a man they would give you a brother's grip, and die with you or for you in the fight for human redemption and deliverance. Go to Joseph Mazzini, and he will tell you of lodges where, for fifty years, Poles and Italians have kept the sparks of liberty alive whilst Russian and Austrian tyranny was striving to trample and crush them out. Go into France, and the imperial tottering Lie—which has stood too long in the shadow of the first Desolator's bloody reputation—will, if it can (now it is near its grave), forget its daily life-practice, and speak truth by way of change—tell you that the Masonic Lodges of France have been the only temples in which for twenty years it has been possible to preach the gospel of civil and religious liberty. Read Br.·. Adolph Cremieux's recent declaration : "La Maçonnerie n'est pas la religion, n'est pas la foi, elle ne cherche pas dans le Maçon, le croyant, mais l'homme." Get Odo Russell to ask Mastai Ferrati, or some old woman, to inquire of Monseigneur l'Eveque d'Orleans, and each will tell you that in the lodges are the greatest enemies of the falling churches, the bravest preachers of heretic thought, and the most earnest inculcators of Republican earnestness. Or instead of going, with some noble German glutton, to a paltry casino, read, if only once or twice, a page of Europe's history for forty years before '93, and then Germany's and Sweden's Master Masons, speaking from their graves, shall tell you how their teachings helped to pulverise crowns and coronets, and build up living citizens out of theretofore dead slaves.

You have joined yourself to the Freemasons at a right moment, for true Freemasonry is about to be more powerful than Royalty. In Spain, at this moment, they have a government without a king; nay, more, in that land disgraced by many an *auto da fé*, there is hope of the growth of a people not in the hands of priests. The Revolution which trampled on the Crown, has raised the brain, and heresy has been spoken boldly in the legislative chamber. Freemasonry has in Iberia a grand mission, an arduous task. The Revolution has exiled the weak and wicked Queen. Freemasonry, to prevent the return of such royalty, has to strive for the development of a strong and useful people. In Italy, where the Honorary G.·. M.·. is our brother, Joseph Garibaldi, to-day they dream of a Government without a monarch. Turin, Florence, Naples, Rome, forgetting

petty dissensions and local differences, no longer misled by royally-tinselled vice, are striving and hoping for the time when an Italian Republic, with a Roman Senate, may once more claim the right to be in the vanguard of civilising peoples. Read, Brother, how at the recent Masonic Banquet at Florence, Frederic Campanella was greeted with *vivas* for the union "di tutti i Galantuomini" for the salvation of Italy. In England, even at this hour, we are—if the organs of blood and culture speak truly—very near forgetting the use of a Queen. The least learned in politics amongst our peoples now know that kings and queens here are only the costly gilded figureheads of the ship of State, its helm being in the hands of the nominees of our territorial aristocracy. Some begin to wonder whether the State might not be better served by sign less gaudy, and more in accordance with the material of which the bulk of the vessel is built. Others grumble downright that a sort of base Dutch metal should be imported in large quantities, as if we had no good British oak out of which to carve a king without disfiguring German silver or Dutch leaf. In France, men are working, with prospect of near success, to overthrow the fear-stricken, *soi-disant* nephew of the great Emperor; and in Europe, the Republic of United Germany is not so far away but that the grandchildren of living Prussian and Austrian subjects may read with wonderment of the value that foolish Englishmen set upon petty German princes. *Liberté, Egalité, Fraternité*, form the Masonic trinity in unity. Do you believe in this trinity? Which will you be, prince or man? You give me the right to ask, for, cradled a prince, you have to-day (in the time which ought to be your manhood) sought admission to the ranks of men. In Freemasonry there are no princes; the only nobles in its true peerage muster-rolls must be noble men—men noble in thought, noble in effort, noble in endurance—men whose peerage is not of a parchment patent, but foot-trodden on the world's weary-to-climb life's ladder. In our Masonry there are no kings save in the kingship of manhood, "*Tous les hommes sont rois.*" Kings with pens for sceptres, king poets who make burning verse, and grand music to give life to the half-dead nation. Kings of prose, who pen history as impeachment of the few cruelly strong in the past, and who pen it that the many may learn neither to be cowardly nor weak in the grand struggle of the future.

You are a prince, but dare you be a man: for the sake of the Danish flower, whose bloom should gladden your life; for the sake of the toiling millions who are loyal from habit, and who will revolt reluctantly, but for peace will pay taxes readily; for the sake of the halo that history will show round your head in its pages? If you dare, let us see it. Go to Ireland—not to Punchestown races, at a cost to the people of more than two thousand pounds—but secretly amongst its poor, and learn their deep griefs. Walk in London, not in parade at its horse shows, where snobs bow and stumble, but in plain dress and unattended; in its Spitalfields, Bethnal Green, Isle of Dogs, and Seven Dials; go where the unemployed commence to cry in vain for bread, where hunger begins to leave its dead in the open streets, and try to find out why so many starve. Don corduroy and fustian, and ramble through the ploughed fields of Norfolk, Suffolk, Northamptonshire, Wiltshire, and other counties, where thirteen shillings per week are high wages, out of which the earner has to feed and clothe man, wife, and family, and pay rent.

Brother, before you die you will hear cries for a Republic in England, cries that will require the brains of a grand man to answer, cries which are gathering now, cries from the overtaxed, who pay, without thought and without inquiry, many more pounds in unearned pensions, for yourself and brother princes, than they will by-and-bye pay shillings, unless indeed you all work miracles, and make yourselves worth your money to the nation. Yet even this you might do; you might—you and your fellow princes in Europe—if you would disband your standing armies, get rid of the tinselled drones and gaudy court caterpillars, the State Church leeches, and hereditary cormorant tax-eaters, and then there would be a renewed lease of power for you, and higher happiness for the people. But whatever you determine to do, do quickly, or it will be too late. The *Vive la Rëpublique* now heard from some lips in Paris, Lyons, Marseilles, Bordeaux, will soon be the voice of France, and there is an electric force in the echo of that cry—a force which evokes the lightning-like flash of popular indignation with such directness against princes who mock peoples, against kings who rule for themselves, and against peers who govern for their own class, that as in a moment the oak

which has stood for centuries, is stripped of its brown bark, and left bleached and blasted to wither, so is royalty stripped of its tinselled gilding and left naked and defenceless to the cold scorn of a justly indignant nation. As a Freemason you are bound to promote peace, but peace makes the strength of peoples, and discovers the weakness of princes. As a Freemason you are bound to succour the oppressed of the world, but then it will be against your fellow-princes. As a Freemason you are bound to aid in educating the ignorant, but if you do this you teach them that the sole authority kings can wield they derive from the people; that a nation may elect a chief magistrate to administer its laws, but cannot give away their liberties to a master who shall have the right to bequeath his authority over their children to his child. As a Freemason you are bound to encourage the development of Freethought, but Freethought is at war with the Church, and between Church and Crown there has ever been most unholy alliance against peoples. You were a prince by birth, it was your misfortune. Your have enrolled yourself a Freemason by choice, it shall either be your virtue or your crime—your virtue if you are true to its manly dutifulness; your crime if you dream that your blood royalty is of richer quality than the poorest drop in the veins of

A Free and Accepted Mason.

FIVE DEAD MEN WHOM I KNEW WHEN LIVING.

In selecting as the subject for a lecture "Five Dead Men Whom I Knew when They were Living"—Robert Owen, Joseph Mazzini, John Stuart Mill, Charles Sumner, and Alexandre Auguste Ledru Rollin—I do not mean more than that the accidents of my chequered life, having thrown me into contact with these men, I take their lives for the lessons such lives give, without either pretending to maintain their several views, or to imply that all, or either of, the five are, or is, in any fashion identified with my own advanced opinions, except where such identity shall be expressly stated. Naturally, the compass of a lecture is prohibitive of any biographic detail, or of any completeness of statement of the respective teachings of the men I briefly deal with.

I.—ROBERT OWEN.

Robert Owen, the great advocate of English Socialism, was born at Newtown, a Montgomeryshire village, on the 14th May, 1771. His early life-struggles—his rapid, but sober and business-like, conquest of that wealth which the world worships so much, but to which he seems to have attached little value, except as it gave him facilities for spreading his views—are familiar enough. It is at New Lanark, in 1797, and thenceforth for twenty years, that one would wish to show Robert Owen, for if he had never done

aught outside New Lanark, he did enough there alone to win grateful recollection. Surrounding the factory workers in his employment with humanising conditions, ameliorating their position, he made the wage-winners something more than mere human machines. Recognising that it was easier to bend and mould the tendencies of the child than to break the long-acquired habit of the grown man or woman, Robert Owen set an example to all Britain by introducing infant schools in his New Lanark village. It was Robert Owen who practically demonstrated that the child's mind is a sheet of paper, varying in colour, quality, and size, but which cannot be left blank; it must be ornamented or disfigured, fact or falsehood must be written on it. It was Robert Owen who gave an example which might be followed with advantage by teetotal advocates. He made New Lanark a sober village, not so much by denouncing drink, as by providing home inducements and evening amusements which outrivaled the beer-shop or whisky store. Many an unfortunate man, returning to his overcrowded unwholesome dwelling, wearied with his toil, finds that it is foul with the breath of so many huddled together, and he consequently escapes to the glare of the gin palace or the gathering at the beerhouse to fly from the misery he finds at home. It is true that he thus aggravates the ill, but we cannot make men sober unless we purify their lives, unless the domestic hearth has its charms and enticements for them; what we want is, that the workers shall have a dwelling to go to from their work which has in it the real tokens of comfort, purity, and health of life. No four-leaved shamrock, nor magician's wand, could have even been supposed to effect so great a transformation as the persistent Humanitarianism of this earnest Robert Owen effected at New Lanark. His doctrines on the formation of character have found practical and authoritative expression more recently in the law-established reformatory schools. Instead of trampling juvenile criminals still lower into the earth, society now adopts the view which Robert Owen was the first to popularise—although not the first to enunciate—that man is better or worse according to the conditions surrounding the parent previous to the birth of the child, and those which surround the infant itself during its childhood, and accompany the boy or girl during youth. Young criminals are now sought to be made less criminal by being placed for lengthy periods under conditions which shall modify and improve their characters.

In 1817 Robert Owen—who had up to this time been regarded by fashionable society as an amiable but eccentric philanthropist, whose whims were to be pardoned on account of his wealth—startled all England by his famous declaration at the London Tavern. Impeaching the religions of the world, he aroused against him all the clergy, and frightened away most of his titled admirers. It has been the custom of late years for street-corner tub-thumpers—utterly incapable of imitating Owen's unselfish devotion to human improvement—to malign Robert Owen's name, and to cast all kinds of opprobrious epithets against his life. Undoubtedly Robert Owen furnished some cause to his foes, when he declared in his London Tavern speech that all the religions of the world were founded in error. And yet every religious man will contend that all the religions of the world save one, and that one his own, are false. It is said, too, that the doctrine that man is the creature of circumstances involves a theory of fatalism demoralising to the human character. Those who take ground against Mr. Owen overlook the fact that it is better to teach the truth, whatever that truth may be, so that the knowledge may furnish the motive for the selection of improving conditions. Nor is man a merely passive figure to be acted on; he re-acts and modifies his surroundings, improving or aggravating them and their effects. As each drop of water is to the ocean, so is each human unit to the world—part of the great whole, from which it cannot escape, and from which it cannot be eliminated. Freewill theorists delude themselves with empty words when they claim for the phenomena of volition that they are outside all law. The formula that man's character is formed for him, and not by him, does not express all the truth, but it expresses much more than is taught by those whose dogma it is that man may will, uninfluenced by events. Robert Owen has been too fiercely assailed for his views on marriage, those who are his assailants, forgetting how much the laws affecting woman's position and property, and regarding divorce, have been modified during the last fifty years. The marriage question is one hedged round with huge difficulties. In Roman Catholic countries extreme harshness forbids all divorce. In some States of the American Republic great facilities are given for determining a contract, which holds by force of law only, against the desire of each. Human passion enters too much with some into the consideration of this question, and is too utterly excluded by

others. It is chiefly as the inaugurator of the English Socialist Propaganda that Robert Owen will be remembered. No Socialist myself, I yet cannot but concede that the movement had an enormous value, if only as a protest against that terrible and inhuman competitive struggle, in which the strong were rewarded for their strength, and no mercy was shown to the weakest. I am probably too much of an individualist to judge a system fairly which seems to me to neutralise individual effort; but it is only necessary to look to the enormously beneficial results of co-operative effort in the North of England, in order to affirm that the Socialist Missionaries, with good old Robert Owen at their head, have left proud monuments of the effect of their teachings. If any early reconcilement is possible, as I believe it is, between the owners of accumulated capital and the vendors of labour, it must come by the enlightenment which efforts at co-operative manufacturing give to all those who take part in them. The war between capitalists and workers is an insane and suicidal war, aggravated because the rights of life are too often made secondary to the privileges of wealth. Robert Owen's Socialism was the utterance of one of the many efforts to give life and dignity to labour. Honour, then, his human effort, even if you deny his dogma. I first saw Robert Owen as a Sunday evening lecturer on the platform of the old John-street Institution, about 1848, and it was from the same platform, ten years later, that it became my duty, in consequence of the ill-health of Robert Cooper, to read for Mr. Owen the last speech he ever prepared for delivery at a Freethought meeting. No one, friend or foe, could come in contact with Robert Owen without being most thoroughly convinced of the old man's complete conviction of the accuracy of his views on society, and of his full certainty to the very last that those views would all be realised at no distant date. He was a good, pure, one-idead man, whose long life, from its prime to its close, was one never-ceasing struggle to soften the world's harsh conflict, and to create a new moral world for after-livers.

II.—JOSEPH MAZZINI.

GUISEPPE MAZZINI, the untiring preacher of Italian Republican unity, was born at Genoa on June 22nd, 1805; and he tells us it was in April, 1821, just after the unsuccessful Piedmontese insurrection, that he was first impressed with the idea "that we Italians could, and therefore ought to, struggle for the liberty of our country." When about twenty-two years of age Mazzini commenced his literary career by writing brief book notices for a mercantile journal at Genoa, which journal he made sufficiently political to at length bring down upon it a Government decree of suspension. Vetoed in Genoa by the Sardinian authorities, Mazzini, in a second journal, braved more openly the Tuscan Government at Leghorn; but, after about twelve months, the *Indicatore Livornese*, as the new journal was called, was also suppressed. Induced by his new political associates, Mazzini joined the Carbonari, a secret association, in which the police had usually—as is commonly the case in secret political organisations—sufficient members to betray the whole of the plans of the Society. Betrayed and arrested in 1830, Mazzini was confined for some months in the Fortress of Savona, whence he was ultimately released—the formal evidence against him failing—but was exiled, because the Government were only too sure of his Republican tendencies.

It was while a solitary prisoner in Savona that Joseph Mazzini conceived the plan of *La Giovina Italia* (Society of Young Italy). Intensely national, Mazzini believed that "regenerated Italy was destined to arise the *initiatrix* of a new life, and a new and powerful unity to all the nations of Europe." It is doubtful whether the movements of the Southern and Northern races in Europe have not a distinctness of character which must always be fatal to Mazzini's conception of the *rôle* of Italy. Mazzini rightfully asserted the unity of Italy; but Italian intellect is too poetic and too subtle to be the guide of some of the less musical, but not less thorough, politics of the Teutonic races. From

Italy Mazzini went to Lyons, and in 1831 he joined a forlorn expedition into Corsica, intending to cross thence into the Romagna, where an insurrectionary rising was planned. This expedition failing, Mazzini took up his residence at Marseilles, where he formally founded the Society of Young Italy, to create "an Italy, one, free, and powerful; independent of all foreign supremacy, and morally worthy of her great mission." The statutes declared "Young Italy is Republican and Unitarian. Republican, because theoretically every nation is destined, by the law of God and humanity, to form a free and equal community of brothers; and the Republican is the only form of government that ensures this future. Because all true sovereignty resides essentially in the nation, the sole progressive and continuous interpreter of the supreme moral law. Because, whatever be the form of privilege that constitutes the apex of the social edifice, its tendency is to spread among the other classes, and, by undermining the equality of the citizens, to endanger the liberty of the country. Because, when the sovereignty is recognised as existing, not in the whole body, but in several distinct powers, the path to usurpation is laid open, and the struggle for supremacy between these powers is inevitable; distrust and organised hostility take the place of harmony, which is society's law of life. Because the Monarchical element, being incapable of sustaining itself alone by the side of the popular element, it necessarily involves the existence of the intermediate element of an aristocracy—the source of inequality and corruption to the whole nation. Because both history and the nature of things teach us that Elective Monarchy tends to generate anarchy, and Hereditary Monarchy tends to generate despotism. Because when Monarchy is not, as in the Middle Ages, based upon the belief now extinct in right divine, it becomes too weak to be a bond of unity and authority in the State.....Young Italy is Unitarian, because without unity there is no true nation; because without unity there is no real strength.....The means," say the statutes, "by which Young Italy proposes to reach its aim are—education and insurrection, to be adopted simultaneously, and made to harmonise with each other. Education must ever be directed to teach by example, word, and pen, the necessity of insurrection. Insurrection, whenever it can be realised, must be so conducted as to render it a means of national education."

It is a little difficult, when Mazzini teaches that "insurrection, by means of guerilla bands, is the true method of warfare," to understand how guerilla warfare and educational progress can be consistent. Guerilla warfare is so nearly allied to—and so often results in—mere brigandage that the certain evil seems greater than any possible advantage; and, as a matter of fact, history has most clearly shown that these guerilla bands are more effective for mischief on the enemy than for good to the cause on behalf of which they are arrayed. Mazzini himself teaches that "Great revolutions are the work rather of principles than of bayonets, and are achieved first in the moral, and then in the material sphere." In the programme of Young Italy Joseph Mazzini, who was bitterly opposed to what he called Materialism, affirmed that "the reformation of a people rests upon no sure foundation, unless based upon agreement in religious belief." He declared that "the doctrines of Materialism disinherit man of every noble aim, and abandon him to the arbitrary rule of chance or blind force." Joseph Mazzini was, at the same time, devotedly Republican and religious. He blended his piety with his politics, and regarded Republicanism as God-ordained.

Exile, and some sorrow beyond—a sorrow which he alludes to, but does not state—had given a tone of sadness to his life. Tenacious of purpose, he was fit to be the mainspring of a secret society, but hardly so fitted to be the conductor of any open movement where his views would be subject to contradiction or criticism from his co-workers. He was grandly thorough in his Republicanism, but he dreamed it for the working men of Italy before he knew what those working men were; and although he made great efforts to educate the people, he never seems to have recognised the fact that the proclamation of a Republic to a people of whom the majority are not prepared for it, is but a small step towards real Republicanism. In Rome he was —when invested with authority—so roughly brought face to face with the bitter truth, that he says "it was put to the vote whether we should not resign our charge the day following. The population, in consequence of the long corruption of slavery, was ignorant and idle; distrustful and suspicious of all things and of all men."

The extension of the propaganda of the Young Italy became rapidly so formidable, that on the representation of the Italian Government, the French authorities, in August,

1832, ordered Mazzini to quit Marseilles, but the order was rendered inoperative by the extraordinary ability with which Mazzini eluded the police, and yet continued most actively his revolutionary work, so that, by the middle of 1833, the Society of Young Italy had become widely extended, if not powerful, through Lombardy, the Genoese territory, Tuscany, and the Roman States. Treason from some, and incaution on the part of others, giving the Government a clue as to the members of the society, many were arrested and put to death.

Mazzini could not help feeling deeply his own share, as the founder of the Association, in the deaths of his co-workers. Four years afterwards he says: "I feel myself a criminal—conscious of guilt, yet incapable of expiation. The forms of those shot at Alessandria and Chambery rose up before me like the phantoms of a crime, and its unavailing remorse. I could not recall them to life. How many mothers had I caused to weep? How many more must learn to weep should I persist in the attempt to arouse the youth of Italy to noble action, to awaken in them the yearning for a common country? And if that country were indeed an illusion, whence had I derived the right of judging for the future, and urging hundreds, thousands of men, to the sacrifice of themselves, and of all that they held most dear?"

Early in February, 1834, an abortive attempt was made to take a column of insurgents, under the command of General Ramorino, into Italy from Geneva. In this column Joseph Mazzini, although the contriver of the expedition, marched as a private soldier. Treachery on the part of the General, and inefficient means of action, caused the failure of the plan; and the defeat almost made Mazzini despair of his whole mission.

The Swiss authorities—compelled by the representations of the European Powers—seized the war stores of the Italian exiles, and menaced themselves with expulsion.

In Berne, where he then took refuge, Mazzini projected the formation of the Society of Young Europe, a combination of Young Italy with two kindred associations, called Young Poland and Young Germany. The ideal of the Association of Young Europe was the federal association of European Democracy under one sole direction; so that any nation rising in insurrection should at once find the others ready to assist it. To this organisation, later in 1834, was

added the new Society of Young Switzerland. Writing of Switzerland, Mazzini says: "Since January 1st, 1338, that little people has had neither king nor master. It presents the spectacle—unique in Europe—of a Republican flag floating for five centuries above the Alps, although surrounded by jealous and invading Monarchies, as if to be an incitement and a presage to us all. Charles V., Louis XIV., Napoleon, passed away, but that banner remained sacred and immoveable." The Constitution of the Swiss Republic was regarded by Mazzini as specially defective, in that its Diet, or Central Government, is composed of delegates from each Canton, chosen in each case by the grand *conseil* of the Canton, instead of being directly elected by the people. Mazzini also objected that in the Swiss Diet each Canton has but one vote, irrespective of size, or population, or taxation contribution; and he further objected to the *mandat impératif*, or special instruction to the delegate, as nullifying all spontaneity of thought and conscience. Mazzini justified the Association of Young Europe by affirming that "Liberty is an European right. Arbitrary power, tyranny, and inequality cannot exist in one nation without injury to others." In the middle of 1835 "Young Switzerland" had its journal, *La Jeune Suisse*, and a printing press at Bienne, in the Canton of Berne. The European Governments used considerable pressure to prevent the little Swiss Republic from being continued as the centre for this Republican work, and ultimately a *conclusum* of the Swiss Diet, in 1836, condemned Mazzini to perpetual exile from Switzerland.

In January, 1837, the great Italian conspirator arrived in London. This was a gloomy period in Mazzini's life; exiled, poor, doubting, and doubted, it seemed to himself almost as if his young life had been an utter failure. England gives the shelter of its land to the political exile, but it is a cold shelter if he be a poor or an unknown man; and, until Mazzini's pen had won for him a position amongst English writers, he often knew the extremest bitterness of want. Joseph Mazzini found, too, that although the English nation gave nominal protection to his person, the English Government nevertheless was guilty of the baseness of opening his correspondence, and communicating the contents to foreign powers. That Austria utilised the information communicated to her by Lord Aberdeen's Government, which had tampered with letters addressed to Mazzini by

the unfortunate Brothers Bandiera, is now a matter of history. Writing eighteen years later, Mazzini said: "The secret of correspondence is violated in the English Post Office at the present day, precisely as it was in 1844, though perhaps somewhat more rarely." It is certain that in the Irish Post Office letters have been opened by authority during the last few years; and it is also certain that secret police reports have, within the last five years, been furnished in writing by the London Detective Department to the Paris Police. Whether letters are still opened at St. Martin's-le-Grand I have no sufficient means of determining.

The political volcano of 1847-8, shook severely several of the Italian princedoms, and Joseph Mazzini returned to Italy to take part in the struggle which overturned, at any rate temporarily, more than one ducal throne.

On February 9th, 1849—the Pope having fled, and Rome being without any Government—a constituent assembly, chosen by a very large popular vote, and of which Mazzini had been elected member, proclaimed a Republic in Rome. On March 29th, Mazzini, Saffi, and Armellini, were chosen Triumvirs; and on April 25th, the French Republic disgraced itself by landing an army, under General Oudinot, at Civita Vecchia. The story of the siege of Rome, of its heroic defence by Joseph Garibaldi, of its fall at last in July, is too well known to need repeating at length, and is too grand to be pressed into one or two lines. Rome fell, and in July Mazzini was once more a fugitive from his loved Italy.

In 1857 Mazzini endeavoured to organise a general Italian insurrection, and went to Genoa himself to take his part; but although detached risings took place in various parts of Italy, the differences of opinion between the leaders, such as Mazzini, Manin, and Garibaldi, were so great, and the people were so unprepared, that another failure had to be chronicled. Mazzini opposed himself bitterly to the diplomacy of Cavour, who was then endeavouring, chiefly through Prince Jerome Napoleon, to obtain the alliance of France against Austria.

In 1858 Mazzini penned the following words on woman, worthy reproduction, alike from their great merit, and as chronicling this phase of his faith: "Love and respect woman. Seek in her, not merely a comfort, but a force, an inspiration, the redoubling of your intellectual and moral faculties. Cancel from your minds every idea of superiority over her. You have none whatever.....Long prejudice, an

inferior education, and a perennial legal inequality and injustice, have created that apparent intellectual inferiority which has been converted into an argument of continued oppression. But does not the history of oppression teach us how the oppressor ever seeks his justification and support by appealing to a fact of his own creation? The feudal castes that withheld education from the sons of the people, excluded them on the ground of that very want of education from the rights of the citizen, from the sanctuary wherein laws are framed, and from that right of vote which is the initiation of the social mission.....Consider woman as the partner and companion, not merely of your joys and sorrows, but of your thoughts, your aspirations, your studies, and your endeavours after social amelioration. Consider her your equal in your civil and political life."

Mazzini and Mill were alike eloquent pleaders for womanhood, and each deserve woman's tribute of grateful memory.

In 1859 the brain of Mazzini and the arm of Garibaldi effectually moved the peoples of Sicily and Naples, and rousing even the lazzaroni from their lethargy, frightened away Bomba from his Neapolitan Palace. Mazzini and Garibaldi then took entirely different ground, and bitterness arose, which was never cleared away. Mazzini desired Garibaldi to hold the Two Sicilies as Republican, and to strike a blow at Rome for the unity of Italy, while Joseph Garibaldi consented to the annexation of Naples and Sicily to Piedmont, under the rule of Victor Emanuel, and returned to his island home at Caprera, satisfied that his country had advanced one step to the unity, which he, equally with Mazzini, so ardently desired.

It was shortly before this date that I first saw Joseph Mazzini, at his modest lodgings, in Onslow Terrace, Brompton, where he then lived under the name of Signor Ernesti. He was one of the few men who impress you first, and always, with the thorough truthfulness and incorruptibility of their natures. Simple in his manners, with only one luxury, his cigar, he had that fulness of faith in his cause which is so contagious, and by the sheer force of personal contact he made believers in the possibility of Italian Unity even among those who were utter strangers to his thought and hope.

In 1865 the city of Messina elected Mazzini as Deputy to the Italian Parliament; but he refused to take his seat in an Assembly where he would have had to take the oath of allegiance to Victor Emanuel. He said, "Monarchy will

never number me amongst its servants or followers. I dedicate myself wholly, and for ever, to constitute Italy one free, independent, Republican nation. I have lived, I live, and I shall die a Republican, bearing witness to my faith to the last."

When in 1870 Mazzini set foot in Sicily, the Government arrested him, and sent him to Gaeta. A general protest went out through Europe, and the imprisonment was not of long duration, but it was yet enough to weaken the already diminished vitality of the oft-disappointed conspirator for Italian Republican Unity.

On the 10th March, 1872, at Pisa, where, under an assumed English name, he had passed five months in almost complete solitude, Joseph Mazzini died; worn out in body and spirit by the forty years' never-ceasing toil for the liberty and unity of his much-loved native land. At his funeral 80,000 men and women met to testify to his truth, to mourn his death. Sentences of death and exile stood unrevoked against him while living. Italy, from that Rome which Mazzini had defended, could not enforce these penal sentences, but it was only her dead son she honoured. Living, she let his broken heart bear undiminished the sorrows of his intense struggle. Dead, a whole population witnessed that the liberty-lesson his life had taught would bear its fruits now the white-haired teacher could no longer use his pen. In seven-hilled Rome a laurel crown was placed by Italy's hand on the head which had bowed to earth in the mighty effort to teach Italia's children how to compass the freedom of their birth-land.

III.—JOHN STUART MILL.

To record the mere life of John Stuart Mill would present little of lasting interest, especially as Mr. Mill never seems to have sought to use his official knowledge of Indian affairs to govern his conduct as a practical politician, after his connection with the East India Company had been

determined. It is not so much how he lived as what he thought, not so much what he did as what he taught, that is worth remembering. Born May 20th, 1806, and dying May, 1873, he probably, during the last twenty-five years of his life, influenced, more than any other man, the various thinkers in England and America. As a political economist, a logician, a politician, a metaphysician, the exponent of Utilitarianism, and advocate of woman's rights, he stands in all phases remarkable, in some without superior. In political economy it is his merit to have popularised amongst the people a science which had been generally regarded by artisans as cold and hard, only to be used by the rich against the poor; and it is noteworthy that Mr. Mill won his popularity despite his steadfast maintenance of the Malthusian theory of the law of population.

Mr. Mill clearly distinguished between the laws of production of wealth, which are real "laws of nature," dependent on the properties of objects, and the modes of the distribution of wealth, which, subject to certain conditions, depend on the human will. In this he differed from those who pretend that the distribution of wealth is determined by economic laws, which are incapable of being temporarily defeated or modified by human effort.

As a politician, Mr. Mill affirmed that women were entitled to representation on the same terms with men. He supported Mr. Thomas Hare's scheme for obtaining a more perfect representation of minorities; and, whether or not Mr. Hare's proposal shall ever be embodied in a statutory form, Republicans should remember that thorough respect can never be shown to the decisions of the majority unless the minority are afforded a fair occasion to be heard on all important questions. It is right that the majority should decide, but only on condition that the voice of the minority has full utterance prior to the delivery of the final award. Mr. Mill opposed the ballot, and I avow that I should be pleased if voters could be true and self-reliant enough to dispense with the protection it affords.

Admitting "the irresistible claim of every man and woman to be consulted, and to be allowed a voice in the regulation of the affairs which vitally concern them," Mr. Mill desired to give a plurality of votes to "proved superiority of education," in order to secure "the superiority of weight justly due to opinions grounded on superiority of knowledge."

In his Political Economy Mr. Mill had taught that the

right of freehold proprietorship in land could only be maintained subject to the duty of cultivation; and late in life, as the President of the Land Tenure Reform Association, he propounded a scheme by which the unearned augmentation of rent was to be applied otherwise than to the private aggrandisement of the landlord. The land question in England is yet to become a battle question, serious in character, and uncertain as to its method of solution. Only one thing is certain—viz., that thousands must not be allowed to continue to grow poor and wretched, in order that a few dozen persons may become unfairly, as well as enormously, rich.

In the great American struggle Mr. Mill regarded the course of the Southerners, in all its stages, as "an aggressive enterprise of the slave-owners to extend the territory of slavery, under the combined influences of pecuniary interest, domineering temper, and the fanaticism of a class for its class privileges;" and, therefore, when the upper and middle classes in England expressed pro-Southern views, Mr. Mill arrayed himself with the artisan classes of England on the side of the North.

In philosophy, Mr. Mill affirmed that "the prevailing tendency to regard all the marked distinctions of the human character as innate, and in the main indelible, and to ignore the irresistible proofs that by far the greater part of those differences, whether between individuals, races, or sexes, are such as not only might, but naturally would, be produced by differences in circumstances, is one of the chief hindrances to the rational treatment of great social questions, and one of the greatest stumbling-blocks to human improvement." While describing himself, in the Autobiography published since his death, as one who never had a religious belief, John Stuart Mill was, unfortunately, taught that his heretical opinions "could not prudently be avowed to the world." Now, it is true, he affirms that the time appears to have come in religious matters "when it is the duty of all who, being qualified in point of knowledge, have, on mature consideration, satisfied themselves that the current opinions are not only false, but hurtful," to make their dissent known; "and," he adds, "the world would be astonished if it knew how great a proportion of its brightest ornaments—of those most distinguished even in popular estimation for wisdom and virtue—are complete sceptics in religion."

The effect of Mr. Mill's early teaching is manifested by

a reticence which pervades his writings; a reticence often liable to be utterly misunderstood. Three essays, published since his death—in which the subjects he specially refrained from discussing are treated at some length—make us more completely regret that his silence during life leaves his posthumous utterances, if not contradictory, at any rate deficient in that clearness for which his ordinary writings are so remarkable. Perhaps the most distinct declarations from Mr. Mill's pen, published during his lifetime, were: first, the one in which, in his review of Hamilton, he declared it to be profoundly immoral to teach, with Dean Mansel, that it is man's duty to worship "a being whose moral attributes are affirmed to be unknowable by us, and to be, perhaps, extremely different from those which, when we are speaking of our fellow creatures, we call by the same names." Mill says: "If, instead of the 'glad tidings' that there exists a being in whom all the excellences which the highest human mind can conceive, exist in a degree inconceivable to us, I am informed that the world is ruled by a being whose attributes are infinite, but what they are we cannot learn, nor what are the principles of his government, except that 'the highest human morality which we are capable of conceiving,' does not sanction them; convince me of it, and I will bear my fate as I may. But when I am told that I must believe this, and at the same time call this being by the names which express and affirm the highest human morality, I say in plain terms that I will not. Whatever power such a being may have over me, there is one thing which he shall not do—he shall not compel me to worship him. I will call no being good, who is not what I mean when I apply that epithet to my fellow creatures; and if such a being can sentence me to hell for not so calling him, to hell I will go." The other is in the review of Comte: "Candid persons of all creeds may be willing to admit, that if a person has an ideal object, his attachment and sense of duty towards which are able to control and discipline all his other sentiments and propensities, and prescribe to him a rule of life, that person has a religion; and though every one naturally prefers his own religion to any other, all must admit that if the object of this attachment, and of this feeling of duty, is the aggregate of our fellow-creatures, this Religion of the Infidel cannot, in honesty and conscience, be called an intrinsically bad one."

Occasionally, as in the essay on Utilitarianism, there are

passages in Mr. Mill's writings which a Christian would probably read as meaning more than Mr. Mill intended to convey; and in the two last essays of the latest volume there are several positions conflicting seriously with the ground taken in the first essay.

In 1861, when I fought the authorities at Devonport on the question of the right of meeting, Mr. John Stuart Mill, with whom I had up to that time held no communication, sent me a cheque for £25 towards the heavy costs I then incurred; and in 1868, for reasons which he has himself stated towards the close of his Autobiography, he also subscribed towards the expenses of my election struggle at Northampton.

To show how even his opponents can speak of him, I give the following extract from an official lecturer of the Christian Evidence Society, Mr. W. R. Browne, M.A., Fellow of Trinity College, Cambridge :—"John Stuart Mill was one of the keenest, the clearest, the most influential thinkers of his day. He was also a man much beloved by his friends (Heaven forbid that I should stint a word that can be uttered in praise of the dead!), devoted to the welfare of his fellow-men, regular and temperate in his life, honest, upright, sincere; and he was an utter unbeliever in any form of religion whatsoever. This fault, which was tolerably well known in his lifetime, is made perfectly clear and certain by the volume before us. He was all that I have described, morally and intellectually, either in consequence of, or in spite of, his rejection of all that Christians hold true and sacred. Which of these is the case? There can be no denying that, at first sight, his life makes against the party of religion. I know that it has been felt to be so by many; I have felt it to some extent myself. Can that be true which a thinker so careful and so brilliant—the greatest master, in this age at least, of the science of logic and the laws of evidence—pronounced unhesitatingly to be false?"

Mr. Mill's almost sudden death at Avignon was mourned as a national bereavement. As an able writer in the *Daily News* wrote in the obituary notice, "the full measure of his political influence will not be known until the next generation, when the younger men, who of late, at Oxford and the other seats of learning, have drunk in his doctrines, come in their turn to the front, and assume the task of shaping the nation's destinies."

IV.—CHARLES SUMNER.

ENGLISHMEN need to be reminded that slavery was a vice instituted and fostered in the American colonies by aristocratic and monarchical England. Efforts made by various colonies to check the slave trade were rebuked by the English Government. The barbarism of slavery was the enduring legacy to the West from civilised and Christian England. In the Federation of the United States the right of holding slaves was retained, amongst other State rights, by the Southern States.

As the Republic grew, two hostile elements were distinctly manifested—the one for the abolition, the other for the extension, of the slave power. In 1844 Texas was annexed to the United States by the influence of the Southern members of Congress, and the vast extent of Texan territory promised the Slave States the command of the Gulf of Mexico, and their preponderance as a political party. It was on this occasion that Charles Sumner—known theretofore as a cultivated, eloquent, and rapidly-rising Massachusetts barrister—made his first distinct stand on the side of freedom against slavery. In November, 1845, in a speech in Faneuil Hall against the admission to the Union of Texas as a Slave State, Sumner said: "God forbid that the votes and voices of the freemen of the North should help to bind anew the fetter of the slave." From thenceforward, until the day of his death, Charles Sumner never wavered in the course he had chosen.

Dealing with the matter with the reverence for law, natural to one trained as he had been, Charles Sumner challenged the slaveholders on constitutional grounds; urging that the provisions of the United States constitution, in favour of slaveholding, were merely temporary, and were framed in the expectation that the slave traffic would be abandoned at no distant period. He affirmed that the Congress could, even then, by express legislation, abolish slavery in the district of Columbia, and in any territories; that it could abolish the slave trade on the high seas between the States; and that it could refuse to admit to the Union any new State with a constitution sanctioning slavery;

further, that the people of the United States might, by regular amendment to the constitution, destroy slavery.

In 1851 Mr. Sumner, who was then forty years of age, having been born January 6th, 1811, was elected United States Senator for Massachusetts; and at first he stood at Washington almost alone in his direct pleading for abolition. In 1854, by the Kansas and Nebraska Act, a large extent of fine territory was practically thrown open for competition between free and servile labourers.

Streams of Northern men advocating free soil, and bodies of Southern men, eager to extend slave power, pressed on to the new lands. The Southerners were not, however, content to fight fairly; organised bodies of armed men entered Kansas from Missouri, and controlled the elections with bowie knife and pistol. At the first election of the Kansas Legislature, March 30th, 1855, the revolver and knife were freely used, several unoffending citizens were shot, and the abolitionists, finding themselves overpowered by force, appealed to the Government for protection. Mr. Seward presented to Congress "A Bill for the Admission of Kansas into the Union." During the debate Mr. Sumner delivered, on the 19th and 20th May, 1855, his celebrated speech, "The crime against Kansas," described by the poet Whittier as "a grand and terrible philippic." He said: "The wickedness which I now begin to expose is immeasurably aggravated by the motive which prompted it. Not in any common lust for power did this uncommon tragedy have its origin. It is the rape of a virgin territory, compelling it to the hateful embrace of slavery: and it may be clearly traced to a depraved longing for a new Slave State, the hideous offspring of such a crime, in the hope of adding to the power of slavery in the national government." With almost prophetic voice he added: "The fury of the propagandists of slavery, and the calm determination of their opponents, are now diffused from the distant territory over widespread communities, and the whole country in all its extent; marshalling hostile divisions, and foreshadowing a strife, which, unless happily averted by the triumph of freedom, will become war-fatal, fratricidal, parricidal, war—with an accumulated wickedness beyond the wickedness of any war in human annals."

The speech caused a tremendous sensation through the whole of the South. Previous to its delivery there had been many threats of personal violence against Mr. Sumner; two

days after it had been delivered Preston S. Brooks, member of the House from South Carolina, with a gold-headed gutta-percha cane in his hand, came to the seat in the Senate where Charles Sumner sat writing, and, with scarce a word of warning, struck the abolitionist orator a fearful blow, inflicting a severe wound upon the back of the head, repeating the blows until the cane was shivered to pieces, and Mr. Sumner lay bleeding and insensible on the floor of the Senate. The spirit of Southern slave-holding chivalry was well shown. Richmond and Charleston journals praised Brooks for his dastardly blow. Southern clergymen preached in his favour. South Carolina re-elected him as the representative of the State. Southern ladies bought for him a new cane, in lieu of the one which he had destroyed in his murderous onslaught on Charles Sumner. It was nearly five years before the effects of the attack had sufficiently passed away to enable the Massachusetts Senator to plead again for freedom. Perfect recovery was impossible; the shock to the nervous system had been too severe; and Mr. Sumner never ceased to feel the effect of the cowardly attack.

While travelling in Europe to recruit his health, Mr. Sumner, on the introduction of the Duchess of Argyll, had an interview with Lord Palmerston as to the repression of slavery in Cuba, the particulars of which I will give as nearly as possible in Mr. Sumner's own words: "Prompted to it by nearly the last words John Adams used to me before he died, I reminded his Lordship that his own Circular as Foreign Secretary had, in express terms, pledged any Government, in which he was influential, to an abolition policy; and urged on him that Great Britain could, if it would, at any time put an end to slavery in the island of Cuba." "How?" asked Viscount Palmerston. "By simply enforcing the treaty between Great Britain and Spain, which absolutely prohibited all importation of slaves after a fixed date, and provided that any slaves landed in Cuba in contravention of this convention, should be declared free." I added to this that "more than seven-eighths of the slave population of Cuba were under this provision entitled to their freedom." Lord Palmerston was very courteous, but did nothing.

It was in June, 1860, he spoke of "that better day, near at hand, when freedom shall be restored everywhere under the national government; when the national flag, wherever

it floats, on sea or on land, within the national jurisdiction, will not cover a single slave; and when the declaration of independence, now reviled in the name of slavery, will once again be reverenced as the American Magna Charta of human rights. Nor is this all. Such an act will be the first stage in those triumphs by which the Republic—lifted in character so as to become an example to mankind—will enter at last upon its noble prerogative of teaching the nations how to live." The story of the election of Abraham Lincoln, the huge war convulsion, the emancipation proclamation, the amendments to the constitution giving the coloured man political equality—this cannot be told here in fitting words.

Sumner is one of the few great warriors for a principle who have lived, not only to witness its emergence from unpopularity and obscurity, but have actually seen victory crown the apparently hopeless effort of their lives.

Charles Sumner, whom I first saw in the autumn of 1873, seemed to feel deeply the charge that he had acted unfairly to England in the matter of the claims arising out of the damage done to United States' commerce by the vessels built for the Southern Confederacy by Messrs. Laird. He said: "I distinguish between the English people, whom I have always regarded with the utmost friendliness, and the English Government. But put yourself in my place. Suppose civil war between Ireland and England; suppose a Member of Congress to build war steamers at Portland under orders from those whom you called the Irish Rebels; suppose the Government at Washington, duly warned, taking no real steps to stop the vessels; suppose these vessels coming direct from the American port—and without ever entering an Irish port at all—being fitted with munitions of war, and burning and destroying your merchant vessels; suppose the builder to sit in Congress, not only without censure, but receiving there constant friendly greeting, and to be treated as a friend by members of the Cabinet—what would be your feelings, Mr. Bradlaugh, as an Englishman, against the America which permitted such a wrong?"

Charles Sumner died on March 11th, 1874; all America felt his loss, and Massachusetts mourned for him as though her dearest son had been taken. At his grave Curtis and Schurz vied with each other in laudations on his life. Amongst those who delivered funeral orations over Sumner

was Robert B. Elliott, Senator for South Carolina, who said: "I am a negro, one of the victim race;" and from this oration I take the following: "Fellow citizens, the life of Charles Sumner needs no interpreter. It is an open, illumined page. The ends he aimed at were always high; the means he used were always direct. Neither deception nor indirection, neither concealment nor disguise of any kind or degree, had place in his nature or his methods. By open means he sought open ends. He walked in the sunlight, and wrote his heart's inmost purpose on his forehead. His activity and capacity of intellectual labour were almost unequalled. Confined somewhat by the overshadowing nature of the anti-slavery cause in the range of his topics, he multiplied his blows, and re-doubled the energy of his assaults upon that great enemy of his country's peace. Here his vigour knew no bounds. He laid all ages and lands under contribution. Scholarship in all its walks—history, art, literature, science—all these he made his aids and servitors. But who does not see that *these* are not his glory? He was a scholar amongst scholars; an orator of consummate power; a statesman familiar with the structure of governments and the social forces of the world. But he was greater and better than one or all of these; he was a man of absolute moral rectitude of purpose and of life. His personal purity was perfect, and unquestioned everywhere. He carried morals into politics. And this is the greatness of Charles Sumner: that by the power of his moral enthusiasm, he rescued the nation from its shameful subservience to the demands of material and commercial interests, and guided it up to the high plane of justice and right. Above his other great qualities towers that moral greatness to which scholarship, oratory, and statesmanship are but secondary and insignificant. He was just, because he loved justice; he was right, because he loved right. Let this be his record and epitaph."

V.—LEDRU ROLLIN.

ALEXANDRE AUGUSTE LEDRU ROLLIN was born February 2nd, 1808, when Napoleon I. was in the height of his power. Louis Philippe—after whose flight Ledru Rollin sought from the popular suffrage the post of chief magistrate—was then thirty-five years of age. Louis Philippe at that time an exile, afterwards to be King, and then an exile once more. Poor France! a line of Bourbon Kings ruling for centuries over starved peoples, and ending in a revolt of despair—an attempt for liberty, rendered impossible by bayonets, hired by England from every corner of Europe, and ending in centralised authority and military mania; a one-man rule, without heart or conscience, save such as the lust for power creates, ending in a ruined France, and a Divine-right King restored to his loving people by Uhlans and Cossacks; 1830, and the fallen successor of Louis XVIII. escorted to Cherbourg with much ceremony, Divine-right Monarchy having collapsed by its own feebleness; then, for a little more than seventeen years, Louis Philippe Citizen King. Louis Blanc says: "Charles X. était tombé, parceque son trône reposait sur un principe faux: Louis Philippe est tombé parceque son trône ne reposait sur aucun principe."

Ledru Rollin, who in 1830 became a barrister, won considerable popularity as an *avocat* by his defence of various persons charged with political offences. In 1834 we find his name amongst a muster-roll of the most brilliant names of France, as one of *les défenseurs choisis par les accusés d'Avril*, and the signature of Ledru Rollin appears to a memoir, telling, in terrible language, the horrible story of the slaughterings by Monarchical authority done in the City of Paris, under the Citizen King, on April 14th, 1834.

During the period of O'Connell's great Repeal gatherings in Ireland, Ledru Rollin, who had married an Irish lady, visited his wife's native country, and, being present at one of the monster assemblages, was cheered by the Irish

peasantry as a delegate from the Republican party in France.

As Louis Philippe's power diminished, the voice of the Republican advocate made itself heard more distinctly, and his influence was felt over a larger area. At Lille, shortly prior to the end of 1847, he pictured the coming revolution, which, "like the waters of the Nile inundating the land, should sweep away the corruptions and impurities, and deposit the germs of a new and rich life." When the first of the Reform banquets was held at the Château Rouge on July 9th, 1847, Ledru Rollin refused to attend, because—although the toast of the King's health was to be omitted—he apprehended there might still be equally obnoxious toasts. On the morning of February 24th, 1848, Louis Philippe was pressed to abdicate by Emile de Girardin—always the consulting physician to dying governments; in the evening the Monarchy had ceased with the King's flight, and a Provisional Government was chosen, of which M. Alphonse de Lamartine was the nominal head, and in which Ledru Rollin became Minister of the Interior. This Government was in name Republican; but at that date no Republic was possible in France. France was not a country with innumerable municipal centres of political vitality; it was rather a huge watch, with Paris for its main-spring. Whoever controlled Paris, the army, and the telegraphs, controlled France. M. Louis Blanc, in the fourth chapter of his "Histoire de la Révolution de 1848," tells the story how the Republic was proclaimed. Unfortunately, Lamartine, in his own account of his acceptance of the conduct of the Provisional Government on February 24th, shows how easily a few active, earnest men in Paris named the Government which was for a brief space to replace that of Louis XV. The new Minister of the Interior is thus described by his fellow-Republican: "He was well suited to his mission, one entirely of revolutionary propaganda. Quick-witted and penetrating, a political energy tempered by frank and engaging manners, an ardent will, integrity, a vehement desire to assure the success of the Republic, and an oratorical talent of the first class. These were the qualities which Ledru Rollin brought to the accomplishment of his functions, and they were heightened in him by a handsome figure, an imposing stature, and an indescribable magnetism, which, when he spoke seemed to pervade each of his

gestures." Lord Normanby, an English ambassador, in his "A Year of Revolution in Paris," thought it right to libel Ledru Rollin, just as former English ambassadors had libelled the men of 1789. Unfortunately for Lord Normanby, and happily for the truth, he published his libels to the world, and there were more newspapers to criticise, and more readers to judge, in 1848 than in the period when Louis XVI. reigned.

On March 5th, by a decree of the Provisional Government, universal suffrage was declared to be the law of France. The law was right; but it should have been demanded by the nation, and voted by the national representatives; the men to whom it was freely given were, in the majority of instances, unable to properly value the right they gained unsought.

Ledru Rollin has been severely assailed on account of an official circular issued just prior to the elections, and addressed to the Commissioners, who acted as his provincial subordinates, directing them to replace the various préfets, sous préfets, and other officials, with persons avowing Republican opinions, and declaring that "all political functions ought to be allotted to men of sure and of Republican principles." Undoubtedly, both Ledru Rollin and Louis Blanc felt justified in using on behalf of Republicanism the centralised authority which had been so long used against it. As a Republican, the exercise of any pressure on the voters was unjustifiable; especially was it unjustifiable when, on April 15th, Ledru Rollin permitted his bulletin newspaper to suggest that, if the result of the elections should prove adverse to Republicanism, a second appeal to the barricades would be necessary on the part of the Parisian populace. A Republican is bound to submit to the vote of a majority, even if that vote annihilates the Republic. An appeal to force is an appeal to the past; it justifies the conduct of the strongest. When some of the regiments of the National Guards were permitted, if not encouraged, to exact from the officers they were electing a pledge, "that in the event of the new Assembly declaring against a Republic, they would march against the Assembly, and put it down," every teaching of Republicanism was outraged.

A few weeks later, Ledru Rollin, as a member of the Executive Commission, found himself obliged to submit to his colleagues, who gave authorisation to Gen. Cavaignac to

use force when the people at the barricades appealed against the decision of the Assembly hostile to the further existence of the Ateliers Nationaux. The bloody days of June were the result of this appeal, and all hope of present Republic was dead. After Ledru Rollin's retirement from the Ministry, he was for a short time *chef du Cabinet* to the Préfet of the Seine; but a strong attack was made upon him, and his popularity became seriously weakened. He was, nevertheless, elected in April, 1849, for Paris, with 129,000 votes.

On June 13th, 1849, Ledru Rollin made an earnest, but ineffectual, appeal in the Assembly against the murder of the Roman Republic by the French army under General Oudinot. The story is told by Joseph Mazzini, how clericalism in France triumphed in inducing the soldiers of one Republic, only just born, to crush the efforts of another Republic struggling into birth.

Forced to quit France, Ledru Rollin was an exile from his native country for twenty-one years. In 1857 he, then in England, was judged *par contumace* for alleged complicity in the attempt by Felice Orsini against the life of Louis Napoleon, but the charge was utterly unfounded, and was probably never even believed by the French police. The only pretence for the use of Ledru Rollin's name in the matter seems to have been that Charles Delécluze, who had established some political associations in France, was known to be in correspondence with the exile; but there was not even a shadow of complicity between Delécluze and Ledru Rollin.

It was in 1857 that I first saw Ledru Rollin, who often consulted me on points of English law during the time of his subsequent residence in St. John's Wood. On one point he was entirely in error: he judged France to be always as he left it in 1849, and was bitterly dis-illusioned when, on his return to Paris in 1870, he found a new generation had grown up with new ideas.

The life of an exile is not a very happy one; the sketch of the career of Joseph Mazzini illustrates this. Ledru Rollin, in his "Decadence de l'Angleterre," says: "Proscribed, we bore with us the sacred right of misfortune, which even amongst barbarians was regarded as a kind of public religion. How has it been respected? We have been each day submitted to insult; the English aristocracy has drawn us about on its journalistic hurdles, denouncing

us to its people as convicts escaped from the galleys, as miserable bandits, as the refuse of the sewers of Paris." Ledru Rollin endured exile for nearly twenty-one years.

In 1870, now with whitened hair, and with his heart withered by the exile chill, Ledru Rollin once more returned to his home at Fontenay aux Roses, and was in 1871 chosen by three departments as deputy to the French Assembly, where, however, he at that time declined to sit. A Republican Society in Paris, the Alliance Républicaine, nominated Ledru Rollin as its President; but the hero of 1848 does not seem to have ever regained his old power in Paris.

At his funeral an enormous mass of Parisians gathered. His career had been honest, his devotion had been sincere. While the Empire lasted he had refused it allegiance; he had been loyal to France.

THE lives of Owen, Mazzini, Mill, Sumner, and Ledru Rollin, present several features of likeness. To the whole of these men the clergy were bitterly hostile, for each of them was an apostle of at least some chapter of the gospel of progress. The Welshman, Robert Owen, who taught the communism imperfectly shadowed out by Jesus and his Apostles, was denounced, with more than ordinary fierceness, from nearly every pulpit in England, the Bishop of Exeter encouraging the cry from his place in the House of Lords. The Italian, Joseph Mazzini, the greatest modern preacher of Republicanism, was excommunicated by the Pope, head of a Church always hostile to liberty, and the Italian patriot was anathematised by almost the whole of the Roman Catholic priesthood. The Englishman, John Stuart Mill, had scarcely been lowered into the grave, at Avignon, when the weak-brained and orthodox *Church Herald* yelled out its curses against the scarce-cold form of one who will always rank amongst the chief of Europe's thinkers; when John Stuart Mill was invited by the electors of Westminster to allow himself to be their candidate for election to Parliament, the cry of "heretic" was loudly raised by all sects of Christian preachers, and a

Liberal dignitary in the Church was bitterly assailed because he cast his ballot for the great logician. The New Englander, Charles Sumner, the Abolitionist, was preached against alike from Northern and Southern pulpits; the unfeed pleading of the Massachusetts barrister, on behalf of dark-skinned humanity, was impartially scorned by the sects who pretended to kneel to a common father: and last, though hardly least, in the value of its testimony, the Frenchman, Ledru Rollin's grave—surrounded by the many thousands of men and women who came to honour his civil burial—marked once more the hostility between progress and the Church.

Robert Owen, though he himself died poor, having devoted to popular redemption the fortune he had created, yet lived to see thousands lifted at least a little from their poverty by the practical co-operative efforts which gradually, and after many trials, grew out of his Socialistic theories. The glory of the experiment in infant education, which he first pressed at New Lanark, was, before he died, claimed by the very religious teachers who had so long hindered all education, and who must in time be destroyed by the rescue of children's brains from the control of priestly manipulators. Joseph Mazzini did not die until his much-loved Rome had been proclaimed the capital of Italy, and—though generations of education in liberty and self-reliance will be required to efface the trace of the Divine Bourbon in Naples and in Sicily—yet the lone man's life was not without its fruitful harvest. John Stuart Mill, dying ere his strength was spent, had nevertheless found himself recognised as the thought-maker of his people. Charles Sumner, who had spoken for freedom when angry and brutal men pointed revolvers in his face; who had continued to speak for abolition when the whole continent of America cried out that the speaking was hopeless; who had fallen in the Capitol—at the close of a grand speech against slavery—bathed in his own blood, shed by a felon hand; Charles Sumner lived to see his speech grow into law. And even Ledru Rollin survived long enough to see the Imperial sham fade away, and to hear the very peasantry of France utter their yearning cry for the Republicanism to which he had devoted himself.

It will not be until another age that full justice will, or can, be awarded to the memories of these men. Statues and monuments are readily erected to princes pensioned

for the merit accruing from accident of birth, or fortune of marriage; memorial stones are easily found to record great wealth and huge rent-rolls. For the dead who lived for the poor, and died in poverty; for the dead who struggled for freedom, and died worn out in the effort to burst the shackles theretofore worn by others; for the dead who, living, were not known by fashion, nor honoured by wealth; for these the monuments can only be slowly raised, as a new generation inherits, without obstacle, the prizes of social advancement and political freedom, which these dead won with bleeding hearts and wearied brains.

FREETHOUGHT PUBLISHING COMPANY,

28, Stonecutter Street, Farringdon Street, E.C.

The Freethinker's Text-Book.—Part I. By C. BRADLAUGH. Section I., Nos. 1 & 2.—"The Story of the Origin of Man, as told by the Bible and by Science."

Section II., Nos. 3 & 4.—"What is Religion?" "How has it Grown?" "God and Soul."

Each Section complete in itself, with copious Index. Each Number, 6d. Part I., containing the whole four Nos., bound in cloth, price 2s. 6d.

Part II., by ANNIE BESANT.—"On Christianity." Nos. 5, 6, 7, 8, 9, & 10, price 6d. each. Section I.—"Christianity: its Evidences Unreliable." Section II.—"Its Origin Pagan." Section III.—"Its Morality Fallible." Section IV.—"Condemned by its History." Part II., containing the whole 6 Nos., bound in cloth, price 3s. 6d.

History of the Great French Revolution.—A Course of Six Lectures. By ANNIE BESANT. Cloth, lettered, 2s. 6d. Also in six parts—Parts 1 to 5, 3d. each; Part 6, 4d.

Impeachment of the House of Brunswick.—By CHARLES BRADLAUGH. Sixth edition. Price 1s.

The boldest indictment of the present reigning family ever published, with an Appendix on the Civil List.

What does Christian Theism Teach?—A verbatim report of two nights' Public Debate between the REV. A. J. HARRISON and C. BRADLAUGH. Price 6d.

God, Man, and the Bible.—A verbatim report of a three nights' Discussion at Liverpool between the REV. DR. BAYLEE and C. BRADLAUGH.

This is the only debate extant on the purely Socratic method. Price 6d.

Heresy; its Morality and Utility.—A Plea and a Justification. By CHARLES BRADLAUGH. Price 9d.

Verbatim Report of the Trial, the Queen against Bradlaugh and Besant.—Neatly bound in cloth; price 5s., post-free. With Portraits and Autographs of the two Defendants.

Is the Bible Indictable?—By ANNIE BESANT. 2d.

Autobiography of C. Bradlaugh, with Portrait. 3d.

Life of Jonah.—By C. BRADLAUGH. 1d.

The Law of Population: Its Consequences, and its Bearing upon Human Conduct and Morals.—By ANNIE BESANT. 10th thousand. 6d.

On the Being of a God as the Maker and Moral Governor of the Universe.—A verbatim report of a two nights' Discussion between THOMAS COOPER and C. BRADLAUGH. Price 6d.

When were our Gospels Written ?—A Reply to Dr. Tischendorf and the Religious Tract Society. By CHARLES BRADLAUGH. Price 6d.

The Existence of God.—A verbatim report of two nights' Debate at Edinburgh, between A. ROBERTSON and C. BRADLAUGH. With a Preface by the late Austin Holyoake. Price 6d.

Cromwell and Washington : a Contrast. — By CHARLES BRADLAUGH. Price 6d.

This is a Lecture which was delivered by Charles Bradlaugh to large audiences throughout the United States.

Five Dead Men whom I Knew when Living.—By CHARLES BRADLAUGH. Sketches of Robert Owen, Joseph Mazzini, John Stuart Mill, Charles Sumner, and Ledru Rollin. Price 4d.

National Secular Society's Tracts.—1. Address to Christians. 2. Who was Jesus? 3. Secular Morality. 4. The Bible and Woman. 5. Secular Teachings. 6. Secular Work. 7. What is Secularism? 8. Who are the Secularists? 9. Secular Responsibility. 7½d. per 100, post free.

My Path to Atheism.—Collected Essays of Annie Besant.—The Deity of Jesus—Inspiration—Atonement—Eternal Punishment—Prayer—Revealed Religion—and the Existence of God, all examined and rejected, together with some Essays on the Book of Common Prayer. Cloth, lettered, price 4s.

Secular Song and Hymn Book.—A Republican and Atheistic Collection for the use of Secular Societies and Secular Homes. Edited by ANNIE BESANT. Cloth, gilt, 1s.

PAMPHLETS BY ANNIE BESANT.

The True Basis of Morality.—A Plea for Utility as the Standard of Morality. Price 2d.

Auguste Comte.—Biography of the great French Thinker, with Sketches of his Philosophy, his Religion, and his Sociology. Being a short and convenient *résumé* of Positivism for the general reader. Price 6d.

Giordano Bruno, the Freethought Martyr of the Sixteenth Century. His Life and Works. A Tract for popular distribution. Price 1d.

The Political Status of Women. A Plea for Women's Rights. Price 2d.

Civil and Religious Liberty, with some Hints taken from the French Revolution. Price 3d.

The Gospel of Atheism. Price 2d.

CROMWELL

AND

WASHINGTON.

A Contrast.

28, STONECUTTER STREET, E.C.

CROMWELL AND WASHINGTON.

I.—CROMWELL.

OLIVER CROMWELL is probably one of the mightiest amongst England's children. His memory, always fresh, has for its protection no array of statues. A modern Prince has his otherwise undiscoverable goodness prominently recorded in many cities, lest without the stone record all traces of his virtues should be lost; but we can recall Cromwell's greatness without even one marble or granite reminder of his glorious manhood. Statues are now chiefly erected by Englishmen on Utilitarian principles. We build the most monuments to those men who, but for such aids, would perhaps be least remembered.

Oliver Cromwell was born at Huntingdon on April 15th, 1599, just as the reign of Elizabeth was drawing to a close A Royalist from birth until death, Royalist by early association and family tradition, of easy fortunes and fair connections, Cromwell had no special temptation to the adoption of a course of rebellion against the Crown. When about twenty-nine years old he sat in the House of Commons for his native borough of Huntingdon. He owed his seat probably more to the family influence and old estates than to any special merit then manifested; and in this first essay at Parliamentary life Oliver Cromwell has left us very little for record, although the Parliament in which he sat was a great one, and had its stirring scenes. It was the third Parliament of Charles I. Carlyle calls it "a brave and noble Parliament.' This was the Parliament to which his Majesty sent a message, requiring it "not to cast or lay any aspersion upon any Minister of his Majesty," and which forthwith accused and impeached the great Duke of Buckingham. This was the Parliament in which Mr. Speaker Finch tried to stifle speech, and to avoid all Parliamentary remonstrance, by adjourning the House; the only Parliament, as far as I know, in which some of the members held the Speaker in the chair while they, on March 2nd, 1629, voted respectful remonstrances against tonnage, poundage, and other matters.

Denzil Holles, Sir John Eliot, William Strode, and John Selden (who were afterwards fined or imprisoned for their daring) were amongst the most prominent in thus forcibly retaining Mr. Speaker. "Let him go!" cry the King's Privy Councillors. "No," answers Holles; "God's wounds! he shall sit there until it pleases the House to rise." And in all this stir we see no sign of Oliver Cromwell.

Poor Eliot—for his part in this business fined £2,000, and to be imprisoned during the king's pleasure—will make no submission, ask no grace, and the Tower dungeon is his tomb: he comes not out of gaol alive. How many grand men die in the effort to make a country live, and these dead have not even the honour of a grateful memory from the children of those they served so well! Living a day or two too early, they were the forlorn hope, whose bodies helped to fill the ditch, that others might pass more easily to victory and glory. This third Parliament should be memorable if only that gallant Eliot sat in it. It was this Parliament which solemnly declared, in the famous Petition of Right, "That no man hereafter be compelled to make or yield any gift, loan, benevolence, tax, or such-like charge, without common consent by Act of Parliament."

Parliament was soon dissolved; it had only been needed to vote "supply." Not fulfilling this need, it was extinguished, as had been its predecessors. There had already been in this yet short reign two preceding Parliaments, both brief-lived, because they would not vote money without discussing grievances; and now this third Parliament, its members having acted, as the king thinks, like "vipers," is also dismissed. Then, for eleven years, no Parliament in England, and during this space Oliver Cromwell leads apparently a gentleman farmer's life on his lands at St. Ives, near the River Ouse. He had a strong tendency to the fast-developing Puritan spirit of the times; his prominent relatives were Puritans, too; but Cromwell manifested—so far as we can judge—little, or no, inclination to meddle in rising political strife. Yet his very Puritanism counted for something in making him a rebel. Sturdy Puritanism struggled against servile Episcopalian flunkeyism. Mainwaring was made a Bishop by Charles I., and Sibthorp gained preferment in the Established Church, for preaching "that the king might take the subjects' money at his pleasure, and that no one might refuse his demand, on penalty of damnation."

No Parliament for eleven years, and yet the king wants money! and without Parliament he cannot have it. The charges of the king's Government grew more serious in each reign. The Crown lands, once extensive enough for everything, had been given and granted to favourite and favourite's flatterer; now broad acres to this pretty face; now wide baronies to this strong arm; now far-stretching slopes and fertile dales to this proud churchman; until the recipients of royal bounty were sometimes as rich as, or richer than, the kingly donor. Feudal obligations to contribute in peace and war to the maintenance of the royal state, are not, and were not, quite as accurately calculable in their realisable results as would be the proceeds of a modern property-tax. "Forced loans" and "benevolences," then a good source of income, were well enough, if collected from the Jews, whom nobody protected; but when the moneys were sought in the cities, the merchants stood resolutely on their privileges and charters, and obstinately refused to lend or give. "Tonnage and poundage" — which divine-right Charles considered a tax to be levied within his own discretion— was much denied. "Tonnage and poundage" was an imposition upon goods and merchandise exported and imported, and was first granted by Parliament about 1523 to Henry VIII., and the right thus accorded to the sovereign to levy had been renewed in each succeeding reign, until the time of Charles I., when it being proposed in the Commons to limit the right to a single year, the Lords rejected the Bill, and Charles Stuart was left without any statutory right to collect the tax.

It was in 1635 that Oliver Cromwell's cousin, John Hampden, was required to pay ship-money, and refused. According to the old practice, there were military tenures, which bound the landholders in a great part of the kingdom to furnish actual men and arms, or to pay in money their cost. So also the Cinque Ports, and other English seaports, and sometimes maritime counties, had been called upon to furnish a quota of ships for the public service, and there had even been instances of similar demands on inland towns, when piracy was prevalent. Attorney-General Noy, to win favour with the king, and backed by the opinion of a corrupted and time-serving Bench of Judges, sought, under cover of ship-money, to levy taxes from the nation without the authority of Parliament. The first ship-money writ was issued to the City of London and other seaports, in October,

1634, requiring them to provide vessels and armaments to oppose the pirates at sea, and under it £35,000 was obtained from the City of London alone, though not without remonstrance or resistance on the part of the citizens. One Richard Chambers refused to pay, and being committed to gaol by the Lord Mayor of London for this non-payment, Chambers brought an action against the Lord Mayor to recover damages for the false imprisonment. His fight was gallant, but hopeless; for the twelve judges, headed by Lord Chief Justice Finch (the former Speaker), had already given their public opinion that the king might, in his sole judgment, issue such a writ as that under which the ship-money levy was made. On Chambers's trial Mr. Justice Berkely refused to allow his counsel to contest the validity of the writ, declaring "that there was a rule of law, and a rule of government, and that many things which could not be done by the first rule could be done by the other." I expect this man Berkely must have been related to the Governor Berkely, of Virginia, who, in the same reign, declared "free schools and printing to be pernicious inventions of the devil for the spread of heresy and sedition." On a portion of his property John Hampden was required to pay 20s., which he refused. The king sued and won judgment for the 20s., but lost a crown as the final result to the suit. The case was argued on behalf of Hampden by Oliver St. John, who was distantly related by marriage to our Oliver Cromwell. The 25th Edward I., "which forever abrogated all taxation without consent of Parliament," was pleaded, but without avail. Another statute called *de Tallagio non Concedendo*, was urged to like effect, but the judges had pre-determined their judgment. Last, but not least, the famous Petition of Right, "that noble legacy of a slandered Parliament," as Hallam calls it, was brought forward by Hampden's counsel. All to no purpose! Seven judges upheld the ship-money levy against five dissenting. The majority laid down the damnable doctrine that King Charles had absolute power "to command his subjects, their persons and goods, and I say their money too." These were the words of Lord Chief Justice Finch, and he found six judges servile enough to re-echo the slavish formula. Five judges dissented, but only two of them, Justices Croke and Hutton, had the courage to squarely deny the alleged prerogative of the Crown, and to declare ship-money unlawful. Unhappily for them, their names stood already committed in

writing to the extra-judicial opinion, concocted by Finch, affirming the king's right to issue the writ, and make the levy. It is said that Justice Croke would have given judgment for the king, the justice being in fear of losing his appointment, but that he was kept on the right side by his wife, "who implored him not to sacrifice his conscience for fear of any danger or prejudice to his family, being content to suffer any misery with him, rather than to be an occasion for him to violate his principles."

Hopeless of obtaining justice from the English Law Courts, and not yet driven by despair to the last desperate appeal to force, many of the Puritan leaders looked across to the New England settlements as a haven of refuge. It is said by Hallam that, "Men of a higher rank than the first colonists are now become hopeless alike of the civil and religious liberties of England; men of capacious and commanding minds, formed to be the legislators and generals of an infant Republic; the wise and cautious Lord Say, the acknowledged chief of the Independent sect; the brave, the open, and enthusiastic Lord Brook; Sir Arthur Hazelrig; Hampden, ashamed of a country for whose rights he had fought alone; Cromwell, panting with energies that he could neither control nor explain, and whose unconquerable fire was still wrapped in smoke to every eye but that of his kinsman Hampden: were preparing to embark for America, when Laud, for his own and his master's curse, procured an order of council to stop their departure." They were to be driven to bay, all loopholes being stopped, all escape being prevented. They turned, and at last the hunted became the hunters.

The litigation with Hampden, from the first assessment to the final judgment, had lasted more than three years; and ship-money was paid less willingly after the judgment, than even while the suit against John Hampden was yet undecided. Passive resistance, when it takes the shape of a general "We won't pay," is very effective. The king needed money; for effectual collection of money he must have a Parliament. London would lend money if a Parliament were summoned, none without; and at last, on the 13th of April, 1640, King Charles's fourth Parliament was assembled, and in this our Oliver Cromwell sat as Member for Cambridge. The duration of this Parliament was of the briefest; it is known as the "Short Parliament," for—not providing money for the king with sufficient rapidity, and

providing protest against the Hampden judgment, and criticism against Strafford much too freely—it was dismissed "in a huff, on the 5th of May, after a session of three weeks." Charles I. resolved to get his money without the aid of Parliament, but could not. Ship-money was enforced with greater rigour than before, and brought less profit. Sheriffs who would not levy the tax were fined and imprisoned, but even these fines were not always paid. Loans were asked for, and citizens preferred committal to prison to lending to the king. Merchants' bullion was seized in the mint, and debased coin issued. But all these expedients failed. The king still needed money; London would lend £200,000, but only on condition that a Parliament should be summoned; and, accordingly, on the 3rd of November, 1640, there assembled at Westminster the most notable of all the Parliaments that St. Stephen's has ever known, the "Long Parliament." Instead of being dissolved by the king, it ultimately resolved the king's dissolution. It created a Frankenstein monster in its army, which, at last, under Colonel Pride, weeded out its strength with an array of pikes for weed-hooks. It was driven away by angry Oliver Cromwell, but claimed not to be dissolved, and as "the Rump" Parliament it appeared once more to act as usher-in for the restoration of the pious and virtuous Charles II. In this fifth Parliament, Oliver Cromwell again sits as Member for Cambridge, and now gets notice from friend and foe. The friendly words have struggled through the Restoration period with much difficulty; the hostile comments are thick and strong. Thomas Carlyle quotes from Philip Warwick, doubly returned, to sit for Romney and Radnor, but who preferred the latter borough: "I came into the House one morning, and perceived a gentleman speaking, whom I knew not, very ordinarily apparelled, for it was a plain cloth suit, which seemed to have been made by an ill-country tailor; his linen was plain, and not very clean, and I remember a speck or two of blood upon his little band, which was not much larger than his collar. His hat was without a hat-band. His stature was of a good size; *his sword stuck close to his side;* his countenance swollen and reddish, his voice sharp and untuneable, and his eloquence full of fervour." The trait of Cromwell here, which marks the man, is in the seven words, "his sword stuck close to his side." The sceptre of Cromwell was his sword: his sword was his tongue, his pen. Cromwell's will, and Cromwell's

sword were alike of a metal which bent little and cut through everything. Lord Clarendon would make out that our Oliver Cromwell, as a young Member, was a blusterer, whose "carriage" was "tempestuous," and "behaviour" "insolent:" and this, even in private committee, where Clarendon alleges that Cromwell replied to Lord Mandevil "with much indecency and rudeness," and in "contrary and offensive" language. It is so easy for a plain man to be rude and indecent to a lord. Our English lords are not to be mauled with rough hands, or pelted with rough words. We have a bankrupt Duke of Newcastle and a bankrupt George Odger. No well-trained mind would think of using the same harsh phrases to the well-housed Duke of Newcastle, in his Clumber Castle palace, that might be fittingly applied to the needy Radical shoemaker, in his poor Bloomsbury home. It is "contrary and offensive" language, even now, to suggest that princes, who live on the country, owe service to it; and I am prepared to admit that Oliver Cromwell, in Parliamentary debate, might have been "contrary," "offensive," "indecent," and "rude," but blusterer he was most surely none. Bluster is the wind-bag weapon of the weak man; the warrior who wears and handles a mace never fights with an air-bladder as his arm of offence. Cowards bluster—those who from the rear shout "Forward," and from a safe distance, and in a crowd, cry "Down with him." But a man like Cromwell, a real man, whose "sword was stuck close to his side," who rode at the head of his troop; who, when the forlorn hope was repulsed, and he was general, went himself "at push of pike" into the breach; he was no blusterer.

The Long Parliament began its work well. It declared ship-money illegal; it annulled the judgment against Hampden; it declared that no tax could be levied on exports or imports, save by common consent in Parliament; it made Parliaments triennial; it abolished the Star Chamber, the Court of High Commission, and several other arbitrary and irregular tribunals; it denied the king's right of impressment for military service; it voted that bishops should not sit in the House of Lords; it impeached and brought Strafford to the block, Charles being cowardly enough to sacrifice his minister as a scapegoat; and on the very day that Strafford's death-warrant was signed, it enacted that this Parliament should not be dissolved without its own consent. To get money, the king assented to this Bill, which in the

end proved his death-warrant too. There was some talk even of a Puritan Ministry, with the Earl of Bedford as chief, and Pym, Hampden, and Holles in the Cabinet; but this talk ended in worse than nothing; it only irritated the men, and widened the breach. These Puritans wanted Parliamentary Government; Charles Stuart wanted to be despot, riding England with Parliament as his riding whip. At last, on the 4th of January, 1641, Charles I. determines to stop the daring of Parliament by a blow which shall terrify the most audacious. Pym, Hazelrig, Holles, Strode, and Hampden have been over-daring in their speech, and these the king will punish. So to the House of Commons with a strong armed force enters the king—the Earl of Roxburgh holding open the doors of the House—to seize with his own hands the famous five. But they are no longer in the House. A friendly word of warning had gone before to notify the coming of his angry majesty, and Hampden and the four others are safely within the City walls, where, indeed, all Parliament goes for protection next day, to "consider and advise how to right the House in point of privilege, broken by the king's coming yesterday with a force to take Members of our House." The Parliament, threatened with the sword, takes up the sword to protect itself, and yet with a show of profound reverence for royal authority. It asks the king for permission to raise a militia; it raises the militia without consent, when the request is denied. It vests the command of the militia in persons to be appointed by Parliament, and it prays for the custody of the Tower and other strong places. Its prayer refused, it takes all it can, backing its respectful request with pike, broadsword, and battering ram. And now Oliver Cromwell comes to the front! It is time. He offers to lend £300 to aid the Parliament in reducing the Irish rebellion; he sends down arms to Cambridge; he commences to organise troop 67; he seizes the magazine at Cambridge Castle; and he has prevented the king from getting the University plate, value some £20,000. The king, unhindered by the Parliament, as yet too reverent to touch his sacred majesty's person—has fled from Whitehall to York, on the way gathering an army round him. The queen and the crown jewels have been sent away, to negotiate foreign aid and to raise money abroad.

There is now civil war, not as of old, between rival pretendants for the throne, but of the army of the king and Parlia-

ment, against the army of the king. High treason, and yet not enough of Republican spirit to shape the treason into war against monarchy. A strange civil war, in which there are many Parliament men who do not hope to win, many who do not desire to win, and many who do not deserve to win. Captain Cromwell grows daily in his strength, and is soon first in the Cambridge county, and then the eastern counties are associated for common defence, and Cromwell gradually takes the lead; no bigger, braver, or wiser captain being there to stand in front. When there is some defeat, and much terror, Cromwell is firm and unreceding. When lawless troops, in the name of Parliament, do as much wrong to friends as to foes, Cromwell is a stern and strict captain. When cold friends will not find food, forage, and pay for the "God-fearing" "Ironsides," Cromwell's sword pens the requisition which knows no evasion, and must be fully complied with. Cromwell seems daily to grow conscious of his augmenting power, and to play cautiously for more authority: and yet I stand with Cromwell. To re-quote the words attributed to Lord Chatham: "There was ambition, there was sedition, there was violence, but no man shall persuade me that it was not the cause of liberty on the one side, and of tyranny on the other." Lieutenant-Colonel Cromwell is busying himself in fortifying the town of Cambridge against Prince Rupert, in levying "freewill contributions" for the good cause, and in seizing "malignants'" horses; busying himself, too, in riding hard and striking hard, as the need arises, until the Colonel Cromwell is chief of the seven associated counties, with a large force of well-ordered men; "not a man swears but he pays his twelvepence; no plundering, no drinking, disorder, or impiety allowed." Lord Essex, the Lieutenant-General, grows less, and Colonel Cromwell grows greater, until the big fight comes at Winceby, where, "within half-pistol shot, his horse was killed under him at the first charge, and fell down upon him, and, as he rose up, he was knocked down again by the gentleman who charged him.....but afterwards he recovered a poor horse in a soldier's hands, and bravely mounted himself again," and rides to victory.

Puritan Cromwell is now Governor of Ely; the Cathedral Service does not please him, and so he writes to the Reverend Mr. Hitch, "Lest the soldiers should in any tumultuous or disorderly way attempt the reformation of the Cathedral Church, I require you to forbear altogether your

choir-service." Cromwell's will is to be law to Mr. Hitch, even in the regulation of the Ely Cathedral Choristers. The Reverend Mr. Hitch disregarding, next Sunday in walks Oliver Cromwell, his hat on his head, a force at his back, and with a "Leave off your fooling, and come down, Sir," he dismisses poor Mr. Hitch from his pulpit, just as a few years later he dismisses Speaker Lenthall from the House of Commons. The Lieutenant-General Cromwell, early in 1644, finds time to appear in Parliament to complain of my Lord Willoughby, a Parliament General, but one not too well-inclined to see the Parliament over-much-succeeding against the king, and who has "strangely dissolute people about him." And a little later, to Major-General Crawford, the Lieutenant-General Cromwell delivers a sharp reprimand, because Crawford has discountenanced an "anabaptist" Lieutenant-Colonel: "Sir, the State, in choosing men to serve it, takes no notice of their opinions; if they be willing faithfully to serve it, that satisfies. I advised you formerly to bear with men of different minds from yourself.....Take heed of being too sharp, or too easily sharpened by others, against those to whom you can object little, but that they square not with you in every opinion concerning matters of religion." And still a little later—with the extra glory of Marston fight giving further force to his authority—Oliver Cromwell rebukes the Ely Committee for having released some prisoners who had been arrested by some of Cromwell's officers, and forthwith has the released men re-arrested by the warrant of his (Cromwell's) will. The newer soldiers, especially those with strong convictions on religious matter, all inclined to Cromwell. "The man," Baillie says, "is a very wise and active head, universally well-beloved, as religious and stout, being a known Independent, and most of the soldiers who love new ways, put themselves under his command."

After the second battle of Newbury, on October 27th, 1644, there was strife between Oliver Cromwell and his superior officer, the Earl of Manchester. The latter, it was alleged, "does not want to press the king too hard, will not pursue after a victory, does not even wish to fight;" and in December we find Cromwell in Parliament declaring that "it is now a time to speak, or forever to hold the tongue," and urging in effect that these Earls of Essex and Manchester are poor shiftless things, with which it will be indeed difficult to save a nation from ruin. While on the

other side it is contended that the firebrand Cromwell has openly avowed that "there never would be a good time in England until we had done with Lords;" and still worse, that "if he met the king in battle, he would fire his pistol at the king as at another." The Scots Commissioners, fearful of Cromwell's growing influence and bold speech, want to learn "whether there be not ground to prosecute Cromwell as an incendiary;" but Cromwell has already too many "Ironsides" to make such a prosecution desirable. And now Lords Essex and Manchester are got out of the army with soft words and flattering distinctions. Sir Thomas Fairfax is Lord-General, and Cromwell is scarcely second.

The self-denying ordinance—which took from all Members of both Houses of Parliament their commands in the army and their civil employments—would, if it had been strictly carried out, have deprived Cromwell of his military position; but Prince Rupert is to be attacked, and who shall be relied on to do it save Oliver Cromwell? Accordingly, "forty days' leave" for his continuance in command being granted, he routs convoys, captures strong houses, and goes on so victoriously, that the leave is renewed for "three months," and at last the "self-denying ordinance" is dispensed with, at least in this case, and the Lieutenant-General Cromwell still remains M.P. for Cambridge.

And now the attempt at any treaty at Uxbridge having failed, the king and Parliament come again to blows on the 14th of June, 1645, when Naseby fight brought Charles and Cromwell very close indeed, and the king's majesty fled. For a moment the daring Rupert seems likely to win, but his cavaliers are better thieves than soldiers, and staying to plunder after their first dashing charge, lose their vantage; and then stern Cromwell, whose "Ironsides" never plunder, drives away Prince Rupert's troopers into disastrous defeat.

Through 1645 and 1646, we find Cromwell continually fighting and growing stronger, capturing Bristol and various strong places, battering forts, and personally doing daring deeds, with a tinge of fierceness, which made his name feared, until the king surrenders to the Scots, and is by the Scottish leaders traded away to the Parliament. Now comes complication of quarrel; Parliament has not only to fight the king, but is also divided against itself; one party thinks the king low enough, the other section would push the man Charles Stuart still harder, even though he fell too low to rise again. With the latter goes the army; with the first

ranks the city. City and Parliament Presbyterians would fain disband the army, which has grown too potent through its victories, and at last has marched much too near to London. The army requires its arrears of pay, insists on its "old commanders," and begins to rank itself a power in the State. The king, high with hope, plays army against Parliament, and Scots Commissioners against both. The army appoints "agents," or "adjutators," from each regiment, and Cromwell, though he sits in Parliament, and does not openly side with the growing malcontent spirit, is evidently more inclined to count upon the sword than upon the tongue, and declares to Ludlow that "these men will never leave until the army pull them out by the ears." The army petitions, and marches nearer London, and now the Lieutenant-General Cromwell goes to Saffron Waldron to see "the army disbanded," which does not disband, but, on the contrary, and probably by Cromwell's connivance, seizes the person of the king, not altogether too unwilling to be so seized. There is some thought in Parliament to arrest Cromwell, but no opportunity. He now plainly sides with the army, and it marches still nearer London, and demands not only its arrears of pay, and redress of other grievances, but claims also "a settlement of the peace of the kingdom, and of the liberties of the subject." On the one side Presbyterian Parliament and London; on the other, the army, drawing closer to the city walls, with Oliver Cromwell its real commander, and with the king in its midst, his majesty vainly hoping that the contending parties may destroy each other, leaving him the master. Hallam says that the royalists "seem never to have comprehended that many active spirits looked to the entire subversion of the monarchy. The king, in particular, was haunted by a prejudice, natural to his obstinate and undiscerning mind, that he was necessary to the settlement of the nation." Nor was Cromwell, nor were his followers, irrevocably hostile to the king. Soon after the capture of the king by Cornet Joyce and his troopers, they declared, "we do not see how there can be any peace to this kingdom, firm or lasting, without a due provision for the rights, quiet, and immunity of his majesty." Unfortunately for himself, Charles Stuart irritated even the portion of the army well disposed to him by his utter deceitfulness.

For a little time there is compromise between the Presbyterian and Independent factions, and an effort is made to

limit the duration of the Parliament by its own vote, in which effort Oliver Cromwell is beaten by a small majority only. The king keeps a sort of prisoner's state in Hampton Court Palace, which serves as a not unpleasant gaol, until all negotiations fall through, and on the 11th of November, 1647, he absconds from Hampton Court. His Majesty's flight had been hastened by the discovery—through the interception of letters to the queen—of the worse than double part that his insincere kingship was playing. The army had been provoked at the notion that they had been tricked by the king. Fifth-monarchy men began to menace the king's person; and in the army the levelling spirit, which had threatened Parliament, turned also, for an instant, its angriness against Oliver Cromwell, who quickly, and without mercy, trampled out the mutinous spirit, the leader being shot as a warning to prevent other want of discipline.

The king is a prisoner in Carisbrooke Castle. The Scotch, who not long since delivered him into bonds, now march, or threaten to march, into England, to obtain his majesty's release. The very hope encourages Presbyterian royalism in Wales, which bursts out in royalist risings; but Cromwell burns one place, starves another, and generally terrifies the Welshmen into quiescence; even if he does not win them to the complete abandonment of the now utterly-ruined monarchy. The Scotch threatening is at last real invasion. Duke Hamilton has crossed the border with heavy forces, and is coming southward, Preston way, with a huge and straggling army stretching miles backward, like some unwieldy serpent. Cromwell, hurrying out of Wales, and over the Lancashire and Cheshire hills, throws himself on this Londonwards marching army, breaks its back, stamps on its tail, and pounds its fangs into impotence. With the rout at Preston commence the funereal ceremonies for Charles Stuart; to be delayed for a scant space, while in his turn Oliver Cromwell crosses the Scottish border in pursuit of Hamilton's broken men; but coming to an end at Whitehall on the 29th of January, 1649.

The theory of divine-right rule was exploded for ever in England on that day. The divinity which doth hedge around a king proved no barrier to the headsman's axe. There had been an effort in the Presbyterian Parliament to save the king, and, in December, a majority of 129 against 83 had voted that "his majesty's concessions in the treaty of Newport are a ground of settlement." On the second day

after this vote, on the 6th of December, 1648, Colonel Pride's regiment of foot paraded under arms in Westminster Hall, and Colonel Rich's regiment of horse stood in the Palace Yard outside. Pride's purge is applied to the House of Commons. Those who are against the army, may not go in, but must get them gone. The sword is stronger than the law. Lieutenant-General Cromwell has hurried up to town: the minority has become majority, and Charles Stuart is "convicted, attainted, and condemned of high treason." Here it is not fair matter to discuss regicide at any length; killing kings is poor work and useless work. Republics are not created by carving off the head of a monarch; they can only grow gradually in the development of peoples into a grandeur of stature higher than tinsel kingcraft knows. Regicide is weak work, for it is mostly the vengeance of an indignant people, for a wrong which was only possible while that people participated or acquiesced in the perpetuation of the wrong. I am against beheading kings, as a matter of policy; it is only chipping off an unimportant morsel of the monarchy; but I am still more against killing kings, as a matter of principle, for I object entirely to capital punishment. Punishment can only be lawful—that is, moral; that is, useful—when it has for its end and aim the prevention of the recurrence of crime, not only in the criminal, but also in the society to which the individual culprit belongs. Punishment which is only vengeance for past offence is itself crime, and it brutalises those by whom, and amongst whom, the vengeance is carried out. I am against killing kings, for I am against the right of society to take human life; but while capital punishment obtains in any country, I know no reason that the headsman's axe should be blunted and turned from a king's neck. The law should see no distinction of person in any citizen, unless, indeed, it tempers itself with tenderness to the poor-born, the weak, the starved, and the ignorant. I do not understand the cant of warped humanity, which sheds a tear for the royal martyr, and has, nevertheless, dry eyes for the scores of thousands, whom the royal murderer pushed to death and ruin by his crime, his folly, or his impotence.

On the 19th of May, 1649, it is solemnly declared that England is "A commonwealth or free state, and shall from henceforth be governed as a commonwealth and free state, by the supreme authority of this nation, the representatives of the people in Parliament, and by such as they shall

appoint and constitute officers and ministers under them for the good of the people, and without any king or House of Lords." Alas! paper decrees do not make commonwealths, and England as yet is hardly full enough of men to continue a government "without any king." An uncrowned king has already commenced to reign by the force of his own grand will. Charles Stuart is indeed dead, but there is not even the hope or shadow of a possible Republic in England. The one-man rule is more potent than ever; but it is now the rule of a real, resolute man, not that of a mere irresolute royally-born puppet; an Oliver Cromwell wields power, not a Charles Stuart. The uncrowned king governs with a steel sceptre, but he governs for England; Charles Stuart misgoverned for the king. Oliver Cromwell is tyrant, not Republican; but his heart is, despite the lust of power, a patriot's heart, and he uses a giant's might to build his country's glory and its strength. He knows no mercy, no toleration, for episcopal royalism, or mass-saying adherents to the monarchy. He is law and judge, and his verdict is fiercely severe.

Poor Ireland was for, and was against, Charles I., and now is nearly all in arms for Charles II. And so in Ireland, the Lord General Cromwell acts with a Puritan mercilessness of judgment against these misguided Papists. The Irish page is a bloody one—"One could pity this poor Irish people; their case is pitiable enough." But Cromwell does not torture the captive, nor strike the fallen. To the foe in arms, and counting high his strength, fierce fight, no truce, no peace, no mercy. To the foe on his knees, abandoning his arms, all manner of protection and fairness, save one—no shadow of toleration for Rome. The freedom of worship, claimed and taken for Independents, was denied to Romanists. "I shall not where I have the power, and the Lord is pleased to bless me, suffer the exercise of the mass where I can take notice of it. No, nor in any way suffer you that are Papists, where I can find you seducing the people." When the Lord General Cromwell landed, nearly all Ireland was united against the Commonwealth, and had declared for the young Charles II. Two cities alone, Dublin and Derry, and they besieged, still held for the Parliament. In less than twelve months Oliver Cromwell had burned and trampled out all resistance, and, save the city of Waterford, had captured in turn every strong place. No plundering, no murder, no violence permitted;

but when the fight comes, and Tredah summoned will not cede, Cromwell himself has to lead the fresh assault: then no mercy, no pity, all the garrison are put to sword. And more than one Tredah in this twelvemonths' history!

"A train of favouring events, more than any deep-laid policy," says Hallam, "had now brought sovereignty within the reach of Cromwell. His first schemes of ambition may probably have extended no farther than a title and an estate, with a great civil and military command in the king's name. Power had fallen into his hands because they alone were fit to wield it; he was taught by every succeeding events his own undeniable superiority over his contemporaries in martial renown, in civil prudence, in decision of character, and in the public esteem which naturally attached to these qualities." And this from Hallam, hostile, it must not be forgotten, to our Cromwell. The wine of power is an intoxicating draught. The taste grows with the drinking. It is easy now to condemn Cromwell for taking power, but who is there who—having dared to lift the glass to his lips when each drop was bitter—would have the courage to turn away the goblet when the hour of triumph came, and the whole contents seemed sweet and pleasant, and the world, with loud shouts, acclaimed the drinking? It requires a hero's might to leave the won prize ungrasped, and this Cromwell was only a man. A grand man, it is true, as men are measured in these peddling days.

Hardly is Ireland roughly smitten into sullen peace before Scotland again calls for similar chastening. Charles II. has there become a covenanted king; has signed a public declaration acknowledging his late father's sins, and his own errors, which he filially puts to the account of evil training. On the 26th of June, 1650, "Oliver Cromwell, Esq., is made Captain-General and Commander-in-Chief of all the forces raised, or to be raised, by authority of Parliament, within the Commonwealth of England," and in a few more days is on the march to Scotland, where he has to match himself against cool and cautious General David Lesley, who is too strongly intrenched to be attacked safely on his own ground, and who will not leave his chosen lines. Here for nearly two months, with a little poor skirmishing, until Oliver Cromwell and his men get short of supplies, and David Lesley is much worried for his over-caution by kirk committees and royalist civil dignitaries, and battle is given at Dunbar; and on the 3rd of September, 1650, "the Scotch

army is shivered to utter ruin." The day before the battle the Scotch were sure of victory, and Cromwell deemed defeat possible. The fight at Dunbar was not his choice, "we were necessitated," he writes Ireton. The day after the battle his view has changed; he now writes, "the kirk has done their do," and so they had. There is yet more fighting to be done, but it all goes one way. At last, as a desperate effort, the Royalist Scots march southward, carrying with them their young king, and Cromwell hurries after. Through Lancashire, past Shrewsbury to Worcester, where some rest is taken, goes Charles II. Through Northumberland and Yorkshire, and by way of Nottingham, comes Cromwell; and on the 3rd of September, 1651, a year to a day from Dunbar fight, comes the battle of Worcester, where too there is another utter rout, and the young king is a fugitive, without the shadow of an army.

Ten weeks after the battle of Worcester the Long Parliament voted that it would cease to exist on the 3rd of November, 1654. "But why," asks the army, "should there be still three years delay?" And then there are difficulties about the new representation, and on these the army officers and the Parliament are by no means agreed. The army desires to shut out the possibility of a Presbyterian majority, and the Parliament hopes to prevent any other. It is thought by many officers that the Rump Presbyterian Parliament desires to keep its power, and continue its existence. These difficulties grow into dangers, until on the 20th of April, 1653, the Lord-General Cromwell, in plain black, but with a company of musketeers close at hand, goes into the House, and sits him down for about a quarter of an hour, and then, with an "I will put an end to your prating," calls in the musketeers, and dissolves the Parliament by the sole warrant of his will. After a brief two months, by the same warrant of his will, and by no other law, Oliver Cromwell issues his summonses for a National Council, to which come 138, selected by him as members for various counties. This Council, called by some the Little Parliament, by others the Barebones Parliament, is greeted on the 4th of July, 1653, by Oliver Cromwell, in a speech wherein he declares that in the "Act for a Representative," brought forward in the Parliament he had just dissolved, "plainly the intention was, not to give the people a right of choice," but "was only to recruit the House, the better to perpetuate themselves," and "truly, I say, when we saw all this, having

power in our hands, we could not resolve to let such monstrous proceedings go on." This "Little Parliament" worked vigorously for five months, doing in that time some good service to the State, and then resolved, "That the sitting of this Parliament any longer, as now constituted, will not be for the good of the Commonwealth, and that, therefore, it is requisite to deliver up unto the Lord-General Cromwell the powers which we received from him."

On the 16th of December, 1653, "a council of officers, and other persons interested in the nation," nominated Oliver Cromwell Lord Protector of the Commonwealth of England, Scotland, and Ireland. "Through a gross and glaring evidence," says Hallam, "of the omnipotence of the army, the instrument under which he took his title accorded to him no unnecessary executive authority. The sovereignty still resided in the Parliament, he had no negative voice in their laws."

On the 4th of September, 1654, was assembled the first Protectorate Parliament duly elected by the nation. This Parliament wants to discuss too freely; for it discusses the very right and authority of the Protector himself; but only for a week, for on the 12th of September the Parliament House is locked up and guarded with soldiers, and the Members are all invited to attend his Highness in the Painted Chamber, and there he, Oliver Cromwell, tells the assembled Commons "that he would sooner be rolled into his grave and buried with infamy" than throw away the Government, and that, until they all acknowledge his position as Lord Protector, he says, "I have caused a stop to be put to your entrance into the Parliament House." Some submit at once, some more submit to-morrow, some—as Bradshaw, Hazelrig, Thomas Scott, Major Wildman—will not submit at all. Non-submission avails nothing; those who will not submit may have no entrance, no voice, but may get them home, or go whither they will, save into the Parliament House.

The Lord Protector's Government is certainly of the most despotic; but says one, "it makes England more formidable and considerable to all nations than it has ever been in my days." Cromwell looks to Virginia; deals sharply with Spain; refuses to sign the French treaty until some show of justice is done by the Duke of Savoy to the Protestants "of Lucerna, of Perosa, and St. Martin;" and generally marks himself as a live head for England.

There are plots against Cromwell's life, a reward is offered by Charles II. of "virtuous life and blessed memory," of £500 a year to any one who by "sword, pistol, or poison," shall kill "the base mechanic fellow, named Oliver Cromwell," and this reward is offered "on the word and faith of a Christian king." There are men too more dangerous, because more honest, who seek Cromwell's life, because they regard his power as paralysing all hope of liberty. And there is a Parliament which has so reluctantly recognised his chieftainship that it cumbers and hinders his Government by its resolutions and red-tape provisions for limiting his authority; so that on the 22nd of January, 1655, Cromwell makes it a last long speech, of which the peroration is: "I think it my duty to tell you that it is not for the profit of these nations, nor for the common and public good, for you to continue here any longer"; and Parliament is dissolved, even before the five calendar months are yet run out during which it is provided that Parliament shall not be dissolved. Cromwell construes the month to be but four weeks, and he wears a sword that would, if need be, measure a hour to have only fifty minutes.

Parliament had voted the Protectorate elective by 200 voices against 60, and although compelled by Cromwell to admit his personal might unquestioned, had resolutely debated and examined every other article of the instrument of Government, under which the Protectorate had been created. Parliament dissolved, Cromwell governs by a pure military despotism, dividing England into ten districts, presided over by Major-Generals, nominated by himself. These Major-Generals levy heavy taxes on disaffected persons, their authority being, that it is by Cromwell's will. Duties on merchandise having been levied in excess of law, by Cromwell's authority, and a Mr. George Cony, on whom the tax had been enforced, having made suit at law against the collector, Cromwell sent Cony's counsel to the Tower, while the Lord Chief Justice Rolle retired from the bench rather than give judgment against the Protector.

And yet after his fashion, and as between individuals, Cromwell dealt out a rude justice, and in all matters other than those which touched the firm maintenance of his Government, was equitable in his dealings as chief-magistrate of the land. He filled the benches with wise and able judges, and, outside the one question of his personal rule, he governed well for the country which he held in the grip

of his iron gauntlet. In all matters, even of minor appointments, he would have his way, and writes to Mr. Secretary Thurloe: "I have not the particular shining bauble for crowds to gaze at or to kneel to, but—to be short—I know how to deny petitions, and whatever I think proper for outward form, to 'refer' to any officer or office, I expect that such my compliance with custom shall be looked upon as an indication of my will and pleasure to have the thing done."

On the 17th of September, 1656, a fresh Parliament is summoned of about 400 members, and of these Cromwell, against all law, prevents nearly ninety persons from taking their seats. The men excluded have been duly elected, but some are too Republican, some few too Royalist, and Cromwell will have none of them. Under this Parliament the major-general system is abolished with Cromwell's consent, and some slight show of constitutional Government presented. At last, on the 31st of March, 1657, the House of Commons present to Cromwell their petition and advice that his Highness, the Lord Protector, may be pleased to adopt the title "king." Irate major-generals and stern Puritan officers have already remonstrated and urged upon his highness the danger of even seeming to covet any such title. And Cromwell, he will, and he will not, become king. For himself, he is far stronger with the Lord Protector's staff than he would be with the king's sceptre; but then the crown, should he take it, would pass to his son by custom. So he refuses, in view of army opposition, but not too peremptorily, for he still hopes and wishes to wear the crown, if it may be done without too much war with his old Ironside following. In discussing whether or not he shall take the title, he uses no grand thought of right or plea of duty; it is a shambling, hesitating, argument, with none of the thoroughness of Cromwell in it. "I suppose it will have to stand on its expediency," he says, and so it does, and being judged by Cromwell to be not expedient, is at last refused. On the 8th of May his Highness says: "I cannot undertake this Government with the title of king," and so keeps the Government as Protector, with such new advantages and stipulations as Parliament sees fit to give and make; and on the 26th of June, 1657, Oliver Cromwell, now more formally recognised as Protector by the English Parliament, is solemnly installed in his Protectorship, in Westminster Hall, with grand State ceremony, and Parliament is prorogued

until January, 1658, when it meets again with two Houses as of old, Lords and Commons. But into the Commons House now the excluded Members may (by terms of the Petition and Advice) enter if they will but take the oath, and they, or at least some of them, do take the oath, and entering range themselves in sturdy opposition. For ten days there is discontented debate in Parliament, with at least the echoings of disaffection outside; and on the 4th of February, therefore, Oliver Cromwell makes his last speech to the two Houses, saying: "You have not only disjointed yourselves, but the whole nation.....it hath not only been your endeavour to pervert the army while you have been sitting, but some of you have been listing of person by commission of Charles Stuart to join with any insurrection that may be made. And what is likely to come upon this, the enemy being ready to invade us, but even present blood and confusion?.....And if this be the end of your sitting, and this be your carriage, I think it high time that an end be put to your sitting. And I do dissolve this Parliament! And let God be judge between you and me." And now for a brief seven months governs alone again Oliver Cromwell, and on the 3rd of September, 1658, dies.

Oliver Cromwell dead, the Protectorate was dead too. It had never been a Government created by the people, it was the work of one resolute man. During the storm-strife provoked by Charles Stuart's arrogant imbecility, Cromwell had taken the helm of the State ship, and had navigated her, roughly but safely, through tempest, fury, and dangerous passages. But he had allowed none other of the crew to study navigation, nor to share with him the piloting; and when the rudder slipped from his hand, palsied by death, the poor Protectorate bark drifted to wreck, because none had been trained to fill his place. Cromwell's was a one-man rule, a pure despotism. Two thousand years earlier he would have been carried into Rome on the shields of his soldiers, and saluted "Imperator." Cromwell was no Republican; but he was a grand Englishman, who pushed to the front by virtue of his sturdy thoroughness, and who did mighty service for the nation whose authority he took, whose power he wielded. One with whom he dealt roughly said of him: "One could bear a little with Oliver Cromwell, though contrary to his oath of fidelity to the Parliament, contrary to his duty to the public, contrary to the respect he owed to that venerable body from whom he received his

authority, he usurped the functions of Government. His merit was so extraordinary, that our judgments, our passions, might be blinded by it. He made his way to empire by the most illustrious actions; he had under his command an army that had made him a conqueror, and a people that had made him their general." The author of a fine history of "Democracy," recently published in Massachusetts, describes Cromwell as "hypocrite in his religion, a fanatic in his politics, and a despot in his rule." That he was "a despot in his rule," is true; that he was a "fanatic in his politics," I see no evidence. Clearly a monarchist, he trampled on the monarchy and accepted a Government without a king; was content with a Protectorate with one chamber, equally content with a Protectorate with two chambers. Having overthrown the king, would have accepted himself the kingly title, had it not been for the dangerous opposition of men who were alike fanatics in politics and religion. Whether Cromwell was, or was not, a "hypocrite in religion," is harder perhaps to decide, and I may not be the best one to express an opinion. Many great leaders have professed themselves God-sent, and even I, who would always regard such a profession as utterly untrue in fact, am not prepared to say that the utterer is necessarily a hypocrite. Hindostan gave us recently a great leader claiming to be god-sent. The Moslem, twelve centuries ago, had his Mohammed. That Cromwell was a "fanatic" in his religion is, I think, more easily proveable; and that he was, at any rate, in the last eleven years of his life "a hypocrite" in his politics, is, I think, capable of demonstration. But, despite all this, he was a man of huger stature and of mightier will than any other who lived in his age. He made the haughty Spaniard bend; forced Mazarin to be tender to Piedmontese Protestants; compelled the sturdy Dutchman to admit England's supremacy; and made his brief page of power dazzling with the glory of his grand rule. He died, and the night of his life was without starlight; his grave without honour afforded no shelter to his bones. A people whom he had overmastered became again willing servants to the dynasty he had expelled. Sole ruler of his race, his sceptre fell as his coffin was lowered. The might of his manhood had offshoot in no breast. The Captain is dead, and the wind and waves urge the helpless ship to ruin, for amongst the crew none dares take his place.

II.—WASHINGTON.

On the 22nd of February, 1732, nearly three-quarters of a century after the death of Cromwell, George Washington was born at the family homestead on Bridges Creek, on the Virginia side of the Potomac River. Washington was the offspring of a royalist family of estate and position, and his early associations with the friends and relatives of Lord Fairfax were calculated to increase his feeling of reverence for Monarchical and aristocratic traditions. When yet only nineteen years of age, George Washington was appointed Major and Adjutant-General of the Virginian Militia, and before he was twenty-two was charged with a most difficult and dangerous mission to those of the Indians and French then united in arms against the English Colonists, and also to the tribes of Indians who had not yet committed themselves to open hostilities. In this mission he exhibited much prudence, firmness, and devotion, coupled with admirable tact and self-possession.

In April, 1754, Washington fought his first battle with a small French force; and writing to his brother in the flush of the excitement, says how he "heard the bullets whistle." His first campaign ended most disastrously, his command having, after hard fighting, to surrender to a very superior force; but Washington received, nevertheless, the thanks of the House of Burgesses of Virginia for the bravery he exhibited.

In 1755 a great expedition, under General Braddock, having been organised against the Indians, Washington's talents were utilised by the English commander, who appointed Washington as a volunteer aide-de-camp, but only partially adopted the advice given by the young Virginian. The utter disregard by Braddock of part of Washington's information was attended by most fatal consequences; for the English general led his troops into an ambuscade of Indians and Frenchmen, against which he had been warned,

where the English regulars were literally cut to pieces, and Braddock himself was mortally wounded. In this sad business Washington distinguished himself alike for his courage, his modesty, and his wisdom; and when, a little later, the Colony of Virginia raised special forces to defend its boundaries against attacks from the French and Indians, Washington was, with the full assent of his countrymen, appointed Commander-in-Chief of the Colonial forces (somewhat against the wish of Governor Dinwiddie, who behaved with coldness and ungraciousness to the Virginian militia-man). The position of the young Commander-in-Chief was further embarrassed, by the fact that any officer holding a commission from the king refused to obey orders from an officer whose commission was only signed by the Governor; and we find Washington journeying to Boston in the hope to get himself and officers put upon the regular establishment, with commissions direct from King George III. It is useless now to speculate on what might have been the result on Washington's military future had his request been complied with. Luckily for the struggles for independence, his demand in this respect was refused. Theodore Parker, speaking of his severity as a military disciplinarian at this period, says: "From natural disposition, he loved the exercise of power. But he was singularly careful to defer to the civil authority when possible. If the right was doubtful, the conscientious young soldier left it to be exercised by the magistrate, not by the military arm. This is to be noted, because it is so rare for military men to abstain from tyranny." Washington's position was a very painful one; he had to defend a wide-stretching frontier against a wily and savage enemy, and this with an utterly inadequate force, badly supplied with munitions of war. He was thwarted and snubbed by Governor Dinwiddie, and nearly all his requests for necessaries in the conduct of military operations were disregarded. Washington's health entirely broke down under these varied annoyances, and he ultimately resigned his position. Having been elected to the House of Burgesses of Virginia, he took his seat in 1759, being greeted on his entry to the Legislature by the special thanks of the House for the services he had rendered. To these thanks Washington could make no reply; his talents were not those of the orator. Self-possessed in face of danger, he was unnerved amidst his friends by the praise thus publicly tendered to him.

In the House of Burgesses George Washington was not, therefore, at first a conspicuous figure, save as the soldier who had earned its thanks prior to his installation. There is, however, a storm rising through the land which shall so endanger the liberties of the citizens, and excite their wrath, that a man of Washington's stature cannot long be overlooked. The Navigation Laws enforced by England against the Colonies had entirely excluded the Colonists from trade with foreign countries; had subjected the trade between the various Colonies to heavy duties, and had either totally prohibited, or imposed prohibitory restraints on, all Colonial manufactures thought likely to interfere with the manufacturing interests of the mother country. Much discontent and dissatisfaction had been produced, especially in New England, by the operation of the Navigation Laws; and in 1760 this feeling of discontent was aggravated by an attempt made in Boston to collect, under writs of assistance, duties on foreign sugar and molasses, which had been smuggled into Massachusetts. Those writs of assistance were resisted before the law courts as unconstitutional, the question being argued so eloquently by the famous James Otis, that it is said that all his hearers went away ready to take up arms to resist the enforcement of such writs. The litigation on these writs of assistance was really the first potent step in the struggle for independence—the beginning of the great American Republic.

At the conclusion of the French war, the most active efforts were made by the British men-of-war, acting under stringent orders from the Home Government, to suppress the clandestine trade theretofore carried on with the Spanish Colonies. To this the New England men replied by resolving not to purchase British fabrics, and the home trade was in consequence much diminished.

In 1764 the ill-advised Ministry of George III. sought to levy taxes in the Colonies, and in 1765 the famous Stamp Act was passed. Washington, who had hitherto been a devoted royalist, and had shown himself submissive to all the procedures of the Home Government, now denounces "this unconstitutional method of taxation." The resistance to the Stamp Act was so great that it was repealed on the 18th of March, 1766; and Washington then writes that all "who were instrumental in procuring the repeal are entitled to the thanks of every British subject, and have mine cordially." So that in the spring of 1766 Washington not only

regarded himself as a British subject, but actually raised no objection—perhaps saw no objection—to the clause of the repealing act—so much impeached by Henry, Otis, Franklin, and the Adamses—which declared that "the king, with the consent of Parliament, had power and authority to make laws and statutes of sufficient force and validity to bind the Colonies and people of America, in all cases whatsoever." Those who contended for principles in America still protested against this clause, but Washington took no part in the protest. He remained quietly at Mount Vernon attending to his plantation. Year by year the attitude of the Home Government grew more menacing, and the dissatisfaction in the Colonies grew more marked. In 1767 a variety of duties were enacted for collection in the Colonies. To prepare for a possible struggle "armed negotiators," in the shape of two regiments, were sent from England to Boston to protect the Commissioners of Customs. The inhabitants of the Bay State City resolved, in towns' meeting, that the king had no right to send troops thither without the consent of the Assembly, and quarters were refused to the troops, who were thereupon billeted in the State House, in Faneuil Hall, and other public buildings. The resistance offered in Massachusetts encouraged others. Washington in 1769 writes to his friend George Mason: "At a time when our lordly masters in Great Britain will be satisfied with nothing less than the deprivation of American freedom, it seems highly necessary that something should be done to avert the stroke, and maintain the liberty which we have derived from our ancestors. But the manner of doing it, to answer the purpose effectually, is the point in question. That no man should scruple, or hesitate a moment, in defence of so valuable a blessing, is clearly my opinion; yet arms should be the last resource."

In 1769, on the proposition of Washington, the burgesses of Virginia—following the example of the northern Colonies—pledged themselves neither to import nor use any goods, merchandise, or manufactures taxed by Parliament. Washington adhered rigorously to this, and strictly enjoined his London agent not to ship him anything subject to taxation.

In 1770 Lord North became Prime Minister in England, and he abandoned all the duties levied in 1767, save one, the right to a tax on tea, which he reserved, "to maintain the Parliamentary right of taxation." "A total repeal," he said, "cannot be thought of till America is prostrate at our

feet." This tea tax, if it had been collected, would have produced not quite £300 a year. England spent £139,521,035 in the vain endeavour to enforce the tax!!

EARLY in 1773 Lord Dunmore was appointed Governor of Virginia, and despite the hostile feeling arising between the Colonists and the Government, Washington appears to have been on the most friendly and intimate terms with the Court Party, until the arrival in Virginia of the news of the monstrously mad and vindictive policy adopted by Lord North—a policy which it is now clear was actually strongly urged and enforced by George III.—by which the port of Boston was to be closed and its commerce entirely ruined. The whole of Massachusetts determined to stand by Boston, and the query now was, Would the other Colonies stand by Massachusetts? Washington offered to "raise one thousand men, and subsist them at my own expense, and march myself at their head for the relief of Boston." General Gage had encamped his infantry and artillery on Boston Common, and the cry went round the whole country to break off all intercourse with Great Britain, until the colony was restored to full enjoyment of all its rights; and further, to renounce all dealings with those on this American side, who should refuse to enter into a similar compact. On the 18th of July, 1774, a meeting was held in Fairfax County, at which a committee was appointed, with Washington as chairman, to draw up resolutions, which state first the illegal conduct of the British Government; covenant not to import or hold intercourse with England or any colony, town, or province refusing to agree to the plan adopted by the General Congress; then recommend a petition to the king, "lamenting the necessity of entering into measures that might be displeasing; declaring their attachment to his person, family, and Government, and their desire to continue in dependence upon Great Britain." The attachment to the person of "mad George" may be passed by as a phrase of fashion, and even when we remember that his family included the lustful and lying George IV., the corrupt and brutal Duke of York, the niggardly and paltry William IV., and the bestially immoral Duke of Cumberland, it must not be forgotten that the "family" was then very young, and the "attachment" was probably for the good qualities which the Royal Family might have manifested had their lives been reversed, and their vices passed for virtues.

On the 3rd of September, 1774, a General Congress of

fifty-one deputies, delegated from the various Colonies, assembled at Philadelphia (Georgia alone being unrepresented). It was from this Congress that the famous address was sent to England which won such high praise from the lips of Chatham. On his return from this Congress, the eloquent Patrick Henry was asked whom he considered the greatest amongst the men assembled there. He replied; "If you speak of eloquence, Mr. Rutledge, of South Carolina, is by far the greatest orator; but if you speak of solid information and sound judgment, Colonel Washington is unquestionably the greatest man on that floor." Even yet Washington—irritated as he and his friends had become by aristocratic misrule—had no sort of disposition to advocate any separation from the mother country. Writing to Captain Mackenzie as to Independence, he says: "I am well satisfied that no such thing is desired by any thinking man in all North America."

It is worthy notice that the struggle in England, out of which Cromwell grew into power, and that in America, which ended in the elevation of Washington to the chief magistrature, had each its inception in the denial of the right claimed by the king and his ministers to levy taxes without the consent of the taxed. It was not, says Washington, "against paying the duty of 3d. per pound on tea..... No, it is the right only that we have all along disputed." Although Washington appears to have been opposed to some of the extreme measures of resistance advocated by a strong party of the Eastern men, yet so soon as a definite course was resolved upon, he went loyally with the majority; and he wrote to his brother, "It is my full intention, if needful, to devote my life and fortune to the cause."

The crisis soon came; General Gage detached a body of regular troops to destroy some provincial military stores at Concord, Massachusetts. At Lexington Green these troops fired on the local yeomanry, and before night a large body of English troops had been literally chased into the City of Boston by the "minute men," who ran, gun in hand, from their industries, to revenge the blood recklessly shed on the road to Concord. The Massachusetts yeomen, in their indignation, blockaded the English army within the limits of Boston, and the second Philadelphia Congress shortly afterwards appointed George Washington Commander-in-Chief of the insurgent army, now assembled in front of the Bay State City. Washington—who had in no fashion sought

the appointment, and whose nomination had been unanimous—when he accepted the position, added: "But lest some unlucky event should happen unfavourable to my reputation, I declare that I do not consider myself equal to the command I am honoured with. As to pay, I beg leave to assure Congress that, as no pecuniary consideration could have tempted me to accept this arduous employment, at the expense of my domestic ease and happiness, I do not wish to make any profit of it. I will keep an exact account of my expenses. These, I doubt not, they will discharge, and this is all I desire." Adams, in a letter written at the moment, praises highly the conduct of Washington, "a gentleman of one of the fairest fortunes upon the Continent, leaving his delicious retirement, his family and friends, sacrificing his ease, and hazarding all in the cause of his country. His views are noble and disinterested."

There is a tree at Cambridge—an old elm—where it is noted that Washington assumed his high command; and the first time I halted under the tree I tried hard to picture to myself the variously accoutred, roughly-dressed, badly-armed array of agriculturists which had so shut into Boston the well-drilled, well-armed, and highly-trained regular troops of the British Monarchy. The great fight at Bunker Hill—in which the gallant though unsuccessful attempt to fortify a position which would have commanded every portion of the City had shown the sturdy stuff of these New England "minute" men—had taken place prior to Washington's assumption of command. What army he found was to him very disappointing. Tired of merely watching the British forces, many of the newly-enrolled troops had returned to their farms, which sorely needed cultivation; and instead of 20,000 men supposed to be in camp, Washington only found there about 14,000 fit for service, and many of these without muskets or ammunition. The only troops presenting any appearance of drill or fair equipment were those from the small colony of Rhode Island. Theodore Parker says: "The camp was full of jealousies, rivalries, resentments, petty ambitions; men thinking much for themselves, little for their imperilled nation." Washington desired to force General Howe into general action, but, on taking stock of the gunpowder in the stores, found that the whole supply of powder would not provide nine cartridges per man.

In the American, or "Continental," army, as it was called, there were many divisions of opinion and interest. Some of the New England officers were personally indisposed to co-operate with the Virginian gentleman, whom they found much too aristocratic for their home-spun fancies. To quote the words of Washington himself: "Confusion and discord existed in every department, which in a little time must have ended either in the separation of the army, or fatal contests with one another." While Washington was organising his troops, and slowly obtaining for them the necessary military equipment, he had the constant fear that the British army might be able to take advantage of the disorganisation in the newly-raised levies he commanded. But General Gage and General Howe were content, while waiting for reinforcements, to thunder away from Bunker Hill batteries, while keeping their troops within their own works; the Americans, from want of powder, making but scant reply to the noisy cannonade.

The delay in the siege produced many embarrassments. Men who were brave enough in a fight would not patiently wait, doing nothing, in front of this fortified city, while their farms went to ruin. Enlisted for one year only, many would not re-enlist at all. Those who did manifest willingness to re-enlist would only serve under officers of their own choice; and men from one Colony, as Connecticut, would not serve under Rhode Island officers. In a letter written at this juncture Washington says: "I find we are likely to be deserted at a most critical time.....Our situation is truly alarming.....Could I have foreseen what I have experienced, and am likely to experience, no consideration upon earth should have induced me to accept this command." It must not be forgotten that the position of the men was not of the most enviable kind. "The first burst of revolutionary zeal had passed away; enthusiasm had been chilled by the inaction and monotony of a long encampment." No regular commissariat, and nearly all comforts absent. "The troops had suffered privations of every kind—want of fuel, clothing, provisions. They looked forward with dismay to the rigours of winter, and longed for their rustic homes and family firesides." Throughout the Colonies much more was expected from Washington than he was able to perform, his available force was over-rated, and his motives for inaction mis-construed. "I know," writes Washington on the 10th of February, 1776, "the unhappy predicament I stand in; I

know that much is expected from me; I know that, without men, without arms, without ammunition, without anything fit for the accommodation of a soldier, little is to be done, and, what is mortifying, I know that I cannot stand justified to the world without exposing my own weakness, and injuring the cause by declaring my wants; which I am determined not to do further than unavoidable necessity brings every man acquainted with them.....My own situation is so irksome to me at times that, if I did not consult the public good more than my own tranquillity, I should long ere this have put everything on the cast of a die. So far from my having an army of 20,000 men well armed, I have been here with less than half that number, including sick, furloughed, and on command, and those neither armed nor clothed as they should be. In short, my situation has been such that I have been obliged to use art to conceal it from my own officers.....To have the eyes of the whole Continent fixed with anxious expectation of hearing of some great event, and to be restrained in every military operation for want of the necessary means of carrying it on, is not very pleasing, especially as the means used to conceal my weakness from the enemy conceal it also from our friends."

Ultimately, as every one knows, the regular army of England evacuated Boston, beleagured by "an undisciplined band of husbandmen," and General Howe and his well-equipped legions sought safety in the warships from the persevering advances of Washington to the reduction of the Bay State City.

Convinced that "no accommodation could be effected with Great Britain, on acceptable terms," and that "a protracted war was inevitable," Washington now sought to force upon Congress the need for enlisting an army disposable for the whole war, and available in any portion of the continent. While his energetic remonstrances produced some improvements, there was still much left to be desired. The base of operations was changed from Massachusetts to New York State. Now, to a much larger degree, than when near Boston, Washington felt the effects of treachery; one plot nearly cost him his life, his very body-guards having been corrupted. Those who were the most willing agents of Monarchy and Toryism were found amongst the Quaker families, one of which, for its cowardly rascality, still receives from the British Government a pension of £4,000 a year.

On the 4th of July, 1776, Independence was declared in words; but a severe reverse, sustained by Washington on Long Island, made many persons despair of its realisation. The troops he had under him in this campaign were very ill-equipped. "Many of the yeomen of the country, hastily summoned from the plough, were destitute of arms, in lieu of which they were ordered to bring with them a shovel, spade, or pickaxe, or a scythe straightened and fastened to a pole." The effect of the defeat on Long Island was shown in the wholesale return to their farms in Connecticut alone of more than 4,000 men. Despite all this, Washington always presented a firm face to the enemy, even when himself nearly heart-broken, by the disregard of his entreaties by Congress, and by the indisposition shown by the several Colonial Governments to second his exertions, and comply with his requirements.

In September, 1776, the difficulties of his position, and the defection of some of his troops, seem to have rendered Washington desperate, and in some of the frays he risked his life needlessly. His natural calm, however, soon returned, and though evidently very doubtful as to the possibility of ultimate victory, he now recommenced those series of careful manœuvres which so embarrassed the English and German generals to whom he was opposed. General Washington had the danger of his position considerably heightened by the conduct of General Lee and General Gates. The first a brave and ambitious soldier, who aspired to the chief command, and who regarded Washington's star as on the wane, actually withheld reinforcements from Washington's crippled forces, when the latter was retreating through the Jerseys after the British successes at Fort Washington. The second (Gates) about the same time pleaded ill-health as an excuse for avoiding a command, so that he might go to Philadelphia to intrigue against Washington before the Congress.

If not entirely disregarding, at any rate in no fashion publicly noticing, the hostility of Lee and Gates, General Washington gave courage to his army, and restored the sinking spirits of the American Colonists, by a most brilliant dash at the Hessian quarters at Trenton, where, with actually inferior forces, he created an utter panic amongst the British troops. Just after the Trenton victory there is a fine illustration of the slender thread on which hung the future of American Independence. Several of the

regiments wished to return home; only enlisted for one year, their term of service had expired, their pay was in arrear, their presence was indispensable to Washington, at any rate for a short time, and by the offer of a bounty of ten dollars per man, they were induced to agree to stay for six weeks; but there was no money in the pay-chest, and the poor, penniless men could not rely on promises of future payment. Washington had to borrow £150 to enable him to pay the most pressing, and thus temporarily kept his forces together.

At the close of 1776 Washington was invested by Congress with almost dictatorial powers, and in acknowledging the resolution of Congress, he says: "I find Congress have done me the honour to entrust me with powers, in my military capacity, of the highest nature and almost unlimited extent. Instead of thinking myself freed from all civil obligations by this mark of their confidence, I shall constantly bear in mind that, as the sword was the last resort for the preservation of our liberties, so it ought to be the first thing laid aside when those liberties are firmly established." Washington was true in letter and in spirit to this promise. No enticement of ambition made him waver for one moment in his fidelity to the trust he had accepted.

Although Washington possessed nearly absolute authority, he seems to have been extremely reluctant to use it, and often permitted Congress to interfere, and to make appointments and arrangements which were neither consonant with his views nor with the dignity of his position. This is of course open to the criticism, that had Washington been less wise, it might have been very difficult for him to have held together the Eastern men, some of whom honestly seemed to entertain the notion that despite his professions Washington was really aiming at the establishment of a military rule.

The surrender of General Burgoyne, and the division under his command, to General Gates in the north; and the repulse of the army under Washington at Germantown, gave room for some of the disaffected to revive the intrigues hostile to the Commander-in-Chief. General Gates not only omitted to report to George Washington the surrender by Burgoyne, but actually corresponded secretly with dissatisfied officers in Washington's camp to induce them to cabal against their chief. The glorious achievements of Gates were compared with the disasters which attended

Washington in this campaign. It was overlooked that Gates —who was afterwards utterly ruined by his defeats in the South—was only carrying out Washington's original far-seeing plan of operations, and with a very large force at his command, aided by a generally favourable spirit in the part of the country where his military operations were conducted, while Washington had an inferior force weakened by troops he had detached to aid Gates—which troops General Gates now withheld from his Commander—and was in a lukewarm State, where many were disaffected to the American cause. Washington himself says that "General Gates was to be exalted on the ruin of my reputation and influence." The American army had great difficulty in obtaining provisions; in some places where the inhabitants had provisions and cattle, they denied them to General Washington, and preferred taking their cattle and food to Philadelphia, where the English army gave them higher prices.

In 1778 Washington writes: "For some days past there has been little less than a famine in the camp; a part of the army has been for a week without any kind of flesh, and the rest three or four days. Naked and starving as they are, we cannot enough admire the incomparable patience and fidelity of the soldiery." Philadelphia was occupied during the winter by a British army 20,000 strong, provided with every comfort; while Washington was at Valley Forge, besieging the city after a fashion, with not more than 5,000 men, in sadly wretched plight, sometimes without ammunition to serve its cannon. At last General Howe resigned the command of the British army to Sir Henry Clinton, by whom Philadelphia was evacuated, under orders from the Home Government.

Now came the effect of the treaty concluded by Franklin, between France and America, in the aid of a French squadron and French funds. This French contingent rather increased the temporary difficulties of Washington as Commander-in-Chief, although the general effect of the French alliance was to render the British prospects in the Colonies one of the gloomiest character. George III. was wicked enough, personally, to encourage the barbarous employment of Indians; and scalping, ravishing, and burning were amongst the means ineffectually resorted to by an anointed king to win back the affections of his subjects. The English Church and English landed aristocracy, by public addresses, encouraged their king in his cruel obstinacy, and the war

to subdue the Colonies was to be carried on in despite of the failures already experienced. In America the French alliance had at least one bad effect; many deemed that the war would now cease at once; that there was, therefore, no necessity for continuous supplies to the army; for long drills or great preparations. The several Colonies were unwilling to comply with military requisitions, which they thought had now become needless, and General Washington found himself exceedingly embarrassed, and his popularity endangered by his persistence in requiring the means for continuing a long, arduous, and costly struggle; and at the close of 1778 he writes: "Our affairs are in a more distressed, ruinous, and deplorable condition than they have been since the commencement of the war."

Difficulties in the internal condition of the army, and its relation to the various States, may be best illustrated by the case of the Jersey Brigade, in which, in 1779, the officers —who complained that they could get no pay, and that their families were starving—refused to march unless their arrears were first discharged. Here Washington acted with great tact as well as with great firmness; and while entirely denying the right of the officers or men to utilise their military position, he at the same time pressed Congress and the State Legislature to deal more patriotically with their defenders in the field.

For weeks at a time the army was on half allowance of food, sometimes without meat, sometimes without bread, sometimes without both. Congress being destitute of the power of levying general taxes, the State Governments were each severally charged with the duty of supporting their own quota of troops to the army. This naturally resulted in great inequality and discontent. Some States furnished their troops amply with pay and clothing; some States were niggardly in these respects; and some States were so neglectful as to leave their troops practically destitute, producing in these latter a more discontented and mutinous spirit from the contrast with their more favoured brethren.

To remedy this disastrous condition of things increased powers were sought for Washington, but any augmentation of his already large authority was strenuously objected to by some of the best men. It was urged "that his influence was already too great; that even his virtues afforded motives for alarm; that the enthusiasm of the army, joined to the

kind of dictatorship already confided to him, placed Congress and the United States at his mercy."

In the middle of 1780 matters came to a crisis. Two Connecticut regiments turned out in armed meeting, resolved to march home, "or at best to gain subsistence at the point of the bayonet." Suppressing this mutinous outbreak with considerable difficulty, Washington found it nearly impossible to get bread for his famishing soldiers, and in a spirit of deep despondency he wrote: "I have almost ceased to hope." Yet when the English commander, informed by his spies of the condition of Washington's forces, marched to attack the American troops, he found that Washington's great personal influence was enough to arouse their patriotism and unite their ranks; and instead of a discontented and disorganised rabble, the British were confronted by a compact and well-ordered, though badly-equipped, army, before whom the English forces retreated, despite the superiority on the royalist side.

In 1780 Washington seemed at the end of his resources. He writes: "I see nothing before us but accumulating distress. We have been half our time without provisions, and are likely to continue so. We have no magazines, nor money to form them; and in a little time we shall have no men, if we have no money to pay them." The Pennsylvanian troops mutinied in 1781, and compelled Congress to treat with them. Encouraged by this, a part of the Jersey troops also revolted; but Washington, here close at hand, sternly stamped out this revolt. A striking feature connected with these mutinies by the American troops against Congress is, that the mutineers nevertheless remained faithful to the American cause, and made prisoners of agents sent to them with money and promises from the English camp.

In October, 1781, the war was practically decided by the surrender of Lord Cornwallis at Yorktown; and it is needless to dwell here at any length on the closing scenes of a struggle which terminated on the 20th of January, 1783, by the signature of the treaty at Paris.

The army, as in the case of the Commonwealth struggle, was now a power in the land. The pay of officers and men was in arrear; they had many grievances; the future conduct of affairs was doubtful; there was a suggestion of—if not an absolute attempt to organise—a military government. One veteran officer took upon himself to suggest to Washington

that "the title of King would be attended with some material advantages." Washington replied without hesitation that no event in the war had given him so much pain as "your information of there being such ideas expressed in the army," which "I must view with abhorrence and reprehend with severity." With the army General Washington had a most difficult task. Their grievances were real, and to the Congress at Philadelphia he represented these in the strongest terms. To the army itself he was sternly firm in forbidding any use of their military force in support of their claims against Congress.

At last, on the 23rd of December, 1783, at Annapolis, having first in methodical fashion settled up his pecuniary accounts—and without one farthing pay or profit or recompense for his military services—George Washington relinquished the authority the nation had entrusted to his hands, and retired to private life without a stain on his shield, unhesitatingly disregarding those allurements of power which would have been irresistible to a weaker man. It is noteworthy that the total amount of Washington's account—including £1,982 10s. for secret service—was only £19,306 11s. 9d., and this was from July, 1775, to December 28th, 1783. In General Washington's own private book there is an entry that he was a considerable loser from items that, "in the perplexity of business," he had omitted to charge. No claim was ever urged by him to have this deficiency made up.

In 1785, the Assembly of Virginia, by an unanimous vote, gave to Washington a number of shares, value about 40,000 dollars, in two schemes connected with the navigation of the Potomac and James Rivers. Washington, who had resolved not personally to accept any valuable reward, asked and obtained the permission of the Virginian Legislature to apply the gifts to objects of a public nature, and ultimately the value was devoted to educational purposes.

The conclusion of the struggle with the mother country left the many, discontented with the burdens and troubles of the war, a full opportunity for the expression of their dissatisfaction. The Government had little or no effective authority now that the war was concluded, and martial law no longer prevailed. "The confederation," writes Washington, "appears to me to be little more than a shadow without the substance, and Congress a nugatory body, their ordinances being little attended to." Colonel Henry Lee

having applied to George Washington to use his influence with the people, the latter thus replied from Mount Vernon: "You talk, my good Sir, of employing influence to appease the present tumults in Massachusetts. I know not where that influence is to be found, or, if attainable, that it would be a proper remedy for the disorders. Influence is not government. Let us have a government by which our lives, liberties, and properties will be secured, or let us know the worst at once. There is a call for decision. Know precisely what the insurgents aim at. If they have real grievances, redress them if possible; or acknowledge the justice of them, and your inability to do it at the moment. If they have not, employ the force of the Government against them at once. If this is inadequate, all will be convinced that the superstructure is bad and wants support.....Let the reins of Government be braced and held with a steady hand, and every violation of the constitution be reprehended. If defective, let it be amended; but not suffered to be trampled upon whilst it has an existence."

Something had to be done to bind the independent Colonies together. "A government," says Marshall, "authorised to declare war, but relying on independent States for the means of prosecuting it; capable of contracting debts, and of pledging the public faith for their payment, but depending on thirteen distinct sovereignties for the preservation of that faith, could only be rescued from ignominy and contempt by finding those sovereignties administered by men exempt from the passions incident to human nature."

On the 25th of May, 1787, a Congress assembled at Philadelphia, of which George Washington was appointed President. After several months of doubtful, and sometimes bitter, discussion and uncertainty, this Congress published the Constitution of the United States of America. Of this Constitution Washington writes to Lafayette that, while not free from defects, "the general Government is not invested with more powers than are indispensably necessary to perform the functions of a good government," and 'that these powers, as the appointment of all rulers will forever arise from, and at short stated intervals recur to, the free suffrages of the people, are so distributed among the legislative executive and judicial branches into which the general government is arranged, that it can never be in danger of degenerating into a monarchy, an oligarchy, or an aristocracy, or any other despotic or oppressive form, so

long as there shall remain any virtue in the body of the people."

Under the New Constitution the first Wednesday in January, 1789, was appointed for the election by the people of their first President, and the vote was unanimous in the choice of George Washington.

III.—THE CONTRAST.

THOUGH in many respects occupying positions of similar character, no two men could be more dissimilar than Oliver Cromwell and George Washington. The first, as is shown by his life, grew into a ruler of men by the force of his own character and by the warrior skill he manifested, and this in spite of the leading spirits of his age. The second became the chief magistrate of a newly-made nation by the force of the times, by the suffrages of men with intellects clearer, and even bolder, than his own, and because of the thorough faithfulness he had shown to the cause to which he had most disinterestedly and unselfishly devoted himself. Cromwell made his will the law for the nation, and used his sword to enforce the law. Washington accepted the will of the majority, which had entrusted him with authority, as the law which he was bound to obey. Cromwell played the army, and especially his Ironsides, against the Parliament. Washington submitted most completely to Congress, and refused to side with the dissatisfied army when it wished to rely on its weapons to enforce the redressal even of its just grievances. Neither Cromwell nor Washington were really Republicans. Cromwell, though destroying the Monarchy, never ceased to be Royalist, and took himself the throne—uncrowned, it is true, save by the trooper's helmet, in which he had fought his way to the right to wield the Protector's sceptre-staff. Washington, wrestling against a far-away and blundering Government, amidst men with more vigorous politics than he had learned, went with the stream, and became Republican *malgré lui*—that is, he accepted the form, and honestly strove to adopt the spirit from the grander brains who gave to the world the famous Declaration of Independence. Washington made a better man than Cromwell. Cromwell was a bigger man than Washington. Washington rejected the mere whisper of a crown, and indignantly condemned the suggestion, even

before it had found clear shape of utterance. Cromwell created the spirit which formally presented to him the kingly dignity for acceptance, and he weighed the glittering bauble regretfully in his hands before he put it aside as an ornament scarcely valuable enough to wear, as against the danger of weakness it brought to the wearer.

There can be few men more thoroughly true and honourable than George Washington. History tells of *no* other man that you may rank in the same line with Oliver Cromwell. Washington has many statues, for the century which has marched over his grave has freshened each year the laurel-wreath with which the giant child-Republic crowned its foster-father. Oliver Cromwell has few or no monuments. The country to which he devoted his virility has seen his bones rattle in gibbet chains, and for two hundred years has, on its knees, thanked God that hollow, tinsel, lying, lustful, Stuart was restored to rule England, in lieu of this fierce, sturdy, Puritan man, whose soul inbreathed power only because the power carried England's standard higher.

A fitting emblem for Oliver Cromwell is presented by the grandly glorious Western sunset. Still mighty in the fierceness of its rays, few eyes can look steadily into the golden radiance of that evening sun; the strongest must lower their glances, dazzled by its brilliance. Every cloud is rich with ruddy gilding, as if the mere presence of that sun made glorious the very path it trod. And yet, while one looks, the tints deepen into scarlet, crimson, purple, as though that sun had been some mailed warrior, who had gained his grand pre-eminence by force of steel, and had left a bloody track to mark his steps to power. And even while you pause to look, the thick dark veil of night falls over all, with a blackness so cold, complete and impenetrable, as to make you almost doubt the reality of the mighty magnificence which yet has scarcely ceased. In the eventide of his life's day such a sun was Cromwell. Few men might look him fairly in the face as peers in strength. His presence gives a glory to the history page which gilds the smaller men whom he led. And yet Tredah and Worcester, Preston and Dunbar, and a host of other encrimsoned clouds, compel us to remember how much the sword was used to carve his steps to rule. And then comes the night of death—so thickly black that even the grave cannot protect Cromwell's bones from the gibbet's desecration.

And not unfittingly might the sunrise, almost without twilight, in the same land, do service as emblem for George Washington. He must be a bold man who, in the mists and chill of the dying night, not certain of its coming, would dare watch for the rising sun. And yet, while he watches, the silver rays, climbing over the horizon's hill, shed light and clearness round; and soon a golden warmth breathes life and health and beauty into blade and bud, giving hope of the meridian splendour soon to come. George Washington was the morning sun of a day whose noontide has not yet been marked—a day of liberty rendered more possible now that slavery's cloud no longer hides the sun; a day the enduring light of which depends alone on the honest Republicanism of those who now dwell in that land where Washington was doorkeeper in Liberty's temple.

THE LAND, THE PEOPLE, AND THE COMING STRUGGLE.

THE growth of the Agricultural Labourers' movement in England, the increasing agitation for the repeal of the law of hypothec in Scotland, and the wail from ruined farmers in the Lowlands, all serve to show that it will be on the Land Question that that large section of the English aristocracy which regards the preservation of territorial rights and privileges as essential to good Government will shortly have to encounter a stronger force, and to cope with a wider movement, than has been manifested in England during the last 200 years. It is in connection with the Land Question that thoughtful working men are commencing to look for a speedy solution of some of the most difficult problems as to the more striking evils of modern society.

So long as skilled labour in mine or factory could easily earn the means of purchasing grain from foreign lands, men remained comparatively quiescent, while the native landholders usurped power and avoided obligations. To-day labour struggles despairingly against reduced wage, and to-morrow's outlook is still more gloomy. While wages are decreasing, the cost of living is augmenting. House rent in England and Wales alone has increased from £36,575,600 per year—which it was in 1846—to £80,726,502—which it had become in 1873—a growth of more than thirty-four millions of pounds in twenty-seven years, all paid by the poor to the rich. The annual income from land, including mines and minerals, has increased, since 1698, from a little over £6,000,000 to about £200,000,000.

The bulk of the land is in the hands of comparatively few persons, and these monopolise the House of Lords, and materially control the House of Commons. In Scotland, 171 persons own 11,029,228 acres of land, and 409 other persons own other 3,876,980 acres, that is, 580 persons own 14,906,208 acres. In England 773 persons own 8,219,468 of acres, making that, in England and Scotland, 1353 persons own more than twenty-three millions of acres.

In too many cases these landholders treat their freehold rights as of infinitely more importance than the happiness of the peasantry of the neighbourhood. Ancient footpaths are closed, common rights denied, game preserving and rabbit breeding carried on to the point of crop annihilation, county members nominated and returned as if the title to the freehold carried with it monopoly of political right; and a most contemptuous indifference is shown as to the condition of the tiller of the soil, or, what is even worse, there is a mockery of charity, to remedy in small part the evil which the very charitable gentry have themselves created.

For the last 163 years this landed aristocracy has been the real governing class, superseding the Crown, and, until 1832, entirely controlling the people.

During this time—viz., from 1714—the standing army has been built up, and the National Debt has been almost entirely created, while Imperial taxation, and the rent-rolls of the few privileged ones, have enormously increased; thus the burdens of Imperial and local taxation have been shifted from the shoulders of the landholder to those of the labourer. For since, with the accession of the Brunswick family to the English throne, the monarch, excluded even from the political councils of the nation—at first because he could not speak the language of his subjects, as in the case of George I.; then because of his indifference, as in that of George II.; and then because of his oft-recurring insanity, as in that of George III.—has been practically reduced to a mere costly show puppet, it is impossible for the student of our history not to remark how the landed aristocracy have utilised their possession of political power for the transference from their own shoulders of the bulk of the local and Imperial taxation.

Amongst the agricultural classes, pauperism has become more permanent and more widespread, and certain classes of crime and misery have more prevailed, as the land monopoly has become more complete.

The agricultural labourers of many English counties, and notably of Dorset, Wilts, Gloucester, Norfolk, Suffolk, have, from bad and insufficient food and shelter, so degenerated, that their state is a disgrace to any civilised country in the world. The *Westminster Review* urges, on the evidence of Mr. Simon, Medical Inspector, that rather more than one-half of our Southern population are so badly fed, that a class of starvation diseases, and a general deterioration of mind,

must result. In Berkshire, Oxfordshire, and Somersetshire, insufficiency of nitrogenous food is the average.

Landowners, in the large majority of instances, and this whether the proprietor be Whig or Tory, regard their tenants as bound to follow the politics of their freeholder, and as fairly liable to ejectment when malcontent.

Mr. Latham, a magistrate of Cheshire, before the House of Commons' Committee, said that "it was the evil of property that a man considers that he owns not only the property itself, but that he owns the souls of the tenants also."

The Duke of Buccleuch, not content with the influence which his vast holdings in Scotland give him, has actually followed the practice of manufacturing voters, by granting to certain persons feu rents or freehold rent-charges, to qualify them for county voters, and this to such a glaring extent as to excite popular indignation. This fabrication, however immoral, is held to be legal, although, since the grant of the rent-charges, his Grace has actually sold to a railway company a considerable portion of the property charged. This Duke of Buccleuch, in his Wanlockhead mining works, in Dumfriesshire, employs a number of wretched lead miners, who sometimes do not see five pounds in actual money from year's end to year's end, being constantly in debt to the overseer's shop. They are badly paid and tyrannically dealt with.

In Wales, because at the general election in 1868 the advantage was "won by the Liberals, through the votes of the freeholders and leaseholders of cottages, the landlords," says the *Westminster Review*, "enraged at their defeat, proceeded to wreak their vengeance upon those of their tenants who had presumed to vote in accordance with their convictions." Mr. Harris, a gentleman of independent means in Cardiganshire, "believed that as many as 200 notices to quit had been served in Cardiganshire alone, at Lady Day after the election. He was himself aware of from thirty to thirty-five served upon tenant farmers, in some cases where the families had been 200 years upon the estates; in others where considerable sums had been laid out by the farmers in improving their farms, which, as the law now stands in England, they have no means of recovering."

In Ireland you have a landlord—perhaps like the late Most Noble the Marquis of Hertford—constantly residing out of the country, having no sympathy or connection with

his property, except that of sucking it as dry of vitality as the law permits him. At election times, "his lieutenant, the agent, armed with notices to quit, and backed by the police, is sufficiently formidable. Threats of eviction (and more than half a million evictions have taken place in Ireland during the last thirty years), distresses, and demands for immediate payment of rent, large arrears of which are usually due," assail the voter. "It has long been the practice in Ireland for the landlords to collect together their tenants who are voters, to place them upon cars, and send them in a body under the agent to record their votes at the polling-booth. These parties of voters are frequently escorted by detachments of police and military, on the alleged ground that there is fear of their being prevented by violence from going to the polling place : it is observable that these escorts are always asked for by the landlords or their agents, never by the voters themselves." General MacMurdo, who commanded a brigade in Ireland at the 1868 election, admitted, before the House of Commons' Committee, in answer to Mr. Gathorne Hardy, that these voters are practically prisoners, one of whom would not be allowed to go away even if he desired, until he had been escorted to the polling-booth.

Under the feudal system in England, bad as it was, there were no seignorial rights without a declaration of corresponding duties—the vassals gave their services, and in return the lord apportioned them land, and gave them some sort of protection ; but now the lord claims the land as his own freehold, without any admission of obligation accompanying the ownership, and regarding himself as unduly taxed if any fiscal imposition touches his pocket. In many cases, in order to relieve themselves from the burdens of supporting the poor, the great proprietors have ordered the wretched cottages of the labourers working on their lands to be destroyed. The tillers of the soil cleared out from a noble landowner's domains get shelter how they can, in hovels in bad condition and dearly priced, where they are huddled together, as the following picture, taken from the Parliamentary Blue Book, shows :—"Modesty must be an unknown virtue, decency an unimaginable thing, where, in one small chamber, with the beds lying as thickly as they can be packed, father, mother, young men, lads, grown and growing up girls—two and sometimes three generations—are herded promiscuously, where every opera-

tion of the toilette and of nature—dressing, undressing, births and deaths—is performed by each within the sight or hearing of all; where children of both sexes, to as high an age as twelve or fourteen, or even more, occupy the same bed; where the whole atmosphere is sensual, and human nature is degraded into something below the level of the swine. It is a hideous picture, and the picture is drawn from life."

In Scotland, even under the old semi-barbarous, but patriarchal, system of clanship, the land was treated as the property of the entire clan—so much so, at any rate, that the chief of the clan had no power, under penalty of death, to alienate any portion of the land without formal authority of the clan given in solemn assembly, and the meanest member had privileges in connection with the cultivation of the soil.

In Ireland, the old Brehon laws as to the land are more clear and distinct than on most other topics. Each member of the local society or tribe had a life interest in the land of the society; and when he lost it by death, or by quitting the tribe, a new partition of land was made, so as to prevent too large a portion falling into the hands of any one holder. And yet, after generations of progress, we find that at the passing of the Church Disestablishment Act the land was practically in the hands of a few large families, who consider that they are entitled to hold the soil without any sort of consequent liability to provide for the lives or to ensure the happiness of the inhabitants. Under the provisions of the Irish Land Act, 1871, and of the Church Disestablishment Act, some facilities are now offered in Ireland to small tenants to become landowners, and under the second Act 4000 proprietaries, averaging twenty acres, have been created, and 6000 similar freeholds are said to be in course of purchase. Unfortunately, no similar possibility exists in any other part of the United Kingdom.

The land is constantly increasing in value, or, at any rate, a higher rental is exacted by the freeholder, and yet there is no corresponding contribution from the landowner towards the imperial burdens; on the contrary, the landowner shifts the fiscal burdens on to the labourer.

In illustration of this, the territorial incomes for England and Wales alone amounted, in 1800, to £22,500,000; in 1810 they had increased seven millions; in 1850 they had swollen to £41,118,329; in 1861 they had grown to

£54,678,412; to-day, including mines and minerals, they exceed £198,000,000; while the land-tax, which in 1800 was about £2,032,000 per annum, is now reduced by redemption to about one-half that amount.

Since the date of the usurpation of power by the territorial aristocracy—viz., since the accession to the throne of the House of Brunswick—land has, according to the *Westminster Review*, increased in value in Great Britain to a startling extent. Our taxation is constantly and fearfully on the increase; in 1842 it was, without the charge for the Kaffir war, under 57 millions; in 1877 it overtops 78 millions—an increase of 22 millions in twenty-eight years.

Out of this taxation, in this country, less than one-seventy-seventh portion of the burden falls on land. In France, land, prior to the Franco-Prussian war, bore one-sixth of all imperial burdens; in India, nearly one-half of the taxation falls on the land. To make the contrast more striking, we may point out that twenty-five years before the accession of the House of Brunswick, land paid nearly two-thirds of all the imperial taxes, the rents received by the aristocracy being then only the tenth part of what they are to-day. And these rents, which have grown tenfold in two hundred years, for what are they paid? For the natural fecundity of the soil, which the owner seldom or never aids. It is for the use of air, moisture, heat, for the varied natural forces, that the cultivator pays, and the receiver talks of the rights of property. We shall have for the future to talk in this country of the rights of life—rights which must be recognised, even if the recognition involves the utter abolition of the present landed aristocracy. The great rent-takers have been the opponents of progress, they have hindered reform, they kept the taxes on knowledge, they passed combination laws, they enacted long parliaments, they made the machinery of parliamentary election costly and complicated, so as to bar out the people. They have prevented education, and then have sneered at the masses for their ignorance. All progress in the producing power of labour has added to the value of land, and yet the landowner, who has often stood worse than idly by while the land has increased in value, now talks of the labourer as of the lower herd which must be checked and restrained. As Louis Blanc says: "The general wealth and population are susceptible of an almost indefinite increase, and, in fact, never do cease increasing; commerce demands for its operations a territorial basis

wider and wider; towns are enlarged, and new ones built; the construction of a railway suddenly gives to this suburb, to that district, an artificial value of some importance. All this combines in a manner to raise the value of land."

These land monopolists, too, are ever grasping; they swallow common lands and enclose wastes, relying on their long purses, the cost of legal proceedings, and the apathy of a peasantry ignorant of their rights and unable to perform their duties.

The *Westminster Review* says that no less than 7,000,000 acres of commons have gone to increase the already large estates of adjoining proprietors during the last 200 years—all, be it remembered, since the landed aristocracy have, under the present reigning family, wielded full parliamentary power—all taken during the time that the imperial national debt had risen from about £52,000,000 to that enormous sum, of which we still owe upwards of £750,000,000 in England, besides our debt in India, being estimated at over £120,000,000 more. Side by side with this increased taxation, and upon these huge estates, we find an unimproved—if not an absolutely deteriorated—farm population. The parliamentary blue-books of 1867 describe the population round Mayhill as seeming "to lie entirely out of the pale of civilisation; type after type of social life degraded almost to the level of barbarism." In Yorkshire we are told of the "immorality and degradation arising from the crowded and neglected state of the dwellings of the poor."

In Northamptonshire some of the cottages "are disgraceful, necessarily unhealthy, and a disgrace to civilisation." In a Bedfordshire parish "one-third of the entire population were receiving pauper relief, and it seemed altogether to puzzle the relieving officer to account for the manner in which one-half the remainder lived." In Bucks the labourer has to "pay exorbitant rent for a house in which the ordinary decencies of life become a dead letter." So we may go through all the eastern, southern, south-western, and most of the midland rural districts, until the repetition grows as nauseous as it is hideous.

The wages of this wretched agricultural class varied before the union of agricultural labourers from 7s. to 15s. per week, wage of 10s. to 12s. per week being the most common, out of which a man had to pay rent, and feed, clothe, and educate himself and his family. Children were

sent into the fields to work sometimes before they were seven years old, often before eight years, and nearly always about that age. Even now, in Somersetshire and Dorsetshire, agricultural labourers' wages average about 11s. per week. Lord Walsingham claimed them at from 13s. to 15s. The Prince of Wales pays 13s. And with education thus rendered practically impossible, we find the organs of "blood and culture" taunting the masses with their ignorance. We allege that the mischief is caused by those who exact so much for rent, and waste so much good land for pleasure, that no fair opportunity for happy life is left to the tiller of the soil. While the condition of the agricultural population is as thus stated, it cannot be pretended that sufficient compensation is found in the general prosperity of the artisan classes. Probably there are at this moment in England and Wales more than half-a-million able-bodied paupers—that is, men able to work, who cannot get work in a country where millions of acres of land fit for cultivation lie untilled.

In Plymouth, in 1870, one out of every fifteen persons was in receipt of pauper relief; and we fear that throughout England and Wales it would be found that, at the very least, one in every twenty is in the same position, while, in addition, many thousands struggle on in a sort of semi-starvation misery. During the last half-dozen years the figures have been improved by the restrictions on out-door relief, but the improvement is but a surface-polish. At Cardiff the most fearful revelations have been made before the Parliamentary Commissioners as to the state resulting from the folly or criminality of some of the large capitalists. In this part of Wales, by paying wages at long intervals, men who were sometimes justices of the peace and large landowners, in 1870 compelled their labourers to ask advances as of favour when they were really entitled to payment as of right. Then, by a dexterous evasion of the Truck Act, the men were forced to a "tommy shop," where the advance was made in goods instead of cash. Men swore before the Commissioners that it was with the greatest difficulty they could get a few shillings of ready money, and that, to obtain it, they were often compelled to re-sell the goods forced on them at a loss. The shop being sure of its customers, the women have been kept waiting for nine hours for their turn, and have had to assemble two, and sometimes four, hours before the opening of the shop, this

even in the winter weather; and, in two or three cases, have been known to wait outside all night, and this through rain and storm, to secure a good place when business should commence, so that they might get the food they were unable to obtain elsewhere, and without which the breakfast meal could not be got. We wonder what kind of homes they can possess which can be left for nine hours, and what is done with the young children! The cruelty inflicted upon the women themselves by such a necessity is scarcely credible. One woman had not "seen money for twelve years," being constantly in debt to the shop. The same woman on oath said: "I went once when my son-in-law was ill, and I wanted only two or three shillings, and I begged and cried for it, but do you think I could get it? No!" Nay, it was proved that when a collection was made for a funeral, as the bulk of the workers were without money, the cashier entered the amount subscribed by each man in a book. Five per cent. was charged for cashing the list, then any amount due from the deceased's family to the shop was taken out, and even then part of the balance had to be taken in goods. Deductions were made week by week for the doctor, who was paid by bill at the end of the twelve months, and the men had no means of knowing the amount paid.

Nor is the state of things just described confined to Wales. In Scotland a companion picture may be traced. In the lead mines belonging to His Grace the Duke of Buccleuch, near Elvanfoot, in Lanarkshire, the miners have been treated more like serfs than free labourers. Young men of from eighteen to twenty were stated in 1870 to be working for 10d. a day; and while the nominal wages are 14s. to 16s. per week, or £36 8s. to £41 12s. per annum, for the ordinary working men, a horribly clever system of infrequent payments, occasional advances, a "tommy shop," and a complicated system of accounts, has so entangled the men that their pay for the year is said to range from £25 to £35. The Duke of Buccleuch is more careful of his game and his salmon than he is of his lead miners. About twelve months before the first edition of this pamphlet was issued, not far from Hawick, a poor woman, with a child at the breast, was sent to gaol for being in possession of a salmon for which she could not account. The child died whilst its mother was in gaol; but the Duke of Buccleuch's interest in the salmon fisheries was maintained.

In the *Liverpool Mercury* it was alleged that the wickedly-fraudulent truck system—here, too, cunningly disguised to evade the Truck Act—also prevailed in the Wednesbury district. And yet the noble lords and high-minded gentlemen who thus grind down the poor, and who, by cheating their labourers, demoralise honest labourers into cheats—will preside at pious gatherings, and talk about saving the souls of those whose lives they are damning. Or these born legislators will denounce trades union outrages—these high-minded men, who draw scores of thousands out of the muscle and heart of their wretched workpeople, and then endow a church, and listen to a laudatory sermon preached by the local bishop.

We affirm the doctrine laid down by Mr. Mill and other political economists, "that property in land is only valid, in so far as the proprietor of the land is its improver," and that "when private property in land is not expedient, it is unjust;" we contend that the possession of land involves and carries with it the duty of cultivating that land, and, in fact, individual proprietorship of soil is only defensible so long as the possessor can show improvement and cultivation of the land he holds. And yet there are—as Captain Maxse shows in his admirable essay published in the *Fortnightly Review*—in Great Britain and Ireland, no less than about 29,000,000 acres of land in an uncultivated state, of which considerably over 11,000,000 acres could be profitably cultivated.

There are many thousands of labourers who might cultivate this land, labourers who are in a semi-starving condition, labourers who help to fill gaols and workhouses. To meet this let the legislature declare that leaving cultivable land in an uncultivated state is a misdemeanour, conviction for which should give the Government the right to take possession of such land, assessing it by its actual return for the last five years, and not by its real value, and handing to the proprietor the amount of, say, twenty years' purchase in Consolidated 3¼ per cent. Stock, redeemable in a limited term of years. The land so taken should not be sold at all, but should be let out to persons willing to become cultivators, on sufficiently long terms of tenancy to fairly recoup the cultivators for their labour and capital, and these cultivators should yearly pay into the National Treasury, in lieu of all other imperial taxes, a certain proportion of the value of the annual produce. This tenancy to be immediately

determinable in the event of the improvement being insufficient, and extensible on evidence of *bonâ fide* improvement of more than average character.

All land capable of producing food, and misused for preserving game, should be treated as uncultivated land. The diversion of land in an old country form the purpose it should fulfil—that of providing life for the many—to the mere providing pleasure for the few, is a crime. The extent to which the preservation of game has been carried in some parts of England and Scotland shows a reckless disregard of human happiness on the part of the landed aristocracy, which bids fair to provoke a fearful retribution. Paragraphs in the newspapers show how almost tame pheasants are driven to the very muzzles of the guns, to be shot down by royal butchers, who have not even the excuse of sport in their wholesale slaughterings.

It is calculated that for the deer forests of Scotland alone nearly two million acres of land—some of it the choicest pasture, much of it valuable land—is entirely lost to the country. Two red deer mean the displacement of a family, and it is, therefore, scarcely wonderful that we should learn that much of the Duke of Sutherland's vast estate is a mere wilderness.

Country members who shun the House of Commons while estimates are voted, and go to dinner when emigration and pauperism are topics for discussion, crowd the benches of St. Stephen's when there is some new Act to be introduced for the better conviction of poachers without evidence, or for the protection of fat rabbits, which eat and spoil crops, against lean farm labourers, who, having not enough to eat, pine alike in physique and intellect.

The Game Laws are a disgrace to our civilisation, and could not stand twelve months were it not for the overwhelming influence of the landed aristocracy in the Legislature. The practice of game preserving is injurious in that, in addition to the land wasted for the preserve, it frequently prevents proper cultivation of surrounding lands, and demoralises and makes criminals of the agricultural labourers, creating for them a kind and degree of crime which would be otherwise unknown.

Poaching, so severely punished, is often actually fostered and encouraged by the agents of the very landholders who sit as Justices of the Peace to punish it. Pheasants' and partridges' eggs are bought to stock preserves; the game-

keepers who buy these eggs shut their eyes to the mode in which they have been procured, although in most instances it is thoroughly certain how they have been obtained. The lad who was encouraged to procure the eggs, easily finds that shooting or catching pheasants gains a much higher pecuniary reward than leading the plough-horse, trimming the hedge, or grubbing the plantation. Poaching is the natural consequence of rearing a large number of rabbits, hares, partridges, and pheasants, in the midst of an under-paid, under-fed, badly-housed, and deplorably ignorant mass of agricultural labourers. The brutal outrages on game-keepers, the barbarous murders of police, of which we read so much, are the regrettable, but very natural, measures of retaliation for a system which takes a baby child to work in the fields, sometimes soon after six years of age, commonly before he is eight years old, which trains all his worst pro-pensities, and deadens or degrades his better faculties, which keeps him in constant wretchedness, and tantalises him with the sight of hundreds of acres on which game runs and flies well-fed, under his very nose, while he limps ill-fed along the muddy lane which skirts the preserve—game, which is at liberty to come out of its covert and eat and destroy the farmer's crop, but which is even then made sacred by the law, and fenced round by carefully-drawn covenants.

An agricultural labourer (with a wife and family), whose weekly pittance gives him bare vitality in summer, and leaves him often cold and hungry in winter, in the midst of lands where game is preserved, needs little inducement to become a poacher. Detected, he resists violently, for his local judges are the game owners, and he well knows that before them he will get no mercy. The game watchers are armed with flails, bludgeons, and firearms; the poacher uses the same brute argument. Indicted at the Assize he goes to the county gaol, and his wife and children go to the union workhouse. Imprisonment makes the man worse, not better, and he is confirmed into the criminal class for the rest of his life, while his family, made into paupers, help to add still more to the general burdens of the country.

In the agricultural districts, offences in connection with the Game Laws are more numerous than those of any other class. Men suspected of inclination for poaching are easily sent to gaol, for cutting a twig or for nominal trespass, by magistrates who, owning land on which game is reared, re-

gard it as most wicked sacrilege that hungry labourers should even look too longingly across the hedge.

In this land question the abolition of the Game Laws must be made a prominent feature.

The enormous estates of the few landed proprietors must not only be prevented from growing larger, they must be broken up. At their own instance and gradually, if they will meet us with even a semblance of fairness, for the poor and hungry cannot well afford to fight; but at our instance, and rapidly, if they obstinately refuse all legislation. If they will not commence inside the House of Parliament, then from the outside we must make them listen. If they claim that in this we are unfair, our answer is ready—

You have monoplised the land, and while you have got each year a wider and firmer grip, you have cast its burdens on others; you have made labour pay the taxes which land could more easily have borne. You now claim that the rights of property in land should be respected, while you have too frequently by your settlements and entails kept your lands out of the possibility of fulfilling any of the obligations of property, and you have robbed your tradespeople and creditors, because your land was protected by cunningly contrived statutes and parchments against all duty, while it enjoyed all privilege. You have been intolerant in your power, driving your tenants to the poll like cattle, keeping your labourers ignorant and demoralised, and yet charging them with this very ignorance and degradation as an incapacity for the enjoyment of political rights. For the last quarter of a century, by a short-sighted policy, and in order to diminish your poor-rates, you have demolished the cottages on your estates, compelling the wretched agricultural labourers, whose toil gave value to your land, to crowd into huts even more foul and dilapidated than those you destroyed. We no longer pray, we argue—we no longer entreat, we insist—that spade and plough, and sickle and scythe, shall have fair right to win life and happiness for our starving from the land which gave us birth.

To the landowners in the House of Peers we say:—It is on the land question, my lords, that the people challenge you, at present in sorrow and shame. Take up the matter while you may, and do justice while yet you can. The world is wide for you to seek your pleasure, the poor can only seek life—where death finds them—at home. Give up your battues, your red deer, your black game, your pheasants,

your partridges; and when you see each acre of land won by the fierce suasion of hardy toil to give life and hope to the tiller, in this you will find your recompense.

You few, who lock up in your iron safes the title-deeds of more than half Scotland's acreage, I plead to you; forget mere territorial pride and power, and be generous while you may, for the day is near when your pride may be humbled, and your power may be broken.

For you, lords of Erin's fertile soil—you who have wrought her shame and made her disaffection—you who have driven her children across the broad ocean to seek for life—even for you there is the moment to save yourselves, and do good to your kind. Thoughtful workmen will try to gradually win your land by law, hungry paupers may suddenly wrest it from you in despair; you may yield it now on fair terms, and grow even richer in the yielding. England is growing hungry, empty bellies make angry faster than heads reason, and the Land Question cannot stand still.

The struggle—if you compel it, landlords of Great Britain—will be one in which the landless will claim political power, and use it as a weapon, as did their French brethren eighty-five years ago.

At present by gradual concession, you may even win a meed of praise for generosity of conduct, and you may avert for generations that appeal which hunger has always prompted, when pride and power have been deaf to the cry of a nation. At present you have prestige to aid you; use it for good, while you can, for once let the storm-wind of popular indignation turn against your rank and position, and your peerage-prestige will be like a rotten reed on which to lean.

To-day the arbitrament is in your hands, and we pray a just deliverance. To-morrow—if to-day you do nothing—it may be your turn to pray, while your judges may be too hungry to listen. To-day you make the law; use it for human right; for it may be that if you do nothing, to-morrow the law will unmake you, as penalty for having worked and permitted so much wrong against your poorer brethren.

AMERICAN POLITICS.

BY CHARLES BRADLAUGH.

To deal with American Politics with any pretensions to fairness, it is necessary to consider several points, often overlooked by critics, and some of which are peculiar to the United States of America. The most important of these are as follows :—

1. The enormous extent of its territory, stretching from the Atlantic to the Pacific; from the great lakes to the Gulf of Mexico: supplemented by Alaska, or Russian America, and containing in all about 3,510,978 square miles. Its diversities of climate and physical character, and these so extreme that, even excluding Alaska, you find in the North the vegetation of an almost arctic region, while in the South you have "the luxuriant foliage of the tropics."

Grand mountain ranges, like the Alleghany, the Rocky Mountains, the Coast range, and the Sierra Nevada; huge fresh-water lakes, larger in their total extent than any others known in any country in the world, and a river valley drained by the Missouri—Mississippi, for nearly 4,500 miles. The widest diversities of food, climate, and soil, each and all affecting most materially the social and political character and conduct of the various persons of foreign birth or foreign parentage, subjected to these influences.

2. The rapidly-increasing population, to-day numbering more than 40,000,000; in 1860 numbering only 31,183,000. The fact that this increase differs in character from that of any other country in the world. In most of the old and settled countries, all increase in population is from the excesses of births over deaths. In the United States of America the increase is in chief the result of immigration, and is only in very small part due to the preponderance of births. It is perfectly true that in many of the British

Colonies the augmentation of population is by the immigrant stream, but there is a wide distinction between the effect of that stream on political affairs in the British Colonies, and of the influx of immigrants in the United States.

Nearly all the accessions of population to Canada, New Zealand, Australia, and British Columbia, are of emigrants from the British Isles. They speak the language of the people amongst whom they come to dwell; they are already acquainted with the habits, literature, and traditions of the people with whom they are to associate. The new comer and the old colonist have almost the same national feelings and interests; the same general views on religious and social questions. In the United States, on the contrary, the increase is from diverse races, with distinct and often opposing traditions, with national associations generally hostile to those held by the people amongst whom they are to live, with strange tongues and contrary habits, and with creeds which can never amalgamate, but which must extinguish or be extinguished. English, Russian, German, Swede, Italian, Pole, Wallachian, French Canadian, French, Chinaman, Dane, Norwegian, all jostle together in the New World; where they have to struggle for existence; the Chinaman at one end of the country is now to have the Esquimaux at the other; all are to be governed under the constitution of the United States Republic. And yet critics in English journals amuse themselves with leading articles illustrative of America and its shortcomings, written by men whose highest qualification is that they write in the sublimest ignorance of the subject on which they treat.

Of these new comers to America, the large majority have little or no interest in the form of the government under which they are to dwell. They have, for the most part, left the country of their birth because food was scant, and mouths many. Some of the immigrants are too old even to acquire the language of the country of their adoption, and there are not a few who place obstacles in the way of the instruction of their children in the tongue in which is administered the law of their new homes. There are Pennsylvanian Dutchmen who have gone through generations of residence in the Quaker State, and who to this day conserve a barbarous patois, the relic of their native tongue. There are French Canadians, and these a rapidly increasing element, who will not, when adults, learn the English language, and whose priests (Roman Catholic), probably to

prevent heresy, do their best to hinder the education of the children. Through Maine, New Hampshire, Massachusetts, Connecticut, and Rhode Island, you find this French Canadian stream. The signs, painted in French, in front of many shops, evidence the illustration here given. Thus you have a population increasing vastly every year, and at present not betraying the slightest interest in the political conduct of the country where it obtains the means of existence.

There are Germans, arriving even in greater numbers than the English, who, when they come into newly-settled lands as in Wisconsin, Minnesota, or Iowa, sometimes continue to speak little or nothing but their own language. These have journals of their own, printed in German, some, as the *Staats Zeitung*, of very wide circulation, and who by mere diversity of user of tongue are kept to a great extent apart from their fellow citizens. Even in great cities they often dwell in large bodies by themselves. "Germantown," or "little Germany," is a well-known description for the suburb of many a good-sized city from Buffalo westward. The Germans have amongst them men who are able political leaders, notably Carl Schurz, who, but for the fact of his foreign birth, might well hope to attain the Chief Magistrates' seat. Yet it is no easy task to identify with the political life of the country a mass of men, thinking in a strange tongue, whose home life has had in it no training for political citizen duty. Here they are not rallied by a religion of Fatherland, they have no other interest at first in the country than the estimate of next year's crop. The life is new, the land is new. At home they have been governed, and it is hard for the one taught under a paternal "blood and iron" monarchy, all at once to realise that here, in this United States, it is the duty of each man to govern himself, and of all to help to govern one another. The struggle for mere existence is so absorbing to the immigrant settler that the political national vitality is of slow growth, and there is, therefore (amongst many hundreds of thousands of new comers for the first few years), an utter indifference as to who "runs" the Federal or State Government. There are no traditions dear to the newly-arrived man associated with his future home; the page of his adopted country's history has to be read when he can find leisure, in a language which he has often to learn, laboriously or reluctantly, at a period of life when the child's aptitude for being taught has long since departed.

3. The United States of America differ, further, from all other countries in having within their confines an aboriginal race, who seem on the road to extermination—a race protected nominally by treaty with, and by authority of, the Federal Government, in territory which is not subject to ordinary United States law; a race which does not seem to be amenable to the influences of civilisation, except so far as "civilisation" tends to utter annihilation. Here I speak of the Indians—the "red" men, who once owned the whole vast expanse of North America, but whose descendants now number not more than some 25,000 persons. The political difficulty is here one of the soil—*i.e.*, whether a few can hold land which the vigorous and hungry many press for. Not reckoning the various Indian reservations in other States and territories, there is the Indian territory lying between Arkansas on the east, New Mexico on the west, Kansas on the north, and Texas on the south. Here you have 55,000,000 acres of land, with a rapidly-decreasing population, to-day numbering about 15,000 human beings. To these, "a mere handful," the whole territory is preserved by treaty as long as "river runs and grass grows." If treaties make enduring barriers, the Indian would be safe enough against the swelling tide from the Old World. But coal crops up to the surface for many miles, and the Indian does not work it. The land is rich in metal, which the Indian does not mine. It is not in his nature to search the bowels of the earth with slow and painful strokes; he loves to roam its surface. The soil is a fruitful one, but is left by the Indian comparatively untilled. The Old World empties the white race from out its bosom, and they look too greedily over the Indian borders for the period to be very long, ere the pressure of population shall burst the treaty limits, and drive the red man from his last retreat in the West. In the North-east no trace of the pure Indian scarcely exists.

In Maine the Indian is gradually disappearing by amalgamation with the "superior" race. The money originally devoted in the East to the education of the Indian finds at Dartmouth College only one to teach, and he not of pure Indian blood. At Oldtown it is easy to see that, despite the law which declared void all marriage between the white and red races—the mingling of bloods is ending in the entire destruction of the aborigine by the Teuton. Yet, while the solution is certain, the problem is one not free

from grave questions, all to be considered when estimating American politics.

The lawlessness which is prevalent in parts of Western Askansas, Southern and South-Eastern Kansas, Texas, and Eastern New Mexico, is a natural result of the existence of this Indian territory, wherein ordinary civil authority is powerless. No doubt the difficulty has been aggravated by the anti-slavery struggle fought out on these borders, in the worst spirit, by the worst men; and on the cessation of which struggle even, had its too long-enduring mischief in the presence of those remnants of the guerilla fighters from both sides, who had become too much corrupted by war to again settle down into peaceful citizens.

4. The existence in the United States of America of 4,500,000 human beings, not indigenous to the soil, until recently treated as mere chattels, and who enjoy now nominal political rights, with the disadvantage in very many cases of having been utterly unfitted for political duty by their whole life surroundings. Throughout North and South Carolina, in Virginia, Tennessee, Georgia, Alabama, and Louisiana, the negro has for nearly 100 years been treated as if he were a kind of superior cattle; and although the fifteenth amendment did, five years ago, give a paper political equality to the coloured man, no one can doubt that it would—even under favourable and peaceful conditions—require several generations of average school training, several generations of practice in self-reliant effort, several generations of participation in self-government, to even give the coloured race the possible chance of making the best of the organisation they inherit. Much more difficult is this negro problem, embittered as it is by the conduct of those long-resident in the South, who, by the warmth of the climate, and the habits of their fathers, have been unfitted to cope with their Northern or Western brethren in the struggle for life. Still more difficult of solution is this negro problem, encumbered as it is by the rascality of some who, really caring nothing whatever for the negro, seek to use his vote as a means of winning power for their party or place for themselves. Terrible enough is this negro problem, even for those who have their hearts sternly set against slavery in all its forms.

The fearful war-struggle in America broke down legal slavery; but it did not win, it could not win, the Southern planter to co-operate with the Northern merchant, or manu-

facturer, or farmer, in the work of elevating the newly-enfranchised man. The result of a war may crush, but it does not convince, the defeated party. The pro-slavery men in the South, who organised the armed Kuklux conspiracy immediately after the war, and who now organise the White League, represent an element which will never cease to oppose the recognition of the equality before the law of the negro race. I do not in this brief space do more than allude to the purely ethnic question, and yet without considering this, it is impossible to treat American politics except in the most superficial manner.

The Civil Rights Bill, to which Charles Sumner attached so much importance, and which he intended should remove all obstructions to the gradual raising of the coloured man, has been robbed of its most important and most valuable provision—viz., the School clause. Mr. G. S. Boutwell, in a recent speech in the Senate of the United States, said: "When the children of the white people and the black people are compelled to go into the same schools, sit upon the same forms, accept the same teachers, study the same books, become rivals in education and in the pursuits of life, you will have a community that will believe practically in human equality. Therefore it is that that provision which has been stricken out of the Civil Rights Bill in the other House is of more consequence than all the other provisions of that Bill." Draper says: "That while the Slave States existed as a political power, they were forced by the necessities of their position to impose a forced ignorance on the low elements of their society." It is only by insistance on the most complete facilities for negro education that permanent improvement can be hoped.

Hitherto in America there have been two great parties—Republican and Democratic; and one of these, the Democratic party, has suffered severely, first, from its identification with the pro-slavery movement and the Southern rebellion; and, second—and more recently—from the fact that the men convicted in New York City of misdealing with, and misappropriation of, the city moneys were elected by the Democratic vote, which in that city has an overwhelming majority, nearly the whole Irish vote being cast for the Democratic ticket.

Candidly, I do not think that the Democratic party ought to be condemned entirely for the sin of slavery; nor do I hold that the Republican party ought to be credited with

the original virtue of abolition principles. Unfortunately for the Democratic platform, the affirmation of State rights involved the perpetuation of national wrongs. The English Monarchy had planted slavery more or less throughout the thirteen colonies, but especially in Maryland, Virginia, North and South Carolina, and Georgia. The slavery so planted had been enforced, preserved, and encouraged by direct acts of the Home Government. When the several colonies became independent States, they conserved—unfortunately for themselves—the fatal privilege of retaining their negro brethren in bondage. The privilege of slave-holding became a State right; and in the Southern States the climatic conditions helped to give colour to the notion that it was a social necessity. The affirmation of State right identified the Democratic party with the maintenance of the curse of slavery in those States respectively which refused to vote for abolition.

In judging American politics an Englishman should at least remember two things: first, that slavery was a legacy left by the English Monarchy to the new Republic; and next, that when the great American people had at last determined to free themselves from the shame and disgrace of the slave blot on the American escutcheon, it was the English aristocracy and land-owning interest which, while making profession through the world of a policy of universal emancipation, nevertheless gave its sympathy to the slave-holding South, and permitted without protest the building in, and issue from, its ports of war vessels to be used against its ally the North, though that North had then, by the force of events, become pledged to the abolition of slavery.

In declaiming, too, against corruption in New York State, it should be especially borne in mind by English critics that the controlling voting power of the city of New York was thrown into the hands of a large mass of men who, in the country of their birth, had been debarred from any wholesome political activity, whose fathers had for generations been absolutely deprived of political life, and who had personally suffered the severest want. These men, to escape death by starvation, left their own shores absolute paupers; and the country of their adoption has had to pay some of the penalties attending the early practice of full political right by a mass of men not yet educated to the consciousness of their duty.

New issues are now raising in the United States, and neither the platform of the Republican party nor that of the Democratic party seems to me to make full provision for facing the serious points involved. One of the most grave is the approaching conflict between Labour and Capital, a conflict which will now be aggravated by the presence in the large cities, such as New York, Boston, Philadelphia, and Chicago, of very large bodies of men either entirely without employment, or unable to earn enough to obtain decent food, clothing, and shelter. Very many of these men—especially the recently-arrived Germans in the West—hold extreme Socialistic theories, and do not regard the Government of their newly-adopted country with even the habit-reverence which does much to restrain the inhabitants of old countries. They have many of them quitted Europe with exaggerated ideas of the value of labour in the New World, and without any notion of the smaller purchasing power of money. Many of them are unprepared to go out of the range of civilisation, and they, therefore, stick close to some great centre of population. Some find themselves and their families absolutely unequal to the task of battling in the open country with a climate more severe than that of their native land. They prefer the shelter a crowded city apparently offers, and they forget the bitter disadvantages it involves. These poor men, crowded together in rich cities where they are strangers, grow to regard the suffrage rather as a weapon of offence against the capitalist class, than as a means of performing a common duty in carrying on the Government of the country.

The gatherings in New York City, and the menaces in Chicago, are the outward exhibitions of a terrible undercurrent of discontent, resolvable all into one sentence, Dear food, dear lodging, and poor wages. The politician who grapples boldly with this labour question will need a firm courage and clear head; the party which avoids the question must certainly be ruined.

Another difficult problem in United States politics is presented by the claim of the Western pork and grain-raiser to have his produce cheaply transported to the Eastern markets. In the fertile Mississippi valley, produce may be raised sufficient for the whole population of Europe. In the great West and the North-West, the soil yields readily of its abundant richness, but the cost of transport to the

consumer's door is often so great as to entirely devour the farmer's hard-earned profit.

The protest of the cultivator against the railroad owner has resulted in those Grange associations now thickly scattered through the West, and which, if they gave their temporary allegiance to either party, might easily determine a Gubernatorial, or even a Presidential, election.

That the Grangers have legitimate grievances cannot be disputed, but that the remedy is to legislate down the charge for railway transport is not so clear. No railway company can or will carry at a freight rate which does not meet the cost of permanent way, provide for payment of servants, and furnish some interest on capital. While there are many inconsistencies, and probably some extortions, in the charge for conveying produce, the real remedy will probably be found, partly in the utilisation of the great Mississippi as a pathway to the sea, and partly in the creation of more industrial centres in the agricultural States, so as to bring the consumer closer to the means of subsistence. Railway companies in Europe only construct railways to meet the needs of population already settled. Railways in the United States are built into wilds where there is no population, to provide an iron track for the conveyance of future settlers. The railway monopolist in the East, and his customers in the West, are likely to be arrayed on different sides in a political struggle, unless indeed much forbearance be shown by the leaders of both parties, and unless wise statesmanship can teach each side its common interest and duty.

In America the Roman Catholic question, which is just now so agitating the Old World, is of extreme importance. America has no State Church, and amongst the various and conflicting religious bodies, the Roman Catholic Church stands out prominently, not only as the richest and most complete organisation, but also as having more rapidly increased in numerical strength than any other body. Probably nearly one-fifth of the population of the United States are now Roman Catholics. I am inclined to doubt whether this increase is not a little more nominal than real. I do not regard it as showing an addition to the general strength of the Roman Catholic body. It is nearly all the result of immigration of Irish, Germans, and French Canadians. The latter are the most superstitious, the most ignorant, and the least disposed to permit themselves or their children to be educated; but they are also fortunately the fewest. The

two former occupy a very different place. The Germans are, as a body, extremely indifferent on religious matters, and are strongly inclined, when they give themselves any trouble at all, to favour Rationalistic views; and the American-Irish—that is, children American-born of Irish parents—are figuring so well in the common schools that as long as the education is unsectarian it only needs in addition to be made compulsory, and the political future of the United States would be perfectly safe-guarded from danger, from this source at any rate. And I avow that I do regard the overwhelming predominance of the Roman Catholic Church in any country as an element of grave hostility to Republican institutions. Roman Catholicism maintains the principle of authority not derived from the people; as against the right of private judgment, and the constitution of government by the exercise of individual suffrage. I do not mean by this that it is the duty of a Republic to legislate against the Roman Catholic Church; on the contrary, I conceive it to be the duty of a Republican Government to ensure to all its citizens the fullest liberty and protection in religious matters, permitting to each and all the profession of faith the individual judgment inclines to, securing, to each and all, the fullest right of dissent and nonconformity without penalty or disability. The law should secure free Church in free State, and should protect, equally with the believer, the man who makes work his worship, and who refuses to kneel at any altar.

I am not unaware that Father Hecker, a really admirable man, and his able co-workers in New York, make a very strong plea that the Catholic in America can be a consistent and intelligent citizen of a Republic, and if I pass their plea here in silence, it is from no want of respect for the men, and most certainly in no contempt of their ability.

One evil in the practice of American politics is the habit which has grown up of changing most, if not all, of the lower government officials on the election of each President. All thinking Americans regret this; it is no necessary consequence of the constitution, and there is little doubt that at an early period a President will be found who will revert to the line of conduct observed by the earlier occupants of the Presidential chair, who only displaced officials for actual misconduct.

Another evil is the abstention in some States and cities of many of the best educated men from the performance of their political duties. This has been especially so in New York

City, but is not, I think, so much the case in Massachusetts. I believe, too, that this is an evil which originally arose from the Southern pro-slavery influence on the Democratic party, and that the future will show a vast improvement under this head.

For the information of many who have addressed me questions on the subject, I beg to add the following rough sketch of the American political machine.

The United States of America contains 37 distinct States, and also the territories of Colorado, Wyoming, Dacotah, Montana, Oregon, Idaho, Washington, Nevada, Utah, Arizona, and New Mexico. Each State has its own law courts for administration of State laws; its House of Representatives and its Senate for internal legislation; also its executive, headed by the State-Governor, who is the supreme executive magistrate within the limits of the State. In describing Massachusetts constitution I present a fair notion of the several constitutions of the other States, although there are many minor differences. The Governor, who must be a resident freeholder, is chosen annually by manhood suffrage. The vote is by ballot. He is commander-in-chief of all State, naval, and military forces, and has the sole right of resorting to force against the enemies of the State; but he cannot, of his own authority, order State troops outside the limits of the State. He has absolute power of pardoning criminals convicted in the States courts of offences against the State law. With the consent of his councillors (who are elected by the people) he nominates all State officers. No moneys are paid from the State treasury except on his warrant. In the event of the death of the Governor, the Lieutenant-Governor, likewise chosen by popular vote, succeeds to his office. All the several States and territories are alike subject to the constitution of the United States. The United States has at Washington[1] its House of Representatives, who are elected for two years, in the proportion of at least one representative to 30,000 inhabitants, by the people of their several States. Every representative must be twenty-five years of age, must have been seven years resident in the United States, and must be an inhabitant of the State by which he is elected. The Second Chamber, or Senate, contains two senators from

[1] Washington is the seat of Government; its inhabitants have no votes.

each State. These senators are elected for six years, but are nominated one-third every second year, and are chosen by the vote of the Legislature of the electing State. A senator must be resident in his State, must be thirty years of age, and have been for nine years a citizen of the United States. The Senate has the power on impeachment to try and condemn the various Federal officials, including the President of the United States. The Senate and the House of Representatives are together Congress, and they have the power to levy and collect taxes, to borrow money on the credit of the United States, to coin money, regulate foreign commerce, declare war, maintain an army and navy and militia, but no army appropriation can be made for more than two years. The executive power is vested in a President elected for four years. The President is chosen by an electoral assembly, chosen by popular vote from each State, equal in number to the whole number of Senators and Representatives entitled to set in Congress from such State. The President must be native born, must be at least thirty-five years of age, and must have been fourteen years resident in the United States. The President and Vice-President cannot both be inhabitants of the same State. The President is commander-in-chief of all military, militia, and naval forces. He can pardon all persons convicted of offences against the United States laws, except those convicted on impeachment. He can make treaties, subject to the concurrence of two-thirds of the Senate. He nominates, and, if approved by the Senate, appoints, all ambassadors, consuls, judges, and other officers, whose appointment is not specially provided for.

Each of the severally-named territories has its own government, legislature, and law courts, under act of Congress. These territories send delegates to the Congress at Washington, but with limited authority.

HOW IT ORIGINATED, AND WHO BEARS IT.

In ancient times, in this country, the ordinary expenditure of the sovereign, as representing or wielding the executive power, was made up of Crown rents, feudal dues of various natures, prisage—a right the king claimed of taking to his own use and at his own valuation as much as the king had occasion for—of all merchandize belonging to merchant strangers, and sometimes merchandize of native-born merchants, out of every ship importing the same; and butlerage, a similar exaction applied to wine. These prisage and butlerage exactions were at first a mere sort of uncertain extortion by force, and were taken by some feudal lords, as well as by the Crown; but in time they became a prescribed or customary levy, payable by native merchants and by merchant strangers in different proportions; and the exactions having been at first taken in kind, were at last commuted into a money payment, and were called "tonnage and poundage," being so much per ton on wine, and so much per pound on other goods. The word "customs" in ancient time seems to have covered many customary payments and dues, regal, feudal, and ecclesiastical, but became gradually restricted until it was at last limited only to the duties payable to the king upon the importation, exportation, or carriage coastwise of various articles. In the reign of Richard I. an import duty on wine, called "prise," was payable to the king and was accounted for to the Exchequer. In the reign of John import duties are mentioned on wood, salt, and fish, and export duties on wool and leather. The first parliamentary authority we can find for the exaction of a customs duty is in 1297, when the community of the realm granted to Edward I., in aid of his war with France, a customs duty of

40 shillings for every sack of wool, and 5 marks for every last of leather, exported, for the space of two or three years, if the war should last so long. There must have been earlier parliamentary grants than this, but we cannot trace them. When the grant of 1297 was made, the king declared that he would take no fresh custom of the nation without its common consent, but that he reserved the right to continue to collect the "old customs duties," said to have been granted before that time, of half a mark for every sack of wool, and a mark for every last of leather. The duties of "tonnage and poundage" were generally granted to the king by one and the same Act of Parliament, and were called the subsidy of tonnage and poundage. Some of the kings claimed the right to levy tonnage and poundage at their own will and discretion, and by their own authority, but this was from the 16th century forward almost always contested by Parliament. It was in 1629 that what Carlyle calls "a brave and noble Parliament" held the Speaker in the chair until remonstrances had been voted against the king's claim to collect tonnage and poundage by his own writ. It was this same Parliament which declared: "That no man hereafter be compelled to make or yield any gift, loan, benevolence, tax, or such like charge, without common consent by Act of Parliament." Prior to this declaration forced loans and compulsory benevolences were extremely common, and the Jews were especial and unpitied sufferers.

In the early times the customs were let or farmed by the Crown to collectors for a cash purchase-payment, or as a recompense for services rendered, or as a reward to a favourite, or to secure, and as a repayment of, a loan, previously made or then agreed to be made, to the king. In 1329 the entire customs of England were farmed for £20 a-day, Sundays excepted, the total amounting to £6,260 a-year. In the year 1400 the customs were let for £8,000 a-year. In the year 1650 they averaged £500,000 per annum; in 1800 they were £8,144,380; in 1876 they amounted to £20,341,502, or, with the excise, to £48,641,321 per year.

The practice of farming customs ceased in 1671, when the collection was transferred to a board of commissioners. For extraordinary war expenditure, the old military tenures involved special charges on the landowners, but these feudal obligations slowly disappeared, and subsidies and aids by Parliament were gradually substituted for them. In 1635,

in consequence of the reluctance of Parliament to vote any subsidy until certain grievances had been redressed, an effort was made by King Charles I., while no Parliament was sitting, to levy a tax called ship-money by his own writ, without any concurrence or sanction of Parliament, and the courts of law affirmed the king's right to make this levy; but in November, 1640, the Long Parliament declared ship-money illegal, and enacted that no tax could be levied on exports or imports save by the common consent of Parliament. Amongst ancient direct taxes was one of hearth-money, which does not, however, appear under this name as a statutory tax until 1662, when Parliament granted two shillings per year to Charles II. for every firehearth or stove. This hearth-money was voted as a compensation for the suppression of the Court of Wards, and of other feudal tenures. Hearth-money was finally abolished in 1689, on the resolution of the House of Commons "that the said revenue cannot be so regulated, but that it will occasion many difficulties and questions, and that it is in itself not only a great oppression to the poorer sort, but a badge of slavery upon the whole people, exposing every man's house to be entered into and searched at pleasure by persons unknown to him."

Several poll-taxes were from time to time enacted; the first we can find is in 1377, of 4d. per head for every man and woman above 16. The aristocracy paid higher rates, a ducal head being rated at £6 13s. 4d. The Wat Tyler rebellion grew out of resistance to a poll-tax. The last poll-tax was enacted in 1698, but some collection of arrears was continued for a few years later. There have been several very absurd direct taxes. In 1723 there was a papist tax, and in 1695 taxes were levied on weddings, burials, bachelors, and widows. In 1710 and 1718 two shillings a ton duty was laid on coals in order to build some new churches, and afterwards to provide for the clergymen.

Whenever extraordinary funds were necessary for the purpose of carrying on a war, or for any other special object, Parliament made an extraordinary grant as an aid or subsidy. These subsidies were a specified proportion—as a tenth or fifteenth—of the nominal income; or a special duty for a limited period upon wines or goods. The most usual aid to the king was the grant of a fifteenth, and was at first rather a substitution for the feudal revenue payable by the landowner to the king. By the 14th Edward III., statute

1, cap. 20, A.D. 1340, a ninth and a fifteenth were granted for the wars in Scotland, France, and Gascony. The ninth lamb, ninth fleece, and ninth sheep were to be taken for two years, and the ninth part of all goods and chattels in cities and boroughs. Foreign merchants not dwelling in cities and boroughs, and other people dwelling in forests and wastes, were to pay one-fifteenth. Poor cottiers, and those living by bodily travail, were exempt.

The last grant of a tenth and a fifteenth appears to have been made in the reign of James I., and the last subsidy was in the reign of Charles II. The land-tax grew out of these subsidies, the king complaining that the aristocracy defrauded him by under-rating their incomes.

A land-tax should in every country be the chief source of internal revenue. In India land pays to-day a very large proportion, nearly one half, of the total taxation. In France, before the late war, land paid one-sixth of all the taxation. In England, on the accession of George I., it paid two-fifths of the total taxation; to-day land bears less than one-seventy-eighth part of the national burdens.

Land to-day is assessed at the rate of 4s. in the £ on a valuation made in 1692. Under this assessment land paid, in 1798, £2,037,627 net, and the gross annual value of land was then stated at £22,500,000. In 1877 the land-tax realised, gross, £1,084,889, and the parliamentary return gives the gross annual value of land, including mines and quarries, for 1873, at £198,275,717. At the rate of 4s. in the £—thought fair by the landowners themselves eighty years ago—the land-tax alone ought to amount to £39,655,143, or about half the present total of our extravagant taxation.

This unfairness in the land-tax will scarcely be wondered at when it is known to what an enormous extent land is owned by persons who are either members of the House of Lords or of the House of Commons, and when it is considered how few persons own a large proportion of the whole area of the United Kingdom. The total area of the United Kingdom is 77,635,182 acres, and of this 38,875,522 acres are owned by 2184 individuals, of whom 421 persons own no less than 22,880,775 acres. Can it be wondered at that land-laws are unfair when it is remembered that nearly every one of these landholders speaks or votes in one or other of the legislative assemblies either by himself or by his nominee. The land valuation of 1692 was certainly imper-

fect, and some have urged that it was purposely and fraudulently understated. This valuation was adopted without challenge by William Pitt in 1798; he had, however, the grace to say that his measure for the nominal land-tax of 4s. in the £ was not intended to prevent a future Parliament from augmenting the tax. So far from augmenting the amount, we have the fact that the land-tax to-day represents throughout Great Britain a most unequal and ridiculously low figure. The accountants of the Liverpool Financial Reform Association have made a careful analysis of the land-tax as it is paid, and the land-tax as it ought to be paid, and it appears from this calculation that—entirely omitting the value of mines, quarries, iron works, and other real properties transferred to Schedule D in 1866—the highest land-tax paid is in Suffolk—5½d. in the £; in many counties the tax is less than 1d. in the £, and in some less than one farthing in the £. In Lancashire the land-tax is half-a-farthing in the £, and in Scotland three-sixteenths of a 1d. The general average of the land-tax throughout the United Kingdom is 1d. and five-eighths of a 1d. per £.

The contention in this essay will be that the landholding class, being practically the legislating class, with a monopoly of one House, and, until 1832, with absolute control of the House of Commons, have gradually shifted from off the land the fiscal burdens which land ought not only to bear, but which would be less oppressive if levied on land than they are when borne by labour.

While the tax-levying Parliaments were composed—as in the first half of the seventeenth century—of the persons who actually paid the taxes, the votes were small and hard to carry through the House of Commons. Now the votes are large, and pass much too easily. Joseph Hume is dead, and no one bears his mantle.

It ought, however, to be remembered that Members of the House of Commons are not sufficiently encouraged and supported by their constituents on questions of financial reform. Members are derided for "cheeseparing" and "nibbling at the estimates," and yet it is only by close investigation of each separate item and by attempted restriction of each disbursement that any permanent economy can be hoped for. Voters should carefully watch the conduct of their local members when the estimates are being discussed, and should, when necessary, hold meetings and

send in petitions to give weight to the voice of the man who represents them in Parliament.

The gross taxation for 1877 amounted to £80,099,051; in 1848 it was £59,323,465; in 1837 it was £49,878,124; in 1706 it was £5,691,000. It is submitted that the increase during the present reign, and especially during the last twenty years, has been unduly extravagant, and it is urged that, unless the increase be stopped, and a marked reduction be effected, revolution must result from this enormous increase of the people's burdens.

The increase in our home expenditure during the present reign has been nominally about £29,250,000, but has been really almost £31,000,000, allowing for the lesser charge in 1877 for the interest and management of the National Debt.

The first item in our National Expenditure consists of the charge for interest and management of our National Debt amounting to £27,992,833 14s. 7d.

I agree with Mr. Dudley-Baxter that a national debt is a national evil. It is a mortgage of the earnings of generations unborn—a mortgage created by the Parliament of the nation—a mortgage on earnings in which Parliament has no property. Parliament, and the Government maintained by its authority, have not even the right of ownership of the actual earnings of the living citizens, much less has either Parliament or Government any right of ownership in labour not yet existing. It has only a protectorate and limited jurisdiction over the vast aggregate of existing property, and over the living workers, whose economies constitute the capital—and the ability to create the capital—of the country. No Government has justification for the creation of national debt, save "in case of great emergency, with which the State is otherwise unable to cope," and then only if it may be fairly maintained that those who are to be called upon to bear the burden shifted from the borrowing generation will enjoy benefits which would be impossible, save for the borrowing. The creation of a national debt is only justifiable when the money is expended on public works which increase the productive ability of the nation, or so facilitate commerce as to render actual produce more available. Mr. Baxter says: "Owners of property that was not in existence at the

time of the loan, and workers who have inherited no property at all from their borrowing ancestors, are obliged by this law of public credit to pay interest as to the amount of which they have had no discretion, and to deprive themselves of comforts, and even necessaries, for the cost of services in which they have no share, and probably have derived no benefit. Such a power as this transfers a burden from one set of workers and property to a materially different set of workers and property, and inflicts a great deal of hardship, and often of injustice, upon future generations—more particularly on the poor among them. Hence the power of borrowing ought only to be exercised on the clearest necessity, and with the utmost economy." And, further: "The unnecessary or extra portion of war expenditure, occasioned by the adoption of borrowing, is capital unnecessarily diverted from productive investments, and spent on unproductive objects. Instead of being employed in trade or industrial undertakings, or improvements, adding a new annual produce to the net income of the nation, this capital becomes a pensioner on the old net income of the country. It is like taking an army of artificers and agricultural labourers from their workshops and fields, to maintain them, and their children after them, without labour, upon the taxes. An unproductive debt, by its absorption of useful capital, prevents improvements, hinders the growth of industrial capital, and stunts the development of a nation; while, at the same time, to meet the necessity of paying interest, it imposes additional taxation, and lessens the margin of tax-bearing power of the nation." The whole of the debt owing to-day by Great Britain is the unpaid balance of money borrowed for war expenditure. To-day we owe about £776,000,000; we have spent for wars alone, during the last 180 years, £1,555,421,160, and this without reckoning the cost of borrowing, and without calculating the interest paid on the money borrowed.

The total military and naval expenditure during the war in Ireland and against France, 1688 to 1697, amounted to £36,876,203.

During the war from 1702 to 1713, called "the war of the Spanish succession," the total cost for army, navy, and ordnance was £66,279,292. It was at this time that the increase of our standing army commenced, and the system of subsidising foreign Powers and hiring foreign troops originated.

The naval and military expenditure during the war with Spain, from 1718 to 1721, came to £11,399,324.

Between 1739 and 1748, we had the "war with Spain (right of search) and Austrian succession," and in those years spent for fighting £62,077,642. When the treaty of peace was made at Aix-la-Chapelle, the right of search was not even referred to.

The "seven years' war" was nominally 1756 to 1763, but really involved military expenditure over eleven years, at a cost of £104,611,374.

The war which severed the connection between the North American colonies and the British monarchy—the war which served to create the Republic of the United States of America —necessitated a total outlay of £139,521,035.

The war with France—nominally commencing in 1793, but really commencing with the signature of the secret arrangement in 1791 (concurred in by George III. and the Tory Government), by which the various Continental Powers, parties to the secret treaty of Mantua, agreed to invade France, in order to overthrow the Constitution—made up the enormous total of £989,636,449, when the expenditure ended in 1817. So that if we had not joined in the conspiracy to enable Louis XVI. to break his oath, we should now have had no debt, and France might possibly have escaped the Reign of Terror.

The Crimean war cost £116,053,151, for the maintenance of the Turk at Constantinople and the prevention of Russian war vessels in the Black Sea. The first result has enabled the Sublime Porte to borrow English money, and to misgovern and maltreat Bulgarian, Bosnian, and Herzegovinian peasants. The Russian diplomatists have since persuaded the English Government to abandon the second result, despite the blood and treasure lavished to secure it.

Some contend that it is unjust to include, as I have done, the whole expenditure for army, navy, and ordnance during war years; but I submit that I should be justified in adding to the above items all increase of the annual charge of the public debt, and all interest paid on money borrowed towards defraying the war expenditure. If this were done, the total cash wasted for and through war, during the last 180 years, would not be less than £2,000,000,000.

Our Military Expenditure.

The second item is for our army and navy, £28,186,117, and of this the army cost us altogether £16,820,716, being nearly double what it cost us in 1852, while the navy cost us £11,364,383, as against £5,849,916 in 1852. Omitting the items for army purchase and localization of forces, the cost of the army for last year was £15,421,356. For this we had a supposed effective force of 96,275 men, with a total muster-roll of 132,884 men of all ranks. The German army, on a peace footing with 420,000 men of all ranks, costs as nearly as possible the same sum as does the English army, although the latter has 287,000 less men. In the British army we pay the salaries of a large number of gentlemen as nominal colonels of regiments, which these titular commanders sometimes never see; the salaried colonelcy is occasionally the reward of merit to a tried warrior of foreign lineage who has done this country the honour of associating himself by marriage with our Royal Family. The increase in the peace cost of our army has been very terrible. In 1871 the cost was £13,430,400. In 1847 our army, militia, commissariat, and ordnance cost £9,061,233, everything included; showing the outrageous addition in twenty years of £7,775,000 per annum to the one item of military expenditure. Compare this with the cost of the army in 1792, just prior to the great continental wars, and the total then for Great Britain and Ireland was £2,410,212, or about one seventh of the army expenditure for 1877.

Estimates are so wonderfully framed that it is possible some inaccuracies may be found in these figures; if so, the inaccuracies will only be of form and not of substance. Without regarding any increase for war, our peace establishment for the army for 1878 is to cost £15,595,800, and for this, unless we denuded Ireland of her garrisons, we could probably not collect and have ready in the field within two months more than 50,000 men. It is true that we have in the three Indian presidencies 60,000 men, but we dare not remove these at the risk of an immediate rebellion. Divine service in the army costs £49,300; and as each officiating clergyman for his share of this sum has to devote about two hours per week to each regiment, it can hardly be said that religion is too cheaply provided for. As the Gospel does not make all soldiers good, the expenditure for military punishments comes to £28,600. The total charge for the

militia is £1,287,753; and the yeomanry cavalry, whose availability for war will be evident to the meanest capacity, cost £74,400. The most famous achievement of the yeomanry cavalry was in 1819, at Peterloo, and the recollection of this should endear that branch of the service to all real Radicals. It is sometimes pretended that the Duke of Cambridge foregoes some of the salaries attaching to the numerous colonelcies he holds, but in the foot note to the statement on the estimates of his salary of £4432 as Commander-in-Chief, it is expressly stated that this is "in addition to the full pay" "of the military ranks" "held in the army." When commissions in the army were sold, there was a regulation price, and every officer selling his commission used to pledge his word of honour that he did not receive, and every officer purchasing gave a pledge on honour that he did not pay, more than the regulation price. It was always well known that the whole system was a farce; that more money was always demanded and paid; and that the amount varied according to popularity or otherwise of the regiment. When the practice of promotion in the army by purchase was abolished, there was actually provision made for paying compensation to officers for these fraudulent "over-regulation prices;" the amount apportioned for 1878 under this head is £29,200.

Revenue Departments.

The cost of collection of our customs and inland revenue might be much lessened if direct taxation were made the rule. Almost all earnest financial reformers seek to substitute direct for indirect taxation. Indirect taxation is a levy of revenue by taxes on the transit of merchandise, on articles of food, on the raw materials used in manufacture, and on the process of manufacture. Direct taxation is here intended to mean the levy of revenue by a tax on income. There are, of course, various direct taxes of obnoxious character which would be utterly impolitic. Indirect taxation is objectionable, because, in the end, the pressure of it always falls most severely on the mass of the consumers, and the richer tax-payers manage to transfer their burdens with interest to the poorer and ultimate purchasers. Indirect taxation is always a hindrance to industrial enterprise. It encourages smuggling, fraud, and perjury, and compels the maintenance of a strong force for the detection and punish-

ment of the crime it creates. The governing classes, and those who are opposed to economy, will naturally object to direct taxation, for its very simplicity makes each taxpayer unpleasantly and immediately conscious of every increase in his fiscal burdens. Almost all local taxes are direct taxes, and when all imperial taxes are direct there will be less opportunity of annual increase in our expenditure without a vigorous protest. Men and women ought to pay taxes for the preservation of their property, their liberty, and their persons, but the severest pressure of tax ought not to come upon those whose wage is insufficient for the decent maintenance of themselves and their families. In 1849 the Liverpool Financial Reform Association issued some most able tracts dealing with the questions of direct and indirect taxation. Since that date very many indirect taxes have been entirely abolished, but there is still enough of indirect taxation remaining to make the following passage worth reproducing from the Financial Reform Tract, No. 3 :—

"On a careful examination of the sources whence the public income is derived, the Association are astonished to find how completely the taxation is laid on the trade and industry of the country. Contrasted with the accounts of the expenditure, it divides the community into two distinct classes : one, those who pay ; the other, those who spend the taxes. The former comprises the great mass of the population, all who labour and produce the wealth of the nation ; the other, the favoured few who from accident of birth or connections are exempt from the necessity of toil ; and who seem on that account (for no other reason can be discovered in the examination of official documents, but the fact that such is the exemption) to be relieved from the duty of contributing their fair and proportionate amount to the pecuniary requirements of the state."

It is, of course, just to add that—thanks to men like Joseph Hume, John Bright, Richard Cobden, and last but most certainly not least, William Ewart Gladstone—much change for the better has been made since 1849 in the imposition of our national taxation.

Public Works and Buildings.

In the expenditure, under the head of "Public Works and Buildings," there are some items to which special attention should be drawn. 1st. Palaces in the personal occupation of Her Majesty, which cost £12,397 last year, and for which £12,158 are asked for 1878. £5454 is charged in addition for palaces partly in the occupation of

Her Majesty. 2nd. £3357 is the bill for repairs, *inter alia*, to the apartments of Her Royal Highness the Duchess of Cambridge in St. James's Palace, but including also rent of stables for Her Royal Highness in Brick Street, Piccadilly. This is in addition to the pension to the duchess, which will be found given under the head of "Payments to the Royal Family." Why the nation should pay the Duchess of Cambridge's stable rent is a mystery which poor and hungry taxpayers would do well to clear up. 3rd. The repairs for 1878 to Marlborough House, the residence of the Prince of Wales, for 1878, are estimated at £6450; the actual charge for last year under this head was £4100. 4th. There are items amounting to £45,907, in 1877, for diplomatic and consular buildings, which shall be dealt with later, together with the other items for foreign office services.

Expenses of Public Departments.

The House of Lords nominally cost, in 1877, for salaries and similar expenses, £47,053, but this does not include £6000 further charged on the Consolidated Fund for the Lord Chancellor, making a total of £53,053. The House of Commons, including a sum of £5000, also charged on the Consolidated Fund for the Speaker, costs £61,649. Warming, ventilating, lighting, dusting, and general looking after both Houses of Parliament, comes to £21,130. This is a total for Parliament—without reckoning payments to counsel who draw Parliamentary Bills—£115,832. This is a fairly large outlay for a Parliament in which there is no payment of members, except of the speaker and chairmen of committees. The Foreign Office costs £83,400, one notable item in which total is the salary of £1250 to the Chief Clerk, who is at the same time in receipt of £794 2s., being compensation granted to him for abandoning against his wish and will the illegal and extremely profitable practice of levying black mail on the salaries of Foreign Office *employés*, who were compelled to employ him as their agent to receive their salaries. The Lord Privy Seal's Office figures for £2807, a not unreasonable yearly stipend for acting merely as a "gilt figure-head." This was the office recently held by the Earl of Beaconsfield, from which he professed to gain no emolument, but from which he actually received the full salary, until public attention was drawn to the matter.

Secret Service.

There are two items, one of £10,000, charged on the Consolidated Fund, and the other of £24,000, in the Civil Service Estimates, for Secret Service Money. These are items which ought to be erased from our national expenditure. The usually accurate "Financial Reform Almanack" for 1878 gives the sum for Secret Service in the Civil Service Expenditure at only £14,000, but this is an error, the sum is £24,000, making £34,000 in all.

The House of Commons ought to insist on the nation knowing whether this amount is disbursed at home or abroad. If the sum is only paid to supplement official salaries, it should be voted openly. If it is employed for bribery, or in pursuance of dishonest work, it should not be voted at all. About 250 years ago the House of Commons committed a Secretary of State to the Tower for refusing to give information as to the alleged disposal of Secret Service Moneys, and the House only released the, at first, obstinate offender on his making full submission and furnishing complete accounts. To-day the House of Commons is too subservient to Ministers to do anything half so bold.

Foreign Office Expenditure.

Without reckoning diplomatic pensions or allowances but including diplomatic and consular buildings, our Foreign Office Service costs in all for the current year £567,205, and this, not including special missions such as that of the Earl Rosslyn to Madrid to attend the marriage of the King of Spain, which cost £3200, or the Duke of Abercorn's journey to Rome to invest the new King of Italy with the insignia of the Order of the Garter, the charge for which is £5500. First, in point of expenses and, possibly, also in the prospect of future mischief, come our legations and consular expenses in China and Japan. The charges of the embassies—£9460 for China, and £5660 for Japan—compared with the extravagant totals, are apparently comparatively moderate. The total charge for the United States embassy to China is £6100, including in this all contingencies; while to the £9460 which our embassy cost have to be added the items for legation buildings, legation guards, &c., amounting to several thousand pounds more. The United States embassy to Japan, including all expenses comes to £3000; our embassy costs £5660,

without reckoning the costly additional expenditure. What good our ambassador is to us in China at all is not very clear, as a good Consul-General would do all the real work; but this is only the commencement of a long series of items for the Celestial Empire. The consular services in China amount to £50,664, and those for Japan to £27,772, while the legation and consular buildings come to an additional £15,948, with £2674 for rents, or a round total for our representation in China and Japan of £112,178. It should be borne in mind by taxpayers that many statesmen and their advisers have in recent times suggested the possibility of the extension of English territory in China and Japan.

Diplomatic and consular representation in Persia, where there are only two consulates, costs us £10,085, and the embassy buildings at Teheran are continually figuring in the estimates. Last year they cost £1938. This is one of the cases where a costly embassy is worse than useless. The Shah was a rather uncomfortable visitor, and seems a most expensive acquaintance. If we desire any benefit from the embassy it would be interesting to have such benefit clearly recorded.

Turkey costs us for its embassy no less than £11,345, for embassy and consular buildings, £4,628, and for consulates, after deducting the fees acknowledged and returned, £20,287. For this huge outlay we get the worst of all returns—absolute misrepresentation by our officials to the Turks of the state of English feeling, and to England of the condition of Turkish misrule. If it had not been for the correspondents of the *Times* and *Daily News* during 1876, we should have been absolutely without reliable information as to what was happening in Bulgaria and Bosnia. Our present ambassador is A. H. Layard, who, when he was the English minister in Madrid, actually did all he could to prevent the abolition of slavery in Porto Rico, and plotted actively with Marshal Serrano to overthrow the Republic temporarily established under Castelar. Marshal Serrano travelled through Spain to Santander disguised as the servant of and in company with the English Ambassador, and thus escaped arrest. Turkish embassies are not, however, expected to do special work, and there is a Danubian Navigation Commission which costs us £3,000 a-year, and a Turco-Persian Boundary Commission for which we pay £2,000 a year. Last year there was a special service in

Montenegro, at an expense of £650. The United States embassy to the Ottoman Porte costs for everything £5,600; our embassy, not including legation buildings, costs more than double.

Many of the petty continental legations have been swept away during the last 25 years, and there are several more which ought also to be abolished. The Chargé d'Affaires at Coburg, and his brethren in Wurtemburg, Darmstadt and Dresden, might well be spared, our consuls being most certainly sufficient for all useful purprses.

The eccentricities of disbursements in the Foreign Office department are very wonderful. Vice-Consuls in small places are found receiving more pay than vice-consuls in larger towns. Consuls in important ports receive often lesser salaries than consuls in ports of little or no consequence. Sometimes consuls receive less than vice-consuls. No sort of reasonable explanation can be given for such anomalies.

We now come to the items for superannuations, retired allowances, and gratuities for charitable and other purposes, or in plain words to the Pension List.

We who are Radicals do not object to pensions given for real service; nor do we object to large pensions if the service rendered to the nation has been equivalent. The retiring pensions to our common-law and chancery judges are generally well, sometimes even hardly, earned, and none of them should be grudged. We do object to all pensions corruptly obtained, or granted without equivalent national service; we object, especially, to hereditary pensions, and we contend that Parliament has the right to cancel an improperly received pension without having either the legal or moral obligation to make any compensation to the deprived pensioner.

In the list of payments on behalf of the nation, for the year 1876, appears a pension of £843 as paid to the Duke of Grafton. This pension is a compensatory annuity paid to the Duke of Grafton on the abolition of a legal sinecure conferred on the first Duke of Grafton, who was the son of Charles II.

The modest £843 per annum — received as compensation for ceasing to perform certain supposed legal

services, actually never performed—is but a very small proportion of the amount still really paid by the nation to, or on behalf of, the Duke of Grafton. King Charles II.—of pious and virtuous memory, for whose restoration to the Crown of England a grateful and devout people until very lately repeated a thanksgiving service, which was officially printed in the Common Prayer Book—in his desire to provide sufficiently for his offspring, gave to his son, the Duke of Grafton, the right of levying and taking prisage and butlerage duties on all wines brought into England, with the exception of such wines as should be imported within the jurisdiction of the Duchies of Cornwall and Lancaster. In 1797 it was estimated that the Duke of Grafton received from this source alone about £7,500 a-year. In 1806 under 43 George III., c. 156, and 43 George III., c. 79, the prisage and butlerage privileges of the Duke of Grafton were purchased for an annuity of £6,870 payable to the Duke of Grafton and his heirs male. This annuity was nominally extinguished by the redemption, as to a part, in 1809, and as to the remaining part, in 1816. In 1809 the Duke of Grafton received £49,133 11s. 8d., and in 1816 he received £86,435 7s., or together £135,568 18s. 8d., as the compensation for no longer taking prisage and butlerage on wines.

It would of course have been utterly unreasonable in a rich country like Great Britain—where in 1877 Paisley weavers are averaging 10s. per week all the year round, where a Herefordshire labourer gets eight shillings per week, and where Lord Walsingham proudly boasts that agricultural labourers' wages average 13s. to 14s. per week—to expect a man of the merit and services of the great Duke of Grafton to exist on a wretched pittance of £7,500 a-year, and, therefore, on the 22nd October, 1673, by Royal Letters Patent his loving father Charles II. created a further hereditary pension of £9,000 a-year, which somehow got reduced in 1856 to £7,191 12s., which latter sum was all that the Duke of Grafton then received for that particular pension. This sum of £7,191 12s. was also nominally extinguished in 1856 by the payment to the Duke of Grafton of the further sum of £193,777 13s. 2d.

There was still another pension received by the Duke of Grafton. This last pension appears to have been originally charged upon the Post Office Revenues as a pension of £4,700 a-year to Lady Castlemaine. Unfortunately, on

this point authorities conflict, for in 1663 the whole revenue of the Post Office was apparently given to the Duke of York. Perhaps the accounts of the General Post Office were then as elastic as were the notions of the duties attaching to letter carriers, for we find "Fifteen couple of hounds" passing through the post, "going to the King of the Romans with a free pass," and we also find delivered without charge by the General Post Office, "Two servant maids going as laundresses to my Lord Ambassador Methuen;" and, last but not least, safely and gratuitously transmitted by the same patient Post Office "Dr. Crichton, carrying with him a cow and divers other necessaries." Post Office regulations at present hardly include the foregoing curiosities. In 1857 the sum received by the Duke of Grafton for this special pension amounted to £3,384 a-year, and for the extinguishment of this he was paid a still further sum of £91,181 17s. 7d. If these composition sums are totalled, they amount to £420,528 9s. 5d., and this vast total has helped to swell our national debt, and the nation, in fact, pays the interest on it until this very day. By removing the three several pensions of £3,384, £7,191 12s., and £6,870 from the surface of the pension list, the grievance has been dexterously hidden without having been redressed. A permanent charge has been created equal to the interest at £3 5s. per cent. on about £450,000, or, in round figures, nearly £15,000 per year, which is the sum the Duke of Grafton still costs the country for pensions which do not appear on the face of the Finance Accounts. Besides the above-mentioned commuted pensions, the post of Remembrancer of the Court of First Fruits was, under Charles II., made a patent place for ever, and was conferred upon the family of the Duke of Grafton, and it is from this source that the £843 is derived. If "high wage" helps to drive away trade, as the landowners and capitalists say, it would be interesting to know their opinion on the value of the Duke of Grafton as a stimulant to commerce.

William Henry Fitz-Roy, sixth and present Duke of Grafton, owns 7,316 acres in Buckinghamshire, 8,458 acres in Northampton, 13,642 acres in Suffolk, and 2,784 acres in Banff. We shall be glad to hear from any of our readers the wages paid to agricultural labourers on his several estates. His Grace is a Whig in politics.

After speaking in strong terms of the origin of these Grafton pensions the author of the Financial Reform

Tracts, No. 2, published by the Liverpool Financial Reform Association, says: "Many generations have since succeeded each other, but no Duke of Grafton has yet arisen with sufficient honour or patriotism to refuse to profit by the wickedness of his ancestors, and to reject money taken, without requital, from the honest earnings of the industrious poor."

Another pension which the country continues to pay practically, while theoretically relieved from the burden, is one of £19,000 per year to the Duke of Richmond. On the 18th December, 1676, Charles II. granted to the Duke of Richmond and his heirs 1s. per chaldron on all coals exported from the River Tyne, and consumed in England. On the 5th July, 1799, this burden on poor colliery workers and coal consumers, known as the "Richmond Shilling," was changed into a permanent pension of £19,000 per year, which pension was nominally extinguished in 1825 by a payment of £490,833 11s. 6d. paid in three instalments. Charles Henry Gordon Lennox, sixth and present Duke of Richmond, owns 17,117 acres of land in Sussex, 69,660 acres in Aberdeen, 150,950 acres in Banff, 12,271 acres in Elgin, and 27,400 acres in Inverness. In Sussex we know something of the wretched earnings of the farm labourers, but we shall be glad to have more precise details from any of our Sussex readers. All names will be considered as strictly confidential. His Grace is a Tory, and is Lord President of the Privy Council; his official salary is £2,000 per annum.

Before we quit this Richmond Pension there is one most scandalous feature requiring notice. The heirs of Sir Thomas Clarges at present receive £800 per year on the pension list. This pension is an extremely puzzling one. Originally, in 1676, Sir Thomas Clarges, his heirs and assigns, had a charge on the 1s. per chaldron coal duty granted by Charles II. to the Duke of Richmond. In 1799, by some process of government manipulation, while the Tories were in power, the Clarges annuity was taken off the shoulders of the Duke of Richmond and placed on the backs of the British taxpayer. The effect of this was that the great Duke of Richmond twenty-six years later actually received a huge money compensation for this £500 a-year, to which he had no right, while the country, having thus paid the principal monies to the Duke, continues to pay the annuity to the Clarges family. The pension though

nominally paid to the heirs of Sir Thomas Clarges turns out to be really paid to Lord St. Vincent, who also receives a further sum of £3,000 per year. The £3,000 is made up of two pensions granted to the famous Admiral St. Vincent, of whom the present Viscount is heir, but I cannot make out why Carnegie Robert John Jervis, third Viscount St. Vincent, should also receive the Clarges pension.

In 1662 a pension of £1000 a year was granted in perpetuity by Charles II. to the Earl of Kinnoul. George Drummond Hay, eleventh Earl of Kinnoul, and Viscount Dupplin, a Conservative peer, still receives on account of this pension £676 4s. per annum. This Earl of Kinnoul owns 12,577 acres of land in Perthshire. Apparently the original pension was of a most iniquitous character. James Hay, Earl of Carlisle, had upon the accession of Charles I. a grant of the Island of Barbadoes, as a sort of compensation for property expended about the court and in general extravagant and voluptuous living. On the death of James, Earl of Carlisle, in 1660, without issue, William, Earl of Kinnoul succeeded to the Barbadoes estate, which, in 1661 was ceded to Charles the II., who, in lieu thereof, granted the £1000 per annum for ever to the Earls of Kinnoul.

Amongst the continuing pensions specially worthy of notice there is one of £4,000 a-year payable for ever to the Duke of Marlborough. This pension, originally of £5,000 per annum, was granted by Letters Patent by Queen Anne, in 1706, to the Duke of Marlborough and his heirs in consideration of the "meritorious services" of the Duke. By an Act of Parliament, 5 & 6 Anne, c. 4, the annuity of £5,000 was granted out of the Post Office Revenues for ever to the Duke of Marlborough, the Duchess, and his heirs, and to go with the title. This pension was paid out of the Revenues of the Post Office until 1857, when by the 19 Vic., c. 59, it was transferred to the Consolidated Fund as a pension of £4,000 a-year, which is the sum now paid. The Duke of Marlborough owns 2,755 acres in Buckinghamshire, 1,534 acres in Wiltshire, and 21,944 acres in Oxfordshire. In the event of the failure of heirs male to the body of the Duke of Marlborough, the Honor and Manor of Woodstock, with Blenheim Palace, ought to revert to the nation. J. Winston Spencer Churchill, the present and sixth Duke of Marlborough, is a Tory and is Lord Lieutenant of Ireland, his official salary for which is £20,000 a-year.

His Grace is a patron of fourteen livings. His Grace also receives £91 5s. 3d. per year for his pay as officer in the army.

In the payments of 1876 there appeared an item of £2,160 payable to "the heirs of the Duke of Schomberg." In one Parliamentary return for 1869 this £2,160 figures as "three-fourths of an annuity granted by King George I. to Maynard, Duke of Schomberg, and his heirs;" and in a Treasury minute for 1853, the actual recipients of this Schomberg pension, nominally as the heirs of the Duke of Schomberg, were stated to be the following persons, in the several proportions given after their respective names, viz.; the Duke of Leeds, £1,080, C. Eyre, £720, P. Powys, £360, R. Gosling, £360, Colonel Macleod, £288, Henry Macleod, £72. The portion of the pension payable to C. Eyre was redeemed in 1855 by the payment to him of £19,399 18s., and last year the sum of £29,101 was paid to the Duke of Leeds to redeem the portion payable to him. The original grant of the pension to Frédéric Amand, the first Duke of Schomberg, was by Letters Patent of William and Mary, and was expressed to be out of the Post Office Revenues. In the estimate dated 10th August, 1699, although the Duke had been killed at the battle of the Boyne on the 11th July, 1690, the pension figures under the head "Pensions and Perpetuities" as "Duke Schonberg, on the Post Office, £4,000 per annum." George Godolphin Osborne, ninth and actual Duke of Leeds, owns 3,117 acres in Buckinghamshire, 5,911 acres in Cheshire, 5,911 acres in Cornwall, 3,234 acres in the North Riding, and 10,034 acres in the West Riding, of York.

Another curious pension is one of £4,000 per annum, also payable for ever, which figures in the national accounts as payable to trustees for the use of William Penn and his heirs and descendants for ever, in consideration of his meritorious services and family losses from the American war. The original William Penn died in 1718; we do not know who was the William Penn who, in 1790, was judged so worthy.

Under the 43 George III., c. 159, a pension of £3,000 per year is payable for ever to the representatives of Jeffery, Earl Amherst. The present recipient of this pension is William Pitt Amherst, second earl, who owns 741 acres of land in Essex, 4,269 acres in Kent, and 1,789 acres in Warwick. William Carpenter affirms that General Sir Jeffrey

Amherst, the first grantee of the pension, "was a creature of George III.," and obtained the pension "without merit of any description." In the Black Book, published by Effingham Wilson forty-eight years ago, the editor says :—

"This is one of the most objectionable of the hereditary pensions. It was transmitted by the uncle of the peer, Sir Jeffrey Amherst, a favourite of George III., and placed by him at the head of the army; when, as a commander-in-chief, he introduced and protected such barefaced jobbing and traffic in commissions as both disgraced and ruined our military power. The loyalty of that day was not to entertain even a suspicion of the misconduct of the individual who had the ear of Royalty, however flagrant, and thus the Court favourite died in the full enjoyment of the rewards of his baseness."

Horatio, third Earl Nelson, is the son of the nephew of a Norfolk Church of England clergyman, the Rev. William Nelson, who was created an earl with a pension of £5,000; having been born the brother of Horatio, Baron Nelson of the Nile. Admiral Lord Nelson received pay, pensions, and presents to a large amount. After his death, £20,000 was granted out of the people's money to Mrs. Bolton and Mrs. Matcham, two sisters of the well-rewarded admiral, and £90,000 was, in addition, voted for the purchase of an estate and mansion for the Rev. William Nelson, Prebendary of Canterbury, and Norfolk vicar. At present Earl Nelson receives from the pension list £3,500 and the balance of £1,500 is received by the Countess Frances Elizabeth Nelson. The estate bought for his lordship's father's uncle is, we believe, in Wiltshire, 5,735 acres.

The Duke of Wellington receives £4,000 per year, and in addition to this, the sum of £700,000 was granted to his father, the late Duke, in addition to his ordinary pay and extraordinary allowances, and in addition to a like annuity of £4,000 a-year for life. The present Duke owns 15,847 acres of land in Hants and 2,246 acres in Herts. The total annual income of the "Iron Duke" during the latter years of his life was about £43,178—a very fair yearly pay.

The non-existent Earl of Bath receives, or some persons as his heirs receive to-day, a pension of £1,200 per annum. This pension was originally £8,000 and was granted to the Earl of Bath—£3,000 out of the revenues of the Duchy of Cornwall, £2,500 out of the Post Office, and £2,500 out of the firstfruits and tenths. The Parliamentary return of

1869 states the £3,000 pension to have been originally granted by King William III., and also states it to have been granted by Charles II. On the 12th August, 1715, the pension of £3,000 was transferred by Royal Sign Manual Warrant of George I. from the charge of the Duchy of Cornwall to the Hereditary Excise, as from the previous 24th June, in effect increasing the income of the Prince of Wales by that amount. In 1826, Lord Melbourne, who had somehow become entitled to receive a moiety of this pension, obtained from the country the sum of £30,000 in discharge of his portion of the pension. If in America Cabinet Ministers used their influence to obtain heavy money compensation for pensions originally granted without reason, the English Press would soon expose the corruption of republican administrations. Here corruption is unknown, for this is a monarchy.

On the 9th of June, 1694, William III. granted two pensions, each of £2,000 per year, to Henry Lord d'Auverquerque, one pension to be paid out of the revenues of the principality of Wales, and the other pension to be paid out of the revenues of the Duchy of Cornwall. On the 24th December, 1698, Lord d'Auverquerque was created Earl of Grantham. In 1732, Earl Cowper married into Earl Grantham's family, and for this latter service the Earls Cowper received, and down to 1853 continued to receive, four-fifths of each of the above pensions. In 1853 Earl Cowper received two several sums—on the 5th April, £40,000, and on the 13th May, £43,000—as compensation for foregoing the annual allowance so gallantly deserved. The pension of £2,000 being payable out of the Duchy of Cornwall the actual result was to benefit the present Prince of Wales to the extent of £43,000. F. Thomas de Grey, seventh Earl Cowper, P.C., K.G., owns 2,787 acres in the county of Derby, 10,122 acres in Herts, 2,078 acres in Kent, 1,064 acres in Northampton, and 5,294 acres in Notts. Countess Cowper owns 3,227 acres in Essex, 2,536 in Wilts, and 5,720 acres in the West Riding of Yorkshire, The Dowager Countess Cowper owns 8,888 acres in Bedfordshire. The motto of the Cowpers is "Tuum est" and includes the pension.

Amongst the small curiosities of the pension list we find £209 per year to Samuel Hallyer for not being Deputy Chaffwax. James Gordon Seton gets £442 for the like absence of service (it is to be presumed that he is a superior

kind of non-deputy Chaffwax), while John Holdship, as actual ex-Chaffwax, gets annually £1,145 11s. The Hon. J. H. Knox gets as ex-Weighmaster of Butter £1,076 15s., and for not holding this sinecure office this honourable gentleman has personally received £49,530 10s. There is a gentleman of the same name who owns 6,909 acres of land in county Mayo. Can any of our readers tell us if the two Dromios are one? and if yes—what sort of a landlord he makes? There is another pensioner, Caleb Tyndall, who is also not a Weighmaster of Butter, who only receives for his non-service the paltry annual stipend of £118 6s. As Mr. Tyndall and Mr. Knox each do the same work, it seems unjust that they should not have the same pay. Each of them has been ex-Weighmaster of Butter for forty-six years, and prior to that date neither of them weighed any butter. Mr. C. Panton has for fifty-five years received £850 each year as ex-Clerk of the Pipe.

A pension of £600 a year to Lady C. M. Gardiner, as one of the bedchamber women in the household of the late Princess Charlotte of Wales, is stated, in the estimates, to have commenced on the 11th December, 1865. Now, as Princess Charlotte of Wales died on the 6th November, 1817, my curiosity was excited as to the nominal origin of this pension 48 years after the death of the Princess; stated in the Government estimates as having commenced on the same day, is a pension of £100 a year to Charles Andrews, footman to the same Princess, and the age at the time of retirement from office of this footman is declared to have been 65. Now, as Charles Andrew may be fairly presumed not to have continued as footman to Princess Charlotte of Wales after her death, it is difficult to understand what is meant by the retirement from office of Charles Andrews. The Princess Charlotte received first £6,000, then £13,000, and then £60,000 a year, besides special grants amounting to £69,777; and the Prince Leopold of Saxe-Coburg received £50,000 a year for marrying the Princess. Prince Leopold is supposed to have ceased to receive this pension from the date of his acceptance of the throne of Belgium. We still continue to pay pensions to persons belonging to the household of the late king of the Belgians, Edward Robert, gamekeeper to the king, gets £75; Charles Moore, the late king's steward, £85 10*s.*; and William Pitcher, the groom, £75. Recipients of pensions are long lived. One view of the pension to Prince Leopold, which I had

not sufficiently regarded, has been forced upon me in examining the statements as to the Russo-Dutch Loan. In 1876 there is an item of expenditure for interest and sinking fund on Russian Dutch loan of £63,384. This money represents an annual payment of decreasing amount, which commenced in 1817 at £122,480, and which will end with a payment of £21,354 in 1915. The liability seems to have been undertaken at the close of the great war in 1815, for the purpose of "establishing the King of the Netherlands in his new sovereignty." The 55 George III., cap. 115, provided that Great Britain should only continue to pay her proportion of this Russian-Dutch Loan so long as the Belgic provinces remained part of "the dominions of his Majesty the King of the Netherlands." In 1830 Belgium formed itself into an independent State, and its secession was decreed on the 25th August, 1830. Prince Leopold of Saxe-Coburg was made King of the Belgians, and in consequence of the severance of Belgium from Holland, Great Britain ought no longer to have continued to pay for interest and redemption of the Russo-Dutch loan. A new treaty was, however, entered into on the 16th November, 1831, between this country and Russia, and the engagement to continue the payments was renewed.

Mr. E. G. Johnstone was Clerk of Patents to the Attorney-General, and Solicitor-General for England. On the 1st October, 1853, his office was abolished by the 15th and 16th Vic. cap. 83, and he, as compensation for the abolition of this office, receives £850 per annum. Mr. Johnstone also receives £528 a year addition "as long as he holds the office" (*vide* Civil Service Estimates, 1874, p. 456), notwithstanding that, as the office has been abolished for nearly a quarter of a century, his holding is hardly an ordinary one.

Miscellaneous Expenditure.

Amongst miscellaneous expenditure to March 1st, 1878, £439 3s. 4d. is charged for fees paid on the installation of Prince Frederick William of Prussia as Knight Companion of the Garter, and £380 is paid for special packets for conveyance of certain "distinguished persons," whose names and destinations are not given. £7320 is charged as the cost of conferring the distinction of the Order of St. Michael and St. George upon several colonists, and of completing the insignia of the various classes of the Order.

The secret inquiry into the frauds on the London Stock Exchange cost £600. If it had been public it would not have been dear at £6000; but with closed doors and with millionaire culprits sitting on it, the whole procedure is a sham. There are several ancient fees, which have no merit except their antiquity, and which, although small, ought all to be struck out of our annual national expenditure—the City of London, £7; Duchy of Lancaster, £100; Duke of Rutland, £20; Duke of Norfolk, £60; The Bursar of Trinity College, Cambridge, £5; the Dean and Chapter of Norwich, £5.

If any evidence should be needed of the marvellous effect on health and life of the receipt of a government pension, it may be found in the item of £261, paid in 1878, "for relief of certain distressed Spanish subjects resident in this country, without the means of subsistence, who were employed with the British army, or under British authorities, in Spain, or who have otherwise rendered service to our military operations in that country during the war from 1808 to 1814." Suppose the persons who so assisted us in 1808 to have been only 25 years of age, they must now have attained the ripe age of 95. But these are only infants compared with the unnamed American loyalist who has figured for the last half-century on our national accounts, and who still continues to draw his £18 a year. What age had he attained to at the time of the Declaration of Independence? and what service had he done to be immortalised on the face of our estimates? Assume the loyalist to have been precocious, and to have exhibited his interest in Imperial politics at a very early age, as did Mr. Disraeli's famous school-girl—say ten years old—even then he would, to-day, be 112. I should like to know that American loyalist, and, in any case, I affirm that a pension is far more effective than Parr's life pills for the prolongation of human life.

We now come to the Civil List and the annuities paid to members of the Royal Family.

In 1856 the Liverpool Financial Reform Association reprinted a precise statement of the cost of the Royal Household, and about seven years ago Sir Charles Dilke caused a considerable stir in this country by his famous speeches at Newcastle and elsewhere on the expenditure of the Royal Household. Since then, Mr. J. C. Cox, of Derby, has pub-

lished, in pamphlet form, an essay on the same subject. A parliamentary return, ordered to be printed by the House of Commons on the 26th July, 1869, contains the only accessible official information as to the origin of the Civil List.

On the 19th of March, 1872, Sir Charles Dilke in the House of Commons treated the subject at great length in a vain endeavour to obtain parliamentary investigation or more complete official returns. This speech he afterwards republished.

The Civil List, which is now understood to mean the annual sum granted by Parliament for the support and maintenance of the sovereign and royal household, formerly meant much more. The first Civil List Act passed by Parliament was the 9 and 10 William III., cap 23, by which £700,000 per annum was voted. This included—as the accounts for the year 1700 show—all the expenses of the nation except interest, management, and repayment of National Debt, army, navy, and ordnance. The following are the approximate items of the cost of the Royal Family per annum :—

Her Majesty the Queen, £385,000. Income of the Duchy of Lancaster, £42,000; including a compensation annuity from the Consolidated Fund, the total income of the Duchy is about £69,000. As Duchess of Lancaster Her Majesty receives £101 every year from the nation as an ancient fee. Cost of royal palaces inhabited, or partly inhabited, by Her Majesty, or inhabited without parliamentary authority by pensioned members of the royal family, £35,680. Cost of royal yachts paid by the country, amount not at present ascertainable. The *aides de camp* to the Queen are charged separately in the army estimates.

Her Majesty's enormous private property in foreign funds and landed estate is not included here, although the whole of this property must have been obtained by her from moneys economised out of the allowance made by the nation to herself and to Prince Albert, as the Duke of Kent, her father, died hopelessly insolvent, and the Prince Albert had practically no estate when he married.

There is a further sum of £1500 voted annually to Her Majesty to enable her to be charitable in Scotland, and a smaller sum of £300 to enable her to be charitable in Ireland, and there have also been yearly votes of about £1500 for racing plates to be given in Her Majesty's

name. In Scotland the vote for Queen's plates comes to £218.

There is no pretence for the allegation that the Duchy of Lancaster is the private property of the Queen. In the reign of Anne, the revenues of the Duchy of Lancaster were not only part of the Civil List, but the Crown was restrained from making grants except under the provisions of 1 Anne, c. 7. So far as I am aware, although a recital was introduced into an Act of George III. that the king is possessed of himself, his heirs, and successors, of the possessions of the Duchy, it was not until 1830 that any claim of purely private property was set up. On December 1, 1830, William IV., in a letter written to Earl Grey, claimed the Duchy "as his separate, personal, and private estate, vested in His Majesty by descent from Henry VII. in his body natural, and *not in his body politic as king.*" This claim is monstrously absurd, as William IV. in his body natural was most certainly not the heir male of Henry VII., even if the Duchy had passed by natural succession.

The Princess Royal has an annuity of £8000. Her Royal Highness is Crown Princess of Prussia and received a grant of £40,000 on her marriage.

Prince of Wales and Princess of Wales, £50,000.

Net income of Duchy of Cornwall about £70,000. The total income of the Duchy in 1875 was £101,828.

The Duchy of Cornwall is the result of a charter of Edward III. stated to be confirmed by a statute of 11 Edward III., which statute is not in the revised statutes. The Duchy of Cornwall is not and cannot be the private property of the present Prince of Wales, who can only have a life estate in it, yet parts of the Duchy have been sold, but no return has, so far as I am aware, been made of the capital moneys received, or of their disposition, though in some years the receipts from such sales have been many thousands of pounds. There were formerly three pensions —one of £3000 a year to the Earl of Bath, another of £2000 a year to Lord D'Auverquerque, and a third of £300 to Sir Peter Killigrew, all payable out of the revenues of the Duchy of Cornwall. These pensions have all been transferred to the cost of the nation, thus increasing the net income of the Duchy of Cornwall. Interest on £602,720 Duchy of Cornwall accumulations in 1861, say £18,000 per annum. Sir Charles Dilke, in Parliament, stated these accumulations without contradiction at £743,000. Landed

property rents, say, yearly, £8000. Military income as colonel of several regiments and field-marshal, not included.

There is no record here of the property inherited by the Prince of Wales from his father, nor can any information be given, as the will is illegally kept secret.

Occasional sums are voted for the repairs of His Royal Highness's residence. In one year £8000 was paid for this. In 1876, £550 was charged. This year £6450 is the figure of expenditure. Last year it was £4100.

There is an item each year in the national accounts of £16,216 paid to the Receiver-General of the Duchy of Cornwall for loss of duties on the coinage of tin. This item is, in fact, an annuity paid by the nation to the Prince of Wales. Although then enormously rich, His Royal Highness the Prince of Wales was content to receive from the people on the occasion of his coming of age, a parliamentary grant of £23,455.

The Duke of Edinburgh, £25,000. The naval income is not included in this annuity, nor is any account taken of the value of the hereditary rights to the Dukedom of Saxe-Coburg, and which are variously estimated. The Duke of Edinburgh has now a large additional income from his wife.

Prince Arthur, £15,000. No estimate is here made of the yearly value of the premises belonging to the nation occupied, without any parliamentary authority, by the Prince, and for which he pays no rent.

Prince Leopold, £15,000.

Princess Alice, £6000. On marrying Prince Louis of Hesse, Her Royal Highness received a grant of £30,000.

Princess Helena, £6000, and a grant of £30,000 on her marriage to Prince Christian of Schleswig-Holstein-Sonderburg-Augustenburg.

Princess Louise, £6000, and a grant on her marriage to the Marquis of Lorne.

Princess Augusta, Duchess of Cambridge, £6000 (the Financial Reform Almanack for 1878 gives this at £3000 only). In addition we spend a large sum of money to repair Her Royal Highness's apartments in St. James's Palace, and we pay the rent of her stables in Brick Street, Piccadilly.

Princess Mary of Cambridge, £5000 (married to the Duke of Teck). The White Lodge, Richmond Park, is occupied by the Duke and Duchess of Teck, and no sort of

rent or compensation is paid by them to the nation, nor is there any parliamentary authority for the occupation.

Princess Augusta of Mecklenburgh-Strelitz, £3000.

Prince George, Duke of Cambridge, £12,000.

This does not include His Royal Highness's salary as Field Marshal Commanding-in-Chief, and Colonel of several regiments, nor does it include any benefits derived by the Duke of Cambridge from any rangerships or other posts held by him. As far as can be ascertained, the military salaries of the Duke of Cambridge are, as Field Marshal Commanding-in-Chief, £4432; as Colonel of the 17th Lancers, £1350; as Colonel of the Grenadier Guards, £2200; as Colonel of the Royal Regiment of Artillery, as Colonel of the 60th Rifles, as Colonel of the Corps of Royal Engineers, for these three it is not clear whether or not he takes salary. It is extremely difficult from the military estimates to say if these are given accurately. In the army list Honorary Officers are distinguished by the addition of the word Honorary, and none of the above are so marked.

Some persons pretend that the amounts paid to the royal family are justly due to them as part compensation for valuable properties surrendered by them to the nation. The only property belonging to the Brunswicks when they came to England was their Hanoverian property; this they not only kept, but actually added to out of English taxpayers' pockets. They surrendered nothing. When James II. was declared to have forfeited the Crown, and his heir male was disinherited, it is clear that the nation, or Parliament on its behalf, gave a distinct schedule of revenues for the royal maintenance, first to William of Orange, and then to Queen Anne and the children of the Electress Sophia, but there was no sort of private inheritance for the newcomers to surrender in return. They, at that time, were not even the heirs to the private estate of James II., if he had left any private estate in this country.

In the early stages of the Civil List the grants to members of the royal family were made by the Monarch for the life of the Monarch. In 1737 Frederick, Prince of Wales, applied to Parliament for a larger allowance than had been made to him by George II., and the King then objected that Parliament had nothing whatever to do with the maintenance of the royal family.

In order to find out the real cost of the royal family it is

needful to examine the whole of the financial accounts with the most careful scrutiny. In the Naval expenditure for 1877, £1262 4s. was charged for conveyance of Her Majesty and the Royal Household. It was stated in the House of Commons that the amount voted for the journey of the Prince of Wales to India was more than sufficient, and that a small surplus had been left undisbursed. Despite this there is, on page 210 of the "Naval Estimates," the following item:—"Expenses incurred in connection with the visit of H.R.H. the Prince of Wales to India, £4,360 14s. 8d." Lumped in an item of £3386 8s. 7d., so that it is impossible to fix the exact amount, I find: "Pay of equerry to the Duke of Edinburgh" and "allowance to messes of Her Majesty's ship *Sultan*," while H.R.H. the Duke of Edinburgh was in command; and this year, £11,000 is to be devoted for "Conveyance by sea of the Royal Household, entertainment of royal personages, and other small or unforeseen expenses."

The True Principle of Taxation.

The true principle of taxation should be, that every member of the State who earns more than is necessary for the mere subsistence of himself and his family should contribute towards the national taxation in due proportion to his ability to pay, and to his stake and interest in the nation. It is submitted that at present the main source of revenue from taxes in the United Kingdom is the earnings of the labourer, and that even the burden of the income tax, assessed taxes, and other taxes, which seem to fall exclusively, or principally, on the richer classes, are really ultimately borne almost entirely by the producing classes.

All taxes direct and indirect, paid by the producers or importers of commodities, or paid by the dealers therein, and all taxes direct and indirect incurred on the productions of land, must in the end be paid by the consumers of house commodities and productions. Taxes originally paid to the tax collector by the producer or importer of any commodity, and by the traders and dealers therein, are all repaid by the ultimate consumer in the augmented price of the article he purchases.

TORYISM FROM 1770 TO 1879.

BY

CHARLES BRADLAUGH.

FROM 1688—when the Whig Revolution which dethroned James II., and took away the possible succession from James II.'s son, affirmed the principle that "the people of the land, fully and freely represented," have the right to take back from the wearer of the crown the authority entrusted by the nation to the monarch—down to the accession of George III., the Tories were rigidly excluded from office. During this period of nearly eighty years the Tories were consistent haters and revilers of the reigning members of the House of Hanover. No words we have ever uttered or written were half so bitter against the Brunswicks as those which came from Tory lips and Tory pens. As the Tories were not allowed to dip into the national purse they were eloquent in and out of Parliament in favour of national economy. Tories not being permitted, except in rare instances, to be commissioned officers, we have strong denunciations of the evils of standing armies from Tories, both in the House of Lords and in the Commons. With the coming to the throne of George III. there was a marked change in Tory utterances, if not in Tory principles. George III. was a natural Tory. Buckle says of him that he was despotic as well as superstitious, and he adds: "Every liberal sentiment, everything approaching to reform—nay, even the mention of inquiry—was an abomination in the eyes of that narrow and ignorant prince." The "great Commoner" who in the very Cabinet Council talked "of being responsible to the people," was no fitting minister for a true Tory King; so by the aid of Lord Bute we have in 1770 Lord North as a real Tory Prime Minister, his administration lasting until 1782. None can doubt the pure Toryism of Lord North. On the 2nd March, 1769, he declared that he could not remember that he had voted for a single popular measure. It is to George III. and his worthy minister Lord North that we owe the whole bitterness of the struggle with the North American

colonies. Lord North vowed that he would never yield until "he had seen America at his feet;" but like a true Tory, he placed England at the feet of America and yielded. Lord Hillsborough, his Tory colleague, a sort of Marquis of Salisbury of a century ago, said: "We can grant nothing to the Americans except what they may ask with a halter round their necks." King George III. threatened that if the colonists succeeded he would go to Hanover; but he repented and stayed.

What was the effect of this Tory struggle with the American colonists on our National Debt and national taxation? In 1770 the National Debt was £129,197,633. The war with the American colonies cost £139,521,035, and at its conclusion the Debt had increased to £245,466,855. Just prior to the commencement of the revolution in America the annual expenditure of Great Britain and Ireland was £10,866,580. In 1785, when the war had ended in the defeat, disgrace, and impoverishment of England, the tax-bill had increased to £26,841,141. As every one knows now, this Tory war resulted in the Republic of the United States, and this result was achieved by Tory obstinacy and Tory folly, absolutely against the wish of the majority of the American colonists. George Washington was Monarchical, until the Tories made him a Republican *malgré lui*. Two petitions from the colonists to the "King's Most Excellent Majesty" were treated with scorn and contempt by the King, and by Lords North, Dartmouth, and Sandwich, his Tory advisers. The struggle began with imperial brag and ended in national shame. Those who, in South Africa, employ Basutos, Fingoes, and Swazies under Lord Beaconsfield in 1879, may well read Lord Chatham's grand denunciation of the employment of Indian savages as our allies in North America in 1777. "Who is the man," asked the great orator, "that—in addition to these disgraces and mischiefs of our army—has dared to authorise and associate to our arms the tomahawk and scalping-knife of the savage? To call into civilised alliance the wild and inhuman savage of the woods, to delegate to the merciless Indian the defence of disputed rights, and to wage the horrors of his barbarous war against our brethren—my Lords, these enormities call aloud for redress and punishment. Unless thoroughly done away with, it will be a stain on the national character." The Tory minister, the Earl of Suffolk, replied that "in a contest with rebels there were no means which God and nature might have placed at the disposal of the governing powers to which they would not be justified in having recourse." Lord Chatham's indignation knew no bounds, and in words of fire he denounced the employment of "these horrible hell-hounds of savage war." Now Tories sanction the employment of Basutos to help to steal Baphuti cattle, and assegai Baphuti wounded, while we, Christians and civilised, explode dynamite in the caverns

where Baphuti women and children are hidden. As late as 1782, when the Whigs were moving resolutions in both Houses of Parliament in favor of peace with America, the Tories still encouraged the King to continue the mad and suicidal war.

From 1783 to 1801 we had the Tory Ministry of William Pitt, and in the compass of this Tory rule are crowded so many iniquities—injustice to India, cruelty and treachery to Ireland, the struggle against political progress in England and Scotland, and the war with France—that if there were no other Tory sins in the whole record of the past 100 years, these would be sore enough, and disastrous enough in their consequences, to make all honest working men guard an undying enmity to Tory Governments. Warren Hastings, the Indian Governor-General, had been impeached for fraud, corruption, for hiring out English soldiers to invade the land of the Rohillas as wholesale butchers, ravagers, and destroyers, and for murder, under the cover of the law, of an inconvenient witness against him. It was the Tory Ministry that protected the Tory Governor-General of India in his wanton course of bloodshed and dishonor. In those days there were English members of the House of Commons with the courage to impeach, but the Tories covered the crime with a party vote, and left, without redress, to the oppressed in Hindustan only the memory of their wrongs, to grow ultimately into mutiny when despair of all justice had made the bitterness of life unendurable. Then it was the Rohilla, now it is the Afghan, and to-morrow it will be some other scientific frontier, if for our shame we endure these Beaconsfields and Salisburys much longer. The Irish story has been told so often that men speak as though the repetition of the record of our shameful doings had in some degree remedied or absolved the wrong we had done. But it was not only the Tory cruelty in Ireland under Pitt, it was not only the breach of faith to the Catholics at the time of the Act of Union, it was the consistent and persistent hindrance by the Tories of all approach to religious liberty through more than a quarter of a century of embittered struggling. In the teeth of his own distinct pledge the Tory Pitt in 1805 directly voted against Lord Grenville's resolution in favor of the removal of Catholic disabilities. True to Tory instincts, in 1807 Lord Liverpool and the Duke of Portland secured the rejection of Lord Howick's proposal to enable persons of every religious persuasion to hold commissions in the army. The Tories might have made Ireland loyal by justice ; they made disaffection chronic by keeping the pressure of injustice always acute. Even when, after the masterly agitation conducted by Daniel O'Connell, the Tories at last gave way to the claim for Catholic emancipation, they were only moved by fear. Eloquence found them deaf, entreaty found them stern, but the threat of civil war found them coward.

The Tory Duke of York, putting his hand to his left breast, near the region where the heart should have been, pledged himself in the House of Lords that the measure for the relief of the Roman Catholics should not be carried, "so help me God." The virtuous and Tory Duke of Cumberland menaced the nation that he would leave it for ever if it dared to pass the Bill. But Tory resistance was vain. On the 4th of April, 1829, the Duke of Wellington declared that his unconvinced Cabinet had been compelled to submit to the popular will, being at last thoroughly convinced that they had no choice between concession and civil war. It was not that they would have cared for the horrors of civil war if they had dared to believe they would have won, but they feared defeat. It is only men with the sustaining courage of principles who can again and again, and with foreknowing persistence, fight losing battles, and since the Tories have been faithless to the Stuarts they have had no principles. And, except that modern opinion limits their power for mischief, the Tories of to-day are to Ireland as were the Tories of Pitt, Portland, Liverpool, Castlereagh, and Wellington. It was on the 2nd of December, 1868, that Mr. Disraeli declared that he would continue to give an uncompromising resistance to the disestablishment of the Irish Church. The Tories made '98; they sowed the seed for '48; they planted the roots of Fenianism; they it is whom we must indict for the continuing discontent in our sister isle. We come back again to the Ministry of Pitt, to the war with France, which arose out of the bargain made by Lord Elgin in 1791 to support the Royal Family of France—that is, to encourage, with armed support, weak and vacillating Louis XVI. to betray the very Constitution he had solemnly sworn to maintain. Without English subsidies, furnished by the Tory ministers, the European princes could have given small aid to the tottering Monarchy of France. The Tories feared that the contagion of liberty would be too fierce, and they made a war which endured from 1793 to 1815; and again, lovers of an Imperial policy, look at the effect of this war on our National Debt and national taxation. The war cost, in hard cash, £989,636,449. Before the war began the annual taxation of Great Britain and Ireland was £18,349,344; in 1815, when the war finished, the tax-bill had swollen to £77,887,335. Before the war commenced the National Debt was £247,874,434; when the war had finished England's future industry was mortgaged to repay £861,039,049, besides the capital value of the terminable annuities.

The political liberty we use to-day, the right of meeting we enjoy to-day, the cheap Press we read to-day, have all been won in spite of bitterest Tory opposition. Under Pitt the most infamous repressive laws were passed against tongue and pen.

One statute of 1796 declared that if a man permitted lectures or debates on any subject whatever without licence of a magistrate he might be fined £100 a day, and that if a man without a similar licence lent books, newspapers, or pamphlets, he might be fined £20. Under Lords Liverpool, Sidmouth, and Castlereagh, acts were passed in 1819 which actually prohibited the publication of a cheap pamphlet or a cheap newspaper until the publisher had given two sureties to the extent of £800 not to publish anything seditious. These statutes were only repealed under Mr. Gladstone in 1869, and after many a journalist had been ruined. In the period between the accession of Pitt to power and the termination of the long administration of Lord Liverpool, how many poor men went over and over again to gaol to win us free speech and free Press! In Scotland, Gerald, Skirving, Palmer, Muir, Margarot, and a host of others paid the penalty for their advocacy of reform; some died in the plantations, others died at home from dungeon fever. In London, Erskine's grand defence of Hardy, Tooke, and Thelwall, and in Manchester his brilliant pleading for Walker and his fellow-prisoners, serve to show us a little how the struggle was conducted, and the later fights, as in 1820, when a whole regiment of poor men were on trial with Hunt and Balmforth at Lancaster —all these mark the fashion in which political liberty has been painfully battled for and slowly won, despite Tory rule. And the present Tory Ministry is true to its old Tory traditions; while it dare not gag the Press in England, it has issued a Press gag law in India, and has stifled the Press in Cyprus. It dare not now use yeomanry to disperse a political meeting in Lancashire, as it did sixty years ago, but it ventures on a similar outrage in South Africa.

In office or out of office the Tories tried to keep bread dear until they were beaten by Cobden and the men of the anti-corn-law movement. In office and out of office the Tories hindered reform, until in the struggle prior to 1832 they were affrighted by Bristol riotings, Nottingham burnings, and the threat of Attwood and his Birmingham men that they would march on London. As they were in 1830, so they were in 1866, when Lord Derby, on the 9th July, as Tory Prime Minister, declared that he would not introduce a Reform Bill, but modified his opinion fourteen days later, when the Hyde Park railings were on the ground in Park Lane. The measure of reform of 1867 grew into its ultimate shape under pressure of large meetings held throughout the land. And as Tories have been, in office and out of office, since 1770 to 1874, so have they been under the present Ministry, from 1874 to 1879. When they came into office in 1874, our national expenditure amounted to £73,270,000, not including the sum paid for the "Alabama" claims. In 1878

our admitted national expenditure was £85,407,000, but this does not include many items for the Afghan war, which India cannot pay if she would, and ought not to pay if she could. These eighty-five and a half millions do not include the whole of the items of the disbursements in South Africa, although it is hopeless to expect that the South African colonies can contribute much to this cost. The Tories have taken from the nation each year a larger sum in respect of the National Debt, and yet the national indebtedness is to-day actually larger than when they came into office. In March, 1874, the debt was nominally £779,283,245, but as the estimates of the outgoing Government showed a receivable surplus of income as against expenditure on the current year, of more than five and a half millions, the real balance should only be taken at seven hundred and seventy-three and three-quarter millions. In March, 1879, the National Debt was admittedly £778,078,840, but this left out many millions to be added of Indian and South African war debt, and who dares say to how much the butcher's bill has already swollen or will swell the debt before this year has finished?

Lord Sandon pleads that our Imperial interests need this enormous expenditure. I answer that our national interests do not need it. In England we want no Empress and will not have one. Lord Sandon says that the expenditure is required for the protection of our colonies. I reply that this wanton waste for powder and steel is only required in those colonies where we practise injustice, annexation, and oppression.

The bill of indictment against the present Tory Ministry is a most serious one. In November, 1875, they bought from the late Viceroy of Egypt—at a time when they ought to have known him to be utterly insolvent—a large quantity of practically worthless shares, for which £4,080,000 was paid. These shares not even giving a right to speak or vote in the Company, the Tory Ministry have since purchased other more valuable shares to qualify salaried directors to watch over the valuable property so acquired. As this purchase was actually most illegally completed, and the money treasonably paid before Parliament was consulted on the matter, an extravagant rate of interest was paid by the Government to the Messrs. Rothschild, by whom the scheme was temporarily financed. To cover this reckless waste of public money to Rothschilds the Prime Minister made two statements, both of which he either knew to be, or might have known to be, positively untrue—1. That Rothschilds had, at the request of the Government, bought the shares, and might have been compelled to keep them if Parliament had not endorsed the transaction. 2. That Rothschilds had found one million in gold on the 1st of December, 1875, and might have been called on to find the remaining three millions on the

following day—the facts, on the contrary, being that Rothschilds refused to be, and were not, parties to the purchase, except as lenders of the purchase-money, and that they expressly stipulated against being called on to find the three millions except at dates convenient to themselves. Subsequently to this the whole conduct of the Ministry in Egypt has been characterised by deception so far as the Ministerial explanations to Parliament are concerned, and by gross fraud on the nation.

The six millions' vote prior to Berlin was obtained by a fraud on the country; the Government, afterwards pledging itself that the abstract of the secret agreement with Russia was wholly unauthentic, thus led infatuated Jingoes to believe that Lords Beaconsfield and Salisbury were really advocating a bold policy at Berlin. Lord Beaconsfield made a wantonly false boast of having secured at Berlin an enduring peace when in Europe Austria was invading Bosnia; when the plans for the invasion of Zululand were already submitted to and approved by the Duke of Cambridge; and when the schemes for forcing a quarrel on Shere Ali, in breach of our solemn treaty, and in defiance of our deliberately pledged word, were being eagerly hurried on. In South Africa, in absolute bad faith, the Tories have most illegally destroyed the Dutch South African Republic. They have quarrelled with the Gaikas, the Galekas, and the Pondos, burning their kraals, stealing their cattle, and shooting their women and children. The Tories have landed us in a quarrel with the Baphutis, who have three times beaten us back from Moirosi's mountain, despite that English Christians have thrown dynamite to explode in the caverns where Baphuti men, women, and children lay hidden. These Tories planned long beforehand the invasion of Zulu territory, and sent reinforcements to enable Lord Chelmsford to make the invasion, and yet Lord Salisbury calls our defeat at Isandalana "an unexpected attack made by savages on one of our colonies, which came on us like a thunder-clap." They have decorated as a hero the Lord Chelmsford who, in coward terror, left our dead unburied for four long months.

With the warning of thirty-eight years since before their eyes, with a solemn treaty binding this country not to force European residents upon the Court of Cabul, the Tory Government have wantonly disregarded treaties, promises, and warnings, and they have, in breach of their own distinct statement to the English Parliament, tried to compel the late Shere Ali to receive a British resident at Cabul. These Tories have succeeded in deceiving the present English Parliament by false and fraudulent representations as to what was really happening in India and Afghanistan, and now, by excluding the representatives of the Press, except under most disgraceful conditions, they prevent the

real truth from reaching the English people. Lords Beaconsfield, Salisbury, and Lytton are responsible for the death of Sir Louis Cavagnari, as Lord Beaconsfield and Sir Bartle Frere are responsible for those who died at Isandalana. They were warned over and over again that there was danger to any European resident at Cabul, but Sir Bartle Frere mocked the warning in 1875, and Lord Lytton not only mocked the warnings prior to and after the entry of Sir Louis Cavagnari amongst the Cabulese, but he actually permitted lying telegrams of safety and quiet to be published in England in lieu of the discomforting reports which continually reached the Government.

What has this Tory Government—now said to be about to dissolve Parliament—to show to the people as compensation for this waste of treasure and loss of life? Seven thousand troops brought from India and marched back again, just enough to teach the inhabitants of Hindustan—whom we govern in their own country at the point of the bayonet—that we were not strong enough to hold our own in Europe without the help of Hindu swords. Cyprus, "a place at arms," desolate and fever-stricken, leased from the Porte at a high rent, which we are to hold as vassals of the Sultan to practise there a little slavery, a little Press-gagging, and some priest-shaving. The Asia Minor Protectorate, a dissolving view in a political magic lantern with the slides twisted and blurred. We are repudiated by Turkey; Safvet Pasha himself told me that England had betrayed Turkey into war by promises of support which had never been kept. We have made Italy uneasy. Germany ridicules our pretence of boldness, and France regards us with mistrust. At home trade is bad, our people are hungry and unemployed. But their verdict is to be given at the polling-booth on the day of the general election.

SPEECHES BY CHARLES BRADLAUGH.

FOUR SPEECHES DELIVERED AT THE BAR OF THE HOUSE OF COMMONS DURING THE PARLIAMENTARY STRUGGLE.

First Speech: June 23rd, 1880.

Mr. Speaker,—I have to ask the indulgence of every member of this House while, in a position unexampled in the history of this House, I try to give one or two reasons why the resolution which you have read to me should not be enforced.

If it were not unbecoming I should appeal to the traditions of the House against the House itself, and I should point out that in none of its records, so far as my poor reading goes, is there any case in which this House has judged one of its members in his absence, and taken away from that member the constitutional right he has. ('Hear, hear.') There have been members against whom absolute legal disqualification has been urged. No such legal disqualification is ventured to be urged by any member of this House against myself. But even those members have been heard in their places; those members have been listened to before the decision was taken against them; and I ask that this House shall not be less just to myself than it has always been to every one of its members. ('Hear, hear.')

Do you tell me I am unfit to sit amongst you? ('Hear, hear,' and 'Order, order'.) The more reason, then, that this

House should show the generosity which judges show to a criminal, and allow every word he has to say to be heard. But I stand here, Sir, as no criminal. I stand here as the chosen of a constituency of this country, with my duty to that constituency to do. I stand here, Sir—if it will not be considered impertinent to put it so—with the most profound respect for this House, of which I yet hope and mean to form a part, and on whose traditions I should not wish to cast one shadow of reproach. I stand here returned duly; no petition against my return; no impeachment of that return. I stand here returned duly, ready to fulfil every form that this House requires, ready to fulfil every form that the law permits this House to require, ready to do every duty that the law makes incumbent upon me.

I will not in this presence argue whether this House has or has not the right to set its decision against the law, because I should imagine that even the rashest of those who spoke against me would hardly be prepared to put in the mouth of one whom they consider too advanced in politics an argument so dangerous as that might become. I speak within the limits of the law, asking for no favor from this House for myself or for my constituents, but asking the merest justice which has always been accorded to a member of the House. ('Hear, hear,' and 'Order'.) I have to ask indulgence lest the memory of some hard words which have been spoken in my absence should seem to give to what I say a tone of defiance, which it is far from my wish should be there at all; and I am the more eased because although there were words spoken which I had always been taught English gentlemen never said in the absence of an antagonist without notice to him, yet there were also generous and brave words said for one who is at present, I am afraid, a source of trouble and discomfort and hindrance to business. I measure the generous words against the others, and I will only make one appeal through you, Sir, which is, that if the reports be correct that the introduction of other names came with mine in the heat of passion and the warmth of debate, the gentleman who used those words, if such there were, will remember that he was wanting in chivalry, because, while I can answer for

myself, and am able to answer for myself, nothing justified the introduction of any other name beside my own to make a prejudice against me. (Cheers, 'Question,' and 'Order'.)

I fear lest the strength of this House, judicially exercised as I understand it to be—with infrequency of judicial exercise—that the strength of this House makes it forget our relative positions. At present I am pleading at its bar for justice. By right it is there [pointing to the seats] I should plead. It is that right I claim in the name of those who sent me here. No legal disqualification before my election, or it might have been made the ground of petition; no legal disqualification since my election—not even pretended.

It is said: "You might have taken the oath as other members did". I could not help, when I read that, Sir, trying to put myself in the place of each member who said it. I imagined a member of some form of faith who found in the oath words which seemed to him to clash with his faith, but still words which he thought he might utter, but which he would prefer not to utter if there were any other form which the law provided him; and I asked myself whether each of those members would not then have taken the form which was most consonant with his honor and his conscience. If I have not misread, some hon. members seem to think that I have neither honor nor conscience. Is there not some proof to the contrary in the fact that I did not go through the form, believing that there was another right open to me? ('Hear, hear,' and 'Order'.) Is that not some proof that I have honor and conscience?

Of the gentlemen who are now about to measure themselves against the rights of the constituencies of England, I ask what justification have they for that measurement? They have said that I thrust my opinions on the House. I hold here, Sir, the evidence of Sir Thomas Erskine May, and I can find no word of any opinion of mine thrust upon the House at all. I have read —it may be that the reports misrepresent—that the cry of "Atheist" has been raised from that side. [Pointing to the Opposition side.] No word of all mine before the committee put in any terms those theological or anti-theological opinions in

evidence before the House. I am no more ashamed of my own opinions, which I did not choose—opinions into which I have grown—than any member of this House is ashamed of his; and much as I value the right to sit here, and much as I believe that the justice of this House will accord it to me before the struggle is finished, I would rather relinquish it for ever than it should be thought that by any shadow of hypocrisy I had tried to gain a feigned entrance here by pretending to be what I am not. (Cheers, and cries of 'Order'.)

On the Report of the Committee as it stands, on the evidence before the House, what is the objection to my either affirming or taking the oath? It is said I have no legal right to affirm. I will suppose that to be so. It is the first time that the House has made itself a court of law from which there may be no appeal, and deprived a citizen of his constitutional right of appeal to a court of law to make out what the statute means in dealing with him. There is no case in which this House has overridden everything, and put one of its members where he had no chance of battling for his right at all. Take the oath. It is possible that some of the lawyers, who have disagreed among themselves even upon that (the Opposition) side of the House, may be right, and that I may be wrong in the construction I have put upon the oath; but no such objection can come. There is no precedent—there is, I submit respectfully, no right—in this House to stand between me and the oath which the law provides for me to take: which the statute, under penalty even upon members of this House themselves if they put me out from my just return, gives me the right to take.

What kind of a conflict is provoked here if this resolution be enforced? Not a grave conflict in a court of law, where the judges exclude passion: where they only deal with facts and evidence. I do not mean that these gentlemen do not deal with facts; but, if I am any judge of my own life's story, there have been many things put against myself which I can hardly reckon in the category of facts. I don't mean that they are not right, for hon. members may know more of myself than I do myself; but, judging myself as I know myself, some of the members who have attacked me so glibly during the last few days must have

been extraordinarily misinformed, or must have exceedingly misapprehended the matters they alleged. It has been said that I have paraded and flaunted some obnoxious opinions. I appeal to your justice, Sir, and to that of the members of this House, to say whether my manner has not been as respectful as that of man could be—whether in each case I have not withdrawn when you told me. If I now come here with even the appearance of self-assertion, it is because I would not be a recreant and coward to the constituency that sent me to represent them; and I mean to be as members have been in the best history of this assembly.

I ask the House, in dealing with my rights, to remember how they are acting. It is perfectly true that by a majority they may decide against me now. What are you to do then? Are you going to declare the seat vacant? First, I tell you that you have not the right. The moment I am there [pointing inside the House] I admit the right of the House, of its own good will and pleasure, to expel me. As yet I am not under your jurisdiction. As yet I am under the protection of the law. A return sent me to this House, and I ask you, Sir, as the guardian of the liberties of this House, to give effect to that return. The law says you should, and that this House should. And naturally so; because, if it were not so, any time a majority of members might exclude anyone they pleased.

What has been alleged against me? Politics? Are views on politics urged as a reason why a member should not sit here? Pamphlets have been read: I won't say with accuracy, because I will not libel any of the hon. members who read them; but, surely, if they are grounds for disqualification they are grounds for indictment to be proved against me in a proper fashion. There is no case in all the records of this House in which you have ransacked what a man has written and said in his past life and then challenged him with it here. My theology? It would be impertinent in me, after the utterances of men so widely disagreeing from me that have been made on the side of religious liberty during the past two nights—it would be impertinent in me to add one word save this. It is said that you may deal

with me because I am isolated. I could not help hearing the ring of that word in the lobby as I sat outside last night. But is that a reason, that because I stand alone the House are to do against me what they would not do if I had 100,000 men at my back? (Cries of 'Oh!'.) That is a bad argument, which provokes a reply inconsistent with the dignity of this House, and which I should be sorry to give.

I have not yet used—I hope no passion may tempt me to be using—any words that would seem to savor of even a desire to enter into conflict with this House. I have always taught, preached, and believed in the supremacy of Parliament, and it is not because for a moment the judgment of one Chamber of Parliament should be hostile to me that I am going to deny the ideas I have always held; but I submit that one Chamber of Parliament—even its grandest Chamber, as I have always held this to be—has no right to override the law. The law gives me the right to sign that roll, to take and subscribe the oath, and to take my seat there [pointing to the benches]. I admit that the moment I am in the House, without any reason but your own good will, you can send me away. That is your right. You have full control over your members. But you cannot send me away until I have been heard in my place, not a suppliant as I am now, but with the rightful audience that each member has always had.

There is one phase of my appeal which I am loth indeed to make. I presume you will declare the seat vacant. What do you send me back to Northampton to say? I said before, and I trust I may say again, that this assembly is one in which any man might well be proud to sit—prouder I that I have not some of your traditions and am not of your families, but am of the people, the people that sent me here to speak for them. Do you mean that I am to go back to Northampton as to a court, to appeal against you—that I am to ask the constituency to array themselves against this House? I hope not. If it is to be, it must be. If this House arrays itself against an isolated man—its huge power against one citizen—if it must be, then the battle must be too. But it is not with the constituency of Northampton alone—hon. members need not

mistake—that you will come into conflict if this appeal is to go forward, if the House of Commons is to override the statute law to get rid of even the vilest of members. Had you alleged against me even more than against one man whose name was mentioned in this House last night, I should still have held that the House cannot supersede the rights of the people. But not as much is alleged against me as was alleged against that man, in whose case the House itself said that its conduct had been subversive of the rights of the people. I beg you, for your own sakes, don't put yourselves in that position. I have no desire to wrestle with you for justice. I admit that I have used hard words in my short life, giving men the right in return to say hard things of me; but is it not better that I should have the right to say them to your faces? If they are within the law, let the law deal with me fairly and properly; but, if they are without the law, not unfairly, as I submit you are doing now.

You have the power to send me back; but in appealing to Northampton I must appeal to a tribunal higher than yours —not to courts of law, for I hope the days of conflict between the assembly which makes the law and the tribunals which administer it are passed. It must be a bad day for England and for Great Britain, if we are to be brought again to the time when the judges and those who make the law for the judges are in rash strife as to what they mean. But there is a court to which I shall appeal: the court of public opinion, which will have to express itself. You say it is against me. Possibly; but if it be so, is it against me rightly or wrongly? I am ready to admit, if you please, for the sake of argument, that every opinion I hold is wrong and deserves punishment. Let the law punish it. If you say the law cannot, then you admit that you have no right; and I appeal to public opinion against the iniquity of a decision which overrides the law and denies me justice. I beg your pardon, Sir, and that of the House too, if in this warmth there seems to lack respect for its dignity; and as I shall have, if your decision be against me, to come to that table when your decision is given, I beg you, before the step is taken in which we may both lose our dignity—mine is not much, but yours is that of the Commons of England—I beg

you, before the gauntlet is fatally thrown: I beg you, not in any sort of menace, not in any sort of boast, but as one man against six hundred, to give me that justice which on the other side of this hall the judges would give me were I pleading there before them. (Loud cheers and cries of 'Order', amid which Mr. Bradlaugh again bowed and retired.)

Second Speech: April 28th, 1881.

Mr. Speaker,—I have again to ask the indulgence of the House while I submit to it a few words in favor of my claim to do that which the law requires me to do.

Perhaps the House will pardon me if I supply an omission, I feel unintentionally made, on the part of the hon. member for Chatham [Sir J. E. Gorst] in some words which have just fallen from him. I understood him to say that he would use a formal statement made by me to the Committee against what the Chancellor of the Duchy had said I had said. I am sure the hon. and learned member for Chatham, who has evidently read the proceedings of the Committee with care, would, if he had thought it fair, have stated to the House that the statement only came from me after an objection made by me—a positive objection on the ground that it related to matters outside this House, and that the House in the course of its history had never inquired into such matters; but I can hardly understand what the member for Chatham meant when he said that he contrasted what I did say with what the Chancellor of the Duchy said I said; for it is not a matter of memory, it is on the proceedings of this House, that being examined formally before the Committee, I stated: "That the essential part of the oath is in the fullest and most complete degree binding upon my honor and conscience, and that the repeating of the words of asseveration does not in the slightest degree weaken the binding of the allegiance on me".

I say now I would not go through any form—much as I value

the right to sit in this House, much as I desire and believe that this House will accord me that right—that I did not mean to be binding upon me without mental reservation, without equivocation. I would go through no form unless it were fully and completely and thoroughly binding upon me as to what it expressed or promised.

Mine has been no easy position for the last twelve months. I have been elected by the free votes of a free constituency. My return is untainted. There is no charge of bribery (cheers), no charge of corruption, nor of inducing men to come drunken to the polling booth. I come here with a pure untainted return —not won by accident. For thirteen long years have I fought for this right—through five contested elections, including this. It is now proposed to prevent me from fulfilling the duty my constituents have placed upon me. You have force; on my side is the law. The hon. and learned member for Plymouth spoke the truth when he said he did not ask the House to treat the matter as a question of law; but the constituencies ask me to treat it as a question of law. I, for them, ask you to treat it as a question of law.

I could understand the feeling that seems to have been manifested were I some great and powerful personage. I could understand it had I a huge influence behind me. I am only one of the people, and you propose to teach them that on a mere technical question you will put a barrier in the way of my doing my duty which you have never put in the way of anyone else.

The question is, has my return on the 9th of April, 1881, anything whatever to impeach it? There is no legal disqualification involved. If there were, it could be raised by petition. The hon. member for Plymouth says the dignity of this House is in question. Do you mean that I can injure the dignity of this House? This House which has stood unrivalled for centuries? This House, supreme among the assemblies of the world? This House, which represents the traditions of liberty? I should not have so libelled you. How is the dignity of this House to be hurt? If what happened before the 9th of April is less than a legal disqualification, it is a matter for the judgment of the constituency and not for you. The constituency has judged me;

it has elected me. I stand here with no legal disqualification upon me. The right of the constituency to return me is an unimpeachable right. I know some gentlemen make light of constituencies; yet without the constituencies you are nothing. It is from them you derive your whole and sole authority. The hon. and learned member for Plymouth treats lightly the legal question. It is dangerous to make light of the law—dangerous, because if you are only going to rely on your strength of force to override the law, you give a bad lesson to men whose morality you impeach as to what should be their duty if emergence ever came. ('Hear, hear.') Always outside the House I have advocated strenuous obedience to the law, and it is under that law that I claim my right.

It is said by the right hon. baronet who interposes between me and my duty that this House has passed some resolution. First, I submit that that resolution does not affect the return of the 9th April. The conditions are entirely different: there is nothing since the date of that return. I submit, next, that, if it did affect it, the resolution was illegal from the beginning. In the words of George Grenville, spoken in this House in 1769, I say, if your resolution goes in the teeth of the law—if against the statute—your resolution is null and void. No word have I uttered outside these walls which has been lacking in respect to the House. I believe the House will do me justice, and I ask it to look at what it is I claim.

I claim to do that which the law says I must. Frankly, I would rather have affirmed. When I came to the table of the House I deemed that I had a legal right to do it. The courts have decided against me, and I am bound by their decision. I have the legal right to do what I propose to do. No resolution of yours can take away that legal right. You may act illegally and hinder me; and unfortunately I have no appeal against you. "Unfortunately" perhaps I should not say. Perhaps it is better that the Chamber which makes the law should never be in conflict with the courts which administer the laws that the Chamber makes. I think the word "unfortunately" was not the word I ought to have used in this argument. But the force that you invoke against the law

to-day may to-morrow be used against you, and the use will be justified by your example. It is a fact that I have no remedy if you rely on your force. I can only be driven into a contest, wearying even to a strong man well supported, ruinous and killing to one man standing by himself—a contest in which, if I succeed, it will be injurious to you as well as to me. Injurious to me because I can only win by lessening your repute, which I desire to maintain. The only court I have the power of appealing to is the court of public opinion, which I have no doubt in the end will do me justice.

The hon. member for Plymouth said I had the manliness on a former occasion to make an avowal of opinions to this House. I did nothing of the kind. I have never, directly or indirectly, said one word about my opinions, and this House has no right to inquire what opinions I may hold outside its walls. The only right is that which the statute gives you; my opinions there is no right to inquire into. I shelter myself under the laws of my country. This is a political assembly, met to decide on the policy of the nation, and not on the religious opinions of the citizens. (Cheers.) While I had the honor of occupying a seat in the House, when questions were raised which touched upon religious matters, I abstained from uttering one word. I did not desire to say one word which might hurt the feelings of even the most tender. ('Hear.')

But it is said, why not have taken the oath quietly? I did not take it then because I thought I had the right to do something else, and I have paid the penalty. I have been plunged in litigation fostered by men who had not the courage to put themselves forward. (Loud cheers below the gangway.) I, a penniless man, should have been ruined, if it had not been that the men in workshop, pit, and factory had enabled me to fight this battle. (Interruption.) I am sorry that hon. members cannot have patience with one pleading as I plead here. It is no light stake, even if you put it on the lowest personal grounds, to risk the ambition of a life on such an issue. It is a right ambition to desire to take part in the councils of the nation, if you bring no store of wisdom with you, and can only learn from the great intellects that we have. ('Hear, hear.') What will

you inquire into? The right hon. baronet would inquire into my opinions. Will you inquire into my conduct, or is it only my opinions you will try here? The hon. member for Plymouth frankly puts it, opinions. If opinions, why not conduct? Why not examine into members' conduct when they come to the table, and see if there be no members in whose way you can put a barrier? ('Hear, hear.') Are members, whose conduct may be obnoxious, to vote my exclusion because to them my opinions are obnoxious? As to any obnoxious views supposed to be held by me, there is no duty imposed upon me to say a word.

The right hon. baronet has said there has been no word of recantation. You have no right to ask me for any recantation. Since the 9th April you have no right to ask me for anything. If you have a legal disqualification, petition, lay it before the judges. When you ask me to make a statement, you are guilty of impertinence to me, of treason to the traditions of this House, and of impeachment of the liberties of the people. My difficulty is that those who have made the most bitter attacks upon me only made them when I was not here to deal with them. One hon. and gallant member recently told his constituents that this would be made a party question, but that the Conservative members had not the courage to speak out against me. I should have thought, from reading "Hansard", not that they wanted courage, but that they had cultivated a reticence that was more just.

I wish to say a word or two on the attempt which has been made to put on the Government of the day complicity in my views. The Liberal party has never aided me in any way to this House. ('Oh!' from the Opposition.) Never. I have fought by myself. I have fought by my own hand. I have been hindered in every way that it was possible to hinder me; and it is only by the help of the people, by the pence of toilers in mine and factory, that I am here to-day, after these five struggles right through thirteen years. I have won my way with them, for I have won their hearts, and now I come to you. Will you send me back from here? Then how? You have the right, but it is the right of force, and not of law. When

I am once seated on these benches, then I am under your jurisdiction. At present I am under the protection of the writ from those who sent me here. I do not want to quote what has happened before; but if there be one lesson which the House has recorded more solemnly than another, it is that there should be no interference with the judgment of a constituency in sending a man to this House against whom there is no statutory disqualification. Let me appeal to the generosity of the House as well as to its strength. It has traditions of liberty on both sides. I do not complain that members on that (the Conservative) side try to keep me out. They act according to their lights, and think my poor services may be injurious to them. (Cries of 'No'.) Then why not let me in? (Cheers.) It must be either a political or a religious question.

I must apologise to the House for trespassing upon its patience. I apologise because I know how generous in its listening it has been from the time of my first speech in it till now. But I ask you now, do not plunge with me into a struggle I would shun. The law gives me no remedy if the House decides against me. Do not mock at the constituencies. If you place yourselves above the law, you leave me no course save lawless agitation instead of reasonable pleading. It is easy to begin such a strife, but none knows how it would end. I have no court, no tribunal to appeal to; you have the strength of your votes at the moment. You think I am an obnoxious man, and that I have no one on my side. If that be so, then the more reason that this House, grand in the strength of its centuries of liberty, should have now that generosity in dealing with one who to-morrow may be forced into a struggle for public opinion against it. (Cheers.)

Third Speech: February 7th, 1882.

Mr. Speaker,—In addressing the House for the third time from this position, I feel the exceeding difficulty of dealing fairly with myself without dealing unfairly with the House. If I were to

follow the hon. member who has just sat down into his errors of law, of history, and of memory, into his reckless misconceptions as to what are the views I hold and write about, I should only be giving pain to numbers of members here, and departing from that mandate with which my constituents have trusted me. It is—I say it with all respect—not true that I done anything more with reference to the succession than maintain the right of Parliament, meaning by Parliament both Houses, to control it; and any member who pretends that I done anything else, either does it, not having read what I have written, or heard what I have said, or having forgotten entirely what I have written or said, and being extremely careless in representing my views to the House.

I regret that the hon. member [Mr. Newdegate] should have imported into the discussion some fact supposed to have occurred in a police-court since I stood here before. I can only give the House my positive assurance that the hon. member is perfectly inaccurate in his representation of what took place. It is exceedingly painful to bandy words in this way. The hon. member was good enough to say he did not hear. He could not well have heard, for the magistrate did not refuse my affirmation at all. I happened to have been before Sir J. Ingham before, and he knew me, and knew the particular form of affirmation; and when the clerk read it to me no discussion took place on the subject. I hope the House will forgive me for contradicting such a small thing, but small things are sometimes much used. They have been used to work my ruin since I stood here before; and I regret that the shame of reticence did not at least keep it from this House: that the hon. member thought it his duty, by a common informer, to attempt to drive me into the Bankruptcy Court, and outside this House has boasted that the question would be solved in that way. It may be a brave boast, it may be consonant with piety from the hon. member's point of view; but I believe that every other gentleman's sense of piety would revolt against the notion of driving a single man into bankruptcy, and then canvassing for subscriptions—('hear, hear')—for the "bold and vigorous, and patriotic and noble conduct", as the advertisement said, which consisted in hurrying in a cab to

find the common informer to issue a writ against me. I dismiss that, however. I ask the House to pardon me for having wasted its time on this poor thing. I do not hope, I dare not think, that any word I may say here will win one vote; and I would have let this go silently against me, were it not that I owe a duty to the constituency that has twice entrusted me with its suffrages, a duty to every constituency right through the land in time to come—('hear, hear')—whose representative may be challenged as Northampton's has been. ('Hear, hear,' and 'No'.) Some gentlemen say "No", but where is the challenge to stop? ('Hear.') It is not simply theology, it is politics too. ('Hear, hear.') It is not simply theology that is brought before the House, but the wild imaginings of some member who, with the nightmare of panic upon him, and a wild imagining of the French Revolution clothed in terrors of which I know nothing, comes here to tell you of mighty Russia successful, and of the unfortunate United States with its Presidents assassinated because of religious and political opinions. Panic of that kind is not evidence as to my opinions. If this House intends to try me for my opinions, let it do it reasonably, and at least have the evidence before it.

I would show you how unfair it is to trust to memory of words. The hon. member was good enough to tell the House that I had declared to a Committee of the House that certain words were meaningless. I hold in my hand the report of the Committee and the minutes of evidence; and no such words exist in any declaration of mine. ('Hear, hear'; and Mr. Newdegate shook his head.) The hon. member does not believe me. I cannot make more than facts. I cannot make the comprehension which should distinguish, when prejudice has determined that nothing shall be right that is put. The only way in which it can be pretended that anything of the kind in reference to the oath can be brought in, is by taking my letter of the 20th of May, written outside the House, which does not contain a specific declaration the hon. member has put into it, which letter I protested ought not to be brought before the Committee at all, which I never volunteered to the Committee—(Opposition laughter)—which I objected to the Committee having before

them. ('Oh!' and laughter from the Opposition.) The gentlemen who laugh, laugh because the laugh is the only answer that could be given. No reason can be given in reply, no facts can be quoted; and I ask hon. members who laugh to remember that I am pleading as though a quasi-criminal at this bar, and that I have a right to an audience from them; and I appeal to the House at least to give me a silent hearing. Judges do that. If you are unfit to be judges, then do not judge. ('Hear, hear.') It shows, at least, the difficulty of dealing with a question like this, when those who are to judge have come to a judgment already, not upon any facts, but upon what they think ought to be the facts.

I ask the House to deal legally and fairly with me. Legally you are bound to deal; fairly, as an assembly of English gentlemen, you ought to deal with me, even if you have differences with me, even if you think my opinions so obnoxious, even if you think that the politics with which you identify me in your minds are dangerous to you. ('Oh, oh!') If I am not dangerous, why not let me speak there [pointing to the seat he occupied last Session]? If there is no danger, why strain the law? If there is no danger, why disobey the law? It is put by the hon. gentleman who spoke last that there are certain words of the oath which the courts of law have declared essential. The courts of law have declared the exact opposite. So far as a decision has been given, the very report of the Committee shows that the highest court of judicature in this realm has decided the words are not essential to the oath at all.

I ask the House to deal with me with some semblance and show of legality and fairness; and first I say that they ought not to go behind my election of the 9th of April, 1881, and that the House ought to reject the resolution moved by the right hon. gentleman, because it deals with matters which antedate my election, and because the House has nothing to do with me before the 9th of April, 1881. That is the return of which the Clerk at the table has the certificate. That is my only authority for being here. If I did aught before that rendered me unworthy to sit here, why did the House let me sit here from the 2nd of July to the 29th of March? If what I did

entitles the House not to receive me, why has not the House had the courage of its opinions and vacated the seat? Either the seat is mine in law, and in law I claim it from you, or I am unworthy to hold it; and then why not vacate the seat and let the constituency express its opinion again? But my return is unimpeached, it is unimpeachable, and there has been no petition against me. The hon. member who went into back alleys for common informers could not find a petitioner to present a petition against it.

If I speak with temper—(Opposition laughter)—the House, I trust, will pardon me. I have read within the last few days words spoken, not by members of no consequence, but by members occupying high position in this House, which made me wonder if this is the House of Commons to which I aspired so much. I have read that one right hon. member, the member for Whitehaven—(laughter from the Ministerial side)—was prompted to say to his constituents that I was kicked down stairs last Session, and that he hoped I should be again. If it were true that I was kicked downstairs, I would ask the members of the House of Commons on whom the shame, on whom the disgrace, on whom the stigma? I dare not apply this, but history will when I have mouldered, and you too, and our passions are quite gone. But it is not quite true that I was kicked downstairs, and it is a dangerous thing to say that I was, for it means that hon. members who should rely on law rely on force. It is a dangerous provocation to conflict to throw to the people. If I had been as wicked in my thought as some members are reported to have been in their speech, this quarrel, not of my provoking, would assume a future to make us all ashamed.

I beg this House to believe, and I trust, Sir, that you at least will believe me, that I have tried as much as man might to keep the dignity of this House. I submitted last Session, and the Session before, to have things said against me without one word of reply, because having had your good counsel, I felt it might provoke discussion upon matters which this House would willingly not have speech upon, and that I had far better rest under some slight stigma than occupy the House with my personality. I appeal to the recollection of every member of the

House whether from the moment of my entering into it I did not utterly disregard everything that took place prior to my coming into it, and direct myself to the business for which my constituents sent me here.

The most extraordinary statements are made as to my views, statements as inaccurate as those which have fallen, no doubt unconsciously, from the hon. member who has last addressed the House. One noble lord in a great London gathering convoked against me—a gathering which was not as successful as some that have taken place in my favor—denounced me as a Socialist. I do not happen to be one. I happen to think that Socialists are the most unwise and illogical people you can happen to meet. But the noble lord knew that I ought to be something. (Laughter.) I am a red rag to a wild Conservative bull, and it must rush at me and call me Socialist.

I ask this House to be more fair and just. If I am to be tried, at least let me be tried for the opinions I hold and the views I express. Why, there are members who have soiled their tongues with words about social relations and marriage for which I have no proper reply in this House, as unfortunately the forms of the House do not permit me to use the only fitting answer, and perhaps it is as well. But I ask the House, Do not let this be the kind of weapon with which a return is met. Deal with me as the law directs, and in no other way. It is said "You have brought this upon yourself". ('Hear, hear.') One baronet who has spoken of me with a kindness more than I deserve, in the very borough which I represent, said I had brought it upon myself, because when I originally came to the House I flaunted and most ostentatiously put my opinion upon the House. ('Hear, hear.') Well, not one word of that is true. Not a shadow of it is true. I hold in my hand the sworn evidence of Sir Erskine May. I do not ask gentlemen to take my word, for it is clear they will not, but that of their own officer. And when the right hon. baronet said I claimed under the statute, and drew an inference from it, he knows that my claim contained no such words, until the clerk at the table of the House challenged me as to the law under which I claimed. I do not quarrel with him, but I submit that the clerk of the House had

no right to put that question to me. I submit that the House had nothing whatever to do with it—that it certainly is no ostentatious flaunting by me. I submit that, at any rate, it is prior to the 9th of April, 1881, and the House has no right to revive it against me.

I ask the House to try and deal with me with some show of fairness. They will find that when I was before the Committee, instead of obtruding my opinions, I said I had never directly or indirectly obtruded upon the House any of my utterances or publications upon any subject whatever; and when pressed by one of the members sitting on that (the Opposition) side of the House as to certain opinions I was supposed to hold, by asking me particular words I was supposed to have used in a judicial proceeding, I said that if the Committee wished I would answer, but that I objected to answer, because I had carefully refrained from saying any word which would bring my opinions before the House. I therefore ask the House whether it is not monstrously unfair to say that I have obtruded any opinions here when I have expressly, carefully, and thoroughly kept them from the House? But it is said by the right hon. baronet that it would be a profanation to allow me to take the oath, and that the House would be no party to such a profanation. (Opposition cheers.) Does the House mean that it is a party to each oath taken? ('Hear.') There was a time when most clearly it was not so a party. There was a time when the oath was not even taken in the presence of members at all. But does the House mean it is a party now? Was it a party the Session before last? Was it a party when Mr. Hall walked up to that table, cheered by members on the other side who knew his seat was won by deliberate bribery? (Loud Opposition cries of 'Order'.) Bribery sought to be concealed by the most corrupt perjury. Did the House join in it? (Renewed cries of 'Order'.) If the House did not join in it, why did you cheer so that the words of the oath were drowned? But was the House a party when John Stuart Mill sat in this House? ('Hear'; 'No'.)

A member who is, I think, now within the walls of the House—the hon. member for Greenwich—in addressing his constituents, said that Mr. Bradlaugh's opinions were hardly

more objectionable than those of some other members of the House. If the hon. member knew that, then he was a party to the profanation of the oath; but perhaps they were on his own side, and he did not feel the profanation so acutely. ('Hear, hear,' and laughter.)

But it is said, "Our real objection is that you have declared that the oath is not binding upon you". ('Hear, hear,' from Mr. Alderman Fowler.) That is exactly the opposite of what I did declare. The hon. member whose voice I hear now, I unfortunately heard on the 3rd of August, and heard so that I shall never forget it. (Mr. Bradlaugh here looked towards Alderman Fowler and paused.) The hon. member admits that is the point—that I have declared the oath is not binding upon my conscience; but, unfortunately, all the print goes the other way. I am asked by the Committee who sat as to whether the oath is binding, and on page 15 I reply: "Any form that I went through, any oath that I took, I shall regard as binding upon my conscience in the fullest degree; and I would go through no form and take no oath, unless I meant it to be so binding". Again, I am asked as to the word "swear". I say: "I consider when I take an oath it is binding upon my honor and upon my conscience"; and with reference to the words of asseveration to which the hon. member for North Warwickshire referred, he would at least have been more generous towards myself, if generosity be possible with him, if he had said: "I desire to add—and I do this most solemnly and unreservedly—that the taking, and subscribing, and repeating these words of asseveration will in no degree weaken the binding effect of the oath upon my conscience".

I say here, Sir, before you, with all the solemnity man can command, that I know the words of the oath the statute requires me to take; that I am ready to take that oath according to law; and that I will not take an oath without intending it to be binding upon me; and that if I do take the oath it will be binding upon my honor and conscience. (Conservative cries of 'Oh! oh!') Members of the House who are ignorant of what is honor and conscience—(Loud cries of 'Order', 'Oh, oh', and 'Withdraw', from the Opposition.) If members

will allow me to finish my sentence——(Cries of 'Withdraw'.) Members of this House who are ignorant of what is ——(Renewed cries from the Opposition of 'Withdraw'.) These (Mr. Bradlaugh pointing to the Opposition benches) are my judges! Members of this House who are ignorant of what is the honor and conscience of the man who stands before them —('Oh', and laughter from the Opposition)—have a right to shout 'Withdraw'; but they must beware lest a greater voice outside—('Oh, oh', and laughter from the Opposition)—at the ballot-box, where it has a right to express it, may not only say 'withdraw', but make withdraw all those who infringe the constitutional rights of the nation, as they seek to infringe them now. If I knew any kind of word which might convince members whom I desire to convince that I would take no pledge that I did not mean to be binding, I would use that form of words. But I have found myself so harshly judged, so unfairly dealt with, that one feels a difficulty in understanding whether any form of words, however often repeated, would convey any kind of conviction to some minds.

I presume that this House will repeat its vote of April 26th. What then? Will it have the courage of its opinions, and vacate my seat? ('Hear, hear.') If it does not, this House leaves me in an unfair position before the law. I am bound to come to this table, and will come to this table, as long as the mandate of my constituents sends me here, unless the House vacates the seat. If my seat be vacated, it is my duty to bow to the House, and appeal to my constituents again; and then the verdict rests with them. But to take away part of the right, and deal with it in this fashion, leaving me with the full legal responsibility and no kind of legal authority, I submit is not generous. Well, will this House repeat its vote of 9th May? Will it substitute force for law? At present the law is on my side. ('No, no,' and 'hear, hear'.) If not, let me sit and sue me. ('Hear, hear.') If not, try by petition. If not, bring an action. But shouting 'No' won't decide the law, even with the united wisdom of the members of this House who shout it.

I know that no man is a good advocate for a great principle unless he himself be worthy of the principle he advocates; and I

have felt acutely the judgment properly passed upon me by many members of this House, who, knowing their superiority to me, say how unworthy I am that this question should be fought in my person. I admit I am unworthy, but it is not my fault that I have this fight to make. I remind you of the words of one of the greatest statesmen who sat in this House more than a hundred years ago, that whenever an infringement of the constitutional right was attempted, it was always attempted in the person of some obnoxious man. ('Hear, hear.')

I ask the House for a moment to carry its mind to the 3rd of August last. I do that because either I do not understand what took place then, or my memory has failed me, as the memory of other hon. members sometimes does, or things happened without my consciousness. I thought I had stood aside until Parliament had dealt with the pressing business of the nation. I thought that had been recognised by this House. I thought I only came saying at the very door of the House that I was ready to obey its lawful orders; and I thought I was then seized by force while saying it. My memory may not serve me well on that, but I think it does. There were plenty of witnesses to the scene. I saw one hon. member climb on to a pedestal to see how fourteen men could struggle with one. It was hardly generous, hardly brave, hardly worthy of the great House of Commons, that those sending out to the whole world lessons of freedom, liberty, and law, should so infringe and so stamp them under foot. I had no remedy in any court, or I would have taken it. With all respect to you, Sir, and the officers of this House, if there had been any possibility of trying at law against the mighty privilege of this House, I would have appealed to that possibility.

Let me now, before I finish, ask the ear of the House for one moment. It is said it is the oath and not the man; but others, more frank, say it is the man and not the oath. Is it the oath and not the man? I am ready to stand aside, say for four or five weeks, without coming to that table, if the House within that time, or within such time as its great needs may demand, will discuss whether an Affirmation Bill shall pass or not. I want to obey the law, and I tell you how I might meet the

House still further, if the House will pardon me for seeming to advise it. Hon. members have said that would be a Bradlaugh Relief Bill. ('Hear, hear.') Bradlaugh is more proud than you are. ('Hear, hear.') Let the Bill pass without applying to elections that have taken place previously, and I will undertake not to claim my seat, and when the Bill has passed I will apply for the Chiltern Hundreds. (Cheers.) I have no fear. If I am not fit for my constituents, they shall dismiss me, but you never shall. The grave alone shall make me yield. ('Hear, hear,' and 'Oh'.)

Fourth Speech: May 4th, 1883.

Mr. Speaker,—With the indulgence of the House, I desire to submit a very few words in support of my right to take the oath and my seat pursuant to my return. I was elected on the 4th of March of last year, and since that election I have not presented myself for the purpose of taking my seat. The House, after my election, expressed its pleasure that I should not be permitted to obey the law that Session; and this Session the House has been engaged in considering a measure which, if it had passed, would have been a measure which would have rendered it possible, supposing my constituents to have re-elected me, for me to have taken my seat on affirmation. Last night the House felt it right to reject that measure, and now it is my duty to do what the law requires of me, and I ask the indulgence of the members who are hostile to me in the few words which it is my unpleasant duty to address to them.

I ask that indulgence because my position for some time has been one of considerable pain. By the privilege of an unsworn member, I have been within hearing of everything that has taken place in this House; but by the practice of the House I have been precluded from offering the smallest dissent to any phrase, however severe; to any insinuation, however

harsh; to any charge, however much I think it false. My constituents have a right to the voice and speech of two representatives in this House. (Cheers.) That is their unquestionable right. They have chosen me three times in this Parliament to be one of their burgesses; and if I were as vile as some of the members have chosen to describe me, if that vileness imposes no legal disqualification, no one within these walls has a right to challenge the return of my constituents. (Ministerial cheers.) The law requires me to take my seat; it imposes a penalty upon me if I do not take my seat; it gives me privileges which I ought to enjoy while I hold unchallenged this certificate of return; and here I ask whether there ought to be any hindrance between the returned of a constituency, the duty which the law imposes upon him to perform, and the services which his constituents have a right to demand; and I submit that any hindrance which is not justified by law is an act which in itself is flagrantly wrong, whoever may commit it; and that the mere fact that a majority of voices in one Chamber may prevent a citizen from appealing to the law in no sense lessens the iniquity of the illegal act; and that history will so judge it, whatever to-day you may think it your right and your duty to do. ('Hear, hear.')

I listened, Sir, with pain to one dangerous doctrine that was put forward against my admission: viz., that Parliament recognises no rights but its own; and that it never treated those claims—that is, those of the electors of Northampton—for electoral or representative concessions as rights; and that it had always regarded them as high and valuable privileges which it was in its power to withhold or bestow; and that it had never been guided by any other principle than expediency or policy. I submit that that doctrine is treason to the Constitution of England. (Cheers from the Ministerialists.) I submit that the suffrage is a right; and in the famous case of Ashby *v.* White it was decided by the highest courts of judicature in the realm that the suffrage is not a privilege, but a right. And I submit that, while it is true that Parliament has a right to take away, negate, or destroy the right of any citizen in this country, yet that one Chamber is not Parliament, and that neither House,

by its mere resolution, may override, negate, or suspend a law; and although you may have the right of force, that is a bad right to put against the right of the law. (Cheers. Some dissent being expressed by Irish members, Mr. Bradlaugh turned to them and said:) I can only thank the courtesy of the members who interrupt me on my right—(several voices: 'Left') —for their consideration for me in the difficult position in which I am placed; and I will ask the indulgence of the House while I put one or two words of explanation as to matters which have been prominently urged as reason why I should not sit.

It is said, first, that I am a candidate of the Government, put forward by the Government. Surely, if that were true, it would be no great objection in the way of my return; but there is not a particle of truth in it. I stood in 1868 for Northampton to fight the seat of Lord Henley. The present Prime Minister on that occasion thought it his duty to oppose my election, and wrote a letter, against which I then thought I had fair ground of complaint, advising the people of Northampton to return the two sitting members, Lord Henley and Mr. Charles Gilpin. I have never had, directly or indirectly, the smallest aid or assistance from either the present Prime Minister or from any member of the Government, or, to my knowledge, from any member of the Liberal party, in any of the elections I have fought in that borough—('hear, hear')—and when the hon. member who has thought it his duty to come into unfortunate collision with me elsewhere (Mr. Newdegate, who expressed dissent) chooses to contradict that, he contradicts it without the smallest knowledge of the facts. With reference to the allegation made by the right hon. baronet the member for South-West Lancashire (Sir R. Cross), that the late Mr. Adam had in some fashion recommended me to the electors of Northampton, there is not the faintest shadow of foundation for that. I never held the smallest communication, direct or indirect, of any character whatever with Mr. Adam, or with anyone on his behalf, until in this House, in his official position as Commissioner of Works, it was my duty to address questions to him on behalf of my constituents. With that exception, I never had the smallest connexion, direct or indirect, with Mr. Adam or with any mem-

ber of the Government; and to my belief—perhaps it may be incorrect—I have always regarded the Liberal party as standing in the way of my election, rather than as in any way helping my return. (Cheers.) This, however, I submit, was matter unworthy of this House. No such consideration has ever entered at any time into the discussion of any other candidature. ('Hear, hear.') I submit that a great House, which claims the powers of one of the highest courts of these realms, should try to be judicial. (Cheers.)

Then it is said that all that has happened I have brought on myself; that it is not the opinions which were alleged against me, but, to use the words of more than one right hon. and hon. member, the offensive way in which, at the table of the House, I paraded my views, and threw down the gauntlet in the face of the House. There is not a shadow of foundation for that allegation. (Cheers.) The only way in which it is attempted to support the allegation is by saying that, when at the table of the House, and when in writing I claimed to affirm, giving no reasons whatever in support of that, and when thereupon asked under what law I claimed to affirm, I named the statutes; then it is said that that was a declaration of Atheism. But it is not true, and no person with the smallest acquaintance with the law should make such a declaration; though I think that I heard a right hon. and learned gentleman commit himself to the statement that none but Atheists could affirm under the Evidence Amendment Acts, 1869 and 1870. That is not so. By the law prior to the passing of those Acts, any Theist who did not believe in future rewards or punishments was one of those who were not competent to give evidence on oath, who might have been objected to as incompetent, and who became competent to affirm under those statutes. Therefore there was no declaration of Atheism involved in what was said at the table, and no member has a right to examine my opinions. (Cheers.) I have never uttered them in this House. Under great temptation I have refrained from saying a word which could wound the feelings of the most religious, although I have heard within these walls within but a few hours language used by one who had declared his religion which I should have felt ashamed to use in any

decent assembly.[1] (Cheers.) Nothing of my opinions was communicated to this House until the Committee which examined me before it asked whether I had written a certain letter to the *Times*—and it has been stated over and over again on both sides of the House that any declaration in the *Times*, or any declaration outside these walls, is a matter with which Parliament has no concern; but when the Committee insisted I gave way, for I had no desire to be a hypocrite or to conceal my real convictions. I had put, I hope as respectfully as man could put, what I thought a fair reason for the line I took; and although I believe that it was a matter which the House had no right to deal with—entirely without its province—yet when the Committee pressed me upon it I believed that I was dealing with generous English gentlemen, who would not distort what they had asked for into a declaration that I had paraded it at the table of the House. ('Hear, hear.') I had to sit with pain while reckless charges, probably supplied to members by persons not having the responsibility of a seat in this House, have sounded in my ears; and I heard two right hon. members and several hon. members quote against me during this week letters as of "An Avowed Atheist", as expressing my opinions on religion and on family life. They were quoted against me on the 1st and the 3rd of May, although on the 26th of April, in the paper in which these letters were printed, there appeared a declaration that they were not written by an avowed Atheist at all, but by a professing Christian, for the purpose of injuring me and preventing my candidature; and I ask the House whether this is a loyal and brave way to deal with a man who has no right of speech until too late to remedy the wrong done. ('Hear, hear.')

Members have been industrious in reading all the things I have ever written, and many I have not written. One hon. member, the hon. member for the Tower Hamlets (Mr. Ritchie), read to this House phrases which when he read them I could

---

[1] This referred to some exceedingly filthy and blasphemous language used by Philip Callan, M.P., in the presence and hearing of the Right Hon. Lord R. Grosvenor and other members.

not remember, but which I knew it was impossible that I could have used in the way they were put, because they would have been fatal to the candidature I desired to preserve in Northampton. What do I find? I find that instead of its being in any matter, or happening in any fashion, in connexion with these contests, a portion of a speech attributed to me in a report fifteen years ago has been taken, although at the top of the very paragraph from which the hon. member quoted I find that there is a declaration that I am in no way responsible for what appears in the report. Surely it would have been generous to have said that; it would have been fair to have said that; it would have been just to have said that. (Cheers.) I do not pretend that in everything I have said I have never deserved the blame of this House; but there is a great difference between things deserving blame, and twisting and distorting every phrase to make groundwork for the heaviest punishment that can fall upon a man who desires to serve the constituency which elected him to represent it in this House. ('Hear, hear.')

Then I heard that I had been convicted of circulating a filthy book, and had escaped only by a legal quibble the punishment it was said I deserved. The hon. member who thought it right to say that in this House, might have said that the learned judge who tried me—whose gravestone will perhaps protect him from the charges and insinuations which have been heaped upon the other judges who have had the misfortune to do me justice—(cheers)—the late Lord Chief Justice Cockburn, said: "That the defendants honestly believe that the evils that this work would remedy, arising from over-population and poverty, are so great that these checks may be resorted to as a remedy for the evils, and as bettering the condition of humanity, although there might be things to be avoided, if it were possible to avoid them, and yet remedy the evils which they are to prevent—that such is the honest opinion of the defendants, we, who have read the book, and who have heard what they have said, must do them the justice of believing". Is that the language which one of England's greatest judges would use if he had before him a man charged with circulating a filthy book? And the jury who found me guilty in their verdict

said: "We entirely exonerate the defendants from any corrupt motive in publishing it". ('Hear, hear.') Surely when foul words of condemnation come, a generous and strong opponent would have at least said this on the other side, so that the House might know how far the condemnation was warranted.

I will say no more personally save this: Members who have said that I attacked marriage, that I attacked the family, cannot have read what I have said on either subject. I have never in my life attacked either. Members who charge me with Socialism and Communism are ignorant of the whole history of my life, and of the whole political strife in which I have been engaged. ('Hear, Hear.')

But all these, although they were as true as they are false, give you no right to stand between me and my seat. (Ministerial cheers.) For I ask the House to be logical—(laughter)—I ask the House with all respect to be logical—though I do not doubt that it would be difficult for some members to get into that frame of mind which would enable them to be so. I would ask the House either to declare my seat vacant at once, or introduce a Bill rendering me incapable of sitting for any constituency. (Ministerial cheers.) Deprive me of all civil rights by law, and then I must submit, as better men before me had to submit, whom the Parliament of England attainted and outlawed; but while I have civil rights I will claim them. (Ministerial cheers.) If the law cannot give them to me—and perhaps it is better this House should be above the law—if the law cannot give them to me, then I can only try, wherever voice may go, to show that you, the High Court of Parliament, greater than the law, have trampled on the law—(Ministerial cheers and counter cheers) —and at least try at the hustings and in the ballot-box, when the time comes, that the people whom you say are on your side shall decide, as it is their lawful right to do. (Ministerial cheers.)

I heard a strange phrase from a noble lord, that both sides had gone too far to recede. The House honors me too much in putting me on one side and itself on the other. The House, being strong, should be generous. The strong can recede, the generous can give; but the constituents have a right to more than generosity—they have a right to justice.

(Ministerial cheers.) The law gives me my seat. In the name of the law I ask for it. (Ministerial cheers.) I regret that my personality overshadows the principles involved in this great struggle; but I would ask those who have touched my life, not knowing it, who have found for me vices which I do not remember in the memory of my life, I would ask them whether all can afford to cast the first stone—(Ministerial cheers)—whether, condemning me for my unworthiness, then that, as just judges, they will vacate their own seats, having deprived my constituents of their right here to mine. (Loud Ministerial cheers.)

INDIA:

HOW WE OBTAINED IT; HOW WE HAVE RULED IT; AND HOW IT SHOULD BE RULED.

Delivered at the Town Hall, Northampton, November 19th, 1883.

Friends, when I was invited to deliver the annual lecture in aid of the Infirmary, I thought I might do that which would be useful work in taking a subject upon which there is much misinformation and very much misrepresentation. I take this subject really in view of the discussion on the Ilbert Bill; but there is so little known among the general public as to our relations with India that I thought you would permit me to roughly sketch our past connexion with it, and show you what seem to me to be our responsibilities in relation to it.

I am of opinion that we have obtained our authority in India in a great part by means of which we ought to be heartily ashamed. And I think if we continue to govern India there is the weightiest duty upon every Englishman and Englishwoman to take care that the despotic authority of England shall be used as much as it can be to redeem our past and to make our Indian fellow-citizens desirous of being governed by us. Conservative speakers seem to hold a different view. They hold the view that was put forward by Lord Ellenborough in the House of Lords many years ago. He said then: "Our very existence in India depended upon the exclusion of the Natives from military and political power. We have won the Empire of India by the sword, and we must preserve it by the same means." I say that that is a shameful doctrine. I say that is a doctrine which no Englishman, to whatever party he may belong, ought to pro-

pound: and, although my views are well known, I desire to-night not to treat this question in a party spirit. I desire to appeal to Conservatives as well as to Liberals, to Radicals as well as to Liberals and Conservatives, and to urge upon them that there is the common duty of trying to deal with the immense mass of the people of India, so that our Government, if it must continue, shall produce as little misery as may be humanly possible, and as much benefit as we can possibly contrive for them.

I am sorry I did not provide such a map of India for you as could be seen through this hall, because the very appearance of India has something in it of such immensity compared with our own small island, as at once to make us wonder how a handful of Europeans should ever have acquired such authority over that enormous tract of country. It is a pear-shaped triangle. Its northern base, so to speak, if you turn it upside down, is the famous Himalayan range. On its western side it is bounded by the Arabian Sea; and on a great portion of its Eastern side, and on the South East, by the Bay of Bengal. Its apex is the famous Cape Cormorin, a sort of pear-shaped curve, which completes the triangle. Its length and breadth in its widest part are curiously almost the same, namely nearly 1,900 miles; and when you consider that that represents a space of something like one and a half millions of square miles, you will form some idea of the enormous extent of territory with which we have to deal. At the census of 1881 that contained nearly 254 millions of human beings, of whom 198,790,853 were under direct British rule, and the others were in those Native States which are subject to England and which are called mediatised States—States regarded as feudatory to England. So that we have 254 millions of Hindu population—when I say Hindu population I am not using the word in its religious sense, but simply in its geographical sense, to designate the native population. We have as against that, in the same territory, 89,798 British-born subjects, men and women. Deducting the army, which consists of 55,808, we have 33,990 of British subjects controlling the welfare of these 254,000,000. And I would put to you at once that if there were equality of interest, if you had

to measure the desires of the 33,000 against 254,000,000, we should be bound to pay the greatest attention to the wants and needs of the 254,000,000, and, if necessary, to disregard very much the desires of the 33,000—when we remember that they have gone to a foreign land for their own benefit, and the others are there already in the land of their birth, where we are only by right of conquest.

I hope you won't think me wearisome if I trouble you with one or two figures of facts. I know they are always tiresome, but I will make them as interesting as I can. The total expenditure of India for 1882 was £71,113,079. That expenditure has increased 16¼ millions in ten years. Now, when you remember that, by over-taxation, famine has resulted in several districts—that the population, the native population, have had no voice, except such small voice as I shall show presently, in relation to that taxation—I put it to you that a gross increase of 16¼ millions in ten years either has to be justified by great improvement for the country, or, when we are making subscriptions in aid of starved inhabitants of Hindustan, we ought to consider whether we have helped to starve them first by the pressure we have put upon them. Not only has taxation increased, but so also has the debt. The total debt of India in 1882 was £156,820,614. That debt has increased no less than 15½ millions in ten years; and it has increased 104 millions since the Crown assumed the Government in 1857. It is right that I should say with reference to the increase in 1857 that there was, as I shall have occasion to mention to you presently, an increase of no less than 40 millions of debt in four years in connexion with the Mutiny and its suppression. But let me urge to you that this Indian debt is one we cannot afford to disregard in this country. In the event of any insurrection having a permanent character, that debt having been contracted under English authority, the English taxpayer would have either to pay it or repudiate it.

I won't, till I come to the end of my lecture, discuss further the probabilities involved there. But I will mention to you that which most of you will know, that until 1858 our relation with Hindustan was only in connexion with the East India Com-

pany, a Company which went there simply to make money. Since then we have governed India under what is called the government of the Governor-General in Council, and that is the government of seven persons alone—the Government of Lord Ripon, or whoever may be the Viceroy, and six gentlemen whom I will describe to you. For all purposes, save one, they are supreme. For all purposes, save one, every order they make is an order against which there is only one appeal, namely to public opinion in this country. And I am sorry to say that that is an appeal which is very little likely to be availing, for English people have not paid the attention they ought to have done to India, either in Parliament or out of Parliament. I have seen Indian matters discussed with twenty men languidly sitting or reclining on the benches of the House of Commons. And I have not found amongst the people of England any great interest taken in what may have been the nature of the debate. Yet I ask you, you who rule 254 millions of people, you whose rule, if it be bad, to them may mean crime and disaster—I ask you, of whatever party you are, of whatever religion you are—have you the right to be indifferent to the happiness or misery of 254 millions of people whose destinies you control without appeal? Your judgment being final upon it, I ask, Are you not bound to consider every question that arises, and to influence the decisions that may be come to? (Loud cheers.)

Now, the Governor-General in Council has six for his ordinary Council: one for Finance, one for Legislative matters—and at the present moment the Legislative member is at any rate well-known in England, that is Mr. C. P. Ilbert, whose name is identified with the Bill with which I shall presently have to deal—one for Military matters, one for Public Works, and two members of the Council who divide between them the departments which in this country would figure as Home Office, Post Office, Trade, Education, and Local Government. Now for all purposes, save one, they are supreme. For new legislation they are not. For new legislation the statute requires that every time they legislate there must be summoned not less than eight and not more than twelve additional members, of whom not more than half are to be official: half may be non-official.

And, in addition, wherever the Council may be sitting, that is, whether it be sitting in the Presidency of Bombay, Bengal, or Madras, the Lieutenant-Governor and the Advocate-General of the Presidency where it sits are also invited to those Legislative Councils. So you have twenty members of the Legislative Council, of whom four are now natives, who sit when matters of legislation are brought forward.

There is one thing one ought to say to the credit of Lord Ripon, and that is, for the first time in the history of India, knowing that the Bengal Rent Bill would be one of the matters on which the Council would have to legislate, his lordship has consulted the large associations in Bengal interested in the question as to the man they would like to have nominated to sit on the Council to speak on their behalf. (Cheers.) I only hope this may be only one specimen of wise direction on that subject.

Now, if you please, I want to say a word to our Conservative friends. I want to express my intense regret that any question affecting Indian rule should be made a matter of party cry and party politics. We ought to forget the parties to which we belong in dealing with Indian questions. We ought only to ask ourselves, Is the measure for the advantage of the people of Hindustan? We ought not to ask who introduced it. We ought not to ask who supports it. We ought not to ask which Government brings forward the measure. We ought only to ask, Is it a measure which is just, humane, wise and generous? And then each party should give it their support without reference to who may be Prime Minister, or who the legislative officer who brings it forward. The danger of making Indian questions matters of party cry is this. If the Tory cry now succeeds—I won't say the Tory cry, but the cry put forward by men like the Hon. Edward Stanhope, by men like the Rt. Hon. James Lowther—(ironical laughter and hisses)—if the cry is to be maintained that we are a dominant race, that we won India by the sword and that we are to keep it by the sword, then remember the answer that may come to that cry. The Sikh people may say: "We can fight as well as you. We were loyal during the Mutiny, when nearly all your rule was swept away. We stood by you in the hour of danger. Our swords

have been drawn in your defence." Others may say: "Our regiments have come to Egypt and to Europe at your beck and call; you can no longer rule us by force as you did, because the enterprise and knowledge of the West which belonged to you has been made more common to the world by education, by telegraphs, by steam, by the thousand facilities which civilisation to-day puts at the service of the weakest". And they may say: "If you rely on force, then we will reply by force, unless you treat us so that we may love you, unless you make it so that it is our interest to be with you. If you continually teach us that we are slave and you are master, that we are down and you are up; if you continually teach us that, then we may draw the sword when you are weakest, and our millions will crush your thousands, as they must."

I don't think that the people of Hindustan desire to quarrel with us. I believe that the best educated Hindus, and I have had some opportunity of judging during the last twenty years, are sensible that in the Western world there are resources and traditions which they have not, which will benefit them: and I believe that they desire to work with us. But there is much dissatisfaction in Hindustan. Just think for a moment. Before a native can be a civil servant, before he can occupy any one of the posts which the English Government can give, he must come over to this country to be examined, on the mere risk that he may pass an examination which is not easy even for Englishmen. He has to be examined in English. Look at the cost of such a long journey. Look at the waste of time in such a long journey. Look at the fact that if he be a Hindu he loses caste entirely, and, if he fail, he is entirely an outcast from his own home and people. I say it is a shameful thing. If there are to be competitive examinations for Civil Service, and I think it wise and right there should be, then the candidates should be examined in Calcutta, Bombay, or Madras. Why should they be obliged to cross the ocean? It is a journey none of them ought to be forced to take as a condition of entering Government service. We ought to hold out facilities for competitive examinations, and not raise these great obstacles —we ought to hold out every inducement to natives to become

servants of the Government, if we want to keep our rule in India. Thirty-three thousand cannot hold 254 millions in check; and I put it to you that this matter of Civil Service Reform is one that will have to be dealt with.

But I must follow the line marked out by the title of my lecture. I begin it by saying how we obtained our rule in India. And I say without fear of contradiction that our past in India has been so shameful, so tainted with crime or marked with dishonor, that if it were the history of any other people, every English orator on every platform would denounce it with the strongest words of castigation and shame. We went there very early in the 17th century—perhaps a little to the end of the 16th century. But we are traceable there early in the 17th. The Portuguese and Dutch had gone there before us. The French were rivals with us. We all wanted to trade, but the Portuguese and Dutch were weaker than we, and therefore we immediately came to the conclusion that they had no right to trade there. At first the French were stronger than we, and therefore we made a distinction. The Portuguese and Dutch being the weakest, we arrived at the conclusion that they were pirates. We could not permit such a clashing with British interests; and as they wickedly persisted in trading to places they had been abominable enough to find out before we did, we burned their ships and hanged their crews, and gradually they left off their iniquities.

At first we only went there as simple traders, and in 1613 the East India Company begged leave of the ruler of that part of the territory on the gulf of Cambay, which is now within the Bombay Presidency, to erect a British station at Surat; and directly afterwards they obtained permission to establish another station a little to the north of that at Cambay; and directly after that at Ahmenabad. But these were only factories or shops. We did not claim any right to be there, and paid tribute or rent for the right to have our factories there. Three years after that we came down to the South East, and there we got leave to establish a station at Masulipatam, or rather more East than North East of what is now Madras. About the same time we got leave to establish another station at Calicut,

on the West, almost on a line with Masulipatam. And then —we began to feel our feet.

At first we only asked rulers whether we might have jurisdiction over our own servants; and the rulers granted that, with strict provision that it was not to go any further. Then we found out that we had a great deal of valuable property, and we asked leave to erect Fort St. George, just by what is now Madras; and then, when we began to fortify, we proceeded to kill. We did not kill the inhabitants of the country—they were too strong as yet; but we killed the Portuguese, and we killed the Dutch, and we made short work of them. We made it a rule to whip to death or starve to death the crews of every one of the vessels that was caught trading, declaring that they were pirates of the seas.

This encouraged us, and we began to think it was not worth while asking further leave. We began to take it. Up in the North of the Bay of Bengal, due east of what is now the City of Calcutta, but which then did not exist as a city, and on the coast, was a place called Chittagong. We tried to take it, and the people of Chittagong wickedly resisted. We burned one or two places on the coast, in order to show them that they ought to appreciate the advantages of civilisation which we brought them. We did not succeed, and about the end of the century we humbly petitioned for leave to have trading stations at the three villages of Chuttanatti, Govindpur, and Calcutta. Calcutta has grown from a village to a city since then. In 1742 we were strong enough to steal, and we stole. Perhaps I ought not to say that. I think it would be better to say that finding ourselves strong enough to give the advantages of the civilisation we possessed to the uneducated natives, we brought some of their territory within the benign influence of our rule.

I won't weary you with the stories of what Clive did. You will find them in Macaulay. I will hardly, except for one thing, trouble you with the story of Warren Hastings; but it is needful I should tell you something of that, or you may not comprehend what grievances India has against us. In 1780, Warren Hastings was impeached by the High Court

of Parliament in England, and the grounds of his impeachment which were proved in evidence were these—that he had been guilty of injustice, cruelty and treachery, in hiring British soldiers to extirpate the Rohillas. The Rohillas were the inhabitants of the province of Rohilcund, an agricultural people, with whom we had a solemn treaty of peace; a people who made no war on us, a people who wanted to make no war on us; and yet, for £20,000 in cash, paid to Warren Hastings, and £400,000 paid to the East India Company, British soldiers were hired out to a native Indian prince to devastate their country, burn their towns and villages, kill their people, and ravish their women. He was charged with cruelty to the Emperor Shah Alum, in withholding his tribute; with extortion and oppression in the case of the Rajah of Benares; with ill-treatment of the family of the Vizier of Oude; with improvidence and injustice in his policy towards Faruckabad. He was charged with reducing Oude from a garden to a desert. Think what it means to reduce a country far larger than our own from a garden to a desert—a densely-populated country. It means that people die of starvation in hundreds. It means that a state of things is produced, so horrible as to shock even those who take part in it, and so terrible in its horrors as to surpass the power of imagination to conceive. It means a state of things in which men, women and children are marked for misery, and shame, and death. I will only read you one or two extracts to point what I say. "The cattle were sold, tools pawned, seed-corn eaten, children offered for sale, till purchasers could not be found; and finally the Government were informed by subordinates that the living were known to prey upon the dead. Troops of famished peasants, worn and wan, came crowding into the towns, bringing with them pestilence in various forms, small-pox, dysentery, and fever, and spreading terror and dismay among rich men and rulers. Death did not heed being told to begone. Its carnival was come, and the ghastly revel was prolonged from week to week and from month to month, till the gravedigger was weary, and the jackal and vulture grew lazy and tame."

You may ask, what is the use of reviving these things of

one hundred years ago? I revive them because in 1879, when a Tory Government wanted to extract money from the North Western Provinces of India, when Sir George Coupar, our governor there, petitioned that the taxes should not be enforced, and told the Government that if they enforced them the people would be unable to cultivate their fields, the Government insisted upon their enforcement, and within a period of four months 250,000 people perished of starvation, and tens of thousands died, because the tax-gatherer had robbed them of the means of cultivating their fields.

I cannot go through the story of vice-royalty after vice-royalty. It is enough to say that it is one page after another of war and annexation. Every Viceroy who annexed territory had a step in the peerage. Every Viceroy who annexed territory figured amongst the grandees of our land. He had example. He knew that he should not be punished, for when Warren Hastings was impeached Lady Hastings brought diamonds to Queen Caroline, and King and Queen canvassed the peers for an acquittal.

This sort of thing ended in mutiny. "Greased cartridges" has been the story; but the annexations of Lord Dalhousie, the seizure of Oude, and other cases of territorial rapacity, were the real cause. The "greased cartridges" were but the spark; there would have been no explosion if the powder had not been already there. It is not that which lies on the immediate surface that unlooses revolution. The causes of each revolution grow in the miseries of the people for long generations, and the outbreak comes when you least expect it.

It is no part of my duty to-night to tell the terrible story of the Mutiny, or the more terrible story of its repression. If the Mutiny was wicked, our repression of it was cruel, murderous, and abominable. Nay, when Canning went there as Governor-General, from 1858 to 1862, because he tried to be just he was mocked with the title of "Clemency Canning", as though clemency were a shame, when in a judge clemency is the highest honor. Yet in the peerage of Canning his clemency will shine when the gems which he wore are forgotten.

I admit that the rulers of Hindustan have since then made

efforts at wise legislation. The Penal Act of 1860 and the Codes of Civil and Criminal Procedure of 1861 stand out as marks of that wisdom. But I will ask you to remember that the Hindus have to forget their history before they will love us. They have to forget the frauds, the perjuries, the villainies that have been perpetrated. They have to forget their burnt cities and their ruined homes. They have to forget the wrongs of their ancestors. And they have only now, if we want to hold them, the guarantees of the future; and unless we make that future full of brightness and of hope, unless we try to show that our professions of freedom are not a sham, unless we try to show that the civilisation of which we boast, and the benevolence which, in famine time, we so widely advertise, are not all false, not all a sham, we must show that we can be just and generous to these people.

Now the questions which will be dealt with by the Govern-General in Council, almost immediately, are important questions. There is the Bengal Rent Bill, the Local Government Bill, some measure in connexion with Civil Service Reform, and the Ilbert Bill.

I confine myself now particularly to the Ilbert Bill, because that is the question on which it is most needful to speak. And I ask first, What is this Ilbert Bill? Because I hold in my hand a memorial sent to me, as to every other member of Parliament, against that Bill. You will find the Ilbert Bill best explained, popularly, in a speech made last week at Bristol by Lord Northbrook. I shall use that speech, or some extracts from it, because Lord Northbrook speaks with the authority due to the words of one who himself has been Viceroy of India—from 1872 to 1876. I will ask those who attack Lord Northbrook to remember that he was honorable enough to give up what is probably nearly the highest office an Englishman can hold in the world—the position of controller of the destinies of 250 millions of human beings—rather than be guilty of a falsehood towards these people.

Lord Northbrook, speaking of this Bill, reminds those to whom he speaks that so long ago as 1833 the then responsible Minister in England, as against the East India Company, used

these words: "I wish it to be clearly understood that whatever may be the immediate regulations of the Governor-General and the India Council, no European shall enter India except upon the condition of being placed under the same laws and tribunals as the natives". There is nothing unfair in that. If you go to a foreign country for your own benefit, why should you have a superior position to the people who belong to that country and to whom that country belongs? You are an intruder there. The least you can do is to meet them on a footing of equality. And if you go as a conqueror and shelter yourself like a coward and a mean rascal behind the bayonets of the soldiery, then you have no claim on the sympathies of intelligent people. Lord Northbrook points out that in pursuance of this a law was passed by which Englishmen were made subject to all the civil laws of the country; and, at the present moment, Englishmen in all things over that one-and-a-half million square miles are subject to the Civil Judges, whether they be native or European. In addition to that, in all the cities of the Presidencies, Calcutta, Madras, and Bombay, Englishmen were made also subject to the same Criminal Code and to the same Judges, whether they were native or whether they were European. I will ask you to remember that the bulk of these 33,000 people are precisely within the cities of Calcutta, of Bombay, and of Madras, that it is a small proportion of them only who are scattered through the country, and that proportion not the most creditable.

I hold here a Government Report, not a Report of a party character, but a Report made under the authority of Governments, both Conservative and Liberal; and I find that since railways have commenced, "mean whites" or European vagrants have begun to spread over the country, and are increasing in numbers, so that efforts have been made to grapple with this evil. This Report has not been made for the Ilbert Bill, for it was printed nine years before the Ilbert Bill was proposed. The gaols and workhouses have found in them too many of these European vagrants. But none of these have been subject to Criminal Law, because there was no European Judge; and, in order to get them tried, you had to send them to

the High Court of Madras, Calcutta, or Bombay. Often you could not transport the witnesses thither, and therefore there was a failure and miscarriage of justice.

The Ilbert Bill is to remedy this, to give the same jurisdiction outside the Presidency cities as exists inside. There is no damage done. The Englishman will still have a right of appeal. He may appeal to the Sessions Court or to the High Court. He may be tried by a jury, half of which shall be composed of Englishmen or Americans, in cases in which the law provides there shall be a jury; and there is no sort of pretence of any injustice at all. What are the objections? The objections are urged in this memorial. The objections are also urged not simply by wild Tory speakers at after-dinner banquets—they are also urged by a man whose words I desire to treat with the most profound respect—I mean Mr. Justice Stephen. Now Mr. Justice Stephen claims that the Ilbert Bill ought not to be accepted because it is the privilege of the European not to be tried by a Hindu. I deny that privilege. If an Englishman puts himself in contact with the Hindu, knowingly beforehand, he is bound to submit himself to the law and he has no right to privilege which prevents his crime from punishment.

The objections to the Bill are stated by Lord Northbrook; and before I refer to the memorial I will give Lord Northbrook's statement of them. First, that Englishmen in India are a dominant race, with right to be tried by their own countrymen only; secondly, that a change in the law is unnecessary; and, lastly, that for various reasons native judges are not to be trusted to try Englishmen. But, as a matter of fact, native judges have tried Englishmen ever since this English law which has been in existence nearly fifty years; and there have been no complaints of their injustice or unfairness. Curiously, it was one of the native magistrates who recently dealt with an important case in which religion was involved. It was a native Indian judge who dealt with the Salvation Army riots; and on that decision I have not heard any complaint that he was unjust or unfair. As a matter of fact, Jews, Mahometans, Parsees, men of every sort and creed, are tried without reference

to their creed, and there has been no pretence for saying that the law has been unfairly administered.

Now what does this memorial say? That is, the memorial of the Europeans who object to the Bill. "Not only are Europeans in the interior of the country isolated in the sense of being solitary units in the midst of tens of thousands of an alien race, but, by reason of difference of language, habits, and feelings, and the absence of common ties and sympathies, they are also morally and socially isolated from the natives around them." The people who have no sympathy with the natives amongst whom they go, should not go there; they should not go amongst them if they intend to regard them as an alien race. And if they go they have no right to ask us to protect them with the sword, because they do not choose to be sympathetic with the natives to whom it is their profit to go. I am afraid of being wearisome in putting this question—but I have to ask you when a memorial urges, as this memorial does, that there will be false charges, and that people will be unfairly tried—I have to ask if these things happen? There are false charges in every court in the world. But here justice has been administered by these very natives in the three most densely-populated cities, where most Englishmen have congregated, and there has been no such complaint.

Now, what is the character of the Hindus? And I take again this Report, which is a statement of the moral and material progress of India—a Government Report printed in 1874, and which is continued year by year. What does it say of the people? It says that, as a rule, they are "chaste, honest, peaceful, singularly docile, easily governed, and patient".

Why should we insult these people? I ask you who have made my poor words of service to the Infirmary by crowding this hall, I ask you—and I would have you forget the speaker in the sentiment I put—I ask you who really dislike me, or who are in any way against me—do not let these people feel that you intend to treat them always as a conquered race. If you do, they will despair of justice, and they will try revenge. If you hold them only by force they will break the fetters when they can, and strike back with the steel when the steel is in their

hands. The past we cannot change, but we may redeem it. The shame of yesterday exists, but we may make the glory of to-morrow so great that the people may forget the iniquity which preceded it. We cannot make glory by dominance. That is a brute doctrine, the doctrine of the days when men cased themselves in armor and pierced their way with steel. It is the school, the lessons of equal justice, interest, and love, that will win to-day.

I appeal to you to protest in favor of this Ilbert Bill as the measure of your desire to do justice to those whom you have wronged.

The Tories are talking in their meetings of a Mr. Atkin, or Atkins, who has come here to represent somebody. I received a strong letter from Madras last week asking me to assure every audience I addressed, or any people with whom I had influence, that he represented nobody but those who had paid him to do their official work. He does not represent the people. And if he did, the people who want you to rule by the sword don't deserve to be represented.

We don't want to rule India by the sword. We want to put before the people of India a future in which, if they will be patient, as they have been, they may climb, slowly it may be, but surely, to the fullest right of self-government, in course of time.

We know that India is populated with divers races, that, having broken up their old systems, they may not be able to climb to the fullest enjoyment of freedom at once. They may have to climb slowly and painfully, but that will give them the opportunity of making their way upward all the more surely. We will not shut the door in their face. If we are to rule these 250 millions of people at all, we must rule them not in the way in which we have gone to their country and taken possession of it, but in the way in which we should like to be ruled if it had been their people who had come and taken possession of our country.

I regret that it should be needful, before an audience speaking the tongue which pretends to be identified with the traditions of liberty, to make such an appeal; but it is needful. When we

find words of mocking go from such gatherings as the recent Conservative banquet at Wellingborough; when we find words of mocking go from a Conservative banquet at Bristol; when we are told that Mr. Gladstone wants to put the Englishman with his neck under the heel of the Hindu; I say either these men are uttering wild and mad things, that they do not think, or are uttering wicked things that they may provoke an echo from the other side. The Hindus have been brave enough to fight beside us, loyal enough to keep our rule. We, at least, owe them that, having taken their land with the strong hand, we shall hold it as gently as it is possible for human hand to hold.

CAPITAL AND LABOR.

Delivered at the Town Hall, Northampton, on January 7th, 1886.

There is probably no subject on which any man could be invited to speak more serious—not only in its actual influence, but in what must come from it during the next few years—than that of Capital and Labor. In old times the laborer was not reckoned at all, except perhaps as a superior sort of animal—a kind of conscious machine. He was never treated as a human being to be reasoned with. If any of you take up any of the old Roman books you find work and slavery not simply immediately connected, but both having nearly the same signification—in fact, in your language there is even yet preserved the evidence of that old slave notion. In connexion with all kinds of labor, the man who directed the labor was called master, the man who performed the labor was called servant; and the servant, or serf, or slave, or bond-man, was owned by his lord and master, owned as to life and to liberty—as to brain it was seldom considered.

During late years there has been a vast change; but Professor Thorold Rogers, in a volume—or rather two volumes—recently issued, entitled, "Six Centuries of Work and Wages", says that "the pauperism and degradation of the English laborer were the result of a series of Acts of Parliament and acts of government which were designed or adopted with the express purpose of compelling the laborer to work at the lowest rate of wages possible, and which succeeded at last in effecting that purpose". And if you look back to our old legislation you would be astounded: there were statutes directing that wage should not exceed this amount or that amount; there were

statutes making it crime to claim higher wages; there were statutes against combinations of workers, and the people were treated as dangerous—not as men, not as women, but as the lower classes—the dangerous classes, and the treatment sometimes made them so. Men who were not reckoned with as thinking human beings, sometimes, in times of despair, times of political excitement, times of starvation, times of anger, acted as though they were unthinking, wild, ferocious beasts. If you use the whip, the whipped one turns sometimes; if you use the fetter, when the fetter breaks there is no restraining influence on the hand; if you constantly drive by fear, if there is no outlet of hope, if there is no opportunity, no sort of break in the dark life, then when the day of mischief comes it is fearful. And in every country it has been so. In the past times the uprisings of the poor, the revolts of the slaves, the wars of the peasants, the revolution of the starved of France—and, coming to more modern times, the riots of the Blanketteers in Lancashire, and in various trades—these all were when men had no right of meeting, when such a meeting as this could not have been held, when the fact that a trades organisation convened a meeting for a man to address it on the relations between capital and labor would have been considered such an element of danger that the magistrates would have prevented it, the military would have been called in to disperse it, and the people who took part in planning it would have been prosecuted.

It is perfectly true, as Professor Thorold Rogers points out, that there have been great changes. Laws have been repealed. "The despotic law", he says, "of parochial settlement has been materially modified; working-men are no longer liable to imprisonment and penal servitude for trying to sell their labor at the best advantage; and the wages of labor are no longer mulcted by Corn Laws and other restraints of trade." But although that is true, many of the effects of old bad laws still remain.

Trades Unions, which have only had legal protection for comparatively the last few years, have not yet been able to grow into the exercise of the full moral control which I trust they will exercise

by-and-by. Take for example one of the latest classes of labor in which organisation has been attempted—I mean the agricultural laborers. If it had not been for the work of men like Joseph Arch and a number of others who have been associated with him, especially for the last fifteen or twenty years, the Franchise just acquired would have been simply a weapon for mischief rather than a tool for utility—simply a sword for mischief rather than a shield for defence. It would not have been, as it is in the hands of educated persons, the opportunity of delivering a verdict, the opportunity of exercising a judgment; it would only have been an opportunity for mischief, because the class had ever been oppressed and there did not seem a possibility of their redemption. But Mr. Arch has taught that class the advantages of organisation; he has taught them the advantages of education; he has taught them the advantages of sober, steady work for the deliverance of their fellows; and he has enabled them to play a part in the election which has just taken place which has won the admiration even of their foes by the judgment they have exercised.

In dealing with the relations of labor and capital, I occupy an exceedingly difficult position: I have no capital, and I have hardly the right, save that of sympathy, to speak for those who are ordinarily called those who live by labor—not that my life is ever free from labor, or that my day is ever an idle one—and I have the difficulty in trying to treat the subject impartially, as I hope I shall; fairly, as I trust I may; but with my sympathy with those of whom I was born, and to whom I belong—the poor of this land—I feel that I render myself open to criticism, open perhaps to reproach, from both sides. Those who own capital may fear my counsels as extravagant, and those who plead for labor may think me diffident and hesitating in the remedies I recommend; and yet I trust that all will do me this justice: that I shall not speak simply to please, that I shall not counsel simply to gain favor, and that the language I use is the language I have used for more than a quarter of a century of my life to those who have permitted me from time to time to address them on subjects of this character.

I take it then that by all reasonable men, the laborer is to-day reckoned with not as a servant, not as a mere serf or slave, but he is reckoned with as a person, who has his labor to sell, and who is entitled to make a fair bargain for that labor before the world; and there is neither inferiority nor superiority between the buyer of labor and the seller, so long as they are both honest; that the inferiority comes in when either tries to cheat. If, trade being good, if, profit being large, the owner of capital conceals the fact of his large profit and the goodness of his trade, in order to extort from the hungry seller of labor a hard bargain and a harsh contract, then that employer is lower than the laborer whom he cheats. If the laborer, having agreed to labor, having contracted to perform a duty, is idle, lazy, dishonest, fraudulent, then he is the lower, and he deserves the contempt and scorn of those whose labor he ruins by his dishonesty.

Unfortunately the purchaser of labor and the seller of labor do not meet on equal conditions. The laborer must sell his labor at a fair price or starve; the capitalist who does not buy his labor may live, sometimes comfortably, till better times come. Hunger cannot wait; if the man would, his wife cannot; if his wife would, the children cannot—there must be breakfast, there must be food, and hunger frightens often a weak man into having day by day less than he should have in his struggle of life.

I propose to enquire what are the rights of labor, what its duties; what the rights and privileges of capital, what the duties of those who possess it. I affirm that every laborer willing to work has the right to life: and by life I do not mean merely existence from day to day; I do not mean merely continuing on sufferance from to-day till to-morrow; I do not mean one constant round of toil that makes all life a gloomy cloud, and has no gleam of sunshine in it—I mean life, reasonable life, life with leisure in it, life with hope in it, life with relaxation in it, life with fair reasonable shelter, food, clothing, won by the wage-earner for himself, and for those of his family who are yet unable to win it—short enough hours of toil to give possibility of enjoyment for all, education for all, hope

for all; time sometimes for music, if music may be; time for looking at sculpture, if sculpture be near; time for pictures, if pictures be gathered in your public galleries; and if you tell me that music, poetry, sculpture, and painting are luxuries, I say they may be luxuries for the rich, but they should be necessaries for the poor, the gleams of sunshine softening life and making it worth living. How can you wonder at men being rough and brutal, whose life has nothing soft, cheering, or humanising in it? How can you wonder at men using rough words and coarse epithets, if no harmony comes into their daily life? How can you wonder at the surroundings of men being brutal, if you never show them the beautiful, or give them the opportunity of imparting their knowledge of it to those whom they rear around them?

In the report issued in 1875 by the Labor Bureau of Massachusetts the Chief Commissioner, Mr. Carrol D. Wright, a gentleman to whom labor is much indebted, says, in a report made by him under the Legislature to the Senate of Massachusetts: "It seems natural and just that a man's labor should be worth, and that his wages should be, as much as, with economy and prudence, will comfortably maintain himself and family, enable him to educate his children, and also to lay by enough for his decent support when his laboring powers have failed". If you tell me that in any country a laborer cannot win that much, then I say that must be a pitiful country, a country that ought not to be able to afford any Rothschilds, that ought not to be able to indulge in any wars, that ought not to be able to afford any costly generals, that ought not to waste any of its money in cannon, that ought to be economical in Royal grants, and sparing in the matter of pensions. I can understand that there may be countries where trade is so bad, where commerce is slack, where enterprise has been so crushed, that no kind of effort can bring anything in surplus over subsistence, but England, at any rate, is not one of those countries yet. And such an unhappy land should be the country where there are no great landlords; that should be the country where there were no enormous rent-rolls; that should be the country where no man could take huge royalties from mines and

minerals, and, being himself worth his hundreds of thousands, say that labor has too much, and is driving the trade away.

What are the rights of capital? For capital has rights. There are people who talk absolute nonsense, and say that capital should be given without interest and used without profit to the capitalist, and who talk of forcible revolution against the capitalist class. Those men are either enemies of the people, or they are idiots; they are either traitors to the people, or they are madmen. If you want to dig a field and you have no spade, if you can earn something by digging and some other one has that spade, you must pay for the loan and user of that spade. It is impossible that capital will enterprise itself to make you live more easily unless capital has some inducement.

What is capital? Sir Thomas Brassey, speaking at the Industrial Remuneration Conference—and I think that was a good sign: rich men and poor men, men with millions and men with nothing, met together in Piccadilly, London, in 1885, to discuss if it were possible to improve the relations between capital and labor. It is the first time that that ever was done in England. It should be done again and again, until working men and the people owning capital understand one another, so that lock-outs and strikes will be regarded as insanities of the past, and not weapons with which either should meet the other. Sir Thomas Brassey, speaking at the Industrial Remuneration Conference, speaking as a representative of capital, used these three phrases. He said: "(1) Abstinence from enjoyment is the only source of capital; (2) it is upon the increase of capital that advances of wages depend; (3) while labor is the vivifying principle which preserves capital from decay". Permit me to make one or two comments on the first and second parts of this proposition. While it is true that all capital arises from abstinence from enjoyment, it is not true that capital is to be found always, or mostly, in the hands of those who abstain. The enormous accumulations of capital in the hands of an Overstone, a Baring, a Rothschild, or Vanderbilt—these did not come by any stroke of wit: there is no fashion of striking one blow upon the rock and a stream of capital pouring out. This capital

represented pence there, shillings here, pounds there, which were the surplus which men created by their labor, beyond what those men had to live upon. If men could save amongst themselves, if men would knit their savings together amongst themselves for trade enterprises which they all understood, the capital and profit would pass into their hands. That will not come to-day nor to-morrow—and I will tell you why: you are not educated enough for that; you mistrust one another too much—not until men trust one another more—and that means until you are truer to one another, for you would not mistrust one another so much if you were all true to one another; it is because so many of you know that in the struggle of life, sometimes driven by hardship, I admit, you have pushed others out of your way, that you do not trust your fellows as much as you should.

The accumulations of produce, of labor, are capital. Those accumulations come into the hands of the crafty sometimes, the clever sometimes. Sometimes the crafty and the clever leave them to fools after them. But whoever may have the accumulated wealth, you cannot expect, if you have nothing but your labor, nothing but your muscle and sinew, that capital shall clothe you, feed you, while you are working, unless you pay capital something for it. Capital is entitled to fair profit and reasonable insurance against loss, and to hope for some prize for the capitalist in the struggle of life, or he would not make the endeavor. Men will not risk thousands in hazardous speculations, say, of mining or manufacture, hundreds of thousands in enterprises which may fail, unless they have some hope that they will gain some possible prizes.

The mistake that capital has made—and the mistake that labor has made too, but that capital made with its eyes open, and labor never having been permitted to see—was that they believed that the interests of capital and labor were hostile to one another, and the man who bought labor bought it as they buy pigs, except that he bought it to starve instead of to fatten. Wiser councils are prevailing, wiser thoughts are growing; it is beginning to be admitted that hostility between capital and labor is injurious to both, and it is beginning to be urged that

the best method for men to grow rich is to give the opportunity to those who make their riches of sharing some of the enjoyments that are accompanying the work they conduct. Unfortunately many employers of labor have deemed, and some still deem, that it is good policy to get labor too cheap. It is not, not even for them; for if you buy labor too cheap, that is, if you buy it so that it leaves the laborer no margin, if you buy so that the purchase involves poverty and hunger, what happens? That poverty you have to feed; you have unwholesome and dangerous employment; you have unhealthy and immoral dwellings; you have disease; and you have crime. Poverty, disease, and crime, cost more when they break out into mischief both to rich and poor than any possible advantage in the temporary bargain. I copied to-day from a report of the Agricultural Commission of 1867 some words written by the then Rev. John Fraser, whom many of you have since known as the Bishop of Manchester—whose death all regret, whether they are friend or foe to him, for he was a man who, although very ardent in his faith, although very bitter against those he disagreed with, was a good earnest true man, endeavoring to make life better for all, and devoting himself, according to his light, to the task of so making it. Now he, dealing with the Agricultural Laborer, said, speaking of some dwellings he visited: "Modesty must be an unknown virtue, decency an unimaginable thing, where in one small chamber, with the beds lying as thickly as they can be packed, father, mother, young men, lads, grown and growing-up girls—two and sometimes three generations—are herded promiscuously: where every operation of the toilette and of nature—dressings, undressings, births, deaths—is performed by each within the sight or hearing of all; where children of both sexes to as high an age as twelve or fourteen, or even more, occupy the same bed; where the whole atmosphere is sensual, and human nature is degraded into something below the level of the swine. It is a hideous picture; and the picture is drawn from life." That is what the Bishop of Manchester said in 1867. You may tell me, "That is 18 years ago". But there was a Commission on the Housing of the Poor, which reported during last year, and they said, not of

agricultural districts or country places, but of great cities, like Liverpool, like Manchester, like London itself, almost under the very shelter of palaces, close to warehouses where millions of pounds-worth of goods were stored, they said that in little rooms, in filthy alleys, that even now in London itself, you could find more than one family in one room, and several families in one house. There it is where typhoid comes, there it is where small-pox touches, there it is where fever rages; it is on the hungry, on the poor, on the miserable, that squalor and disease lay their foul touch; and the men who bought their labor too cheap, the men who exacted from them the sale in despair, pay in crime—these make the burglars, these the robbers in the streets; and the gaol and the poor-house stand as monuments to mark the crime of the nefarious transaction.

I am encouraged to hope because there has been a vast change in the last few years. Sir Thomas Brassey said: "It is in the highest degree desirable, as far as possible, to liberate industry from the deadening influence caused by the antagonism between capital and labor". Sir Thomas Brassey said that which Trades Union leaders had been assailed for saying. It was thought that there could be no hostility, that capital was so strong that it could ride over all; and in some countries it has. It has done it in Russia, it has done it in parts of Austria, it has done it in parts of Italy; and you have Socialism, internationalism, anarchism: the revolt of hunger, and the stiletto, dynamite, and other explosives. These are the results of ignorance, misery, poverty, and despair, breaking out of all control. The question is, how can capital and labor be reconciled: how far is the reconcilement possible?

Once the capitalist foolishly thought that an Act of Parliament would do his work, and enacted that a man should not do more than so much. You have only to read the story of it all in your own country in Thorold Rogers' "Six Centuries of Work and Wages". You read stories of battles, battles where generals lead, battles where men draw the sword; but any real history of the struggle of work for wages contains the narratives of battles more severe, more enduring, more full of

pain, more full of heroism too; battles where the men are working that men may live, not die; battles for their wives' lives, battles for their children's lives, battling with pick and bar, battling in the mine against fire-damp, gas, and water—the one blows them limb from limb, another stifles them, another drowns them. And the workers go, with the courage of despair, day by day down in the cage again, always facing death in this never-ceasing struggle for life; and these make the heroes out of whom the country grows.

I say that capital and labor may be reconciled by treating men fairly and reasonably on one side, and by the laborers knitting themselves together in the effort to try and treat others fairly and reasonably too. I will not disguise the difficulties; I know there are many; I know that when disputes arise, on the one side the employer thinks you are doing something unfair if you ask him how much profit he makes, and on the other you are not sufficiently careful sometimes when you think how little profit he may make. Sir Thomas Brassey—and you will pardon me quoting him so often, but it was a speech he made at the Industrial Conference, which has not been enough commented upon—said "The rate of profit in business is a subject of great importance to the laborer". That was perhaps the first time that that was so plainly admitted by a great employer of labor. The employers of labor have said, "You have no right to know our profits". The truth is that you have a right to know and the duty to submit. And what you have the right to say is: "But you have never told us your profits. We have seen some growing rich, and we thought all could; we have seen some have costly mansions, and we knew sometimes we had no carpet to our floors, and we cannot help noticing it." Sir Thomas Brassey says, "More or less, wages must follow the fluctuations in profits". Men say, "Yes, we are content with that, if they shall follow them upwards as well as downwards". "In many cases and in many trades", Sir Thomas Brassey says, "the want of correct information as to the profits realised by their employers constitutes a great difficulty as to workmen. They do not know when to press their demand, nor when to

acquiesce in reduction in the rate of remuneration for their labor."

Mr. Giffen, in an essay on the progress of the working classes during fifty years prior to 1883, points out that by the end of 1883 there had been a general improvement in the wage of the classes he deals with; but Professor Thorold Rogers makes a comment upon that which ought to have special interest for you. He says: "It is noteworthy that the kinds of labor for which Mr. Giffen has adduced evidence have all been aided and protected by Trades Unions". That is, in England, where men have stood alone the stronger have pushed them down; and it is only where they have been organised, well organised, carefully led, thoroughly trusting, that they have been able to realise the improvement in their wage, which should go with the improvement of profits made. This shows the clear advantage of association. It is the old fable of the bundle of sticks: the one broken by itself with ease; impossible for the strongest man to break the bundle on his knee—he can but hurt his own knee in the endeavor.

Now men of capital have long recognised the advantages of association. The great bankers, the great railways, the great canal companies, the tramways, the insurance companies, all these are associations of people of capital, and do together what one or two cannot do by themselves. And you ought to learn the lesson too, why it is that there is much of the capital, that the bankers use, from your shillings and from your sixpences which you put into the savings bank, and which they are able to use better than you. Why better than you? If you put them together under special control in your own hands, why should not you use them as well? It is not because you cannot. The co-operative stores in the country have shown what you can do if you try to do it. Although only on a small scale, your own sick and trade societies are showing what you can do if you will. I say only on a small scale, for although it amounts to many hundreds of thousands of pounds, it is small compared with the millions you put in the hands of others to use. And what you do in the co-operative system, what you have done in industrial insurance, with

sick and benefit societies in connexion with your trades, what you have done with your trades' associations, you ought to be constantly doing. If you say you cannot, you deserve to be serfs, slaves, animals to be whipped, imposed upon, and you have no right to claim for yourselves the rights of human beings.

I urge that there is a duty of association, as well as a right that all workers should unite together. Every man who does not unite in an association with which his trade is connected, is failing in duty to himself and them, failing in duty to them if he is strong, failing in duty if he is wise, for it is his duty to give them the benefit of his strength and wisdom; failing in duty to them if he is weak and ignorant, because his weakness and ignorance make them weaker in the struggle in which he gives way.

Now there are two great trade societies in this country which have permitted me to talk to them: I mean the Northumberland Miners and the Durham Miners. When they had no unions, their homes—why, what the Bishop said about the agricultural laborer's home was true of almost every miner's home. It was not his fault: he could not get any other home. They were the pit cottages built by the pit owners. The kennels for the owners' dogs were better than the miners' dwellings, and yet good folk grumbled that these men went to the public-house! Why, when these men came out of the pit, the coal-dust caked upon them through the sweat, dirty to a dirty house, they washed in it as best they could. They worked nearly naked in the pit; they had to strip naked to wash—wives, growing girls, and lodgers round them. Can you wonder at immorality? The wonder is that our people have been so moral and so good, and have improved so much as they have done. During the last fifteen years, and during the last ten years especially, there have been literally thousands of new houses built in Northumberland and Durham. The pitmen have got votes, and they have elected Local Boards of Health, and they have made proper drainage, and they have done this under the guidance of wise leaders.

It is only right I should say—because the Northumberland

and Durham pitmen, if they were here, would say it—that for many years they have found the employers of labor ready to meet them in this new work. There are some exceptions, I am sorry to say; still the best of the men and the best of the employers are making the worst of the men and the worst of the employers better than they were. And the tendency is to do everything by arbitration and conciliation. There have been some failures. I will try to show the remedies. The dwellings have improved, the wages have improved, and at the present moment the Trades Unions of Northumberland and Durham set an example to the whole nation, by having returned their own representatives of their own class into Parliament, whose election expenses they have paid, and whose salaries they pay while they are there.

The Society under whose auspices I speak here to-night—I mean the National Union of Operative Boot and Shoe Rivetters and Finishers—is not so large as the Northumberland Miners'—it is not so big as the Durham Miners'—it is not so large as it ought to be; but it is large enough to be useful. I would like to see it much more extensive, much more efficient, much more wealthy; and one of my objects here to-night is, if I can, to induce men who do not belong to that Union to join it. I especially address my remarks to those who do not approve of it amongst the workmen. I say that it is necessary that there should be a Union in the trade, and if this one is not as good as they think it could be, let them join it and make it better. Standing outside they weaken it and themselves. And I say to the employers: It is to your interest that this Society should be made so powerful, that it shall do for you what the coal owners of Durham and the coal owners of Northumberland admit that the Trades Unions of Northumberland and Durham have done for them—avoid disputes, and enable enterprises to be conducted with more profit to the owners of capital as well as more advantage to the men who worked in them. Although I do not call yours a big society, it is not a little one. I understand that you have something like 11,000 members; that since 1874 you have paid some £20,234 in connexion with trade conflicts; and that since 1875

you have paid £19,450 in sick relief and in funeral grants to those who are your members and have been your members.

Workmen, to provide against distress, should rely upon themselves and not on the parish. If you say, "My trade won't give me medicine for my children", I reply that it will if you make your Society effective enough to extort from the buyers of labor a full price for your labor. It would be no dearer for the employers of labor to pay a full price; and it is less dishonorable than paying it in Poor Rate. Unfairly low wage is dishonoring to payer and receiver. Labor does not want charity, it wants justice: it wants life; and that when it is struck in battle by sickness, by disease, or when the wage-earner is struck by death, there shall be some protecting hand other than the Board of Guardians, other than the Union Workhouse. I understand that you have a balance in hand of some £8,447, of which £4,215 is in the hand of your Central Union, and the other £4,232 in the hand of your branches. You ought to have ten times as much as that in hand. You ought to be in a position to do this: Suppose you said to a great shoe manufacturer, "I know you are making an enormous fortune". Suppose he answered, "I am making an enormous loss". You ought to be in a position to start a factory of your own, where you could make the same things and know then your own profit and loss; and then when you understood whether it were true that profit could be realised you would be able to enforce the claim if it were true, and not be foolish enough to persist in it if it were a mad declaration.

No. 15 of your rules desires to promote conciliation and arbitration. Every sane man must agree that a strike is an evil. It is an evil even when it is successful; it is a horrible evil, if not a crime, when it is a failure. It is an evil, because you do not fight on like bases. A day's labor once lost you can never get back; it is gone, it is so much of the capital of your life gone. Enforced idleness from a strike is bad; existence on charity has a demoralising influence; the influence on the home is degrading. Strikes are always bad. I admit that if a man has only the choice between starving and striking, it is very hard to counsel him against a strike. I don't blame every

man who has advised a strike, or every man who has taken part in one; but I do say that the experience of England, of America, of every country in the world, has shown that the horrible evils that come out of great strikes are such as to outweigh any advantages gained from them.

Why is there not more arbitration and conciliation? An answer was given at the Industrial Conference. Mr. Lloyd Jones complained that arbitration had failed in the opinion of the men, because, he said amongst other things, the data were not sufficient and not correct enough to base any decision upon.

In America they have tried to cure this by having special statistics collected without reference to disputes; when disputes arise, both of you are interested in making out the worst case. Americans have these statistics collected not simply in one establishment, where they may be misleading, nor in one town, where they may not speak the whole truth, but right through the whole of the country. In 1860 the Labor Bureau of Statistics in Boston, Massachusetts, was established; and each year the Bureau publishes a report. At first everybody cried out against it: the workmen said it was inquisitorial; the employers said it was abominable. But by-and-by both found it admirable. Two other States took it up, and then four others, till at last more than twenty States of the Union, and the Province of Ontario in Canada, have Labor Bureaus, all of which are issuing statistics showing the cost of living, the rate of wages, the number of hours worked, the number of people—men, women and children—and ages, the rate of wage each class earns, how long they work in the year, how much capital is used in each kind of enterprise, how much raw material is required for it, what rate of profit is made, and what is the proportion it bears towards wage.

Well, I hope within four weeks to propose in the House of Commons that there be established an office or Bureau of Labor Statistics to chronicle the following things:—

"1. Character, and number of each character, of the various industries of the United Kingdom, number of persons and amount of capital employed in each, specifying when any of these industries are increasing or diminishing, and

why, and whether any special industry is limited to any particular locality, and the reasons, if known, for such local limitation.

"2. The hazardous nature or otherwise of each class of industry, with the results to life, limb, and general health and habits of life, in each industry; giving also particulars as to laborers' dwellings, and whether held from employers, and on what conditions.'

I may say that some of the revelations in America have shown that the different kinds of trades not only lead to different kinds of diseases—that has been known for a long time—but also to special habits, either moral or immoral as the case may be.

"3. Showing how many cases of exploitation in each industry by limited liability companies or other corporations, with their subscribed and actually paid-up capital, and profit, and loss, distinguishing cases where workers to any extent share profits.

"4. The minimum, maximum, and average amounts of capital embarked in each industry, distinguishing fixed and floating capital, the raw material used, the gross wages paid, the value of manufactures produced, and the gross and net profit.

"5. The individual wages paid in each industry, distinguishing men, women, boys, and girls, and specifying highest, lowest, and average wage; also showing whether wage is paid weekly or at long periods, and in latter case, whether companies' shops exist."

I press for these because I find that in several parts of the United Kingdom, the misery and demoralisation arising from a long wage-period and advances have never been properly estimated or dealt with.[1]

"Also showing the longest, shortest, and average number of hours worked per day, and the industries in which there is both night and day work; and showing the average duration of employment in each industry during each year, and showing the cost and nature of living, including rent, food, clothing, necessaries, and luxuries; specifying the cases:—(1) in which the earnings of individuals and of families, where more than one individual was wage-earner in a family, were large enough to leave a surplus beyond fair subsistence; (2) in which the family has subsisted without incurring debt or receiving poor-law relief; (3) in which the earnings did not equal the cost of subsistence. Showing what trades and friendly societies exist in connexion with various industries, with the amount of subscriptions and accumulated capital of each, with annual amounts spent in strikes, sick and other relief, etc., and whether such societies are registered under the Friendly Societies Acts; number of Unionists and non-Unionists in each trade; comparative states of trades in which Unions exist extensively, as against those having no Unions; amount of Savings Banks' deposits, and occupation of depositors.

[1] I have endeavored to diminish this evil by the 3rd section of the Truck Act. compelling advances without interest or discount.

"6. Specifying the other countries where any, and which, similar industries are carried on, with similar details where ascertainable."

All these statistics can be procured with comparatively little cost. A number of them already exist, but are so separated in books as to be utterly inaccessible. Those relating to foreign countries are, many of them, contained in our Consular reports. They want systematising and gathering together; and then people would be in a better position to win their fair rights in any wage contest.

I am pleased in Rule 34 to see that you give bonds on behalf of your members as sureties for honesty. While workmen are sureties for one another, the practice of honesty is made more thorough amongst them. Poverty has often compelled dishonesty, despair has often made men drink, the wretched home has driven men away, and what was not intended for dishonesty became it. But the knowledge that your fellows are responsible for you will make you truer to one another, braver and more loyal. I am glad to see that you are willing to take women among your members. The only unions that can well exist are unions in which the whole family have an interest, in which the wife feels that the man does not go away from her once a week simply to drink. Connected with your unions you can—and ought to—establish places of meeting in each town, where you can have your little reading-room and library, and place of entertainment. You can do it without trenching upon your means, and thus help yourselves step by step. I am glad to see that you have means for helping your sick, that you have duly registered yourselves under the law.

The great struggles of the future will be not between Republicans and kings, not between heretics and churches, but between laborers and employers of labor. Those struggles may be beneficial to both, if they are struggles of reason —if they are conducted considerately, usefully, thoughtfully; but they will be struggles which will be ruinous to both if they are conducted with the notion that either has the right or the duty to destroy the other. The progress of both can go together—one may grow richer as the other grows happier; it is only wanted that there should be fairness, openness. There

is no secret in this; the man's muscle and the man's profit, the man's hammer and his chisel and his plough: all these are things that can be seen; and—by those who know—the other man's profit is seen just as clearly. To make fiction, to make frauds, is dishonorable to all, and I plead here to laborers to meet capital not in vengeance for the past, but for a good living in the future. And I plead to owners of capital if I may: I plead to them that the others are the strongest: money is not the strongest: all they own of it only makes two or three years' earnings. You can earn it — the Rothschilds' wealth, the Overstones' wealth, the Barings' wealth; you, the millions, if you are only loyal to yourselves and to one another, may put all this into your own Savings Banks, and your own Friendly Societies, and your own Trades Unions, within a dozen years. You accumulate it for others; you can do it for yourselves. And I plead to you that your wives may be happier, that your children may be more moral, that your homes may be more pure, more clean, more wholesome; I plead that your whole lives may be better worth living.

MARKET RIGHTS AND TOLLS.

House of Commons, 22nd of April, 1887.

Mr. BRADLAUGH moved :—

"That a humble address be presented to her Majesty, praying her Majesty to appoint a Royal Commission to inquire as to the extent to which market rights, and rights affecting places where markets are held, are in the hands (1) of public bodies, and (2) of private persons or bodies of persons. To inquire generally how such rights are exercised, and particularly what accommodation is given in return for charges levied : in what ratio market tolls stand to the value of goods on which they are levied, and how far the regulation of markets by means of bye-laws or otherwise, market rents, stallages, and tolls, and tolls affecting market towns, are restrictive of trade. To report as to the advisability of compelling the transfer of all such rights to local authorities : of prohibiting the farming of tolls and stallages, of prohibiting the placing of restrictions on the sale of goods in a market that may be lawfully sold elsewhere, of providing—by means of the incomes from markets or otherwise—for the extinction of the capital account chargeable to such markets, and for declaring all markets to be free and open."

In proposing this motion, Mr. Bradlaugh said : I trust that the Government will be able to accept the motion, which in no sense raises a party question. The real object of the motion is to decrease the cost of food to the poor—to increase the facilities of the poor for obtaining good food at moderate prices—to encourage the augmentation, by increased cultivation, stimulated by early sale, of home food produce. At the present time market rights and tolls in many places have the contrary effect.

Whatever may be the result of this motion, and whatever action the Government may feel compelled to take, I desire to acknowledge the courteous consideration which has been given to the subject by the Right Hon. the President of the Local Government Board.

I only propose in this speech to deal with England and Wales, but the terms of my motion apply to the whole of Great Britain and Ireland, and I trust that some Scotch and Irish members will give the House the benefit of their special knowledge. As to Scotland, I am personally without sufficient information, though it is clear that the evil does not now exist in Scotland to the same extent as in the rest of the United Kingdom. There is a report of a Select Committee on Market Tolls in Ireland in 1826, from which I will read a few lines. The Committee reported that "many most exorbitant and illegal charges are still made in markets, seaports, and fairs in Ireland, all of the most injurious tendency in checking commerce and industry. Several of these charges appear to your Committee to be so burthensome and oppressive as to produce the most mischievous restraint both on the sale and transit of commodities." And they said: "Nor are these examples of violation of the general principles of the Common Law the only abuses existing; the Statute Law has been violated in many important particulars;" and they reported specifically that "the intentions of the legislature, in exempting from burden the food of the lower classes of the community, have been defeated". I believe that Irish members sitting near me will be able to state that many of these evils are as bad in Ireland to-day as they were sixty years ago, and this although a Royal Commission in 1853 had again strongly reported against the same evil. Members for Ireland have sought ineffectually to deal with this by legislation. Bills have been introduced session after session into this House by Irish members, which been blocked both by Tories and Liberals, and have never even been discussed. The grievance which was and is still endured in Ireland, is the grievance which now exists in England and Wales.

I submit that a Royal Commission is absolutely neces-

sary in order that the matter may be dealt with in a thorough manner. Neither the House nor the Government has at present sufficient information on which to legislate wisely.

The President of the Local Government Board might say that the Government intend to deal with the evils complained of in a Bill which they are prepared to introduce with regard to local government; but I understand that such a Bill would only propose to give local authorities power to acquire rights. This is not enough, because in many scores of cases the local authorities are as bad offenders as private individuals. There are so many instances of the misuse of power by local authorities that it is absolutely necessary that information upon the subject should be obtained by a Royal Commission before it is sought to legislate. In any case it would be necessary to prevent local authorities from farming tolls to private persons.

It might also be said by the President of the Local Government Board that his department carefully revised all the bye-laws of local authorities, and that there could be no fear of such things happening as I complain of. This is no doubt true, but I would point out that this care has not been exercised at all times, and that there are in force at the present time in different parts bye-laws of a very objectionable character. It is not enough to give the local authorities power to purchase; there must be some restriction put upon them as to what they should pay.

I am quite prepared to accept the position that where the present local representatives under a charter have held markets, and have done anything for the promotion of trade in a district, they should be compensated. Where the local representatives of the holders of the original charters are simply leeches sucking the vitality of the districts and giving nothing in return, hindering food from reaching the poor, driving the sale of food into "rings," limiting the number of shops, and taxing the local produce that comes to market so that it does not pay the people in the neighborhood to grow it—in such cases the local authorities, on acquiring the market rights, ought not to be permitted to pay the same price for them that they would rightly pay where an owner had done a number of things to promote the

convenience of buyers and sellers, and to encourage the trade of the district.

I obtained last year an unopposed return of market rates and tolls. But it did not include any of the many—and some most objectionable—markets within the densely populated metropolitan area; in several cases there was a suggestive deficiency of information, and in others the information given was misleading. Over and over again it was said that the gross receipts were "not known". Of course they were "not known" to any one but the person who got them. And I was told that in several cases the receivers of the tolls had said that it was not the business of the House of Commons to inquire into the matter, and therefore they did not intend to give any information. In reply to the question whether the market was held in a street, the answer "No" was given in many cases, thereby suggesting that some sheltered place was provided, whereas the market was held on an open space known as the market-place, and no shelter of any kind was provided.

Originally these market rights were prerogatives of the Crown, and grants have been made of them to ladies and gentlemen in recognition of some service rendered to the Crown, the service being deemed a sufficient consideration at the moment, although it was one which in modern times no one would deem worthy of such a recognition. Sometimes the consideration was a valid one. There were charters which were granted for the protection of trade. Often the lord of the manor provided armed men to protect the market and those who attended it, and in connexion with it there was a Court for the settlement of disputes which was known as "Pie Powder Court". Although some of the Courts remained in name, all that kind of responsibility ceased centuries ago. The rights granted often included the power to set up a fair or a market in the neighborhood, and under cover of a right of this kind, 300 or 400 hawkers had been prevented entering the district of Rochdale for the purpose of supplying the people with food and vegetables. Some of the charters date back to the time of Henry I, Henry II, and Henry III. Some of the toll receivers had no charters. If they had them they had lost them; but they

still took the money. In some cases they took it quite illegally, but the local magistrates enforced the claim to the privilege as their predecessors had done.

The old law as to market rights, which is still the enforceable law, is: "The king is the sole judge where fairs and markets ought to be kept; and therefore it is said that if he grants a market to be kept in such a place which happens not to be convenient for the country, yet the subjects can go to no other". (Bacon's Abridgment, Title, "Fairs and Markets".) "If a person hath a right to a fair or market, and another erects a fair or market near his," the charter owner may prevent all sales even by hawkers or shopkeepers, and this "although the new market be holden on a different day".

Under this, the charter owner in East London has, as against the Great Eastern Railway, been able to do much mischief. The Clerk of the Whitechapel District Board of Works has forwarded a long statement with respect to the evil effects of the monopoly existing in the Spitalfields Market. I will only trouble the House with one passage from the letter: "This Board, having been informed of the motion which stands in your name for Friday on this subject, have thought that their experience as to Spitalfields Market, which demonstrates how markets of insignificant origin may become very formidable monopolies, may be of some value to you as a matter of information".

Important as is this report, I prefer to venture to appeal to the hon. member for Preston, who has just had specially to investigate this matter upstairs, to give the House the benefit of his special knowledge on this subject. The effect of the existence of private market rights is to unduly increase the price of food, to limit in many places the sources of food supply, to throw land out of cultivation, so far as varieties of dairy and market produce are concerned, and to facilitate in hands of private owners, or where the market rights are farmed, the formation of "rings" for keeping up the prices of food, and particularly of butcher's meat. In many places the poor have had no opportunity of buying Australian or other imported dead meat as such; but as large quantities are known to have entered

the districts, it has no doubt been sold as English meat at English prices. In such places as I have described, the poor are robbed in consequence of the existence of these rights. The regulations with respect to the sale of perishable food, such as fish and vegetables, and sometimes for the limiting of the number of shops in particular trades, are such that if they were framed with the intention of preventing the poor from buying cheaply they could not have been better devised for that purpose. The existence of these market rights has created a class of middlemen, who hinder distribution and render it costly.

If owners of land looked to their own interest, they would prevent toll-keepers from interfering, as they did, with the sale of produce and consequent cultivation of land, and would thus increase their rents.

Market rights, as I have explained, are claimed under charter, or letters patent, nearly all were granted in feudal times, in connexion with manors, under conditions as to population no longer even comparable, and with responsibilities and duties now never performed. The charters are granted for no real service or consideration other than the duty of protecting the traders at the market, of providing sufficient accommodation for buyers and sellers, and of administering justice in connexion with the market trade as to quality, weight, and so on. There are three classes of owners of market rights:—Cities or boroughs, with market charters or claiming prescription; private individuals, under charters or alleged prescription, this last being often a species of what in the colonies would be described as "impudent squatting"; local authorities authorised to establish markets under statutes, these now chiefly governed by Public Health Act, 1875, secs. 166—168.

Where local authorities claim to levy market tolls by prescription, this claim is clearly unfounded, as the whole of these local authorities must have been instituted since the Public Health Act, 1848, and many since the Local Government Act, 1858. I will take as a sample of many, from p. 72 of the return, the case of Slaithwaite. In many cases local authorities have acquired chartered rights, paying heavily for them, thus unduly taxing food of the district to recoup outlay. I agree that in all

cases local authorities ought to acquire, and I do not object to the toll-owners being paid fully where some consideration has been shown in providing market premises; but I do object to twenty or twenty-five years' purchase, or a heavy rent, being given where the toll-owner is only a leech. In many cases the local authorities have been compelled to pay enormous prices for the charter rights they required.

I do not propose to give the Royal Commission any power over contracts which have been completed, but it is necessary to show the House the kind of cases I desire to prevent in future. In 1846, Manchester purchased manorial rights and property at the cost of £200,000. I think that more than £170,000 represented the value of the manorial rights. Since then Manchester has had to pay £359,000 for its own markets. The food of the district has been unduly burdened by the payment of that £170,000. In Bradford the corporation acquired on lease from the toll-owners the market rights for a payment of a rent of £5,000 a year. The markets were held in the streets until the corporation leased the rights, so that the charter went back to a time when Bradford was a little hamlet. This £5,000 a-year taken from the corporation is a tax on the food of the poor. In Huddersfield the return is modestly reticent, but as far as I can learn some £44,000 have been paid for the street right.

There are many cases of absolutely illegal assumption of rights, and of illegal levy of tolls. I will take as samples from p. 21 of the return, the Nottingham Highway Board at Basford, and from p. 64, a market committee at Fareham. There are many cases in which the return lacks frankness on these points. In Ware a private owner has been levying tolls. That cannot be by prescription or by charter, because the market was established on the 24th of March, 1886. This market is chiefly accessible by a bridge, and there are tolls for the bridge which come into effect only on market days for cattle, sheep, and pigs; thus the food of the unfortunate people of Ware is doubly burdened.

Even in municipal boroughs the markets are very often in private hands. In Rochdale the old market proprietors got a statute passed in the reign of George IV, which shows how

iniquitous some private Bill legistation could be. They claimed exclusive rights over the whole of Rochdale, though the borough limits have been since largely extended. There has been taken from every hawker who came within the borough 30s., and some who could not pay it have been sent to gaol. One of the hawkers went to a lawyer, who held that the old proprietors had no right to levy such a tax. Then they shut every hawker out of Rochdale, a borough which has set a better example than any town in England, or in the world, in its co-operative endeavors for procuring necessaries of life cheaply for its people. At least the House will be with me in slaying this iniquitous usurpation.

I have received from 2,000 to 3,000 letters dealing with this subject, but I will content myself with specifying four instances in which these tolls have caused considerable hardship to the population of these particular towns. The towns I will select are Market Drayton, Fleetwood, Taunton, and Bridgewater. In the first-mentioned case tolls are charged on all vegetables, though sold in the open streets, and no accommodation is provided. The restrictions are of such a nature that people who were growing agricultural produce and bringing it into the town will not now do so in consequence of the annoyance. The result has been that the trade has fallen into the hands of the middlemen. At Fleetwood hawking from door to door is forbidden, and it has been announced that farmers are to be forbidden to sell milk to customers except in the place where they pay toll. At Taunton butchers are not allowed to open shops except on payment of £20; and at Bridgewater[1] they allow only a certain number of shops connected with particular trades in the town. What is the effect of limiting the number of shops in this way? To heighten the prices of commodities to the poor.

Not content with reaping a harvest of this kind, however, the toll-owner, when markets are held in the open streets, robs the ratepayers in another way. After the cattle market or other market has been held, there is scavenging to be done

[1] The Market Toll Collector, Bridgewater, afterwards wrote me that on this point I had been misinformed, and I corrected the statement in the *Times*.—C. B.

at the cost of the ratepayers; the toll-owner escapes. He carries off his tolls in his pocket; there is nothing which can be rated; and the local ratepayers are left to pay for scavenging the streets. How many hundreds such cases there are in England and Wales alone is shown by the return, which is divided into three parts: (1) Municipal boroughs; (2) Improvement Acts and local government districts; (3) Rural sanitary districts. In Part 1, 255 corporations made returns: of these, in 223 cases, rights belong to corporation; of these 223, 75 are farmed, and of the total 255, 125 are admittedly held in the open street, whilst more are actually so held. In Part 2, 249 markets under local authorities are shown: of these 161 belong to private owners, and of the remaining 88, 17 are farmed; 145 of these are admittedly held in the open street, the real number so held being far larger. In Part 3, 206 cases are stated to be all in private hands, and mostly held in the open street.

In any reform of local government which may hereafter be introduced, I trust that steps will be taken to prevent municipal authorities from farming tolls.

The effect of such a remedy as I propose will be to increase the wage of every wage-receiver without increasing the amount which his employer has to pay him. The value of the wage to the laborer must not be measured by its nominal amount. It is what it will procure of food and other necessaries of life. Cheapen the cost of food, as this proposal would, and the value of the wage is augmented. Afford facilities for better food, and the standard of comfort is heightened. I trust I shall receive the support of the Government. There are cries outside for turning society upside down, of real grievances pressing on the poor. I have never in my life been a revolutionist so far as this country is concerned—I have always urged the redressal of wrongs by Parliamentary action. But a crisis is undoubtedly coming, and unless Parliament deals with these outside clamors and shows that it intends to redress the wrongs which can be redressed, we cannot complain if violent men should become prone to use violent language.

SECOND READING OF AFFIRMATION BILL.

House of Commons, March 14th, 1888.

MR. SPEAKER, — This Bill consists only of two clauses, expressed in almost the same language as that which was used in the Affirmation Act of the Quakers. The only difference is one made in accordance with a suggestion that I should make it differ from the Affirmation Act which applied to the Society of Friends, by introducing words to provide that the initiative should be taken by the person who desired to have the opportunity of affirming. To meet that suggestion, which does not appear to me an unreasonable one, I have introduced the words "upon objecting to being sworn" in the first line in the clause. As the law then stood, in reference to jurors, no juror who is without religious belief, or who, having religious belief, does not believe in future rewards and punishments, can take the oath or affirm. There is no provision to allow a person, under these circumstances, to affirm, except the provisions which relate to jurors who have religious belief, and that is clearly marked. I do not know that it will be necessary to make any long statement on that point. The law was clearly put by Lord Bramwell in 1881, when he said that the class of persons mentioned in Section 4 of the Evidence Further Amendment Act, 1869, who were at that time incompetent, but for that Act to give evidence from want of religious belief, would not be permitted to serve on a jury on the condition of merely making a solemn affirmation or declaration, instead of taking the oath. That decision was concurred in by the Lords Justices.

In the case of a juror without religious belief being sworn by mistake, or because the matter had not been brought to the knowledge of the Court, or supposing he affirmed, as some persons had

affirmed as jurors, under what I may call the Religious Belief Clause, then it is quite clear that, in a criminal trial, error may be brought after conviction and sentence, and a murderer may thus escape punishment. In 1838 Lord Denman moved in the House of Lords a Bill for the substitution of affirmations for oaths, and drew attention to a case in which a murderer had escaped because a Presbyterian in Ireland—a Dr. Cook—had insisted upon taking the oath in the manner in which Presbyterians thought binding upon them, but had not been sworn in the method required by law. The point was raised after conviction and after sentence, and the objection was sustained. The consequence was that the prisoner who was convicted in that case escaped the sentence which had been passed upon him. During later years there have been a large number of jurors who, being without religious belief, or at any rate claiming to be without such belief, have been ordered to stand aside. They were persons summoned to serve and sit as jurymen, and when they, in *bona fide*, brought the matter under the notice of the Court, or made a claim to be exempt on the ground of having no religious belief, they were able to escape the performance of their duty. In either case, it is equally bad for the rest of the public that these men are not allowed to act as jurymen. They can neither affirm nor can they take the oath. The law has been laid down beyond the possibility of question by the High Court sitting at Bar, by three judges whose decision was affirmed by the Court of Appeal, that if a person so disqualified has taken the oath, however regularly in point of form, yet he has not really taken it in point of law, and error might be brought. It is to avoid the possible consequence of this state of things, that I appeal even to those who take a somewhat hostile view of my Bill, as to whether legislation on this question would not be wise.

There is, however, another view of it which appears to me even more serious. Painful scenes are sometimes enacted, especially in coroners' courts, on the question whether jurymen are entitled to affirm or not, and occasionally squabbles occur on matters of religious opinion. I have noted some twenty or thirty such cases within the last two or three years, and I have several times in the House brought such cases to the notice of the

Attorney-General. The coroner decides sometimes in one way, sometimes in another, and great suffering is often entailed on the relatives of the deceased who are in waiting at the inquest. Surely this is a reason for making the law clear. In regard to jurors, then, I would put the matter in this way: jurors without religious belief, or jurors having religious belief of some kind, who yet did not believe in future rewards and punishment, were by law incapable of taking the oath, and were not by law permitted to affirm.

Leaving that class, I come next to the cases of the Oath of Allegiance, with respect to which there is no provision for affirming at all except in the case of Quakers, Moravians, and Separatists. A Christian, in the fullest sense of the word, who conscientiously objects to take the oath on the ground that oath-taking is unlawful by the terms of his own creed, is not entitled to affirm his allegiance. There is no provision for a case of this kind at all, and yet the oath is taken, not only by Members of Parliament and Justices of the Peace, but by barristers, solicitors, a variety of constables, officers and the rank and file of the Army, petty officers in the Navy, and others. There is a decision of the Court of Appeal confirming that of the Court of three Judges—of whom the present Lord Chief Justice is one—a full report of which is in the Library of the House. If that decision is good—and as it is the decision of the Court of Appeal it must be assumed to be good law—its effect is that no Justice of the Peace without religious belief can have the oath administered to him, and in consequence his acts are open to challenge in a variety of ways: ways with which I need not trouble the House at any length. Nor can any soldier who falls within this category be properly attested.

There is no need to enlarge on the serious inconveniences which may follow, nor do I wish to deal with the matter simply from the point of view of the Oath of Allegiance as taken at the table of the House. I am happy to say that my Bill is no longer a party measure. It has upon its back the endorsement of Members of both sides of the House, and it is within my own knowledge that these members consider this to

be a fair and proper solution of an exceedingly difficult problem, which may now be settled without a particle of bitterness.

There has necessarily been present to my mind the consideration of objections which members may fairly feel in dealing with such a measure as this. I would point out that the whole tendency of legislation for the last sixty years has been to abolish oaths which were once thought necessary, substituting for them, in cases of testimony, affirmations which carry with them all the legal consequences which attached to the oath, so that a false statement made under affirmation should bear with it the same penalties as attached to perjury. I have seen, however, that several members have written to their constituents with reference to this measure, saying that so far as it applied to the Oath of Allegiance they have no objection to it, but that they did object to it so far as it applied to witnesses. I will just point out to those hon. members, that the law already gives witnesses who are without religious belief the right to affirm, so that they are raising a difficulty which does not occur. It may be said, "If so, why do you not exempt witnesses from the operation of your Bill?". I will answer that question at once. It is because, unfortunately, the wording of the Evidence Amendment Acts of 1869 and 1870, is so peculiar that it has given rise to a variety of practices, and only met the cases which I have previously referred to. When the Evidence Amendment Act of 1869 left the House of Commons, it did not contain the words which gave rise to the misconstruction. They were inserted somewhat suddenly in the House of Lords, and were as follows:—"If any person called on to give evidence in any Court of Justice, whether in Civil or Criminal proceedings, should object to take the oath, or should be objected to as incompetent to take that oath".

The only person who can be objected to as incompetent to take the oath is a person without religious belief, or one who, having religious belief, does not believe in a state of future rewards and punishment. Any such person should, "if the presiding Judge is satisfied that the taking of the oath would not be binding on his conscience," make a promise and declaration. This has unfortunately given rise to much difficulty. In 1875

a case was brought before the Court of Queen's Bench, the late Lord Chief Justice presiding. Mr. Woolrych, the police magistrate, had refused to receive the affirmation of a man called Lennard, who had avowed himself an Atheist. The Court of Queen's Bench made the rule absolute for a mandamus requiring Mr. Woolrych to take the evidence on the ground that he ought to have been satisfied that an oath would have had no binding effect upon Lennard's evidence. Unfortunately, the case was not reported. It was, however, traceable by the lawyers, there being a record of it in the Rule Office, though there was no official report of the case. The consequence has been that—especially in proceedings before the magistrates and in the inferior Courts—a curious looseness has been observed in the construction of the words "the Judge shall be satisfied that an oath has no binding effect upon his conscience".

As an illustration of the difficulties on this point, I have received a letter which states the matter very clearly. The writer says:—"A witness in a court of law objects to take the oath, and states that he is without belief in 'a future state of rewards and punishments,' but confesses to a belief in the existence of a Supreme Being, and declares that the taking of an oath would have a binding effect upon his conscience. In such a case, if I rightly understand the law as it at present stands, the witness would be utterly incompetent, and his testimony therefore wholly inadmissible. For, not possessing the required belief as to a future state of rewards and punishments (Reg. *v.* Taylor, Peake, 11; Maden *v.* Catanach, 31 L. G. Ex. 118), he would be unqualified to take the *oath*, even if he changed his mind and waived his objection to taking it; and the opportunity of *affirming* would be denied to him, because, as it seems, to the right to affirm there is attached a condition precedent 'that the Judge must be satisfied that the taking of the oath would have no binding effect,' etc.—a condition which in the present case clearly remains unsatisfied." This clearly shows the extremely unsatisfactory character of the present law.

I was present at a trial in which the present Lord Chief Justice, with his usual kindness, took a great deal of trouble, and occupied some seven or eight minutes in ascertaining whether an oath

would have a binding effect upon a witness's conscience. A short discussion took place, in which an explanation was given on the part of the witness, and an interpretation on the part of the Bench, before it could be ascertained whether the oath would have this binding effect on the witness's conscience. In minor proceedings, such as those in the coroner's courts and before the magistrate, cases of this kind constantly occur, and they have arisen because the wording of the Evidence Acts left room for much misconstruction and misinterpretation in practice.

It is known to all who watched the progress of the Acts of 1869 and 1870, as I have done—and the Amending Act of the latter year passed in consequence of objection to my evidence, that the Bill left this House without the words which have caused all the difficulty, and which were introduced in the House of Lords to meet the objections of a member of that assembly. It had, however, the effect of importing into the matter an element of extreme difficulty. In England, Ireland, and Wales, all witnesses—whether they have religious belief or none—can affirm. In Scotland that is not the case. This Bill would relieve witnesses in Scotland, as the Acts of 1869 and 1870 had relieved them in England, Ireland, and Wales. To illustrate the necessity for the Bill, I will instance a case at Aberdeen of the week before last, where the sheriff was obliged to refuse the testimony of an Atheist who claimed to affirm, at the same time expressing his opinion that the attention of the Legislature ought to be directed to the question. The sheriff also pointed out the serious consequences which might ensue in a murder case, the learned gentleman using these words :—"Supposing this man was the only witness in a murder case, the murderer must escape because of a technical objection to his evidence".

There has been during the last 60 years, as I have already said, a disposition to give every facility in our Courts for the ascertainment of the truth, and to get rid of all incompetence to give evidence; and my Bill is a contribution to the attainment of that end. There was an amendment upon the paper which asked the House not to consider the Bill, but to refer the grievance to a Royal Commission. I would suggest that the hon. member who is to move that amendment can hardly have

remembered that there was a Royal Commission which, in 1867, issued no fewer than five reports, one of which was signed by Lord Lyveden, the present Lord Sherbrooke, and others. This report stated that "oaths of allegiance had seldom been found to be of any practical benefit to the persons or institutions whose safety and interest it had been sought to maintain by imposing them. In peaceful and prosperous times they were not needed, and in times of difficulty and danger they were not observed." Commenting upon the oath of allegiance imposed by the Mutiny Act, the Commission reported that it would be idle to describe this ceremony as either solemn or impressive, nor did it even appear certain that it was intelligible to the lads who invoked Almighty God. The words of the Commission were these: "As an example of an oath which appears to us open to nearly every possible objection, we may cite the oath of allegiance imposed by the Mutiny Act on recruits for the Army, which the Commission in its Report recommends to be maintained. The oath is a part of the ceremony of attestation which is necessary to complete the enlistment. It may be taken before any Justice of the Peace, not being an officer in the Army, and in London it is commonly taken before the Magistrate at the Westminster Police Court. There at certain fixed times, before and after other business, recruits are attested and the oath administered to them in a body by the Usher of the Court, the recruiting Sergeant and his batch of recruits being surrounded by any persons who happen to be present, and who are not required to suspend any conversation in which they may be engaged."

I pass by the historical portion of the Reports of the Commission, because it does not affect what I desire to put to the House. There is, however, an objection which I feel it my duty to consider, and which has been urged. Last year the Right Hon. J. G. Hubbard, now a member of the other House, who has very frankly admitted that the general sense of the House was in favor of the second reading, objected that the Bill did not exclude the Coronation or episcopal oath. I will say frankly that I thought it would have been impertinent on my part to make such

a proposal, but I should offer no objection in the Committee to an amendment to that effect. Last Session gave me great encouragement. There were two divisions taken, nominally on the question of adjournment, but really on the principle of the Bill. On the first division the majority was 91 in its favor, and on the second the majority was 104. It is with no desire to avoid the subject that I have passed over the recent history of the question in this House; I think it better taste on my part to avoid it now that the question is no longer one of party bitterness, and now that members on both sides are trying to find a solution of the difficulty, which is to me no longer a personal question, although I should be glad if the House would permit me to do by law what it was my desire to do eight years ago. But I am now pleading for cases in a large number of which serious evils may arise. I plead in accord with the general legislation of this century, in which, step by step, disqualifications and disabilities have been removed. I plead in favor of the recognition of a principle which the late Mr. Justice Mellor put so clearly in his marvellously able pamphlet. Speaking of the legislation of 1869 and 1870 on this question, the learned Judge said:—"The legislature has enabled even Atheists to depose without any obligation of taking an oath, but at the same time making them liable to punishment for false testimony as if they had committed perjury. Profoundly convinced by long experience of the general worthlessness of oaths, especially in cases in which falsehood cannot be tested on cross-examination or criminally punished, I have become an advocate for the abolition of oaths as the test of truth; but I would retain the punishment for false declarations wherever the law prescribes a penalty for a false oath." It may be urged that this is an argument for the abolition of oaths altogether. I admit it; but I am not prepared to ask the House to go with my argument and abolish oaths altogether, because I know there are many men —many conscientious men—who think that they ought to be permitted to swear their allegiance. I do not propose to interfere in any way with their tender consciences. I only ask an option for all who are either disabled by law at present or who desire to be relieved from a position which often becomes intolerable.

THE COMPULSORY CULTIVATION OF WASTE LANDS.

Speech delivered in the House of Commons, May, 1888.

Mr. Speaker,—The array of amendments which has been put down to the motion I have now to submit induces me to hope that the subject is, at least, one in which the House is beginning to take a greater interest; and the almost unanimous expression of opinion among those who had given notice of those amendments, that there was a large quantity of uncultivated land in this country, also leads me to hope that I may be able to secure their assistance against the other amendment which challenges that proposition. There is an amendment put down by the hon. member for Wandsworth (Mr. Kimber), which, if not moved to-night, may I suppose be taken as a speech for the debate, and which declares that the proposition contained in my motion is one not altogether consistent with the liberties of a free people: besides, the process of compulsion shadowed forth in it seems so repugnant to the hon. gentleman that he feels he must earnestly protest against it at once. There is to me a comfort in being opposed by a devoted follower of the Government like the hon. member for Wandsworth, because, when the hon. member saw the First Lord of the Treasury going into the lobby in support of that motion—as he was bound to do if he carried out the traditions of his own Government—I hoped that the hon. member would no longer feel inclined to denounce the principle of compulsion. (A laugh.) I should hardly have ventured to take up the ground I have upon this subject, if I had not known that the present Leader of the House, and the Prime Minister, belonged to a Cabinet which

had twice, within the last nine years, deliberately made proposals and put them into force for the compulsory taking of uncultivated land. In Cyprus, a law was passed to promote the cultivation of land, and the ordinance was dated the 2nd of April, 1879. Among other things, it enacted that where a landowner had left more than two-thirds of his land which was capable of cultivation in an uncultivated state, he should pay a penalty, a tax on the whole of the land left uncultivated and uncropped, to the Government, as a fine for not having cultivated it. That having failed, the Government took more stringent measures, and in an ordinance dated June 24th, 1885, it was set forth that all cultivable land which had been left uncultivated for ten years should be confiscated by the Government. I hope, therefore, that the hon. gentleman who is to reply to me on behalf of the Government (Mr. W. H. Long), and who last year so eloquently denounced the proposal shadowed by the Bill of 1886, will now, with these Cyprus ordinances before him, modify the severity of his antagonistic criticism. In the discussion of this question I will lay down certain propositions, the first of which is: That the ownership of land should carry with it the duty of cultivation or utilisation. This was generally admitted in last year's debate. In a crowded country like this, I think that no right of property should allow a man to pursue a dog-in-the-manger attitude, and so arrest development of the natural resources of the soil. The authorities should compel the possessors of land to use it for the general welfare. The action of the Government in Cyprus shews that they have accepted that proposition, at least, in part. In the debate on this subject last year, the right hon. gentleman the member for the Sleaford Division of Lincolnshire said that land carried with it the duty of cultivation, no less than the practice, unless, indeed, there were good reasons to the contrary. Unfortunately, I have learnt that in law the ownership of land does not carry with it that duty; and further, I shall submit that it has not carried with it the practice of cultivation. In the case of "the Attorney-General against Lord Sefton", to which my attention has been drawn in the debate on death duties, the following facts appear from the judgment of Mr. Baron Martin: "Earl Sefton died

2nd August, 1855. He was the owner of land in Toxteth Park, Liverpool. This land then, and for ten years previously, had been wholly unoccupied and unproductive." In 1862, seven years after, some of it was sold "at the rate of upwards of £4,000 per acre, which is forty times the value of the best agricultural land". "The present income is nil, but the land is of enormous value, thousands of pounds per acre more valuable than the best agricultural land;" and Baron Martin added, "a great quantity of by far the most valuable land in the kingdom is similarly circumstanced". This land, which paid nothing in respect of local burdens, which contributed little or nothing to the Imperial exchequer, was held not to be liable to even succession duty, although Baron Martin said, "I cannot believe that it was the deliberate intention of the legislature to relieve such land from the payment of duty". Lord Chief Baron Pollock said: "The proprietor of property in this country has a right to make what reasonable use of it he pleases, and sometimes even an *un*reasonable use of it, and he is not bound so to use it as to yield the largest revenue to the Government, or to pay taxes as if he did. A landed proprietor whose park is over the most valuable mineral property has a right to say: 'I prefer living where my ancestors have lived to obtaining the wealth which opening the mines would afford'." Now I challenge the doctrine that a man has any right to prevent the opening up of mines underneath his property. I do not challenge the fact that this may be the law: but I do challenge that it should be the law. In this high court of Parliament, which has the right and the duty to alter the law, I submit that, in a crowded country like this, where admittedly hunger and misery exist, no right of property ought to be allowed by which a man may retard the natural development of the wealth of the country for the benefit of the toilers and workers in it. (Hear, hear.) If the law at present gives the right to an owner of 50,000 acres to say that, although his land will provide employment to hundreds or thousands of people in mines underneath it, he will not permit mines to be worked there, and will thus compel the people to starve; that law should be altered, and the authorities should have the right to step in and compel him to

utilize his property, even as they compel the laborer to utilize his labor, for the well-being of society, of which the individual is a part. (Hear, hear.) The mere laborer is not permitted to say: "I will not work; I will do as I please with my muscle and sinew;" the law punishes him as a rogue and vagabond, society passes on him moral condemnation, when he does not with his labor fulfil his part in contributing to the local and imperial burdens. My next proposition is: That there is now a large quantity of land in the United Kingdom of Great Britain and Ireland which is in a vacant, waste, or uncultivated state, and which might and ought to be properly cultivated or utilized. In speaking of cultivation I do not necessarily mean corn-growing. I mean that the land should be utilized for whatever it can be used most profitably. Last year I estimated that there were some 12,000,000 acres of land in the United Kingdom and Ireland in an uncultivated state; which land might well be cultivated for profit; and the right hon. member for the Sleaford Division then asked: "Where did those 12,000,000 acres come from?" and the hon. member for Maldon (Mr. Gray) disputed the accuracy of this estimate. Taking England, Wales, and Ireland—for I propose to leave Scotland to the hon. member for the Leith district, who I hope will second the resolution, and who will be able to speak with a special knowledge of the country—Mr. Denton, in his evidence before the Royal Commission on Agriculture in 1882, said that the irreclaimable land in England and Wales was 4,722,100 acres in extent, the cultivable land 27,000,000 acres, and the uncultivated land capable of improvement 5,596,000 acres. As an illustration of the kind of land, I will quote a passage taken from the *Weekly Bulletin* of 11th February, from an article headed "A Sussex Desert". The editor says: "When we were told a few days ago that in the middle of Sussex, within less than two hours' reach of London, there were something like 100,000 acres of land absolutely without cultivation of any sort, lying wild and waste, much as they did in the times of the Henrys, we were at first disposed to doubt the sanity of our informant. But as he gave us chapter and verse, furnished the name of the noble lord who owns this immense tract of land, and provided us with careful

directions as to the station at which we were to stop to reach the spot, etc., we determined on at least ascertaining by the evidence of our own senses whether it could be actually true that while tens of thousands of people are on the verge of starvation in London, there are within easy reach of them tens of thousands of acres of land lying idle which, under proper cultivation, would support an even larger population."

Sir W. Bartelott: Will the hon. member state who is the owner of this land?

Most certainly I will. The writer gives the name as Earl Delawarr, and he adds: "Why, we ask in amazement, is all this vast tract of country left to lie idle? Simply, we are told, because 'my lord' wills it so. Is the soil barren? Not at all; it will grow almost any crops to perfection, and in proof we are pointed to the little oases, at long intervals, which have been reclaimed and brought into cultivation. A drive of twelve miles over a beautiful undulating country, on which the great sun stretched down his long rays like loving arms, and yet not a third of the forest had been seen. One vast solitude, stretching away mile after mile, which might be changed like magic into smiling cornfields and verdant pastures, be dotted with homesteads and alive with lowing cattle and bleating sheep, but for the imperious will of one noble and reverend lord!"

Viscount Curzon: Does the hon. member say that Lord Delawarr owns all this land?

I have no personal knowledge on the subject. The *Weekly Bulletin* said it was the property of Earl Delawarr. I can only vouch for the fact that it is uncultivated; but, from letters I have received, I believe it to be capable of profitable cultivation. The *Weekly Bulletin* writer concluded his article by saying: "Of course, many who read this will say at once that the land must be worthless, or it would long ago have been brought under cultivation. But surely the villagers who live upon its borders must know its character and its capabilities, and they one and all agree that most of the forest so-called is as fine land as ever laid out of doors. We confess ourselves to be of the same opinion. What has Lord Delawarr to say?" As

to Ireland, Professor Baldwin and Major Robertson, one of whom had been intimately connected with the present parliamentary Under Secretary for Ireland, affirm that there are 6,000,000 acres of land in Ireland "comparatively worthless"; and they declare that the greater part of this land ought to be cultivated, and could be profitably reclaimed. Professor Baldwin, in his evidence before the Duke of Richmond as to Ireland, said: "There has been a good deal of exaggeration with regard to the waste lands of Ireland. I have gone very carefully into the matter, and I do not believe that there are more than 1,500,000 acres of waste lands that would admit of reclamation; but there are at least 1,000,000 of acres of bog-lands in Ireland that would admit of reclamation;" and he added there was "at least three or four times that" of "semi-waste". These 4,000,000 acres of semi-waste Professor Baldwin thinks could make provision for a large number of families if they were allowed to cultivate. Major Robertson agreed that there were large quantities of waste and semi-waste lands on which people might be profitably planted. Why is not all this land reclaimed? Why do we talk of emigrating people while it is left thus uncultivated? I will also quote what Mr. A. J. Kettle gives as evidences of the hindrances to reclamation in Ireland. He says: "In the greater part of Mayo, and, in fact, all over the mountain and bog sides in Tipperary and Kerry, the land had been reclaimed by the tenants, and that without any assistance from the landlords. They created property in a rude way, and the moment that it by means of their exertions furnished a crop, the landlords raised their rents from 1s. per acre to 2s. 6d. per acre, in order to reap a profit on it." "These small tenants were put on some bog or swamp or mountain land, and they reclaimed this either from a state of nature, or barrenness, or a state of swamp." Describing Connaught, the Most Rev. Dr. Duggan said: "We have bogs and mountains unreclaimed; not only that, we have agricultural tenements not half tilled". Mr. E. D. Leahy said: "There is no question that there is in Ireland a vast quantity of reclaimable land". Mr. E. Murphy said: "I have seen large tracts in the south and west of Ireland

where there might probably be a good deal of reclamation". Mr. J. Hegarty stated to the Commission that "a large quantity of land in Ireland might be made into productive land". Mr. A. L. Tottenham, M.P., a Leitrim landowner, conceded that the bog of Allen and other bogs lying in the centre of Ireland might be reclaimed by the population. There is plenty of evidence that land in Ireland has been reclaimed by tenants without any assistance whatever from landlords, who, however, raised the rent upon it as soon as it had been made to produce anything; with better security the land now unreclaimed could be made equally productive. Similar things have happened in England, particularly in the case of lands controlled by the Duchy of Cornwall. A letter now before me gives an instance where 110 acres at South Tawton, formerly common land, producing nothing to the Duchy, has been reclaimed by poor laborers with the free consent of the commoners, and now the Duchy officials demand rent. I do not pretend that all kinds of cultivation could be made profitable in this country. (Hear, hear.) But we import three millions' worth of eggs annually, and uncultivated lands would at least maintain the poultry that might produce eggs in lieu of those imported. In many places agricultural laborers are not permitted to keep fowls, and in some places where they do so the business is made utterly unprofitable by the landlords' foxes. We also import enormous quantities of fruit and dairy produce that we ought to produce at home. It is true there are difficulties in the way, and among them, one is the favoritism shown by our railway companies to imported produce. The Mayor of Manchester gave evidence that produce can be brought from France at lower rates than those that are paid for carrying English produce one-third of the distance. It is dearer to take fruit from one part of Lincolnshire to another than to take it from the South of France to a Lincolnshire market. Speaking without special knowledge, I believe that part of the evil results from the charge being made per ton—many trucks now being half empty, which, if the maximum charge were per truck, it would be the interest of the cultivator to fill. The question is, further, much complicated by the existence of market tolls and regu-

lations, as well as by the absence of market facilities in many places in the country. These difficulties, I trust, may however be met by the Royal Commission which the House has authorised, and which is now sitting. I will ask the House not to reject my motion because of the difficulties in the way; but to remember that I am raising the question, less for the purpose of making an attack upon landowners, than for suggesting the best way of meeting the rising storm which must one day break out from the close juxtaposition, especially in our large towns, of hunger and misery with vast accumulations of wealth. Will it not be wise to meet that storm by remedial measures? The Socialist cry which is heard everywhere, is it not translatable into the expression of hunger and want? If I now plead with the House on this question it is because I am speaking for the class among whom I was born and for whom I am bound to plead. (Hear, hear.) I am convinced that much of the land in this country, which now does not pay, could be made to pay. As a striking proof of that, I will cite one remarkable instance brought to my notice, where a landowner in Northumberland, having failed to get anything out of 700 acres, had handed them over to his bailiff, with the result that the land was made profitable to the landlord. I am now asking the House to listen to facts; and my proposition is that the ownership of land involves duties as well as rights. And my desire is to avert in England what in Ireland has already become, and in Scotland is gradually becoming, a fearful war between one class of society and another. I earnestly hope, therefore, that I shall not be met by a bare *non possumus*. My plan will do far more for the people of this country than the many plans for the employment of the unemployed, plans which generally and ultimately involve an increase of debt and taxation. I have modified my motion into a form which I hope will prove acceptable to the House. It is said that I propose to confiscate property; I do nothing of the kind; but even if I had proposed to do that I could plead the authority of the present Government. (Hear, hear.)

MARKET RIGHTS AND TOLLS.

Examined before the Royal Commission.

(Lord Derby, *Chairman.*)

I would submit, first, that the local authorities should be empowered and required by law to acquire all existing rights to hold markets, to levy tolls, and to make regulations in connexion with markets. The reason why I say that they should be required as well as empowered, is that I think it possible, if the local authorities only had optional powers, powers which they might or might not exercise, they would sometimes be deterred from resorting to the exercise of those powers owing to the expenditure which, rightly or wrongly, they might think that they would be put to in the compulsory acquisition of market rights. I would respectfully submit that the legislation which will be necessary should entirely sweep away all private market rights; and that where compensation is given (I use that phrase, and the Commissioners will see presently my reasons for it), the compensation should be on an adequate scale, to be settled, not by the ordinary means which would be open to local authorities treating with an individual or with bodies, but either by the High Court or by some specially appointed tribunal, which would be competent, not only to investigate the title of the person claiming charter or other rights, but also to ascertain how far he had acted in fulfilment of what I should submit is the expressed or understood obligation in connexion with all charters, namely, the protection and development of the market. So that in ascertaining the compensation to be given, all these matters might be taken into consideration, under authority given by statute, in a way that I do not think at present they

could be taken into consideration. And I would submit that it might possibly be best that the acquisition of market rights, so far as England is concerned, should be undertaken by the County Council in each case. The reason why I say "so far as England is concerned" is only because as yet no County Councils are established elsewhere; but the same principle would of course apply if County Councils are established elsewhere. I suggest that the amount which is necessary for the purchase of the rights should be defrayed out of a special loan fund, and apportioned equally amongst the sanitary districts in respect of which the rights are acquired, and that each such sanitary district should be empowered to carry on the markets in such a way as would eventually extinguish their proportion of the loan charges. I submit next that the local authorities should be absolutely prohibited from leasing or farming any market; that where the charter owner, or manorial owner, or prescriptive owner of market rights, has not provided any market accommodation whatever, his present rights should be extinguished, abolished, and cease, without any compensation whatever; that where he is providing some accommodation, but clearly insufficient accommodation, the compensation should not exceed seven years' purchase, calculated on the average of the last ten years of the net annual receipts by him. It may be that the charter owner, desiring to provide the fullest accommodation, has been by local circumstances, by possible conflict with private rights, prevented from acquiring the property that might be necessary for the proper development of the market; but where he had tried to provide, or had provided, proper accommodation, then the compensation money should be ascertained by valuation and arbitration, as in the case of any freehold. Then I submit that when the tolls are in the hands of the local authorities, the tolls which they levy on foods ought never to be in relief of the rates, but should be only sufficient to provide, first, for the maintenance and necessary extension of the market; secondly, for a sinking fund for the repayment, spread over not too long a term of years (say, thirty years, which seems to me to be sufficiently long), of all moneys expended in acquiring rights, purchasing land, and erecting

buildings; and I think also that the tolls might be so calculated as to provide a small, not a large, reserve or contingency fund to meet sudden increases of population. Sometimes, in the case of new manufacturing industries, there are instances in which there has been increase of population which has rendered necessary an increase of market accommodation; and there would be, I think, no harm and some advantage in the power to have a contingency fund, not too large, for such purposes. Then, if the Commission would permit me to say so, on the evidence as taken, there seems to be—whether from the class of people examined or not I do not quite know—a rather widespread opinion that markets should be conducted with a view to the advantage of the tradesmen of the town. That seems to me upside down, if I may be allowed to put it so roughly. I think that the markets should be conducted primarily in the interest of the consumers of food. I do not know that I need trouble the Commissioners with the references, in any case, to the evidence, but I may say that it is sometimes put that hawkers, for example, should be licensed and put under stringent rules and regulations. I should rather submit to the Commissioners that the class of people who supply foods to the poorest persons should be encouraged, and that no difficulties whatever should be put in their way; that, in fact, the powers of the local authorities shall be limited, so that they should be unable to check free trade in food; that they may afford additional facilities in markets, but that they may not, either under cover of protecting their market or otherwise, hinder anyone from taking to the most wretched, in the cheapest fashion, any foods that it may pay the hawkers to bring, or that the others may desire to get. I do not think that the ratepayers in a town should be allowed any more favorable use of the market than persons who come into it who are not ratepayers. I have noticed that, in one or two cases, there has been evidence given which seems to imply that persons coming out of the country, who did not pay rates, were not entitled to share in the market advantages on the same terms as the ratepayers. I suggest that every facility ought to be given for the obtainment and selling of food, and that that is of the highest importance; and

that the mere small relief to the rates or the ratepayers ought not to be allowed to weigh against that. Then I respectfully suggest that there should be the most complete and thorough statutory abolition of all through tolls, and of any tolls which in any degree resemble the Continental *octroi*; and that there should be provision in any legislation to prevent tolls, rents, or stallages, operating oppressively against small traders. I would submit that, so long as high rents and tolls are demanded from persons such as small growers, holders of allotments, and small farmers having surplus stock, which they may take to the nearest market to dispose of, the imposition of these high tolls operates to the discouragement of that industry, and the community is deprived of home-grown food; and I suggest to the Commission, that at present our system gives an advantage to foreign food-raisers and foreign food-vendors over the home-raisers and home-vendors; and I say that that is amply shown by the fact that small quantities of produce of various kinds are collected over the whole of Europe, and imported into this country, and that there is nothing like a similar attempt made at present to bring into our markets small quantities of home-grown produce, even though grown within a few miles of the market. Then I think it is clear that there are a considerable number of bye-laws, regulations, and scales of tolls in different places (without its being necessary to specify any particularly) which are open to objection; and I submit, therefore, that in any legislation, there should be an enactment that the local authorities should have power to make new rules; and not only that they should have power to make new rules, but that, say, the Local Government Board should, upon the matter coming before them from any district, have power to compel the local authorities to make new rules; and that any such new rules, when made, should be submitted for the approval of the Local Government Board, or such other authority as was thought right. I think it might be well, if it be possible, that the Local Government Board, or some special authority created by the Act, should frame some kind of regulations which might apply as a guide everywhere upon the subject. At present, as I understand it (I am not quite sure that I am speaking correctly on that, and therefore, I speak subject to correction), where any

Government department is required to confirm anything, in the first place, it is no part of their duty to raise objections which are not raised before them; and I suggest that the regulations of which I am speaking ought to be framed and considered, subject to the kind of objections which poor people would make if they had the power to make them, and which appear to arise over and over again in the course of the evidence which has been taken. I propose also that the tribunal I suggested, which should deal with compensation, that is to say, with the amount of purchase money and so on, ought to have the duty imposed upon it of ascertaining whether the charter owners have fulfilled the conditions of their charters. In some cases, it is possible that the charter owner has held his market on a day on which the original charter did not authorise him to hold it, or has assumed to hold it on additional days when he had no authority to do so. I would suggest that, if legal proceedings had been taken, say, by the Attorney-General, it is fairly clear that these charters or patents might have been quashed in olden times, and that all these matters should be taken into consideration in determining what, in cash, the charter owner should get on being deprived of his rights.

Lord Derby: To take these points which you have raised one by one; in the first place, I observe that you think the local authority should not merely be empowered, but should be required, in every case to take charge of the markets. Let me put such a case as this: That the local authority finds itself already heavily burdened with debt, that the rates are high, and that the market is in private hands, but has been so carried on as not to give rise to any local complaint; under those circumstances do you think it would be desirable, not merely to force the seller to part with what he does not wish to part with, but to force the local authority to become a purchaser when neither the authority itself nor its constituents desire that it should do so?—Yes, I do, and for these reasons: I start first from the principle that market rights in private hands are bad; I quite concede that there are very many cases in which the private owner has used his power as wisely and humanely as it is possible for a man to use it, but I do not think that such excep-

tions ought to prevent the general enactment. Either the market is profitable to the private owner, or it is not. If it were not profitable to the private owner he would not carry it on; at least, I have not met any such instance anywhere. If it were profitable to the private owner it would be no burden to the local authority to take it, and it would be equally profitable to them, and therefore no real increase of burden upon the ratepayers would result.

Admitting, at any rate for argument's sake, that all market rights in private hands are bad, do you not think that the local authority may be left to judge of the badness?—No, because it is quite clear that the local authorities at present have not been as active as they should have been in a large number of matters—not only in the case of markets—and if it be admitted that market rights in the hands of private owners are bad, I do not think that the local authorities should have left to them any option of permitting the continuance of an admittedly bad thing.

Is there any precedent that you are aware of for compelling a local authority to purchase something which it does not want to purchase?—No, I think not; I am not aware of any, although there may be precedents; but I would respectfully suggest that if the thing be good it would be well to make a precedent; and local authorities are now being compelled by Parliament to do a number of things that they have heretofore not been compelled to do.

You say that the local authorities should in every case be the County Councils?—No, I beg your Lordship's pardon; I did not express myself clearly. What I felt was this: The authority for the acquisition of the market rights, I suggested, should be the County Council, but only because over a large district I thought that the County Council could probably raise the money on cheaper terms and in a better way; and I also thought I had expressed in my answer my intention that each district should be empowered to carry on its own market, and to carry it on in such a way as would extinguish their share of the loan charge, which I suggest should be apportioned equally among the sanitary districts.

I am not sure that I understand the process that you propose.

Take the case of a large borough within a county; you would say that the County Council should buy the market and hand it over to the borough?—I think that most of the large boroughs are made counties of themselves by the operation of the Local Government Act.

That is only so in the case of the largest boroughs?—Yes; so that that, if it would be difficult, I submit does not arise in the case of very large boroughs.

You think that the middle-sized boroughs would be content to have the market which is held in them purchased by the County Council?—I think it would be an advantage, if my assumption is correct, if the County Council could borrow large sums for the whole of these purposes in a sort of general loan, on easier terms than each small authority having to buy its market could; and I think that it would also leave less possibility of jobbery in the loan, and involve less charges for commission in raising the loan, and so on.

I suppose you would admit that the question whether the County Council or the borough should be the purchasers is a question of detail?—Quite so; that is a suggestion which I respectfully put before the Commission.

You would prohibit the local authority from leasing a market: that is, of course, in pursuance of the principle that markets ought not to be in private hands?—Yes; and I also think there is clear evidence that where markets have been leased, or, what is the equivalent of leasing, farmed in any way by individuals, sometimes the evils have been even greater than where the private owner has himself exercised any authority, because the lessee has tried to make his thirteenpence for a shilling, and has not been careful as to how he made it.

The person who leases the market has only an interest for a limited time, and probably has no interest in the surrounding district?—That is so.

As to the special tribunal which you propose to create for the purpose of buying up markets, why is the matter not one that could be dealt with by the ordinary courts of law?—I think it might be dealt with by the ordinary courts of law; but what I want to shut out is this: whether it be a division of the courts

of law which deals with it or not, I want the amount which is to be paid to the charter owner not to be a matter in which the personal local influence of the charter owner operates upon the local authorities. Many of the members of the authority, being elected, are sometimes more or less under his influence, because the very fact of his being the charter owner generally implies the possession of estates in the district, and considerable local influence; and there are cases in which, where a very large sum to my mind has been demanded by the charter owner, there has been reluctance in fighting him in the council, because of his being deservedly respected for other matters and so on, which prevent the thing being discussed upon business grounds.

Then you mean that it should be taken out of the hands, not of the courts of law, but of the local authority?—Out of the hands of the local authorities.

That they should have no option as to the procedure or as to the price?—No.

That neither the purchaser nor the seller should be consulted, but that the price should be fixed irrespectively of both of them? —Yes. The only thing I would suggest is that it might perhaps be cheaper to appoint a special tribunal in the nature of an official referee, or something of that kind, than to add it to the work of the courts, in view of the delay which necessarily results from its being taken with other matters; and, perhaps, the form of being represented by counsel and other details might be omitted before some tribunal specially appointed.

Now, with regard to the question of compensation where satisfactory accommodation has been provided, you would consent that the seller should receive the fair market price for the thing which he is selling?—Yes.

You say that where no accommodation is provided the rights should cease without compensation; is it to be assumed that in every case the charter has been granted upon condition of accommodation being provided?—The theory that I should respectfully submit to the Commissioners is this: that all these charters were originally granted, or that the legal assumption in connexion with them was, that the person to whom the charter was granted, protected the people coming to sell and to buy, and

also provided some kind of accommodation for them in selling and buying; probably in the old times he had most to do in providing armed men to prevent them from being robbed. There are clear cases of this, and I say that where this has died away and the charter owner has continued to take for nothing a profit which was granted originally on the condition of something being done, he is not entitled to any compensation for having that determined which appears to have degenerated into the acceptance of money without right.

Then it follows that your argument upon that point that where inadequate accommodation has been provided, there should be some compensation paid, but not to the full value?—Yes.

How would you test the inadequacy of the accommodation?—I should leave it to the special tribunal that I have been speaking of to take evidence upon it in each case where complaint was made; I should not like to lay down any hard and fast rule. I would say, certainly, that there is insufficient accommodation where you find a large number of persons who attend the market complaining, for example, that in winter and in inclement weather it is impossible for them to carry on their trades.

But there may be cases where very little accommodation has been provided because very little accommodation has been asked for; is not that so in out-of-the-way districts?—If that be so, I would suggest, either that the charter owner's rights are very small, and the question of compensation is a very trivial question there, or that, perhaps, the not providing of sufficient accommodation may have been the reason for the non-attendance at the market, for indifference to it, and for want of complaint about it.

You have laid down another principle, that the tolls may not be in relief of the rates; you put broadly that the markets are to be self-supporting, but that no profits are to accrue from them to the local authority?—Save that I would allow a margin for a contingency fund; and it is of course possible that if the contingency did not arise, that fund might become a source of profit to the local authority; but I do not think that it would be fair, looking at the development of the population and the needs of markets, that they should be hampered; I think they should have a contingency fund, and a means of meeting these difficulties.

You say that the rates should be primarily in the interests of the consumer, and that the powers of the authorities should be so limited that they should not check the supply of foods; but is it in any case their interest to check the supply of food?—I do not think it is in any case their interest to do so, but I think they have very often done it.

In what way?—I think by high tolls in some cases; and by stupid regulations, if I may be permitted to say so, which give preference in other cases; and I think the fact that what the French call *la petite culture* is more attended to on the Continent, and that produce finds its way from France, and from other parts of Europe into England, instead of from close handy, shows that they have done so.

But is not that part of the general system by which dealings on a large scale are generally more profitable than dealings on a small scale?—I am not sure that it is clear, that to the public consuming and raising foods, dealings on a large scale are more profitable. I am sure that to the conveyers of produce, such as the railway companies, to the factors who deal as middle men between suppliers at a distance and consumers at home, large quantities are a benefit; but I am not speaking for the factors, the middle-men, and the conveyers of produce. What I would suggest is that by facilitating the small raising of food produce here you develop industry, and you increase opportunities of employment as well as make the food cheaper.

Do I correctly understand that you would give any special advantage to the very small traders in the market?—Special advantage, no; but I would not have such a minimum rate of stallage or toll as should preclude it from being profitable to the small sellers to come in.

You think that the minimum is apt to be fixed too high?—I think so. I consider that the tendency of all regulations should be to encourage the small dealers; but I do not think that the encouragement should ever be in the nature of giving a special advantage to a special man, because he is a small man.

You only wish to put him upon an equal footing with others, and that cannot be done unless a very low minimum rate is fixed?—Quite so.

You have not touched upon one subject which has been raised before this Commission, I mean as to that kind of monopoly which the existing law gives to a market for a certain distance round; would you in all cases do away with that?—I should do away with it.

Even in the case of a borough, you would not allow any private person to set up a new market, I presume?—I think that all markets should be in the hands of local authorities, and therefore, necessarily, I would not.

You have said that no markets should be in private hands; therefore, clearly, that would exclude the possibility of any private person setting up a new market?—Quite so.

But subject to that, and all markets being in the hands of some public authority, you would leave the authority to determine how many markets there should be?—Yes. There is just one point which has occurred to me on that, and on which I am not quite sure that my law would be right. I remember that in the case of the Spitalfields Market, and the Great Eastern Railway Company, some shops were held to be markets; I should not in what I have just said about private markets include shops as markets.

It would be necessary carefully to distinguish what is a shop and what is a market?—Yes.

Then you say that the local authorities ought to have power to make new rules for markets where desired; that, I presume, would be inherent in their authority, would it not?—Not only should they have power to do so, but I think that they should be bound, say, within two or three years (the time is a matter of detail), to examine and revise their rules now existing in all cases; that those should be submitted to the Local Government Board, if that be the proper authority, for examination and confirmation; and that the mere fact that they have existed for some time should give them no sort of sanctity so far as that is concerned.

Then you would let the Local Government Board have power to compel them to make new rules if necessary?—Yes.

Would you give the Local Government Board a corresponding power to veto any new rules?—Yes, I would give them not only the power to veto, but the duty of raising objections, if objections

were not raised before them; my suggestion being that some of the poorest who are most affected have neither the knowledge nor the means, sometimes from want of knowing how to do it, to go before the Local Government Board upon such points.

Lord Balfour of Burleigh: I should like a little further explanation as to the exact local authority which is to be compulsorily obliged to acquire markets in any given district?— I think that in each case it should be what you would ordinarily describe as the local authority. It was rather for the purpose of raising money generally that I put the County Councils.

Your desire being that those who use the market and benefit by the market should have the management of it?—That is to say, that the representatives of those who use the market and benefit by the market should have the management of it.

How will you insure that the constituency which elects these representatives will be even generally the same as those for whose benefit the market is established?—It never will be entirely so; but there is nothing perfect in legislation at any rate, and therefore we get the nearest we can to it. We cannot get the local authorities elected by the consumers, nor would it be fair with reference to other matters which they have to deal with; so that one takes, without making a fresh authority, the authority which certainly will have the burden of taking charge of these things and keeping them up and maintaining them.

But do not these difficulties, although they may be difficulties of detail, suggest some doubt in your mind as to the wisdom of compelling the local authority, as distinguished from empowering it, to buy up and manage markets?—No.

Would not the evil of one set of people managing a market, which is used largely by and established for others, arise in the case which I have just put?—Yes; but the evils on balance do not appear to me to be shown to be so great in the case of management by local authorities as in the case of management by private individuals. I think that if we take markets now existing in the hands of local authorities, even allowing to the fullest all objections that may be urged against them, they have been much more beneficial to the people than those in the hands of private owners.

But would it not be, as the Chairman suggested to you in one of his questions, that when these grievances did exist, if the local authorities had the power, they would be quick to act; but that when they thought that the difficulties that would occur would be greater than the existing evils, they would not act, and that therefore it would be a pity to do away with the elasticity of the system?—I do not see my way to modify the answer which I have already given.

I understood you, I think, to say that this special tribunal was to investigate the title, and the manner in which the present owner of the market had discharged his duty?—Yes.

How far back would you go in that investigation?—I think that in order to prevent harassment, it would be a fair thing to limit the time to which they should go back, but I have not considered the point at which the limits should be fixed. I think they should ascertain first what the original charter was, and unless there had been clear evidence of greater advantages having been afforded at particular times which had subsequently been diminished, there should be some limit as to the time of going back.

Could you suggest any limit?—No, I have not sufficiently considered it to suggest a limit, but I should see no harm in limiting it to the last 40 years, or something of that kind.

Did I rightly understand you to say that when, in the opinion of this tribunal, insufficient accommodation had been provided, you would only allow seven years' purchase of any net revenue which was going into the pockets of the present holder of the market?—Unless the charter owner could show that he had tried to provide sufficient accommodation, and that he had been prevented from providing it, as might be in some cases by the adjoining owner of private land asking an exorbitant price, or by the local authorities preventing him, as they might do, supposing that the powers in their hands happened to conflict with his.

Would you lay down a hard and fast rule that if a man had spent a considerable sum of money, but not in the opinion of the tribunal a sufficient sum, you would still give him only a seven years' purchase of the revenue that he is deriving from *bonâ fide*

expenditure?—Certainly, if the tribunal found it to be insufficient, because, although it might be considerable, so far as that individual was concerned, it might be absolutely ridiculous as compared with the population for whom he ought to have provided the accommodation.

But you would have, would you not, to allow a very considerable amount of discretion to the tribunal, because the necessity for increased accommodation might have arisen very suddenly, or the trade might have increased very rapidly?—I think there should be very wide discretion in the tribunal, because so many new matters with no precedent to guide them in coming to a decision would arise.

Would you allow any appeal from the decision of that tribunal?—It would depend upon what the tribunal was. If the tribunal was a Division of the High Court (and I am inclined to think that that would be an expensive tribunal) I should think not; but if a special tribunal was erected of an inferior character (not using the word in any disrespectful sense), then I think there might be, and perhaps ought to be, an appeal to the High Court of Justice; but I would not have it appealable to the Court of Appeal and to the House of Lords; I do not think there should be that expense, because that might be practically ruinous to the one side or the other.

They would have to deal so much with matter of fact, at least, as much with matters of fact as with matters of law, that you think that an appeal to a Court as such would not be satisfactory?—No, I am not putting it in that way; I only thought that one appeal to an independent tribunal was sufficient, because the questions that arose would be very limited; but, on that, I have not a very definite opinion.

On what principle do you think that the revenue derivable from the markets should be raised—upon rents for the accommodation of the people who wished to sell, or duty upon packages of goods going in?—I think that the guiding principle should be to let all produce come in on the easiest terms, and whatever method was found to involve the easiest terms, consistent with the convenience of the market, I think should be adopted.

I have not special knowledge enough to enable me to answer the question otherwise.

Should the local authority that owns the market in the first instance fix the method?—As I suggested in my statement in chief, I think it is possible that the framing of general regulations, and so on, will have to be done by some authority, as a general guide in this matter. There will always be special instances at seaports and inland places, places easily accessible by rail, and places not easily accessible by rail, places where the surrounding population is of a character likely to bring in small quantities of produce, and places practically excluded from that, where different reasons would operate; and I should hardly like to express a more definite opinion.

Surely, as a general principle, it would be better that the local authority should make the first draft of the byelaws, and then submit it to the revising authority?—Clearly, I think so.

In your opinion, what should that revising authority be, the Local Government Board or the County Council?—I have no objection to the Local Government Board except this: that I think the less we go to the centre the better; and as you have got your local authorities now, they, with special local knowledge, ought to be far better able to say what is right than the central authority, which must get information somehow with somebody to guide it.

You would be in favor of transferring the powers from the Local Government Board to the County Council?—I think so.

One risk would be that you would thereby not perhaps secure regulations on the same general principles?—I see no reason why you should not have them on the same general principles, if the general principles are expressed in the legislation, which is what I have suggested.

But if the general principles can be laid down in the legislation, you would like to see the confirming power transferred to the County Council?—Yes, certainly.

What are the small growers and producers, to whom you particularly refer as being put to a disadvantage, in comparison with those who produce abroad?—I will take a case at once. I was lecturing in a northern town, and I was having my tea

with a friend who attended the lecture, a working man working in a mill. His wife raised eggs, and I went carefully into the statement with her as to the cost of the fowls and food, and I found that this poor woman was making a profit of some 6s. or 7s. per week, not a large sum perhaps for the Commission to consider, but a very large sum for them. This woman appeared to be very lucky in the position in which she was. The small cottage in which they lived, in a small street, happened to abut upon some waste land which is the property of the municipality of Rochdale, and for a very trifling sum she had the permission to let her fowls run over it, so that she conducted it at great advantage there. But I would suggest that there are many cases in the agricultural districts in which that advantage might be easily acquired. First, I think that there are instances showing that the persons who might keep the fowls and raise the eggs are prevented from doing so; and there are others in which there is no inducement to the parties to make the exertion.

Of course it is obvious from your statement that the individual to whom you refer in this case conducted her business under exceptional advantages?—No doubt.

But what is there in the existing market regulations, or in any regulations which you dread in the future, to put at a disadvantage those who can conduct such a business as you describe?—That very case illustrates it. This woman might occasionally have sold her eggs for a better price to the hawkers who would have taken them round, and thus have saved her the trouble of taking them to her customers; but she was prevented from doing so by the regulations in force at Rochdale, of which, I think, the Commissioners have evidence.

Would those regulations have been relaxed in favor of those sending in eggs from abroad?—Oh, yes.

Why so?—The eggs come in from abroad, and they do not come into the hawkers' hands at all. You see abroad the equivalent of your hawker only as a collector, and not as a distributor. He goes round and collects from all these small people, and delivers to the factors that which is sent by cheap through rates: to take my own illustration, to a large egg vendor in Rochdale, to whom those who want eggs have to go.

If there were any large number of small producers in this country, what is there in any regulations which, you apprehend, would prevent the collector going round in the same way, and handing the produce in large quantities to the sellers?—You will never, I think, have an attempt at small growth here until the people are reasonably sure of a fair possible profit upon their exertions.

With regard to your recommendations on the subject of hawkers, is it your view that persons should be absolutely free to hawk goods without any intervention on the part of the local authorities?—Except the police regulations, which apply to hawkers generally.

Such as that they must not be an annoyance by their cries, and so forth?—Those are the ordinary kind of regulations, which I do not propose should be interfered with.

You do not object to those regulations?—I do not consider that it comes within my province to examine them.

I understood your recommendation to be so general that you would allow hawkers to go without any interference at all?—Without interference from market authorities; that was the only kind of interference that I was referring to.

You made no recommendation then that the restrictions for the general convenience of the inhabitants should be relaxed?—No.

Mr. Childers: I will not examine you upon your general plan, which appears to me perfectly homogeneous and self contained; but there is one point as to which I should like a little more information. You propose to sweep away all private rights of market altogether, and to confine market rights to local authorities; would you explain to the Commission precisely what you mean by market rights? Market rights are a monopoly against other people; in what way would you restrain other people from competing with the market?—I would impose no new restriction upon any one in competing with the markets. If one had to deal with the thing now on a plain sheet of paper, I am not at all sure that I should be disposed to advocate the creation of market rights even on the part of local authorities; but I have to deal with a state of things which exists, and which, on the

balance, seems to be attended with more advantage than disadvantage, and any attempt to abolish which entirely seems to me to open the door to possible difficulties which I admit I have not fully considered, and which I am not prepared to deal with. Therefore this is rather an alleviation of existing evils, and as making the best provision one can for food reaching those who need it under the easiest and cheapest circumstances.

But would you kindly explain to the Commission what restrictions you would still leave? I think you said that you would not allow any private persons to form a market in competition with an existing market?—I have not contemplated that it is at all possible that any private person would try to form a market anywhere. I do not think that he could do so. In the only cases in which there has been any attempt to form a market by private persons, they have had to come to Parliament for powers. There are two cases which were rejected, one, I think, the year before last, and one the year before that. If a private person was foolish enough to build a big market on land which he had bought for the purpose, or which he had acquired for the purpose, I would not interfere with him at all; but I do not think he would find it a wise investment for his money. That private person would have no right to levy tolls; he could only take tolls by bargain with the people who chose to come to his place, and if certain people chose to come to his place and pay him so much for coming there, with no exclusive rights against anybody else, except within the limits of his place, I do not think I should impose any restrictions.

Hitherto, of course, no private person could get a market right, if he had no charter, even if he was within the distance, except by Act of Parliament. The point that I want to put to you is this: Do you propose that in the future, restrictions should still continue, so that if I or a Company in possession of a certain amount of land were to put up a market, I should be restrained from putting up that market if it was within an area in which a local authority had a market?—My proposition does not deal with that, because if you registered your Company, unless you obtained statutory powers, which I should oppose and urge ought not to be granted to you, you could not possibly acquire

any exclusive market rights. All that you could do would be to open a big building where people might come to sell and where others might buy from them, but you could not possibly have any sort of right against other people.

I was not dreaming of exclusive rights at all.—I should not prevent it in such a case.

You would not draw any distinction in future between a market and a shop. If I liked to establish a shop on such a very large scale as that, it would be practically a market; and if I sold goods in it, you would not restrain me from doing so because I was not a local authority?—No, because it is clear that, as against the local authority providing the accommodation, you would have no inducement to do so; for I am proposing that the local authority itself shall be prevented from making profit out of its market in relief of the rates, and there is no inducement to a private individual to undertake a necessarily profitless enterprize.

And therefore you would trust to that being a bad speculation?—I would trust to the things which govern ordinary trade.

You would not set up any Parliamentary objection to it, so that I should be restrained before I even went into the business at all, from considering whether I would do it or not?—My view is to encourage people to sell and to buy, not to prohibit anyone from selling and buying.

On whatever scale?—On whatever scale.

Even if I followed the ordinary machinery of a market on my own property?—You would not follow the ordinary machinery, because you could not by law levy any tax; you could only make special bargains with the people, who came to you in each instance, which would not be enforceable apart from the special bargains.

But if I ran that risk, and made a special bargain in each case, you would not prevent me?—I should not prevent you.

Then while you would encourage in every possible way, and make it, in fact, compulsory upon certain local authorities to establish markets, you would not interfere in the least with the sale on their own property, by any person or company, of the

same goods which may be sold in the market?—Most certainly not.

Sir Thomas Martineau: Would your limit of the seven years' purchase apply only to those cases where the owner had not, as you think, done his duty under his charter, or in the provision of the necessary accommodation?—Not quite so. Where he had not done his duty at all I would give him nothing: I think he has too much already; but where he had insufficiently done his duty, and the insufficiency had not been caused by matters over which he had any control, I would give him limited compensation.

In a case where everything has been done that he ought to do, or could be expected to do, you would put no limit at all to the compensation?—No, I would leave that to the tribunal to assess just as in the case of any other compulsory expropriation.

Without limit?—I think that a man who has done his best should be liberally dealt with when you cancel his ability to do it any longer.

Are you aware that in some of these cases where there has been a sale and purchase of rights, the future contingencies are very largely taken into account in fixing the price?—Yes, I think that would be all matter for the tribunal to deal with.

So that it might be that a price would be fixed which was not based altogether upon what had been received, but upon the expectation of what the future receipts might be?—I must not be taken as implying that there is any case conceivable to me at the moment, in which increase beyond the actual value can be considered; but I should not like to exclude the possibility of cases which I have not considered.

We have had evidence in one or two cases here of that having very much affected the price which has been asked for market rights.—I would suggest that sometimes local considerations have operated very much—the very thing that I have tried to exclude—in the settlement of local bargains.

If the price is to be regulated by future expectations, as well as by what has been done in the past, it very much affects the answer which you gave to the noble Chairman, as to the point whether the income received by the present owner would be a

fair equivalent for the purchase money fairly given by the local authority?—I would not take any larger methods of calculation in examining and assessing the purchase money to be paid in the case of an owner of market rights compulsorily expropriated, than I would in the case of any other individual compulsorily expropriated, either by a railway company or by a local authority for other purposes.

But the effect might be this: that a very large sum of money would have to be found by the local authority, for which it would not get any corresponding income at the time of its purchase?—I cannot convey into my answer an assumption that that is possible. I cannot assume any case in which the assessment of the amount will involve the payment of a sum of money for which return cannot be got. That would seem to me to show at once that an improper sum had been fixed.

Do you not think that if there had been a steady increase in receipts for a long series of years, it is a very conceivable case that an arbitration or special tribunal would so take that into account that, in fixing a price, he would name a sum which would cover the probable increase for a reasonable time?—It is quite impossible to answer a general question of that kind, because I have in my mind now, a district not very far distant from Sheffield, in which there had been a gradual increase of population in connexion with a developing industry, and in which that increase has not only entirely ceased, but the population has lamentably diminished by the transfer of that industry to another place. I therefore could not give a specific answer to the general question.

What I want to call your attention to is this: that if it should be enacted that a local authority should be bound to buy the markets, whether they wished it or not, whether they think they can make it a good bargain or not, you may be landing some of them in a very large outlay, for which they will not get an immediate remuneration?—I do not quite know whether the stress of that question comes on the word "immediate", but I cannot conceive any fairly assessed purchase money which does not give them a return. If there is any stress on the word

"immediate", of course these local authorities never do immediately get back their outlay.

Supposing that they do not get back their outlay for 10 years, which is a large part in the life of a ratepayer, it is a severe tax on the ratepayers in the meantime, is it not?—I could not, unless I had some special case to consider, bring my judgment to bear on a proposition which does not seem to me at present (I say it respectfully) well founded.

I will not pursue it further, except to ask whether you have considered the possibility, in any legislation of that kind, of making an exception in favor of cases where peculiar hardships might be shown?—No. I quite admit that all laws involve some hardships; I am not sure that any such hardship could arise, but I do see the possibility of exceptions being very dangerous in the destruction of the utility of legislation.

You would not even allow an exception under an order from the Local Government Board, or any central board, on cause being shown?—I think that dispensing powers are not good generally.

With reference to the byelaws, Lord Balfour asked you about the confirming authority. A large number of the larger boroughs and cities, as you have mentioned, are now governed by County Councils; I suppose that in those cases you would still go for the confirmation of byelaws to the Local Government Board?—Yes; I would not leave people to confirm their own byelaws.

And you would not take Liverpool to Lancaster, for instance, or Birmingham to Warwick?—Whatever the ordinary law has done with reference to other matters in that respect, I would not propose to make any exception, but to follow what happened under the Local Government Act, to which I am sorry to say I have not given quite sufficient attention from that point of view.

Mr. Picton: His lordship put it to you that if the price were fixed by the special tribunal that you have indicated, neither purchaser nor seller would be consulted, but the price would be fixed irrespective of both; but I do not understand you to object to the possibility of settlement by mutual arrangement?—Yes,

I rather think I should, and I will tell you why; I want to avoid dealing with instances as to which my information may be doubtful, and which would be unfair to persons mentioned in their absence; but I think I know instances in which, by mutual agreement, sums have been already agreed to be paid, either as cast down, or say as a sum of £5000 a year for ever, which have seemed to me to be open to objection, and I do not think that local authorities should be permitted to make unfair agreements. They would be exceptional cases, and they would become more exceptional still as the thing went on. The interests require watching, as the evidence shows.

Are you aware that under the Elementary Education Act, bargains made by School Boards have oftentimes to be approved by the Education Department before the price is agreed upon?—I should have no objection on the ground of saving of expense. If the persons came together and arrived at the sum, and that was submitted to some authority for confirmation, there would be no use putting people to the expense of ascertaining a thing if they could reasonably agree upon it.

To that extent your answer would be modified?—If my former answer implied more than that.

With regard to the necessity of compelling local authorities to purchase, you ground that necessity on the interest of the consumer, do you not?—Yes.

As a universal rule, the objects of markets ought to be to distribute commodities as cheaply as possible to the consumer; your view, as I take it is, that unless there was one universal rule applied, and all markets passed into the hands of the local authorities, there would be some consumers neglected and unfairly treated?—Yes.

Mr. Charrington: With regard to compulsory purchase, the case of a private market where the market owner offered it to the public authority for the price which it had cost him was before the Commission, but they, on looking into the figures, considered it a bad investment on the part of the public, and declined it. Now if there was compulsory purchase in such a case as that, either the one or the other would be a great loser; either the public would lose in giving too much, or the market

owner would lose a great part of what he had spent?—No; with submission, because either the price asked was a fair and reasonable price, and the refusers were wrong in their judgment, or it was too high. If the price was too high the vendor would not get it from the tribunal; and if the others had been mistaken in their judgment, there is no reason why they should persist in it.

In this case the vendor only asked what he had spent upon it?—But it is quite possible that a man may have spent on a horse more than the value of it.

Mr. Elton: It seems to me that by the details into which you descended in your statement, you rather veiled the real idea that underlay them. What you mean is not a series of purchases and sales between contracting parties; they are only dummies, and they are not according to your plan, as I understand it, to contract at all. What you want is to abolish the existing system of markets, with compensation to private owners on proper rules?—Quite so.

I have heard the discussion, and I daresay it has occurred to you that there may be difficulties, if you express it in language, in saying "purchase" when you really mean abolition?—Yes.

The theory of the English markets, so far as it has appeared in the Blue Books, seems to be rather what you said, that it is a monopoly of taking toll granted in consideration of public convenience being provided?—That is my view, and if I may be permitted to say so, I think the public are very much indebted to the Commission for the statement of the law and history of the markets in the report already issued.

That accommodation was sometimes provided, of course, in modern times, and sometimes in very ancient times. You rather assumed in one of your answers that if a person had given the accommodation in very ancient times, and had never given any since, he could not possibly be legally taking the money now-a-days for what his ancestors had done; is that your view?—If I used the word "legally" I was, perhaps, thinking of the word "morally".

I venture to correct you, because you are no doubt aware that it has been decided in the courts of law that a somewhat

problematical antique benefit to the public is sufficient consideration for a modern toll?—Yes. I am not quite sure whether, in these cases, the non-performance has been argued with the help of the Attorney-General as a reason for stopping it.

The great case of Gunn *v.* The Free Fishers of Whitstable was taken to the House of Lords, and it was laid down in that case; but that view you would modify at any rate?—Yes, the word "legally" was clearly a wrong word to have used.

Take a case where a person had provided accommodation in this way: that when he built the town he left one of the streets very much wider than the others, and called it a market place, the market still being held there; and he, perhaps, still the owner of the soil, and, further, they have their markets there; would you consider that sufficient accommodation?—I would rather not put myself in the position of the special tribunal to determine what is sufficient. I do not consider that I have the ability to determine what is and what is not insufficient accommodation.

That follows from your previous answer. You said that you would not regard the accommodation which was given in those very ancient times as making a title to modern toll. I took a well known case (I think it is Leeds) where, in one market, it was stated that the owner left one of the streets a good deal wider than the others, and called it a market place, and built the town in that particular shape; is that the kind of ancient accommodation that you would disregard?—That is a matter upon which I would rather not express an opinion. I would rather leave that to the tribunal whose duty it would be to adjudicate upon it.

Then, of course, there is another view of markets which has prevailed in some other countries, that the market is merely a matter for the local authority to administer as an ordinary matter of public convenience; that is the view to which you lean?—If "public convenience" includes in it the getting to the consumer in the easiest and cheapest manner all that he requires of food produce.

You would do away with monopoly as far as possible?—Yes.

Either for persons or for classes?—Yes.

Even for the class of the ratepayers of the place where the

market is founded?—I think that the ratepayers, in relation to food, should have no rights superior to those of the consumers of the food. I do not think that the ratepayers should have to incur a special burden for the consumers, but they ought not to have any privilege as against the consumers.

Instead of providing this food supply by means of a franchise or privilege you would substitute a new principle of doing it through local self-government?—I think so.

Of course, there are a great number of private Acts regulating markets over the country: I understand your view to be that if you established a system of making market schemes subject to proper bye-laws, you might follow some other examples, and say that all Statutes and Acts inconsistent with that scheme are hereby repealed?—I think it might be as well in the general legislation to repeal all these Statutes at the end of, say, three years, so as to give sufficient time.

That is what we have done in the case of the Endowed Schools Department?—I quite agree that your opinion and information upon that matter would be much more valuable than mine. I have not sufficiently considered it as a point of detail, and, therefore, I should not express an opinion upon it.

Would it not be more convenient not to go into all these hundreds of Acts and abolish them separately, but to allow schemes to override them when made?—Except that I would not leave them to live if by accident the schemes were not made.

Then with regard to the compensation, I understand that you want to avoid the evils which have sometimes occurred in the case of Lands Clauses Act compensation; that is to say, over-valuations and valuations on wrong principles, and local land surveyors giving people large prices. Have you ever considered the way in which the Land Commissioners manage the compensation in the case of the enfranchisement, for example, of copyholds?—No, my information is very incomplete on that point; I have only very general information upon it.

Take the system to be something like this: that except the parties agree a competent valuer shall go down, acting on certain principles laid down, that he holds an inquiry and fixes the value, that it is subject to an appeal to the Board of Agriculture, or to

the Land Commissioners, or the Local Government Board, or whatever may be the tribunal existing at the time; and that then, if they do anything wrong, there should be an individual appeal on the point of law by way of injunction or mandamus to a court of law, but that a department should do it rather than a tribunal in the sense of a court. Do you think that is a convenient system?—I think it is.

Would not that work out your plan?—I think it would. I only used the word to avoid the difficulties which you have already anticipated. However, that is a matter of detail.

You are not hard-and-fast devoted to having a judge, and a court, and wigs, and all that sort of thing, in the case of every market in England?—Certainly not, if it were possible to avoid it.

You take it that it might well be considered whether that Land Commission plan, subject to an appeal in case of a legal point arising, might not be the best method of dealing with the matter?—Yes, and I think that it would be an advantage to deprive any such negotiations of the character of litigation.

Unless a point of law arose?—Unless there was an absolute necessity.

What you said about model bye-laws and model schemes is carried out in other departments, and that, of course, would be most convenient. Then, putting it shortly, the observations which you have made about the principles on which compensation should be assessed would, in my view of a department doing it, be laid down as rules?—Yes.

Such rules as the Land Commissioners issue to the public now about copyholds?—Yes.

That in fixing the compensation the valuer should take into account the following rules as to whether accommodation has been properly provided, and so on?—I would rather not go into the "as to's"; I am agreed in the main.

As to such points as those you have mentioned to-day?—Yes. I should not like to give a list of cases from which I might omit something or in which I might improperly include something. Such details, governed by what I have already said, I should think ought to be included.

The principle which you suggest, or something like this, might be embodied in rules for the guidance of the tribunal?—Yes, or any principles which the Commissioners finally considered should govern the matter.

I will not go into such details as those of sham markets. You would not interfere with stores; anybody who tried to set up a sham market would not get any compensation?—No. Perhaps I may be permitted to add that I do not think that anybody setting up any kind of market from now, ought to be entitled to any compensation under any legislation.

You told us that they could not set up any market at all, in which I quite agree?—That is so.

When you started the discussion which led to this Commission being appointed, you mentioned two or three towns in which I am interested; I should like to know whether you have made further inquiry as to those, or whether you have read the evidence. I see that you have been speaking of them quite lately; have you any special objection to the way in which the markets in those three towns, Taunton, Bridgewater, and Chard, are conducted, or do you wish to modify the observations that you have made?—If the Commission will permit me, I may only say that I have read as carefully as it is possible the whole of the voluminous evidence which has been taken, except the batch which reached me last night. If I may say so, I am perfectly content with the case as the Commission has taken it; I think that it has been most exhaustively taken; and I have no desire to make any kind of comment upon it. Naturally my speech in Parliament, though I tried to make it as accurate as I could, was made upon the *ex parte* statements that reached me up to that time, and I would rather not put it as in any way clashing with the evidence that has been taken. There was one obvious error, I think, as to Bridgewater, which I corrected in the *Times* the following week. I think, if I may be permitted to say so, the case which I submitted has been more than made out.

With regard to the cases of Taunton, Bridgewater, and Chard, subject to the correction which you have already made in public, you prefer that the evidence should be taken as it has been published by the Commission, rather than that we should

go back to the statements which might possibly have been (I do not say they were) inaccurate in some points?—Certainly. I should prefer that the Commission disregarded the speech I made on that occasion entirely so far as regards matter of fact, because it was made on imperfect information. I think it has been more than substantiated right through, but there may be inaccuracies as to place, or date, or detail.

And you refer us to the evidence on those points?—Quite so.

Chairman: Is there anything that you wish to add?—Nothing at all except to express my regret for having detained you so long.

RELIGIOUS PROSECUTIONS ABOLITION BILL.

House of Commons, 12th April, 1889.

Mr. SPEAKER,—the Bill, the second reading of which I have asked the House to pass, is directed against prosecutions which are partly prosecutions at common law and partly prosecutions by Statute. The Statute is the 9th and 10th William III, chapter 35, and that Statute enacts that any person convicted of blasphemy shall, for the first offence, be adjudged incapable and disabled in law, to all intents and purposes whatsoever, to have, to hold, or enjoy any office or offices, employment or employments; and shall, for a second offence, be adjudged disabled from being a plaintiff or defendant in any suit, or from being the guardian of his own children, or from being capable of receiving any legacy, and shall be liable to imprisonment for the space of three years. The Act has been held to be supplemental to the common law. I may best describe the Statute by using the words of Lord Coleridge, uttered in a case which was tried six years ago. In the course of the defence, the Statute had been described as shocking, and Lord Coleridge said: "Some old things, and amongst them this Statute, are shocking enough, and I do not defend them". In a judgment which Lord Justice Lindley delivered in 1885, His Lordship spoke of this Statute as cruel in its operation against the persons against whom it was directed. The Statute of 6th of George, chapter 47, which applies to Scotland, makes the offence punishable by 14 years' transportation. Now, Mr. Justice Stephen in his "History of the Criminal Law", which was written and passed through the Press in 1882, although it was published in 1883, wrote: "Offences against religion can hardly be treated as an actually

existing head of our criminal law. Prosecutions for such offences are still theoretically possible in a few cases, but they have in practice become entirely obsolete." Unfortunately, whilst the History was passing through the press, several prosecutions were initiated. One of these cases was tried at Maidstone; two were tried at the Old Bailey; and two, in one of which I was myself the defendant, were removed by *certiorari* to the High Court, and were tried before the present Lord Chief Justice of England. Here are two views of the law which it is my duty to submit to the House, one, the view taken by the present Lord Chief Justice of England—namely, that it is only the manner of a blasphemous libel which should be censured, and that a calm, and clear, and cool statement of views could not bring a person within the operation of the laws relating to blasphemy; and the other, the view which, with all submission to the great Judge who has expressed the contrary opinion, I am afraid is the real view of the law—the view which was formed by Mr. Justice Stephen and Mr. Justice Hawkins sitting in the Queen's Bench Division, and which was mentioned in the charge of Mr. Justice North in the trials at the Old Bailey; and formed in the case of the Attorney-General *v.* Bradlaugh reported in the *Weekly Reporter*, vol. 433, especially by Lord Justice Lindley. It seems to me that the real state of the law has been very fully explained by Mr. Justice Stephen in an article that appeared in the *Fortnightly Review*, and which had been published in examination and criticism of the charge of Lord Coleridge to the jury in the case of the Queen *v.* Foote and others. Mr. Justice Stephen there urges that the law as it now stands is a bad law, and recommends the very measure which I am bringing before the House to-night. It is right, however, I should state Lord Coleridge's view—the view that it is the manner and not the matter of the blasphemous libel which should be considered—before I put what I conceive is, unfortunately, the real view of the law. Lord Coleridge says: "It is clear, therefore, to my mind that the mere denial of the truth of the Christian religion is not enough alone to constitute the offence of blasphemy;" and he goes on to point out that all prosecutions for blasphemy, according to his view, tend to failure.

Further on in his judgment, Lord Coleridge says: "Persecution, unless thorough-going, seldom succeeds. Irritation, annoyance, punishment which stops short of extermination, very seldom alter men's religious convictions. Entirely without one fragment of historical exaggeration, I may say that the penal laws which 50 or 60 years ago were enforced in Ireland were unparalleled in the history of the world. They existed 150 years ago; they produced upon the religious convictions of the Irish people absolutely no effect whatever." I submit to the House, that all kinds of enactments which are in the nature of persecution for opinion, are enactments which fail in doing anything except driving the expression of opinion into its worst and roughest forms, and therefore, they ought not to be desired by anyone who has in any degree any faith in any kind of liberty. Mr. Justice Stephen, reviewing the charge of Lord Coleridge, a charge which he praises in language not too strong, says: "My only objection to it is that I fear that its merits may be transferred illogically to the law which it expounds and lays down, and that thus a humane and enlightened judgment may tend to perpetuate a bad law by diverting public attention from its defects. The law I regard as essentially and fundamentally bad." Now when a learned judge, who is now engaged in trying cases, can thus describe this portion of the law, I think I can submit there is something like a *prima facie* case for its repeal. Lord Justice Lindley in delivering judgment in the case of the Attorney-General *v.* Bradlaugh adds: "It is a mistake to suppose, and I think it as well the mistake should be known, that persons who do not believe in a Supreme Being are in the state in which it is now commonly supposed they are. There are old Acts of Parliament still unrepealed by which such people can be cruelly persecuted." And it was because Lord Justice Lindley found this law on the Statute Book, that he said he felt constrained to hold it as he did in the case then before him. What is the state of the law? I prefer to put it in the words of Mr. Justice Stephen rather than in my own. He quotes in support of his statement a large number of cases, and he proceeds: "The result of the examination of the authorities appears to me to be that to this day Blackstone's definition of blasphemy must be

taken to be true; and, if this is the case, it follows that a large part of the most serious and most important literature of the day is illegal—that, for instance, every bookseller who sells, every one who lends to his friend, a copy of Comte's *Positive Philosophy*, or of Renan's *Vie de Jésus*, commits a crime punishable with fine and imprisonment. It may be said that so revolting a consequence cannot be true; but, unfortunately, this is not the case. I suppose no one will, or indeed can deny that if any person educated as a Christian, or having ever made profession of the Christian religion, denied that the Bible was of divine authority, even by word of mouth, he would incur the penalties of the 9 and 10 William III, c. 32. I will take a particular instance by way of illustration of this. The late Mr. Greg was not only a distinguished author, but an eminent and useful member of the Civil Service. I suppose he was educated as a Christian, and no one could have a stronger sympathy with the moral side of Christianity. In every one of his works the historical truth of the Christian history is denied: and so is the divine authority of the Old and New Testament. If he had been convicted of publishing these opinions, or even of expressing them to a friend in private conversation, his appointment would have become void, and he would have been adjudged incapable and disabled in law to hold any office or employment whatever; in a word, he would have lost his income and his profession. Upon a second conviction, he must have been imprisoned for three years, and incapacitated, amongst other things, to sue or accept any legacy. About this there neither is, nor can be, any question whatever." And after a long and careful summary of the law, as laid down in many decisions, Mr. Justice Stephen winds up: "In my own opinion the practical inference is that blasphemy and blasphemous libel should cease to be offences at common law at all, that the Statute of William III should be repealed, and that it should be enacted that no one, except a beneficed clergyman of the Church of England, should be liable to ecclesiastical censures for 'atheism, blasphemy, heresy, schism, or any other opinion'. Such an abolition would not only secure complete liberty of opinion on these matters, but it would prevent the recurrence at irregular

intervals of scandalous prosecutions, which have never, in any one instance, benefited anyone, least of all the cause which they were intended to serve, and which sometimes afford a channel for the gratification of private malice under the cloak of religion." I ask this House to give effect to what the learned Judge has said. I know there are one or two arguments that may be used to weigh heavily against me. One is, that the class for whom I speak is a comparatively small class. (Mr. DeLisle: "Hear, hear.") There would be no reason in denying liberty to one man, even if he stood alone. Every opinion, in every age, has been at some time small; and those who hold opinions which, within 100 years, have been the subject of cruel persecutions within this realm, should be the last to endorse the doctrine of persecution against those weaker than themselves. It may be urged that the severe penalties of the law are seldom enforced. It is only about 50 years ago that, under this Act, one man suffered nine years and eight months' imprisonment in this country, and was also condemned to pay an enormous fine. It did not check his issuing the literature against which the prosecution was directed. It only had the effect of endearing him to a large number of people, and of making many purchase the writings he issued, who might otherwise not have done so. I hardly like to seem to be thrusting my personal case upon the House, but I may be permitted to remind the House that the declaration has been made very formally, in print, that the prosecution which was directed against me was initiated for the direct purpose of disqualifying me, under this Statute, for the term of my natural life, from taking part in the political work of the country. I submit to the House that, ruling as it does over 330,000,000 of human beings, of every kind of faith or lack of faith, it is our duty to treat all alike. What is the effect of the law as it stands? Two years ago a legacy was left to myself and a gentleman in Manchester for the purpose of endowing an institution. We were all persons who might have been indicted as blasphemers under the law. The legacy was left for purely educational purposes, but the legacy was set aside, first of all in the Court of the Palatine of Lancaster, and next on appeal, on the ground that a bequest for such a purpose was an illegal

bequest and voidable. It may be said: "we would not object to your being allowed to utter your views, but we object to your uttering your views in offensive language". But if persons utter their views in an offensive manner, and so as to provoke a breach of the peace, they are punishable under the law as it now stands. The fact that the law is not always enforced; the fact that it is seldom enforced; the fact that Mr. Justice Stephen in his "History of the Criminal Law" describes the law as obsolete; the fact that Lord Justice Lindley has referred to the law as cruel in its operation, should tend, I submit, to induce the House to grant the Second Reading of this Bill. I can quite understand it is possible that people will say that views differing from their own should not be offensively urged; but that brings in the question of the manner of the advocate rather than that of the matter, and I put it to persons who hold this view, whether the keeping on the Statute Book of this harsh and cruel law does not deprive many of us, who may wish to tone and temper argument, of any fair reason for checking harsh or hasty speech or utterance. Again, let me point out that the word "blasphemy" for which you punish to-day, has been an ever-changing word. It is only 240 years ago that a man, Naylor, the Quaker, of the same faith as the man (Mr. Bright) whom all of us in this House honored, was tried for blasphemy. George Fox, William Penn, and scores of their co-workers were sent to goal, or whipped at the cart tail as blasphemers. The Unitarians, had they lived even later than the times of which I have just spoken, would have come within the penalties of this Statute, which Lord Coleridge says gives a ferocious power against people, and which Lord Justice Lindley condemns as an essentially bad law. I feel that this is not a time of night to trespass unduly on the attention of the House. I can only appeal to the generosity of the majority, but I would point out to them the position in which they put those who differ from them when they lack generosity themselves. I have sometimes tried to argue with my friends in France against the strict enforcement some of them have put on the Anti-Clerical laws; they have answered me, "the Church shows us no mercy". It is that kind of unfortunate spirit which treats opinion as if it were a crime, and

thought as if it were a crime, when the very honesty of the utterance of that thought, that expression of opinion, shows you that the persons against whom you direct your Statute have at least the virtue of honesty to redeem their action from being classed with that of the ordinary criminal. It is against this unfortunate spirit I am arguing; it is for these people I am pleading to-night. I am pleading for many who have found trusts for their children cancelled, as was the case with a member of this House, honored while sitting in it because of the family to which he belonged, and for the great name and greater traditions associated with it—I mean Lord Amberley. He found his trust for his children cancelled, because the man whom he honored enough to give the trust, might have been brought within the scope of this statute. It is too late to-day to keep these penalties on the Statute Book. The Bill may not receive sanction for its second reading to-night; but it is something—and I thank the House for it—that the House has listened patiently and generously to an appeal made on behalf of an unpopular minority; and one day or other justice will have to be done, and I ask the House to do it whilst those for whom they are asked to do it are few and weak, rather than leave us to win, as win we will, that outside public opinion by the ballot which determines what the law shall be.

PERPETUAL PENSIONS.

House of Commons, May 16, 1889.

Mr SPEAKER,—I beg to move "That this House dissent from so much of the proposals of the First Lord and Chancellor of the Exchequer, contained in the Treasury Minute of July 20, 1888, relating to perpetual pensions, as proposes 'that holders of pensions, allowances, and payments which the law officers of the Crown consider to be permanent in character, and to which no obligations of an onerous kind attach, should be invited to commute such pensions, allowances, or payments on the same terms as have been accepted in the numerous cases already commuted'; and this House approve the Report of the Select Committee on Perpetual Pensions, 'that the rate of commutation usually adopted, of about 27 years' purchase, is too high'". In view, sir, of what I understand to be the general wish of the House, that an early division should take place upon the motion, I do not intend to cumber the discussion with matters of personal detail of the pensions which can be found by all hon. members in the Report of the Select Committee—in the evidence, as well as in the appendices to the Report. I shall only take the distinction made by that Report, namely, that there are some pensions, not many, granted for services rendered, and a great many ranking under circumstances difficult to justify at any time, and almost impossible to justify with the feeling at present prevalent in the House. I hope it will not be necessary to treat the subject as a party question, although the Government may feel bound to defend a minute for which, as it is, I presume, the work of the Permanent Secretary to the Treasury, the Chancellor of the Exchequer is nominally responsible. At no time has the agitation on the question been of a

party character, and the vote to be taken will not, I hope, be made by the Government one of mere party allegiance. When I had the honor of bringing this motion before the House—very imperfectly, it is true—in the short autumn Session of 1881, I presented a number of petitions, a large proportion of the signatures to which were those of Conservatives. Now, to-night, I am merely asking the House to stand by the decision of its own Committee—a decision not arrived at by a party or majority vote, but with absolute unanimity and with the consent of her Majesty's Attorney-General, who then represented the Government very effectively upon that Committee. The constitution of the Committee shows ten supporters of the Government, and seven members of the Opposition, and I think that without exceedingly strong grounds, grounds which I have never yet heard alleged, it will be almost to much to imagine that the House will repudiate the decision of the Committee, which has been practically endorsed by the House itself, in a resolution of March 23, 1888. I hope that the House will on this occasion, as it usually does, support Committees which have been at great pains to examine into grave matters, involving much detail, and that it will not hastily and lightly dismiss from its attention a judgment arrived at after full consideration, after many sittings, and with the absolute and active concurrence of the Attorney-General and nine supporters of the Government. The resolution arrived at by the Committee was to the effect that steps should be taken forthwith to determine hereditary pensions and allowances, with due regard to the just claims of the respective recipients, and to economy in the public service. In consequence of that resolution, the minute with which I disagree was laid on the table of the House on July 20 last, and 20 days had to elapse before it could come into force. As the minute, however, was in print during only the last three days of the interval, it was impossible to challenge it at the time. A day for its discussion was promised in the adjourned session last year, but the promise could not be fulfilled, and therefore, though nearly a year has elapsed since the minute was first laid on the table of the House, the delay in challenging it has not been due to any fault of mine. This opportunity is now given

me, in accordance with the terms of the letter sent me by the First Lord of the Treasury, specifically promising an early day this Session. In the minute the Government agree that pensions, allowances, and payments ought not in future to be granted in perpetuity; that offices with salaries and without duties, or with mere nominal duties, ought to be abolished; and that the existence of all perpetual pensions, allowances, and payments should be determined and abolished. The Government, having agreed to that last declaration, are hardly dealing fairly with the House if they propose to give all pensioners, in abolishing their pensions, a sum which would realise to them for ever an amount nearly equal to the pension. I see the Chancellor does not agree with me, but I am going to quarrel with his arithmetic, if the House will bear with me.

Mr Goschen: We do not propose to give in each and every case any particular sum.

I am delighted to hear that, but if there is to be a distinction between cases it is a pity the Government have not said so before. The Government say most accurately that it is not in their power to bind their successors, and I am glad of the admission, because it has weight in reference to a later statement in the minute to the effect that the present Parliament and Government are bound by the Acts of previous Parliaments and Governments. If the former declaration be true, there can be no force in the latter one. I would urge as a principle that no Parliament has the right to bind for ever all future Parliaments in relation to payments which may come to be considered as disastrous, fraudulent, and demoralising. The Government state: "The remaining payments and pensions due to individuals are 16 in number, involving a yearly cost of nearly £12,000, while further annuities, amounting to between £23,000 and £24,000 a year, are mainly payable to bodies and corporations". I do not know whether the word "mainly" was used accidentally or designedly, or whether it was used to cover the fact that there are other individuals not included in the 16, and other pensions not included in the £12,000. They are 25 in number, and I will read them to the House. It is just I should say the Secretary to the Treasury has laid on the table

to-day a paper in reference to this subject. In the paper there is a statement that there are only 16 individuals receiving pensions. Let me read my list to the House. It is one which members can check for themselves from the appendices to the Report of the Select Committee: "(1) Viscount Exmouth, £2000; (2) Earl Nelson, £5000; (3) Lord Rodney, £2000; (4) Duke of Grafton, officer of the Pipe, £62 9s. 8d.; (5) Sir Edward Hulse, £10 4s. 6d.; (6) Heirs of T. Warren, £12 7s. 2d.; (7) F. J Prescott, £261 5s.; (8) E. Wadham, £9; (9) Duke of St Albans, £965; (10) Earl Dysart, £75 10s.; (11) Lord Dauverquerque, £375 16s.; (12) Marquis of Devonshire, £216 3s. 4d.; (13) Marquis of Devonshire, £13 18s. 4d.; (14) Duchess of Lancaster, £803; (15) Duke of Cornwall, £16,216 16s.; (16) Sir Patrick Walker's heirs, £242 15s.; (17) Duke of Hamilton, £45 10s.; (18) Mary Pendrell and Richard Pendrell's heirs, £100: (19) William Pendrell's heirs, £100; (20) Jno. Pendrell's heirs, 100 marks; (21) Humphrey Pendrell's heirs, 100 marks; (22) George Pendrell's heirs, 100 marks; (23) Elizabeth Yates' heirs, £50; (24) Duke of Grafton, £6870; (25) Duke of Richmond, £19,000." I, therefore, make the number of individuals 25, and the amount a few thousands more than £12,000.

Mr. Goschen: Will the hon. gentleman refer to the particulars of the grants to the Duke of Richmond and Duke of Grafton?

I can quite understand why the Chancellor of the Exchequer has been misled by his advisers as to these particular pensions. It is the fashion to say that the pensions of the Duke of Grafton and of the Duke of Richmond have been commuted. Neither of them has been commuted. [The Chancellor of the Exchequer signified dissent.] I see the Chancellor of the Exchequer disagrees with that, but as I have given at least 16 years to the study of this question, and had the opportunity of considering it while Parliament allowed me to do nothing else, the Chancellor of the Exchequer will perhaps allow me to state my own view of it, especially as it is fully corroborated. What was done in the cases of the pensions of the Duke of Grafton and of the Duke of Richmond? The Duke of Richmond was the son of one of our kings, who would not in ordinary law have been entitled to any kind of

maintenance. He was, however, provided for by his father out of the coal industry of this country by 1s. per cauldron upon coal, a charge which operated as a curse on the Tyneside industry for fully a century and a quarter, and which at the end of the last century was turned into a cash payment of £19,000, to secure the due payment of which—perhaps to protect it from irreverent hands, like those of Joseph Hume, or from worse ones, like those of myself—a sum of money was invested in Consols. The money was not given to the Duke of Richmond, but kept as the property of the nation, with the First Lord of the Treasury, for the time being, always one of the trustees. It is true that with the consent of the House the bulk of the sum of £633,000 so invested has since been invested in land, every farthing of surplus on which beyond the £19,000 per annum belongs to the nation. It is true that until the Committee sat there was great doubt whether a large amount of this land had not been dealt with as if the nation had little or only a remote right to it. But each parcel of this land is scheduled in the Report, and I cannot understand why the Chancellor of the Exchequer leaves it out, because, if I am well informed, this land is worth more than £19,000 a year; it has often brought in more since it was bought; and therefore I wonder that the acute mind of the Chancellor of the Exchequer has not looked for this surplus also. I mention this to show the absolute carelessness of the Treasury in dealing with matters of such importance. The case of the Duke of Grafton, as to which the Chancellor of the Exchequer also asks for information, is a case of similar provision made by the same king for another of his sons, but by another of his wives, I do not mean by the Queen. This was only one of several provisions. I know nothing more monstrous than the story of the Grafton pensions, some of which have been commuted and are now outside the reach of Parliament, but which within the last 40 years have brought to the dukedom of Grafton enormous sums out of the taxpayers' pocket for services, if they could be called so, against which all the morality of this nation would revolt if the persons had happened to be the poor, the wretched, and the miserable. All the pensions of the Duke of Grafton, save three,

had been commuted before 1881. Large as has been the income of the Duke of Richmond, it has been a trifle compared with the pensions poured into the pockets of the Grafton family. Every member of the first Earl of Grafton's family was pensioned, and the pensions reverted, on the decease of the original pensioner, to the Earl. The pension of the lady whose services originated the pensions with which I am now dealing was fixed for life, with reversion to the Earl of Grafton, who afterwards was Duke of Grafton. In the case of the Grafton money a sum of £30,000 still stands in the Consolidated Stock, but in the case of the Duke of Richmond there is only £80 odd standing there—possibly left there to keep the account open—the rest of the money having been put in land. I have only given these particulars in answer to the Chancellor of the Exchequer. Now, the Government go on to state their disagreements. The Committee recommended that in all commutations of existing pensions and allowances, the Lords of the Treasury should take into consideration the causes of such pensions, whether or not any real service had been rendered by the original grantee, or is now performed; and I understand the Treasury, as represented by the Chancellor of the Exchequer and the First Lord of the Treasury, to say they will do nothing of the kind. Their reasons astonish me. They say they are not prepared to commit themselves to a pledge which may bring the public faith in question, and they make their case strong by referring to the report of the Select Committee which was appointed by Mr. Spring Rice in 1837. They say they are now going to do what the Committee did in 1838, and they add, "The Committee, it is true, recommended that a few pensions should lapse or be modified". That is rather an astounding presentation of what that Committee did. There was a Committee which the right hon. gentlemen do not allude to, which sat prior to 1838, but which is referred to in the report of the Committee of 1838. That Select Committee of 1830 reduced the pensions, which amounted to £145,750 per annum, to £75,000. Was there a breach of faith in that, or did they do the duty this House should always do—stop improvident payments by whomever made? What did the Committee of 1838, on which the Chancellor of the Ex-

chequer and the First Lord rely, do? The Committee said it did not appear to them rash or unjust, but, on the contrary, strictly their duty to inquire into the causes which originally produced and justified the grant, and to find out whether they still existed; and they further said they endeavoured to decide whether each separate grant could be either objected to or defended—the very thing the Treasury to-day say they will not do, and which they said they would not do on the authority of the Committee of 1838. As I have said, the Chancellor of the Exchequer and the First Lord of the Treasury say the Committee recommended that a few pensions should lapse or be modified. I find that the Committee instituted such a searching inquiry that 21 pensioners resigned their pensions rather than face the inquiry. They absolutely suspended eight pensions. With reference to six pensions, they lessened the amounts paid and shortened the time for which they were to be paid; while with respect to 14 pensions, they reported that they did not consider it expedient that any of them should be continued. Parliament endorsed what the Committee did, and this is what the Treasuary calls recommending that a few pensions should lapse or be modified! I do not want the Government to get rid of 21 pensions, or even to suspend eight, or thus deal with six or 14; all I ask is, that the House having determined they thould be abolished, and a Committee of the House having unanimously voted that 27 years' purchase is too high, and that they should not give to any pensioner who has rendered no service at any time an amount which is equivalent, or nearly equivalent, to a perpetuation of the pension, the Government should act accordingly. This is no party question. Conservatives as well as Liberals have pledged themselves upon it. The Committee has dealt with the question in no rough spirit. The Attorney-General, representing the Government, has carefully gone through every line of the Report, and in these circumstances it is too much for the Government to come forward and say they intend to fly in the face of the constant declaration of the representatives of the nation. The Chancellor of the Exchequer, indeed, suggests, and suggests truly, in the paper which has just been laid on the table, that

even at 27 years' purchase there will be an effective saving to the nation of, roughly, something like £9000 a year. I admit at once that that is better than nothing. But that leaves the Richmond and the Grafton pensions entirely out of the question; because under no circumstances can they be dealt with as part of the scheme on which the House is to pronounce an opinion to-night. I have never denied that a commutation is a saving. I am glad that 330 pensions have been commuted since I commenced my attack upon them, because I know that involves a considerable saving to the nation; but I say that now you have a solemn judgment of the Committee; you have deputed a Committee to examine whether or not the rate of 27 years is too much, and that Committee has reported that it is; and it is no answer to say, as the Chancellor of the Exchequer says, that because the conversion scheme was carried last year therefore we are to go back. Whether the people put their money into the Funds or anywhere else is no affair of mine, but of these pensions not one-fourth should be given at all; and, in fact, it is a shame to the House that it has suffered them to be paid so long. It is not a sufficient answer to say that a saving comes to the nation at 27 years' purchase, for the Committee knew that. In the minute to which I am objecting, the Government say that they cannot agree that the terms given to individuals are too high, and they do not agree because some saving comes to the nation in commutation. It will not do, because some nobleman or gentleman, or some person high in influence, may feel dissatisfied, to go back on the decision of the Committee and undo all they have done. The plea put forward in the minute, that it would be a breach of faith, cannot be maintained for a moment, except in the cases of pensions for which services may have been rendered; and if there are such, I do not want to put on the Government any stress of strictness. But, I understand the Committee have said, in effect, that 260 years, 240, or 200 years ago, pensions were put upon the taxpayers that ought never to have been so put, for causes that cannot ever be plainly stated in the House of Commons without provoking immediate reprobation, and without seeming to make a grossly personal attack. But if persons do not wish

to inherit the blame they should not wish to inherit the profit. Although I fear I have already trespassed too long on the indulgence of the House, there is still one point I must answer. I do not often endeavor to ascertain the feelings of hon. members on the other side as to any proposition I intend to submit to the House, for I think it is hardly fair to do so. But one of the most intelligent members of the party opposite said "I agree with you in principle, but it is a small matter". But I say nothing is too small to be honest upon, and if you require honesty from the people, you must be honest towards them in all matters, whether they affect £10,000 or £10. I ask the House to affirm the principle, and I confidently ask the House not to go back upon the unanimous decision of the Committee.

THE STORY OF A FAMINE INSURANCE FUND,

AND WHAT WAS DONE WITH IT.

House of Commons, August 27th, 1889.

I have placed on the Paper notice of my intention to move an Amendment expressive of the deep regret of the House, that the accounts have not been laid before it at a period when they could be properly debated. I do not propose to move that Amendment, because the state of the House is such that no division on it could accurately represent the feeling of the House upon it; and if I did divide, it might go forth to the people of India, that a very large number of members had no regard whatever for the Indian people, and that a very small number of members of this House thought their affairs ought to come before Parliament for discussion. Therefore, while making as I do a most earnest protest—a protest which, I believe, would be joined in by members on the other side of the House as well as by members on this side, if it were not for party exigencies at this late period of the Session—I desire to give it especial emphasis, because of the fact that the modification in the new Rules of Procedure, during the last two years, has deprived those who desire to present to this House any statement or criticism, of any opportunity whatever of doing so, unless such opportunity is furnished by the action of the ballot. Even if a member happens to be fortunate enough, as I was early this session, to obtain first place for a motion dealing with the affairs of India, it may be that the Government will take away the opportunity which the ballot has given him. India stands here in an entirely different position from any other part of the dependencies of this great

empire. There is no colony, however small, but that, upon the estimates, we have had afforded us one or more opportunities of raising any question which any member thinks ought to be brought before this House in relation to it; but the same thing cannot be said with regard to India, with the enormous population, to which the hon. gentleman the Under Secretary has referred, of something like 210 millions of actual subjects of the Imperial Crown, and another 65 millions of people more or less subject to its influence. I am of opinion the present system is one which any person taking any interest whatever, however remote, in the honor of Britain, ought to deplore and endeavor to have changed. I would venture to appeal—it seems rather a mockery to say, to the Government, with only the Under Secretary for India, able representative of the Government as he is, present in the House. It seems also a mockery to appeal to the leaders of the party on this side of the House, none of them being present. I deem it right to say that if the Government are deaf to our appeal, and if they will not so modify the new rule as to enable us to raise questions which we cannot now raise during this debate, I shall take the one opportunity which I have never taken since I have been a member of this House, and shall take care that the question is raised by an amendment to the Address. At any rate, the Government cannot deprive me of that opportunity, as they have twice this session deprived me of the opportunity I had obtained by means of the ballot. While I admire the good-humored and able speech to which we have just listened, I could not help being struck with the marvellous coolness—I suppose I must not say audacity—which characterised some of the statements of the Under Secretary for India. He was good enough to tell us that the only proposal of economy had come from the Government; but he coolly ignored the fact that he and his Government had taken away from me the opportunity I had obtained of submitting to the House proposals which I thought would have tended in that direction. He had the frank audacity to inform the Committee that the Council of India Bill had been hindered on this side of the House, and had only got through with great difficulty, when he knows as well as any other member of the Committee that the

Government never put it down earlier than the ninth order of the day—I think that one night I saw it the 19th—and when he knows it was in the power of the Government to have put it down as the first or second order of any day they pleased, and so have tested the question whether there was any real opposition to it. Surely the hon. gentleman might have acknowledged that on the first appeal made to me by the leader of the House, to the effect that if I kept on the paper a notice of amendment I had to the second reading of the Bill he would be obliged to withdraw it, I at once withdrew the notice, although I regarded the Bill as wretchedly small and exceedingly ineffective, and although I regarded it as being more effective in words than it would be in reality. If I had pressed my amendment on the attention of the Committee, I should have pointed out that any discussion of the Indian Budget with the benches as they are now is utterly impossible. It is impossible to take the sense of the Committee on any proposition which may be submitted to it without a shameful and disgraceful exhibition of the utter neglect by so many members of Parliament of the interests of so many millions of our fellow-subjects. I cannot say I quite followed the right hon. gentleman's first figures. It seems to me that they do not quite agree; but on this point it may be that I did not pay sufficient attention to his corrections, and I shall confine myself more especially to the figures which I have in print, and which at any rate are capable of being more clearly examined. The hon. gentleman complained that he was met by ironical cheers when he referred to the chief increase in the income of India this year as resulting from the Salt Tax; and he went to the length of saying that he was shocked by the statements made by people, who ought to know better, as to the effect of the increase of the Salt Duty on the consumption of salt. Well, he managed to shock me, because, with the almost blind reliance that I have on the accuracy of everything told me by the hon. gentleman, notwithstanding that I have occasionally found that he has been misled by those who instruct him to reply in this House, I had thought that the Blue Book circulated under his authority amongst the members of the House, only within the last few days, has told us expressly that

the consumption of salt had fallen off in consequence of high prices, which prices I proposed to show were the result of the increase of duty. I do not understand why he should be shocked at our entertaining an opinion which the Government of India officially puts to us. The hon. gentleman complains also that we have spoken of the "Famine Insurance Fund". Well, that is how his own Government have spoken of it and have described it. They have now spent the whole of the fund, and do not like to acknowledge that such a fund existed. In a marvellously emphatic tone the hon. gentleman appealed to the Committee, and said: "We have spent the surplus we had; if a larger surplus is wanted for this purpose, do gentlemen on the Opposition side of the House advocate increased taxation, which is the only way of getting a larger surplus?" Our answer is that we have had increased taxation for the purpose of raising a specific sum which you pledged yourselves never to apply to any other purpose; that you have applied it to many other purposes; that you have seldom applied it to the purposes for which it was intended. Before examining the memorandum of the Under Secretary, which was issued later this year than last, I will very briefly draw the attention of the Committee, in view of the fall in silver, to the impolicy of maintaining even the slightest hindrances to the consumption of silver for manufacturing purposes. As was most fully pointed out in a debate on this question in another place about a month ago, the duty of 1s. 6d. per ounce, and the requirement of hall-marking, are practically prohibitive of the importation for trade purposes of Indian manufactured silver articles, and the exportation of English manufactured silver for the Indian market. I appeal specially to the Chancellor of the Exchequer on this question, which is of high importance to India, and vitally affects our silver trade with many foreign countries. I now come to that branch of the speech made by the hon. gentleman, the Under Secretary for India, which has occupied so prominent a position in this evening's debate. I allude to that portion of it which relates to the provision for famine relief and insurance, or, as I prefer to call it, to the Famine Insurance Fund. I ask the Committee to turn to the famine relief and insurance item, on page 50, in the

explanatory memorandum of the Under Secretary. But, in the first place, I desire to say a word or two as to what has been urged by the hon. gentleman with reference to the correction of figures which appear in that memorandum. I would point out that it would have been quite possible for the Government to have taken the discussion on the Indian Budget a week or a fortnight after the Indian Budget statement had been circulated; and had the hon. gentleman taken that course there could not then have been any necessity for the corrections he now makes. The hon. gentleman has taken credit for the fact that the memorandum has been circulated for a period of more than six weeks; but I would point out that it was published later this year than last year, and it might have been criticised at an earlier date, as the financial year ends at the same date in one year as in another. I think that, considering the matter is one which affects the welfare of 275 millions of her Majesty's subjects, the Government ought to recognise it as being one of sufficient importance to be discussed in this House at a period of the year when it can be freely and fairly debated, and nearer to the end of the financial year. It is quite possible that every explanation the hon. gentleman has given has been comprehended by every member of this House except myself; but I certainly do find it difficult to follow a set of figures, as to which the hon. gentleman himself is not quite sure, and which, even in their corrected form, do not commend themselves to us as matters about which there is a possibility of our all being in agreement.

The hon. gentleman has referred to the Famine Insurance Return, which I myself moved for, and which has been laid on the table of this House. He referred to it as a document of which the Government might fairly be proud. Now, sir, I should say that if it were possible to imagine any man holding the position of a minister being capable of shame—and I believe such a phænomenon has never been known in the history of Parliament—I should have thought that that return was a document of which any minister ought to be heartily ashamed; and although I do not put it personally to the hon. gentleman as being any ground for shame on his part, yet I think he might

reasonably feel a sort of vicarious shame in finding that promises which have been so solemnly made, have nevertheless been so deliberately broken, and that a large sum of money collected for a particular purpose, has been just as deliberately misapplied. The hon. gentleman, the Under Secretary for India, referred to the origin of the Famine Relief Fund, but he did so in the vaguest of all fashions. The first reference I will make is to the financial statement for 1878-9, to the financial resolution of the Government of India, dated 18th March, 1878, and to a minute by the Viceroy of India, dated 12th March, 1878, for a detailed explanation of the principles on which it was proposed to make a systematic provision against periodical famines and deaths from starvation. In the Parliamentary Paper, No. 37, dated 1878, page 5, the speech of the Finance Minister in the Legislative Council of the Government of India proposes to raise an additional £1,500,000 a year "on account of famine alone", and he says that this is done because of the "recognition of her Majesty's Government of the duty of making definite provision for the cost of famine". On page 24 of that paper, he further says: "It is the firm intention of the present Government to apply the funds now to be provided for this special purpose strictly to the exclusive objects which they were designed to secure;" and he also goes on to say: "The Government of India intends to keep this million and a-half as insurance against famine alone". Now, there have been twelve years during which that sum of a million and a-half has been collected, making a total of £18,000,000 sterling; and I shall presently show that that money has not been kept, as was promised, and also how little of it has been spent for the purposes it was intended to serve. The hon. gentleman the Under Secretary has told us that it has been religiously disbursed. For my part, I cannot imagine in what sense the hon. gentleman uses that expression; but I can say that it was certainly not honestly disbursed nor truly disbursed. Well, in the same speech the finance minister says: "We consider that the estimates of every year ought to make provision for religiously applying the sum I have mentioned to this sole purpose; and I hope that no desire to carry out any administrative improvement, however urgent, or any

fiscal reform, however wise, will tempt the Government to neglect this sacred trust". They imposed a specific tax of £1,500,000 and promised that it should be devoted to famine, and to famine alone, and hoped that no Government would be able to make away with it. Indeed, the then Viceroy, Lord Lytton, used language so strong that I feel bound to refer to it, and to show that this "sacred trust" was neglected by Lord Lytton himself for the purposes of war; while when the noble lord the member for Paddington, Lord R. Churchill, was Secretary for India, the same "sacred trust" was abandoned for purposes of annexation. As I have said, Lord Lytton, the then Viceroy, used very remarkable language on the 27th December, 1877, which is to be found on page 36 of the paper I am referring to. He anticipated that objectors might say, "Your good intentions are possibly sincere; but the path to the nethermost pit is already paved with good intentions". I do not know whether the hon. gentleman the Under Secretary was thinking of that downward path when he spoke of the money having been religiously disbursed; but Lord Lytton proceeds with what the objectors might say as follows: "Promise is a good dog, but Performance is a better: we have often heard the bow-wow of the first; we have yet to see the tail of the second. We have been told over and over again by the highest authorities that India is to be insured against famine in this way, or in that; but when famines come upon us we find that the promised way is still wanting." Lord Lytton then solemnly declared: "We promise nothing which we have not, after long and serious consideration, provided ourselves with the means of performing. I must have very imperfectly explained myself thus far if I have failed to make it clearly understood that I am not now speaking of what we ought to do, or would do, to insure this country against the worst effects of future famine had we only the means of doing it; but of what we can do, and will do, with the means already provided for, in the measures now before the council." In the debate on the 16th January, 1878, in the Legislative Council, in Parliamentary Paper No. 118, of 1878, page 5, a native member of the Legislative Council, speaking of this famine insurance, suggests: "That it should be formed into a separate fund with

a separate account, so that it may satisfy the people that it is what it in reality is intended to be—a separate famine fund". And, on page 44, Lord Lytton says: "The necessity of a Famine Insurance Fund, and the duty of the Government to provide such a fund, has been generally acknowledged". And yet this session the Under Secretary denies that it ought to be called a fund, and admits that that duty has never been fulfilled. These are not mere empty words, for the hon. gentleman said he did not know whether his trusted Indian Councillors had been dead or alive.

Sir J. Gorst: I did not say that I did not know whether they were dead or alive; but that the hon. gentleman did not ask the question whether they were dead or alive.

Whether we were told that he did not know whether they were dead or alive, or whether the hon. gentleman's own experience of the Indian Council rendered it difficult for him to distinguish if it was a Council composed of living or dead men, is a matter upon which it is not necessary to dilate. At any rate, in order to raise that £1,500,000 it was necessary to levy increased taxes on the natives of India. Well, what does the finance minister say upon this? In 1878-9 the finance minister observed, by way of justifying the increased taxation: "I feel confident that I shall be able to satisfy the Council and the public that the resolution which the Government has proclaimed will be faithfully carried out, and that the proceeds of these new taxes will be expended for the purpose of providing what I have called an insurance against famine, and for no other purpose whatsoever". If words have any meaning at all, Lord Lytton and his finance minister say: "We impose a special tax—a new tax—for the purpose of raising a special sum of money, and pledge the honor of ourselves and our councillors that that money shall never be applied to any other object". If hon. members will refer to the Return moved for by myself, they will see that this promise was never kept, except when Lord Ripon was Viceroy. That I am not stating the case unfairly, may be seen from the minute of the Viceroy, dated 12th March, 1878. The Viceroy then wrote: "The sole justification for the increased taxation which has just been imposed upon the people of India, for

the purpose of ensuring this Empire against the worst calamities of future famine, so far as such an insurance can now be practically provided, is the pledge we have given that a sum not less than a million and a-half sterling, which exceeds the amount of the additional contributions obtained from the people for this purpose, shall be annually applied to it". And here I would ask, how have you applied the £18,000,000; and I repeat that I will show that, except when the Marquess of Ripon was Viceroy, you never applied it to the purpose for which it was intended, and that if you have not got it now it is because you have devoted it, as I have already said, to purposes of war and annexation, and the erection of costly buildings at Simla, and for similar purposes, while the people of India have been starving. The Viceroy's minute goes on to say: "We have explained to the people of this country that the additional revenue raised by the new taxes is required, not for the luxuries but for the necessities of the State, not for general purposes but for the construction of a particular class of public works; and we have pledged ourselves not to spend one rupee of the special resources thus created upon works of a different character". The English language has very little value if this can be so translated from the Ministerial benches as to explain away its plain and direct meaning; and surely in such a case we ought not to be treated with what I must call a miserable farce of arithmetic like that I hold in my hand. But there were people who doubted whether this £1,500,000 would be applied to its intended purpose; and when the British Indian Association later on hinted at the possible breach of faith on the part of the Government, Lord Lytton openly rebuked them in these memorable words:—"You have entirely failed to recognise the fact that the sole purpose of this additional taxation you complain of was the preservation of the lives of the people from the effects of famine. To insinuate the contrary is to insinuate a calumny." After the 11 years' experience we have had, I not only insinuate the contrary, but I say that that which Lord Lytton characterises as a calumny has been proved up to the hilt. I now proceed to complain of, and criticise, the Return. The tax was first imposed in 1878, but the Return commences with 1879-80. Why is the year

1878-9 omitted? Surely £1,500,000 is a sum worthy of being accounted for. Probably the hon. gentleman the Under Secretary will tell us what was the intention of the Indian Government in omitting that year. He might also tell us what was the amount applied in 1878-9 to the prevention of famine, that being a year so close to Lord Lytton's solemn promise. I refer again to the summary of the twelve years contained on page 4 of the Return. There ought to have been £18,000,000 sterling raised by additional taxation for famine relief alone during those twelve years. How is that sum accounted for? It is only alleged that 9,900,737 tens of rupees, or much less than £10,000,000, has been so applied; and I ask what, in that case, has become of the remaining amount of over £8,000,000 sterling? The only years in which Lord Lytton's promises were kept were the years 1881-2, 1882-3, 1883-4, 1884-5, and 1885-6, during which years Lord Ripon was Viceroy. In those years the promise which Lord Ripon did not make was kept; but the promise which Lord Lytton did make has never been kept at all, and since Lord Ripon's time no one appears to have been in a position to keep it. I may here say that I am going to make the Under Secretary and the Secretary of State himself both responsible for what has been going on. Reverting to Lord Lytton's specific declaration that the "sole purpose of the additional taxation" was the "preservation of the lives of the people from the effects of famine", I will ask the Committee to refer to page 2 of the Return. I would remind the Committee of the questions I have felt it my duty to put, sometimes, I fear, in a way that must have been somewhat wearisome to the House, and for which I invariably laid myself open to rebuke; and I would point out that since last October it was certainly known to the Government of India that famine was approaching in Madras and Bengal and was also threatening in Bombay. This was known, so far as a great portion of India was concerned, by the partial failure of the south-west monsoon of 1888, which was due in June and July. The effect of this was aggravated by the almost complete failure of the north-east monsoon which was due in October. The Government must have known that the natural result of these things

without any other cause would have been higher prices for food, great pressure, possible hunger, and even probable famine. Well, what is the estimated provision made by the Government out of the earmarked £1,500,000? It is of no use your saying you have not got it. You have spent it. You took it, and promised to keep it for the purpose of saving life in case of famine. See what a mockery you have made of it! This Return shows that £20,500 was devoted for relief—namely, £500 for charitable relief in Madras, and £20,000 for charitable relief in Bengal. No provision was made by the present Government for the relief works, for want of which hundreds of people certainly, many thousands probably, died of starvation before the works were commenced. I beg pardon; I was wrong in saying the Government made no provision. In 1888-9 they actually wrote off as irrecoverable the sum of £200, which was the amount of debt due from some wretched Madras agriculturalists whose debt had been outstanding from the famine of ten years ago. The general result is that in 11 years real famine relief has been given to the extent of 2,631,750 tens of rupees only; and on page 5 of the statement exhibiting the moral and material progress of India we are told that "no surplus was available as a reserve against famine in future years". This £18,000,000 has been extracted from the peasantry of India on the solemn promise that it should only be applied for the purpose of making provision against times of famine, and that promise has never at any time been kept. In 1877-8 the Government found itself unable to make provision against famine, but at least it did something for the prevention of starvation. I trust I shall not shock the Under Secretary in what I am about to state. I know that his feelings are generally shocked, especially by any statement made from this side of the House with regard to legal questions, which may be accounted for by the fact that the hon. gentleman has been sitting for so many years on the same bench with the law officers of the Crown. Now, what did the Government do? On the 19th January, 1888, they actually raised the salt duty 25 per cent.—viz., from two rupees per maund of 82 lbs. to 2½ rupees per maund; and the Government themselves in their own statement, say that the effect of this was to reduce

the consumption of salt. Less salt means less food, and the official declaration is that in 1888 the consumption of salt fell off markedly in the district of Ganjam. Page 75 of the statement —and a very explicit statement it is—shows that the consumption of salt in Ganjam fell from 12·31 lbs. per head to 8·27 lbs. per head, owing, as the Government say, partly to high prices, or, as I say, almost wholly to the high prices resulting from the increased duty. No wonder there have been famine and starvation in Ganjam. If I possessed the cool freedom of speech which characterises the hon. gentleman the Under Secretary of State for India when attacking members on this side of the House, I should be inclined to use exceedingly hard words against a Government, which takes credit for its high officials, going into a district where it had been pointed out that famine existed, and where, having previously extorted some Rx. 1,800,000 to make provision for such contingency, they must have known that it was going on eight or nine months before (for it had been pointed out in this House).

It is one of the misfortunes of only one debate in the year taking place on the finances of India, that a member is obliged to be exceedingly wearisome in the length of the matter he addresses to the House. But I must ask the Committee to note on page 4 of the explanatory memorandum, a most extraordinary difference between gross and net revenue and expenditure—the gross being swollen by matters of account, and clearly in some instances creating a false impression. For example, railway receipts go to make up gross totals. From page 12 it will be seen that in three years 1887-90, railways impose a burden upon the taxpayers of Rx. 7,502,780, though the hon. baronet, the member for Hythe (Sir E. Watkin), urges the Government to spend £100,000,000 on more railways. In the official statement, page 14, it is admitted that "Though the dividend on the total railway capital is apparently more than 5 per cent, and though the Government is not liable for more than 5 per cent on any guaranteed capital, or for more than per cent on State Railway capital; still the Indian Treasury lost on its current railway transactions Rx. 2,267,800 in 1887-8, and estimated to lose Rx. 2,115,000 in 1888-9". The actual

loss turned out to be more than half a million of rupees larger than the estimated loss. I am sure the Under Secretary did not purposely omit it, but I should have liked an explanation of the fact that the actual loss was more than half a-million of rupees greater than the estimate.

Sir E. Watkin: The hon. member has referred to me. I should like to ask whether he is not aware that it has been proved that the advantage to the people of India is greater than the total value of the railways?

The hon. member will have an opportunity of following me. I do not see how his interruption is to the point. There is one matter as to which the hon. gentleman the Under Secretary has told us nothing in his explanatory Memorandum, and I am rather surprised that he has not, because it is a matter upon which I have felt it my duty to ask him several questions already. He has not in the Memorandum under the head of "Railways" given any information as to the change of policy with reference to the projected railway to Chittagong, as to which a concession of 3,000 square miles of waste land with the right to prospect for coal and petroleum has either been actually granted, or is under consideration. If this be a wise policy there is no necessity for concealment, nor ought members of this House to be driven to obtain information from private sources. I do not suggest that such a concession would be bad or good, but the House is entitled to know what are the views of the Department and of the Viceroy. What is the reason of this entire change of policy? on what conditions are these rights of prospecting to be conceded? The hon. gentleman, in reply to a question the other day, said that if all railway enterprise was to wait until Parliament had expressed an opinion there would be no railways in India at all. I admired the cleverness and ingenuity of the reply, but unless the Secretary of State is the master of Parliament as well as of India, it was his duty in making his annual statement to tell us if such a change of policy has been made or is contemplated, to give the House information on this point so as to enable the House to form a judgment upon it. Referring to irrigation works on page 13, I wish to ask as to table 2, which in col. 1 states the total cost to 1886-7 as Rx. 23,770,346, from

what date the commencement of cost is taken? And whether the two tables mean that a total expenditure to the present date of Rx. 25,332,935 shows an estimated loss for the year of Rx. 725,400; and whether, as a higher loss still is shown in the two other years given, he will date the deficit for the preceding years? I also ask the Under Secretary, as he states the total capital outlay to date on the irrigation works, first, to state the total deficit of all the years covered by the capital outlay. I ask whether the Rx. 629,400 mentioned in col. 3, table 1, page 13, is the portion of the Land Revenue from new works only, or does it include receipts from old works? And I ask whether, to give the Committee an opportunity of comparing, he can state the amount credited to Land Revenue from irrigation in 1858? Further, I would ask him if he will state the net addition to the food production of the Empire which has accrued from the total expenditure of £25,000,000? In the statement of assets and liabilities on page 20 I would ask are the railway and irrigation works set down at their full cost? Is any allowance made for depreciation? Is any Sinking Fund provided? Referring to page 10, on Burma, I would ask the Committee to note that while the cost of annexation was originally estimated in November, 1885, at some £270,000, it has already cost some £8,000,000, and it is impossible to limit the further expenditure required to carry out what the Under Secretary of State has called the pacification of the country. I note that in relation to the Burma Ruby Mines Parliament has never had submitted to it the particulars, with the names and amounts of the various tenders. I would ask the Under Secretary to state the cost of, and incidental to, the sending out of Mr. Barrington Browne as Government expert; what kind of valuation he made; and the general nature of his Report; and how many higher tenders—and to what amount—were received than the one accepted, with the names of the persons tendering.

Sir J. Gorst: I can answer that at once; there were none.

I should like to know whether the hon. gentleman attaches any subtle meaning to the word "tender," and whether there are not offers in writing within the knowledge of the Viceroy of India?

Sir J. Gorst: The tender for the Burma Ruby Mines was settled in this country by public advertisement in the newspapers. Tenders were received at the India Office, and they were opened in my presence. I can vouch for the fact that those tenders were received.

I cannot think that I and the hon. gentleman mean the same thing in the words we are using. I should be glad, however, if the hon. gentleman would oblige the committee with the names and particulars of the various tenders, together with the replies, so that the committee may be enabled to form a judgment as to the higher or lower tenders. Will the hon. gentleman tell the committee why it is stated here—

Sir John Gorst: In what statement?

In your own book [*holding it up*] on page 17 of the Government statement dealing with the moral and material progress of India—that a lease of the Burma Ruby Mines was granted to a British company in 1887-8, when the hon. member more than once in the most express terms has stated in the House that no such lease has been granted? The company is to pay a rental of £40,000 a year and one-sixth of the profits, and I should like to know why it is that in the estimated receipts for 1888-9 and 1890, there is no sum whatever even entered in the Estimates as likely to be received? If the hon. member tells me that this statement as to the rental to be paid is not true, I will not press him further, but he must not wonder if I am a little shocked—electrified—in dealing with such matters.

And now, I have only to apologise to the Committee for the length of my remarks. I hope, however, that what I have said will show that there is some need for effective financial control in India, and that if it be possible—as I believe it to be—to exercise that effective financial control in this House, even supposing more than one day in the year is devoted to the work, something will be done to enlarge the legislative councils in the various provinces and to increase their powers, so that they may have a better opportunity of interpellating in relation to these matters of finance. I would assure the hon. gentleman, the Under Secretary of State, that it is not our desire to destroy provincial activity in India.

On the contrary, we desire to enlarge and develop it. I should like to see the Government carry out their promises in this respect. I should like, to use the words of Lord Lytton, "having heard their bow-wow of promise, to see at least the tail of the performance". We hope that there may be enlarged Councils strengthened by a Committee of this House, or a Joint Standing Committee of both Houses, to which may be addressed questions on which it is necessary that some expression of opinion should he obtained as to the advisability of bringing matters in dispute before Parliament. Although, in the present scanty House, it seems a mockery to do so, I would venture to appeal to hon. members, and, if necessary, I will go from this House to Parliament, and from Parliament to the people—that some opportunity of bringing forward their grievances may be given to those who are connected with the movement for reform in India. I agree that they are only a small body, but small as they are, they are sufficiently important to have some attention paid to them. There assembled at Allahabad some 1,200 delegates, representing some three millions of people, and I appeal to the English people for reasonable attention to the wants of India, especially as its grievances are now finding constitutional expression in the great Congress movement, of which Lord Dufferin said that he regarded with feelings "of approval and goodwill their natural ambition to be more extensively associated with their English rulers in the administration of their own domestic affairs". From the report of that Congress, it is evident that the natives are inspired with a laudable ambition to be more closely associated with their English rulers in the administration of their own affairs.

It is, of course, impossible to hope that within these walls any criticism or complaint made under existing circumstances will have any very great effect, but I do hope that the protest now made and concurred in, as it seemed to me at the beginning of the speech with which I have troubled the Committee, by members sitting on the Conservative benches—that the protest now made against the late period of the session at which this subject is brought forward will not be without effect. The House is wearied with the labors of a long

session, and the bulk of the members have gone away. I do not make this protest from party motives, as I acknowledge that the party with whom I vote are as amenable to every kind of blame in the matter as the party opposite. The right hon. gentleman, the Chancellor of the Exchequer, is now in his place, and I appeal to him, during the Recess, to give effect to words which I hope I have not wrongly understood—and I am only dealing with words uttered across the floor of this House—which have come from the Leader of the House, that it is only due to the vast mass of our Indian fellow-subjects that at some time they may be able to approach this House in a constitutional way, with the Speaker in the Chair, and not be driven to bring forward their grievances at a time when a question of finance is under discussion, and they are not susceptible of radical and effective debate.

INDIAN NATIONAL CONGRESS.

Bombay, December 29th, 1889.

Friends, fellow-subjects, and fellow-citizens — (cheers) — I address you as friends, for the greeting you have given me entitles me to use the same language to you that I would to those at home. (Loud cheers.) You have made me feel since I have been here that home has a wider significance than I have yet given it, for I have learned that if I have only a little home I have one, too—a larger one, in your sympathies, in your affections, and—I trust to deserve it by future work—in your love. (Loud cheers.) I address you as fellow-subjects, for we are here loyal to one rule with the best of loyalty. (Renewed cheers.) That is no real loyalty which is only blind submission. (Hear, hear, and cheers.) Real loyalty means that the governed help the governors by leaving little for the Government to do. (Renewed cheers.) And I feel proud to be fellow-subject with you, in the hope that the phrase fellow-citizen may grow into reality even before my life is ended. (Cheers.)

I pray your indulgence to-night, for this is the first speech I have made since I looked into the blackness of the grave; and I am not sure how far I may trust my tongue to be the interpreter of what I would wish to say; but of one thing I am sure, that you have over-rated alike my work and my ability. (Cries of "No, no".) I pray you be as indulgent to me as you have been generous. And if you disagree with what I say, let me say it in my own poor fashion, that you may find at least my meaning clear to you. I am here only a visitor by your courtesy, a member of a great assembly, the mother of Parliaments, within the walls of which I am one of the poorest members, and to its generous audience is due any praise that I may have had in

advocating the cause of those to whom I belong—and when I say to whom I belong, I was sorry to hear that I was thanked for my work in a popular cause. But for whom should I work if not for the people? (Loud and prolonged cheers.) Born of the people, trusted by the people, I hope to die of the people. (Renewed cheering.) And I know no geographic or race limitations to this word "people". If the nationality—pardon the word—to which I am proud to belong, has raised its empire here, the rule carries with it the duty on the part of every citizen to recognise that which I recognise in you, a loyal constitutional association for the assertion of your just claims, and for the amelioration of your homes and the advancement of your industries. (Cheers.)

And I will ask you not to expect too much. One man is only a water drop in the ocean of human life. You are the breeze driving the water drop on to the western side of the seas, and by your encouragement adding others to it and giving it a force that shall wash away the old rock of prejudices that has hindered progress. I have noted with pride the speeches here, which show that you share our language, our traditions and hopes, and are willing to work with us to make our triumph peaceful. (Cheers.) Do not expect too much, and do not expect all at once. (Hear, hear.) Grand as this assembly is, mighty in its suggestiveness, by its delegates travelling hundreds, thousands of miles, you are yet only the water drop of the nearly two hundred and ten millions whom you number under our empire—yours and mine, not mine against yours, not English against Indian, but a common empire to be maintained for common interests. (Loud cheers.) Do not be disappointed if of the largest claims only something is conceded. If not just now, it shall be on a day that is to come. Just now you have those to stand in the House of Commons and plead for you—not me alone. There are members as devoted to you as I can possibly be; and I hope soon to see added to those ranks one speaking with that authority, that knowledge, which his long residence in India has given him. I mean your President, Sir William Wedderburn. (Cheers.)

I would remind you, as encouraging you to patience—(hear, hear)—that in England great reforms have always been slowly won. Those who introduced them first have been called seditious, sometimes sent to gaol as criminals. (Cries of "Shame!") But no imprisonment can crush the truth. It may hinder it for the moment; it may delay it for the hour; but the oppressed opinion acquires electric force inside the dungeon cell, and moves to the front again when the prisoner comes out. (Cheers.)

Your presence here to-day confutes and answers by anticipation one sneer that I have heard spoken within the walls of Parliament itself. It is said there is no Indian nation, and that there can be no Indian National Congress. It is declared that there is no Indian people. There are over two hundred millions of diverse races and diverse creeds. But the lesson I read here is that this Congress movement is an educational movement acting as a hammer upon the anvil of millions of human brains, until it welds into one common whole men in whom the consciousness of the need for political and social reforms, and the desire to effect such reforms, are higher than all distinctions of race and creed. (Loud cheers.)

It will be my duty, as it is my right, to present to Parliament directly I get back, on the very first day of its opening, the claim you make to have a Bill considered. (Cheers.) On the second day the Bill will be introduced. For so much I can answer; I can answer for nothing more. (Laughter and cheers.) I think it possible that the Government may introduce some Bill themselves. If they do it will take precedence of, but it will not evade, the one you have charged me with; because on the Government Bill in committee I can take the decision of Parliament on every one of the propositions you desire, just as upon the Bill with which you have charged me. It is not easy work; and I have been glad to see that you can meet and discuss differences as you have done. It shows that men who can give lessons to one another, express diversity of views with one another, can be trusted with the right of electing and being elected to make the laws they can so discuss. (Loud cheers.) Then you may take it that, either on your own Bill or on the Government

Bill, the decision of the House of Commons will be taken on your proposals; and you can help that decision, for you have the constitutional right, not of going into the House and being heard yourselves, but of sending your petitions there—(cheers)—from every town, from every division—from far-off Sind and from every part. And I would ask you, if you really want to make me your mouthpiece in that House, to send signatures to petitions which you understand, by the thousand, by the hundreds of thousands, by the million if you can, so that India's people may kneel—and there is no shame in kneeling—on the threshold where the mother of Parliaments sits, and ask that she may do justice to those 6,000, 7,000, 8,000 miles away, in the same way that she has done such justice to those who can assemble with a living voice within hearing of her own walls. (Cheers.)

You will permit me to say, although I am only a guest, that we are here not in a seditious movement; we are not seeking—though if we did there would be no crime in the high endeavor—to transplant the democratic institutions of England to this land. We are only seeking, in the hill which is hard to climb, to carve steps in which the strongest may stand, and there giving support, may help their weaker brothers to higher positions. (Cheers.) It is said there are many who stand aloof from this movement. But on looking at you my wonder is that in its infancy so many have joined it. (Laughter and cheers.) It is said that there are influential men of this party and of that who have not yet come in; but the sun's rays grow as the sun rises. (Cheers.) You are the dawn; I see the day, and do not count the rays which are yet below the horizon. I count the gilding of the clouds I see, from the rays I do not yet see. (Cheers.)

I feel I should like to have the title which some have given me in sneer and some in hearty meaning, of "the Member for India". (Cheers.) But men whose measure I cannot hope to cope with have partly held that title; and I am not to hold it simply by great efforts on great occasions, but by small doings wherever there is injustice to be redressed. (Cheers.) I know how little it is one man can do; and little though one man can

do, I will tell you what he can do. When after rain and storm the waters have gathered in some huge store, one man may make the little boring through which the water begins to percolate that, as it grows in stream, washes all away. I will try and be that man, leaving greater ones than I can ever be to swim on the tide when the water flows in fulness. (Cheers.) I am here because I believe you loyal to the law—(cheers)—which I am bound to support. (Cheers.) I am here because I believe you wish—as we in England have—to win, within the limits of the constitution, the most perfect equality and right for all. (Cheers.)

I have no right to offer advice to you, but if I had, and if I dared, I would say to you men from lands almost as separate, although within your own continent, as England is from you—I would say to you men with race traditions, caste views and religious differences—that in an empire like ours what we should seek and have is equality before the law for all—(cheers)—equality of opportunity for all, equality of expression for all—penalty on none, favoritism for none. And I believe that in this great Congress I see the germs of that which may be as fruitful for good as the most fruitful tree that grows under your sun. (Cheers.) I am glad to see that you have women amongst you—(cheers)—although they are few, for they are your mothers and teach your children; glad to see that in your land you are ready to learn, as we in Britain have learned, that wives may counsel their husbands; and that great thoughts and great endeavors are not made less because the man goes to the woman for counsel in the hour of need and makes the woman stronger. (Cheers.)

I fear I have already spoken to you too long. (Cries of "No, no".) If not for you at any rate for myself. (Laughter.) I beg you—many of you here the most eloquent whom I have heard—I beg you put into your own words and into your own thoughts what you would have me say at home for you and let that there be said. (Cheers.) One thing be sure of—I will only advocate the right. (Cheers.) I must judge the right I advocate, and I may not always judge it as you do; but as long as you let me speak for you, I will only

speak that which seems to me to be right and true. (Cheers.) In this movement let there be no force save the force of brain, no secret union—let all be open, frank, and before the law. Then if mischief touch you, so far as one man may and so far as one man's speech can, English liberty shall put itself on the side of yours. (Cheers.) This is the first and it may be the last speech I may ever make to you—(cries of "No, no.")—but, when I am speaking on the other side within the walls of our Parliament house, let me beg you to think, and let me think, that you are listening, and that if I do rightly you will be generous with me in your judgment, and that even if I do not always plead with the voice that you would speak, you will believe that I have done my best. And I mean my best to be the greater happiness for India's people, greater peace for Britain's rule, and greater comfort for the whole of Britain's subjects. (Loud and prolonged cheering.)

Mr. Bradlaugh then withdrew amid continued cheering, and the meeting afterwards dispersed.

THE MAHARAJA OF KASHMIR.

House of Commons, July 3rd, 1890.

I am obliged to move the adjournment of the House, because it is the only possible way in which any appeal for the Maharaja of Kashmir can be submitted to Parliament. The Government of India have deprived this chief of his authority and of his property under cover of allegations which are emphatically denied by the Maharaja himself. The Maharaja, as I shall show, has applied for a trial in India. That has been denied him. The Secretary of State here has been asked to sanction an enquiry, and has refused; the leader of the House has been asked to appoint a Select Committee of enquiry, and has also refused; so that neither judicial nor Parliamentary nor Governmental enquiry is being allowed, although this gentleman has been subjected to penalties which in the case of the meanest person in this country would entitle him to have the accusations brought before some tribunal and witnesses against him heard. There is no other manner of bringing this matter before the House than by moving the adjournment. Though I can understand that hon. gentlemen opposite may think it unfair that the adjournment should be moved, they must remember that on Indian matters I have always shown the greatest consideration to the Government; so much so that at the beginning of this Session I did not avail myself, as I might have done, of my right to move an amendment to the Address, and I only now make a motion for the adjournment because there are no Estimates in Supply in which, as in any other case affecting any other portion of her Majesty's dominions, a question of grievance may be raised. It is either in the manner I am raising it to-night that this grievance must be submitted, or not at all.

Now on May 14th of last year—that is more than twelve months ago—the Maharaja himself asked the Government of India for a fair trial. I will read to the House presently the touching words in which that appeal for a fair trial was made. From then till now, except in a despatch from which it will be my duty to quote, no kind of answer has been made to that appeal, and the Maharaja has been condemned unheard. I should have pressed this claim for enquiry twelve months ago, but there were then no papers before the House. It would have been open for the Government to say, in the fashion in which rumor has said, that this unfortunate gentleman has been guilty of crime or was suffering the consequences of vice, because these suggestions could be found embodied in official despatches to which I shall refer, and that there was, therefore, a lack of duty in bringing the matter before the House until the Government had put before it the statements on which they rely.

Although this unfortunate gentleman was deprived of his authority and his property at the beginning of last year, the presentation of papers has been delayed until last week. They have been repeatedly pressed for by myself and other members. Until the Government had put their case on the table, any one else would have been at a great disadvantage in submitting to this House any matter for its decision.

I do not propose to ask the House, in the division I shall challenge, to express any other opinion of the facts I shall submit than that when such a penalty is enforced against a prince with whom we have a treaty—who has recently been regarded as being in the position of a feudatory prince—the man so dealt with is entitled to that which any other subject of her Majesty, if he be a subject of her Majesty, is entitled to, viz., a fair trial before condemnation. The Under Secretary must not shelter himself under considerations of State. If considerations of State can justify the Government of India in depriving one man of his authority and property unheard, there is no protection for any one, be he prince or peasant, throughout the whole of our Asiatic dominions.

The other day the question was stated as simply as possible in the language of the right hon. gentleman the Under Secretary

for India (Sir J. Gorst), in answer to a question put by myself. The right hon. gentleman said, "The action of the Government in Kashmir had been based, not upon grave personal charges made against the Maharaja". I would ask the House to remember that, because this man's character has been rumored away and lied away with the help of forged letters during the last year and a-half—forged letters used as instruments of political warfare—letters, the authenticity of which has been denied by the Maharaja, letters which have never been produced in his presence, and which yet the Government have the face to refer to in their worst fashion in one of the despatches I shall read to the House.

I shall be relieved from any question as to the personal conduct of the Maharaja. He may be good or bad. I do not care what he is—he is entitled to justice. If he has been criminal let him be condemned and punished, but do not rob him under cover of a criminality which you dare not bring in evidence against him, and as to which you will allow no enquiry either in India or here. The right hon. gentleman the Under Secretary said the action of the Government was based upon the long-continued misgovernment of Kashmir. Well, this unfortunate gentleman has only been the ruler of Kashmir for about five years, and I will quote the testimony of the Government itself that, to within a few months of the time he was dispossessed, misgovernment did not exist as far as it was in his power to help it. I cannot conceive—I should not be justified in saying before you, sir, anything more impudent—but I can conceive nothing more cool than the audacity of the confidence that this House would be imposed upon by the statement of the right hon. gentleman, the Under Secretary, that there had been long-continued misgovernment in Kashmir such as justified the dethronement of this man. Vague statements there are here, but not one statement of fact. Misgovernment must be made up of something. You may shadow a man, put him unjustly in prison, or take away his property. None of these things are alleged against this unfortunate gentleman. Well, the right hon. gentleman went on to say that the Government of India have never attached any importance to certain treasonable and

criminal correspondence attributed to the Maharaja. It would have been as well not to have so described the character of the correspondence if no importance was attached to it. Why suggest that it was criminal and treasonable if it was not true, as it was not, that he was responsible for it? I do not suggest that the right hon. gentleman has made an inaccurate statement, but I do say he has been ignorant of the facts.

I will read the evidence given by the Viceroy himself with regard to this correspondence which the right hon. gentleman dare not lay before this House, which he dare not put in print, but on which the emissaries of the Government have lied away the Maharaja's character during the last year and a half. I will dispose of this point at once because, fortunately, we have the papers on the Table and are able to deal with them. So far from its being true that the Government have never attached the smallest importance to the correspondence, the Viceroy himself says the Government were justified "not merely by the disclosure of these letters"—so that they consider themselves in part justified by them—[Sir J. Gorst indicated dissent.] The right hon. gentleman shakes his head. It is the Viceroy's head that should be shaken here. I admit that the right hon. gentleman dare not rely on the letters. I admit the right hon. gentleman has too much good sense to use in justification of the position assumed by the Government letters which the man himself declares to be forgeries, and which the Government have never dared to produce to his face. But in a long despatch, dated "Simla, June 26th, 1889", I say the Viceroy did say these letters were amongst the things on which the Government acted in condemning this unfortunate gentleman.

What did the Maharaja himself say about these letters? In a letter, which unfortunately time will not permit me to read fully to the House, he made a plea for justice, first to the Government of India, and then through the Government to the English Parliament. He said: "these letters are nothing but most daring forgeries"; and he suggests that one of the forgers, if not the only forger, is his brother, whom the Government of India has placed in the position of authority of which

they have deprived this unfortunate gentleman himself. My allegation will be that it was on those letters—for the papers disclose nothing else, and further negative everything else—that this action of the Government was based. (Sir J. Gorst again expressed dissent.) The right hon. gentleman shakes his head, but I have read the papers, which he evidently has not done himself, and I shall read extracts to the House to show that I am within the mark in every statement of this kind I make. Why did the Government of India, twelve months ago, say they did not merely act on these letters? What did that phrase mean if they did not act on them at all? Have the Government since discovered they are forgeries? If so, as they are part of the case on which misgovernment and criminality are alleged against this unfortunate gentleman, the whole story of it does now fall to the ground, at any rate rests on other matters, with reference to which this man demands to be put on his trial, and as to which no evidence has been offered.

Lord Cross, speaking last year at Sheffield, used words a little stronger than, and, if I may be allowed to say so, not quite so skilful as the euphemistic language of the First Lord to-night, and of the right hon. gentleman the Under Secretary last week. He said, "we did interfere in the matter of the Kashmir, and why? Because the people of Kashmir were so ground down by the tyranny and mis-government of the Maharaja that we were bound as the paramount power to interfere for the protection of the interests of the inhabitants." Where in these papers is there one instance of this grinding down? If you want to steal Kashmir, as unfortunately we have stolen State after State in India and other parts of the world, then say so at once, and at least have the merit of honest thieves; don't be hypocritical, by saying you set up self-government where self-government has no real existence.

What is the position of Kashmir towards this country? Fortunately the history is not long, so far as it affects this unfortunate man, and I will deal with it as briefly as it is possible to do. The history of Kashmir, for the purpose of to-night's discussion, began with the Treaty of 1846, with the

grandfather of the gentleman whose cause I am pleading. Then for a considerable money payment, recorded in the third section of the Treaty, the British Government transferred and made over for ever, in independent possession, to Maharaja Golab Singh and the heirs male of his body, the territory which includes Kashmir and Jummoo. This is not a case of an ordinary feudatory State. So little is it regarded as a feudatory State, that in the statistical abstract of this very year, you have the evidence of its non-inclusion up to 1881 amongst the feudatory States, and there was never anything to suggest that we had a right or duty to send a Resident there until 1885, on the death of the father of the present Maharaja.

I won't trouble the House with what passed until a few days before the commencement of the reign of the present chief. The Maharaja Golab Singh, with whom the Treaty of the 16th of March, 1846, was made, was succeeded by his son about the time of the Indian Mutiny; and Lord Canning, in an official document, gave Maharaja Rumbir Singh, who had succeeded Golab Singh, in 1857, the *Sanad* of adoption, which provided that in case of failure of issue he and his successors would be competent to adopt an heir and thus perpetuate the line. This was given on the ground of the great service rendered by the Maharaja during the Mutiny. The Maharaja Rumbir Singh was ill in 1884, and I am afraid that some fourteen or fifteen years ago, when Jingoism was specially paramount in the making of great military frontiers and things of that kind, we looked with longing eyes upon the property of others, and were disposed to ignore any sense of justice in our dealings with them. It was then said that Rumbir Singh had misgoverned his country. If he had, it was a matter with which, except as being by treaty the paramount power, in which case we might have made remonstrance, we had nothing whatever to do. But, as a matter of fact, we made no remonstrance to him. The Under Secretary of State dissents. Then why is it not in the papers? The papers began in 1884 with a despatch relating to the alleged misgovernment during the time of the present Maharaja's father. The words of the despatch preclude the possibility of remonstrance having been made.

But what happens is that while the Maharaja was dying, the Viceroy of India, looking to the matter, as he says, with a view to his troublesome neighbors on the north-west frontier, suggested certain reforms which on the accession of the son of the then dying man it would be well should be carried out; and I will read to the House in the words of Lord Dufferin himself the admission that many of these reforms had been carried out during the short period that this gentleman sat on the throne. In 1885 the succession of Prapat Singh was formally recognised by the Government. He came to the throne under the treaty which I have read to the House. One new departure there was against which the Maharaja protested, namely, the establishment of a Residency, instead of Kashmir being an independent possession, which under the treaty it was, subject to the supremacy of the Empress Queen. After the appointment of a Resident, it is a monstrously unfair thing to spring a mine four or five years afterwards, and allege as an excuse for confiscating property and power that there had been misgovernment where, if there had been misgovernment, it should have been reported day by day, week by week, month by month, and year by year. There are no such reports. If the Secretary of State has got them he ought to have printed them.

I am not asking the House to say that this unfortunate man is guiltless, but I am asking them to say that he is entitled to be tried, and to have an enquiry before he is deprived of his rights. In 1889 the Government deprived this gentleman of his chieftainship. By what right? By no right save the right of force. By what law? By no law save the law of force. Upon what charges? Upon charges of the vaguest description. It is clear these papers are delusive papers. There must have been reports made to the Viceroy, which reports ought to be in the hands of the House. If it is said that they are of a confidential character; if it is said they cannot be produced, at any rate the witnesses who can prove the occasions of misgovernment ought to be produced in some court. Is it because this man is rich; is it because his property is in a place where you want to have possession because of frontier considerations, that he is to be deprived of the

right which you admit to the meanest person accused within this country, or within the Asiatic dominions of the Empress Queen? It is a monstrous thing, and I ask the House to look at it without consideration of party; because you must remember it is not a question only of this man, but of every feudatory prince whose property you may want to take and merge in our dominions. The papers have not been put on the table in a hurry. They have been in the skilled hands of the Under Secretary. We all know how frank the Under Secretary can be if he tries, and I ask him to tell the House how many papers relating to these important despatches between the Government of India and the Secretary of State have been kept back, and why? It is clear some have—the language shows it. Why are any kept back? They have been kept back because the action of the Government cannot be defended. I do not know what the charges are against the Maharaja, and I am only asking that this Parliament shall say that the Government of India, however powerful, and whatever the State considerations are, has no right to rob this man.

On the 14th of September, 1885, the Viceroy sent a despatch to which I must allude for a moment. It was sent just on the accession of the present Maharaja to the throne, and I allege to the House it makes a clear bill up to the time, so far as any charges of misgovernment entitled our Government to interfere. The Viceroy says: "I trust that your highness's life may be long and prosperous; and that, in all difficulties of whatsoever kind, you will rely with confidence upon the goodwill of the British Government, which will never fail you so long as you are loyal to the Crown, and earnest in the desire to rule your State with justice and moderation. Your Highness has before you a difficult task. During the illness of your father the administration of the State became seriously disorganised, and it will be necessary for you to introduce many reforms." I will show you that three years after Lord Dufferin's time reforms had been carried out, and that misgovernment is a pretext for stealing the man's property. The Maharaja wrote in reply protesting against the Residency being placed upon him. He said: "I do not hesitate to admit that the existing

state of affairs in Kashmir and Jammu urgently requires immediate introduction of substantial reforms into the administration of the country, and now that I have power commensurate with my responsibilities, I beg to answer your Excellency that nothing shall be spared on my part, and no time will be lost to prove beyond any possibility of doubt that it is my ambition to succeed in making my country a model of a well-governed State in alliance with the Government of India."

Having got the Resident at the capital, what do we find? We find that the Resident wants to get rid of the Maharaja; he submits some report to the Government, the particulars of which we do not know, and a report, the particulars of which we do know, dated March 5th, 1888. Let me point out in the first place that in the despatch of the 5th of March, 1888, there is nothing to justify any of the words of Lord Cross at Sheffield, or the words of the Under Secretary of State last week, as to misgovernment, or the words of the First Lord of the Treasury to-night. Now, what was the decision that the Government of India came to in August, 1888? It was that the condition of the State did not seem to demand such action as Mr. Plowden had suggested, and that the Government had therefore determined not to resort to measures which would have the effect directly or indirectly of taking the power out of the Maharaja's hands. Yet no less than seven months after that despatch power was taken out of his hands, and taken out solely on these letters. Solely, perhaps, is a strong word to use; but it was immediately after coming into possession of these letters, which suggested the worst of crimes—letters which the Maharaja has always denied, and as to which he is certainly entitled to be heard before a Select Committee of this House or before the Viceroy himself. He had confidence in the British Government, but he had no confidence in the officials who, he said, misrepresented him. The decision that there should be no interference with the Maharaja, directly or indirectly, disposes of Mr. Plowden's report of the 8th of March, 1888.

I come now to April, 1889, when we had some further action. I will first mention that on the 25th of July, 1888, Lord Dufferin wrote: "I do not overlook the fact that since the appointment

of the Council of which Diwan Lachman Dass was a member, considerable progress has been made in the direction of reform; useful work has been done with regard to the revenue administration, and in the reorganisation of the Public Works and Medical Department. But much remains to be done." This is not the language of condemnation of chronic misgovernment and the grinding down of the people. Misgovernment is only on invention—an excuse for having dispossessed this man, and I think I have a right to quote the evidence given by Lord Dufferin in 1888. This unfortunate prince, hampered by the Resident who dictated the policy he should pursue, did make such reforms as entitled him to the praise of Lord Dufferin—a statesman of the greatest eminence, of the keenest judgment, and a man who cannot be charged with being at all partial to the class of man I am defending here this afternoon.

Now I come to these forged letters. There is a batch of thirty-four, and the Maharaja says that they are all forgeries. I do not ask you to say whether they are or are not, but I say that if they are used against him he is entitled to go into court and cross-examine the witnesses against him. Other letters on which the Government have relied have been abandoned as forgeries within the memory of many of us in this House. What is the character of these letters as described by the Resident? The character of them is that the Maharaja offered large sums of money to certain individuals on condition that they would murder, or cause to be removed, Mr. Plowden, the late Resident. It is alleged that these letters showed treasonable correspondence with the enemies of England. All these things are denied by the Maharaja. I do not ask you to say whether the Maharaja is right or wrong, but I say that when letters alleging murder are produced against a prince with whom we have a treaty of alliance, immediately after which we take away his property, the commonest and the merest justice demands that he should have an opportunity of being heard before a Select Committee of this House, or some tribunal competent to deal with his offence, if offence he has committed. The Government are not going to stand by these letters to-night, but the Viceroy has stood by them, and I will read you words in which they are so

stood by. The Viceroy said "In the spring of this year"—that is last year—"my attention was called to the documents referred to in your Highness's letter. Many of these had every appearance of being genuine, and they have moreover a striking resemblance to those other papers of which I have already spoken, and which came into the possession of the Government of India at a previous time." "Your Highness is correct in expressing your belief that the action subsequently taken by my Government was not justified merely by the disclosures contained in these letters." Where is the report upon which they acted? The man had a right to be tried. The letters are vague statements. The Viceroy goes on: "Notwithstanding the ample resources of your State, your treasury was empty". Well, if you are going to dethrone every Prince whose treasury becomes empty, I do not know how far you are prepared to carry your policy. Does the Government really mean that? If that be so, how is it they took from this man the advance or deposit or loan of a large sum of money, amounting to twenty-five lakhs of rupees? They had this in their hands when the treasury was empty. Why did they take money for Lady Dufferin's admirable fund? Why, if the treasury was empty, did they not reckon the millions of rupees for railway works in the interest of frontier defence? Treasury empty! Why, you and your Resident helped to empty it, and then you tell this unfortunate man it is a reason why he should be dethroned!

Sir J. Gorst: Will the hon. gentleman finish the sentence?

Mr. Bradlaugh: You put on the table what you please, and I have to make the best I can with the House half empty, because every member feels the difficulty when the motion for adjournment is moved. I have, with such knowledge as is supplied, to make what case I can with this far off matter.

Sir J. Gorst: I only interrupted the hon. gentleman to point out that he had not read the sentence to the end, and I thought to put the case fairly it should be given to the end.

Mr. Bradlaugh: I will read it to the end and show that the right hon. gentleman gains nothing by making me read it. "Notwithstanding the ample resources of your State, your treasury was empty; corruption and disorder prevailed in every department

and every office; your Highness was still surrounded by low and unworthy favorites; and the continued misgovernment of your State was becoming every day a more serious source of anxiety." Well, there is not a word affecting finance there. I was going to deal with each allegation in turn. "Low and unworthy favorites!" Every prince has these even in his own household; every Oriental prince has such. The whole history of our transactions with native princes shows that when we have hankered to take their money, their land, their position, we have used vices which appeared at the time to suit our purposes and help us to gain our ends. I do not know what the right hon. gentleman means by inviting me to read to the end, as if I had omitted some allusion to the empty treasury. Why, the Indian Government had then twenty-five lakhs of rupees of his, and millions of rupees had been laid out in railway works. Who are these low and unworthy people? It is not enough to make a vague statement: where is the evidence? Let the man be tried. A man complains of a burglary in his jeweller's shop, and you say to him, "Oh but you were misusing the jewels".

I ask the House to take at least some tone of dignity in this matter. This despotic government of India, as an Indian Secretary once said, has no public opinion to influence it, no Parliament to control it, no Press to criticise it. The Government of India is a despotism that has in many degrees been well for India; it is a despotism which has brought in its train advantages which many of these poor people would not otherwise have obtained; but it cannot be denied that in many respects that despotism in the past has been tainted with fraud and crime, and I hope it is not left to the present Government to revive these evil traditions in obtaining possession of Kashmir. The Empress Queen, the paramount Power, acting as Judge, has condemned this man unheard. No man should be under menace of this injustice. The grandfather of the Prince bought these lands, and we by treaty declared they belonged to him for ever. (Sir John Gorst expressed dissent.) The right hon. gentleman does not seem to be acquainted with all these facts in the history of India. Shall I ask him to read and tell us the exact sum paid for the Maharaja's dominions?

How do the Government justify their action? They say the Maharaja resigned. He says he did nothing of the kind. I am more inclined to believe him than even the Under Secretary, for whose statements I have always the profoundest respect. Officially, there could be nothing better than the way he answers questions in this House; but when history some fifty years hence comes to deal with him, the comment of the historian will be how wickedly the Government deceived the Under Secretary, by making him say as truth the things that were not true.

It is said the Maharaja voluntarily resigned. It is true that on March 8th, 1889, the Maharaja issued the following document. I will abridge it; if it is said I am incorrect I will read the whole willingly; but I do not think my abridgement will differ from the exact words. The Maharaja appointed a Council who were to govern the country for five years, he reserving to himself all his princely rights and reserving certain powers, but allowing them much the same authority as, allowing for Oriental position, a Cabinet enjoys here. The Government of India do not accept that, yet they say they accepted a voluntary resignation. What he offered they would not have, what they wanted they took from him. The Maharaja says that even in the decree of March 8th he acted under pressure. I do not ask the House to accede to that, but I do say that he is entitled to a Select Committee here—or he would be even content with an enquiry conducted in India, if Lord Lansdowne will give his personal attention to it. The right hon. gentleman is better acquainted with the Government of India than I am. He knows that Residents are not always perfect, that Residents sometimes quarrel with a prince, and that matters are alleged as facts which do not always bear the test and scrutiny of examination.

This man through my mouth appeals to this House, not that you should declare that the Government of India is wrong—he simply asks for an enquiry. He has a right to that enquiry. I regret that the appeal has not been made by an abler tongue, by a better informed man. But I am limited to the information that the Parliamentary papers

presented to the House, and such records as the history of India, enable me to present, and I say without fear of contradiction that no case is made out for the action that has been taken. In 1888 the Government of India and the Secretary of State in Council at home came to the conclusion there was nothing for which directly or indirectly the Maharaja ought to be deprived of power; and within seven months they take it all away. If you trample on treaties, if your obligations to the Princes of India are to be broken, and the native rulers are not to rely on your word, and English justice in India is a shadow and a delusion, let that be known: but let those who hold a contrary opinion vote for my motion as the means of protest. The government of India is no party question; alike for Liberal or Conservative, Radical or Whig, it is our duty and our interest that our paramount rule in India should be just.

CLOSING ADDRESSES AT VARIOUS CONFERENCES OF THE NATIONAL SECULAR SOCIETY.

CHARLES BRADLAUGH, President.

Newcastle-on-Tyne, June 1st, 1879.

IN bidding you farewell, let me pray you take home for the work of the coming year some of that sturdy Northern spirit which has ever characterised the Tyneside. I desire for each individual more real, more true, self-assertion. You want to feel that the body you belong to is worth belonging to, that the cause you serve is worth the service; you need to be proud, not ashamed of your opinions, and to be ever ready to avow them; not impertinently thrusting them forward, not aggressively obtruding them, but holding your colors, so that while you are by, none shall dare insult them nor touch them without feeling that the hand which holds them can strike a blow in their defence.

And there is need of individual effort; national work is nothing without local work; individual life is made up of its seconds, its minutes, its hours, which add and roll into months and years; society life is made up of its individuals, who weld themselves together to form the mighty whole. Let each year find you with a fuller table of contents to show the year's work. If, as you say, you take pride in my work and my name, make it your work and your name by joining your efforts to mine; and remember that if I am strong, my strength is made by yours, and because I believe—believe with my whole heart and mind—in the grandeur of our work and in the love and trust the workers give me.

There is plenty of local work to be done; go avowedly as Freethinkers on to your local boards; in every munici-

pal election—and here I desire to honor Mr. Slater, whose long life of earnest discharge of duty has placed him high in honor among his fellow-townsmen—in every School Board election, in every Parliament contest, you should be the most earnest workers. And here let me pay tribute to Mr. Forster, who has worked most ably at Darlington. Work may be done in the local Press; no wrong should pass without protest; and here recognition is due to Mr. Symes for the work so well and so carefully done. Let us feel that we are alive, with a sting to use if sting be needed; not on our knees, not cringing, not creeping, but walking on our feet, erect, unflinching. Let us aid each other, and grow strong by each other's help; not for my sake, not for me, Charles Bradlaugh, but for that mighty cause which lived ere I was born, and will live long after my bones have crumbled in the grave.

I believe the prospect before us is better than it has been at any period during the last fifty years. Though I am now turning grey, I am still young—as young as I was twenty years ago—young in hope, young in energy, young in trust, young in ambition, young in strength, young in heart. Mr. Symes said the fight was unequal. Yes and no; the army against us in numbers is greater than our own, but it is not armed with weapons so good; every new book is a new weapon for us; every discovery in science, every fresh truth, every step in civilisation, every struggle of thought, all these make new weapons for us, and day by day the fight grows less unequal. Unequal! Have you seen the flood kept back by the barrier? The barrier looks so strong, and the water looks so weak, until the barrier rots, and grows worm-eaten and worn, and the flood bursts over it and through it, bearing it all away; the old flood-gates are the Church, the priests, the creeds—they are rotten, they are worm-eaten, they are crumbling; but the peoples are the flood behind the barrier, and the flood-gates are giving way.

Mr. Symes was right when he said that liberty's chief foe was theology. It is so in France, where the Republic and the Roman Catholic Church stand face to face, and the fight is nearing; we may hereafter have the same battle to fight

here with the same strong enemy. Fight theology always; but fight also politically and socially. Freethought must be identified with progress. In France civil marriages, civil funerals, mark the Radical party. Our chief fight here just now is the political and social one; fight the priest in his stronghold, fight the priest in the school, and let us keep our children from his touch. The Press is fighting for us, often unwillingly, often reluctantly, not always consciously.

Before the next Conference there may be another fight in the struggle which has been going on in Northampton. I trust that the next fight may carry your flag into the Commons' House. I have hope, I have trust, I have ambition. Many men and many women who made our movement are forgotten; the memory of their names has passed away; we have not looked back enough. Other men and other women have cut their names deep in the rocky path upwards. I have the hope, I have the trust, I have the ambition, that by and by those who hereafter read our story may find my name cut faintly there beside those names, and at least I shall have done nothing to militate against the glory of the cause.

London, May 16th, 1880.

I must not again go over the record of our year's work, but that record is one in which we take just pride. Glancing at the late election struggle, we see in nearly every borough our men on the right side. We do not claim perfection for our party, but we do claim that its men are more thorough, more earnest, more hearty in their work than most, and that they are, in the vast majority, to be found on Liberty's side.

1880 gives fair promise for 1881. A large part of this promise, in bud to-day, depends on you for its fruition. If each of you takes care that no child of his is taught theology, there will be no need for attacking theology twenty years hence; but there is need to-day. We cannot deal with the field as though it were virgin soil, as though there were no weeds in it, as though

spade and plough had never touched it, as though it had not for years been sown with the falsehoods of theology, and rolled hard with priestly customs. Many a weed has grown upon it; we see the seeds. I see them in the religious tracts showered on me by the dozen—as though I had not read the rubbish long ago: accounts of Atheist deathbeds, with nothing in them save the inventive genius of those who serve the Lord.

While I am determined that in the House of Commons I will never use my position there against religion, let all understand that outside the House I will not change one syllable of all I have to say. The field, then, is covered with many weeds, and the weeds are so twined round many a good plant, that it is hard not to destroy the plant while you pull off the weed. Weeds you may burn, forests you may hew down, but the roots are left cumbering the soil, sucking its moisture, draining its nourishment. The trunk may be rotten, yet vermin may hide there; the trunk may be rotten, yet fungi may grow there; we must rid the earth of it, not only for ourselves, but for the future.

Who is on our side? Every schoolmaster, even though he know it not; every library; every book that is not filled with fable and bound in fraud: for every book written with honest purpose, aye, though it be against us, may light a spark of thought that shall burn and blaze in the future.

Who is on our side? The bold were on our side long ago. Dungeons held them, faggots and fire stifled and scorched them, penal enactments crushed them, yet the bold went on. And there is life in their deadness, not the sham immortality, but the true, as Bruno's spirit goes through the world, alive as 280 years ago.

Who is on our side? our work is not only negation, not only mocking, not only hewing: mock, sword, mace, these are all weapons in our fight; but we would rather not fight, but grow; we would rather not fight, but march; we would rather not fight, but work our hope out in life; but when we strive to do our duty well, on every side foes swarm hidden, forging lies like stilettos to stab us unawares.

It is something to remember how we have grown. This little hammer that I hold in my hand is the hammer used by

Julian Hibbert, by Richard Carlile, by Gale Jones. If you had told Richard Carlile that before the wood had grown rotten its holder, without one wavering of principle, would stand in the legislature of the nation, he would have thought it a wild dream.

Friends, you have done much for me. Without your aid I should not be entitled to the greeting (pointing to the motto behind him) given me here to-day. Some folks are here to remember me very young. I am speaking in the presence of old men who have known me from my boyhood until now. I was born to no large estate. Without your aid I could not have won the present victory. I owe you much: whether the debt will be paid in the future, only the future can tell. Yet I may, perhaps, dare to say to you that the debt is not all on one side; I, too, have striven to aid you in the time past. You have heard me speak of my ambitions. Suffer me to say a word of them to-night. One ambition I had and have, one as strong as ever, that men may number my name among the names of those who made this free platform possible. This ambition I hope to keep unchanged until I die. Though my life may not be over-long, yet I hope to see our party so organised as to be able to defend its weakest. My other ambition is to be recognised as wielding political power for good or for ill. For good, I hope. For Good, for Liberty, for Redemption, for all without distinction of color, of skin, of race or of type, but for our common Humanity.

We ought all to be gratified by the assurance of our growing strength that comes to us in the bitterness of clerical attacks, in the wild fanatical rage, since my election, of prayers and of sermons. The Central London Branch has decorated this room with the Northampton colors: let me hope that none of you in the years to come may be ashamed that your Society wore them to-day. 1849 to 1880. It is a large piece out of a man's life. From Bonner's Fields to Westminster Hall. It is a long stride. And I have climbed, not crawled; marched, not crept; I have held clenched fist, not silken hand. But, friends, do not expect too much now. Man can only do what man may. I will try and do my best. More than this none may promise truly. I

will try to do as our bravest dead would have done in my place. Thomas Allsop gave me that motto of "Thorough" (pointing to the beam). Strafford put bad tradition into it, but it is a good motto, for without that a man is nothing, I am ready to learn; I have learned much since I first stepped to your front; I have much to learn in my new place. I will try always to be "Thorough" there, and if you do not always agree with me, let me have fair trial before you judge.

I have learned to love many of you, for in the hour of trial men and women of Lancashire, of Yorkshire, of Tyneside, of Glasgow, have stood by me, and have been my friends. In the old times many abrave man has fallen, because he has been alone. During thirty years, lone though I have often seemed, I have never been utterly alone, and all through men and women have loved me, men and women whose love kept my heart warm when it seemed well-nigh frozen. What one man may do, I will strive to do: the result must be left for the story to tell.

Of my foes—for those in front, they must move. For those behind me, who ought to be with me, they are finished. I have no word of further reproach for them, but also I will not work with them. Foes in front I will fight, and friends I will win in the new circle as in the old, but for those who have known me for years, and whose petty jealousy makes them slander me, let them stand off; my way is in front.

Let me speak to you of my duty, my faith, my hope. It is my duty to build up, but also to attack. A big wall blocks the way; I hold a crowbar in hand, and will pull down and make way for the sowers with their bags of good seed. It is my duty to build up, but also to attack. In the far West a man is promised land, and he finds his land covered with trees marking centuries of growth; he must clear before he can build: he must cut logs before he can raise the hut: these trust me with the axe, and I will wield it to make room for the builder. It is my duty, and it is no painful duty; it would be pain to be shut out from doing it. I read to-day in many journals—journals which have discovered in me ability they never saw before, powers of oratory they never knew of—I read in these remarks as though my position were one for pity,

as though I stood only with tabooed men. Were it so, it were no cause of pain. Last Tuesday I saw a member of a little sect which men tried to crush and failed. Fifty-five years ago that sect was in a worse case than we are to-day. They could not sit on juries; they could not give evidence in criminal courts; they are now in the Cabinet. We see the fetters falling from us; we see the redemption of our children by the conscience clause. When I see this, I feel pride, not pain—pride which knits itself into my life, my hope, and my faith. Faith? Yes, my faith. I have faith more than many. I do not believe in the far-off yesterday, too far off to catch a glimpse of, nor in the far-off to-morrow in worlds of the future. But I have faith in Humanity, faith in men and women, faith that is proved by test. Humanity grows larger, not lesser. Look back and see men, ignorant, savage, brutal; see them growing; see struggling thought moulding itself into speech; see speech, the child of thought, bringing forth new thought out of her ever-fruitful womb. Humanity is growing larger than castles, larger than temples, larger than empires, larger than creeds, larger than churches; men once built these, now they are outgrowing them. I have faith in that Humanity. I have hope in the future; hope in deliverance from the fears, the shackles, the fetters of the past. The age is not far off when men shall be free and equal, not in the dead level of that equality which can never come, but the age in which men rank higher than kings, and priests are not.

Bury, June 5th, 1881.

Something had been said by Mr. Slater about the change in the day—beginning so gloomily and ending so brightly, and he (Mr. Bradlaugh) thought that might be taken as an emblem of what the Freethought struggle had been. The morning of Freethought was gloomy, but the storm was lighter now. Any quarrel they had that day, any fighting or penalties they risked, were trifles when compared with the risk Bruno and others,

whose names even were lost to them, faced in paying the penalty in fighting for what was enjoyed now.

He could not help congratulating them on the general progress of their movement—a progress shown in the intense fear manifested in most Christian declarations, and that fear was especially on the part of the State-aided clergy. These had most to fear, because their weapons against all Nonconforming bodies were solely reason, argument, discussion, and pleadings, as those bodies might plead with them; but against the others they claimed to tear asunder the statutes which gave preference to one religious body over the others, and which gave it a position which ought not to belong to a State establishment.

He desired to say a word of thanks both to the society and the open conference for the trust and confidence which they had been good enough to express. It was necessary that he should speak honestly and plainly. The political struggle was not a struggle of Freethought against religion. It might be made a struggle by those who opposed them, of Freethought against bigotry. It would be unjust in the extreme —knowing what they owed to Nonconformists at Northampton during the past two years—it would be unjust indeed on their part not to recognise that when men like John Bright stood out as he had done; when men like Henry Richard had taken the ground he had taken, and when a man like Mr. Gladstone, not without pang and grief to him, claimed the same right for the man who was attacked for his Atheism as he claimed for every other citizen—it would be ungrateful and wrong indeed for them to pretend that the struggle which they were fighting side by side was a struggle for their party. Naturally their party was advantaged at any advance in freedom and by everything which tended to snap some of the old ties which hindered and prevented progress, but only in that sense could the struggle be said to be a Freethought struggle.

Now a word on the gravity of the twelve months they had to face. They were going to their homes, but he could not fight without their help, and he wanted them to know the people they had to fight. If he read the signs of the times aright, the

thing which was expressed by Professor Rainy and Dr. Begg, in Scotland, and in a coarser manner by a man like Dr. Berger, that which found expression in Convocation and which was more virulently and grossly put in the *Whitehall Review*, showed that there was some intent on the part of some to try to revive the old blasphemy laws for the purpose of defeating him with one weapon when they failed with the other; and that fight was the more difficult because they had to deal with the grossest misrepresentations from the daily press, and with grave misapprehension on the part of the people who should be on their side.

Some men in some meetings stood up and said that if his conduct had been different the result would have been different, and that the law would already have been changed. Such a man had the advantage of his ignorance to protect him from the charge of unfairness. But in the position in which they had placed him he had generally succeeded in winning from the judges who had decided against him some compliments for the industry he had exercised in ascertaining the law. They had to meet with most wicked representations as to what they did and taught. He said nothing of the foul pamphleteer who for election purposes strung together some truths and many falsehoods for the purpose of producing an untrue impression. He had paid to Henry Varley a compliment he perhaps should not have done, in asking him to submit his pamphlet to arbitration. Henry Varley had refused that, for he would have him (Mr. Bradlaugh) sue him for libel, as he knew that reiterated actions meant ruin to him in the mere cumulation of expenses. The only court before which he (Mr. Bradlaugh) would sue him would be that of public opinion.

It was not only a coarse speaker like the Vicar of Bolton, or the men like the Rev. Dr. Begg, who, corrected in a misrepresentation, still repeated it, but he found that men whose honesty in ordinary life he felt sure about constantly repeated, as though they were his, views on Socialism which he did not hold, views on marriage which never had an equivalent in his feelings, and declarations on prostitution which were abhorrent to his thought. He found that he had not only to

answer for what he had said, but for a number of assertions which, as they knew, never from the beginning of his life until now came from him.

There were some good but weak people, who were good enough to tell him that they were his friends, and he dared say meant it, but of whose friendliness he had not had the slightest trace during the whole of his career; they perhaps thought that neutrality was true friendship; if they did, he did not. They said that if he had done something different he would have served the movement better. When he was sent to do parliamentary work he was not sent to serve the movement; he was sent to serve Northampton. He would not do anything to hinder the movement or be untrue to it, nor did he intend abandoning one declaration that he had made; but it was not true that he had gone to the House to fight the battle of Freethought. He could fight that on the platform and in the press.

He had no intention, if he could avoid it, of ever opening his mouth on the question of religious belief in St. Stephen's, where he meant to sit for many years. But it was said that if he had pursued another course he would have won the right to affirm. They should see if it were so. A man brave and true, one John Archdale, who had a religious objection to the oath (which did not weigh with him), saw in the form of the oath an absolute breakage of a command which seemed to him divine, and refused to take the oath, and 150 years passed before the right to affirm was accorded. That was longer than he (Mr. Bradlaugh) could afford to wait. He might be told that things moved quicker now, but he did not believe that bigotry would make one step until they pushed it.

Men tried to win the right to affirm for Freethinkers long before he did, and they failed; he might boast that he partially won it, for the Act of 1869 was framed by the Hon. George Denman after a special argument in a case of his own, and after consultation with him on the subject. For years the fight went on. It was not won by standing or by remaining outside; it was only won by fighting thoroughly and completely, as he meant to fight that case. The people who told him that he might have

refused the oath and still have kept his seat were people utterly unacquainted with parliamentary law. Such people referred to Baron Rothschild, who took the oath of allegiance and therefore protected his seat; but did not take the oath of abjuration, in which occurred the words "on the true faith of a Christian," the refusal of which did not cause him to vacate his seat.

With regard to the growing feeling in the country he was bound to say that the provincial press was much more fair and just, he might say generous, to him than the London press was. He had not often trespassed on their columns with any sort of explanation, but had left his opinions to speak for themselves. But in London they had powerful daily papers, which would suppress as far as they could all traces of the agitation; they would ignore its facts and neutralise its forms. They had a powerful organisation against them. So powerful that he found last week that at several post-offices in Ireland the postmasters exposed in the offices notices asking the people to sign petitions against his admission to Parliament. He was bound to say that on his making representation, the Postmaster-General had written saying that he had given orders for the removal of the notices. But that showed them the grave difficulties they had to contend with in that fight.

In many cases they had evidence, which was extremely difficult to bring before Parliament, that petitions were submitted to Sunday school children and were signed indiscriminately by those children from eight to twelve years of age; he had cases in which children had had petitions brought to them to sign; being told that it would help them to go to heaven if they helped to keep an Atheist out of Parliament. That was the sort of thing which made him ask them if they would work for him.

He was proud to see that the Northampton colors were so worn. The selection of those colors was a question with which he had nothing to do in 1868. They had been worn in many a lawful struggle for law and liberty; they were never defeated. It might be said they were defeated in 1868 and twice in 1874 but those were only repulses and not defeats, for they were skirmishing only to gain the victory in the end.

He wanted them to work unitedly; they had been told that if there was no division amongst them people on the other side might say that he was their dictator. If they were afraid of that they should not belong to the society. If he was good enough to be their general by their commission in the fight, they must let him be their general while the fight was going on. He should not like to measure the feeling of Northampton against theirs, but he would forfeit the right to sit in Parliament rather than forfeit the right to hold their love and trust.

For him, personally, the fight was a fairly big one; it was not merely the litigation in which they boasted they would ruin him. It was not easy after travelling all night, as he had to do lately, to go into court in the morning to argue points of law—it was not easy to hold one's own and keep one's temper; it was not easy to meet foes when amongst those foes were those who pretended to be friends. There were some who pretending friendship tried to trip him, who said the bitter word which reached him from behind, and then the struggle was made harder still. Luckily that was not his first fight; it was at present his biggest fight—he did not mean the litigation; he did not mean the common informing tools. He saw in the papers a paragraph speaking of the generosity of the common informer—in the papers was the only place in which he had seen it. It was stated that the informer might have arrested him, but the man never had the legal right to do it; he never had judgment to do it. If he had had judgment, imprisonment for debt under ordinary circumstances was abolished eleven years ago, and if it were not, imprisonment for debt did not apply to a member of Parliament under any circumstances whatever. The Tories said they would make him bankrupt; let them not believe it until they saw it.

They might leave that side of the fight. The serious part of the fight did not lie there, but elsewhere. It was no light thing for one man to challenge the authority of the House of Commons, even if the House of Commons gave a decision against the law, as it had done. It was said that new legislation was required to admit him. It was not true. If he

was not qualified by law, they could turn him out. He was only kept outside by pure physical force, and he had only for the present submitted to that physical force because the man whom they had charged with the duty of taking care of the affairs of the State had to face a state of things in Ireland which was shameful to all English people, and he would not, if he could help it, permit himself to be made the means, even for one moment, of delaying the remedy—if remedy were possible—still less the means of harassing the man whose life was a mighty one, whose career was a grand one, who stood now on the edge of the tomb, with the shadow of the grave near him. No thought of his, no word of his, should give him pain if it were possible for him consistently to avoid it. But the fate of the Irish Land Bill once settled, so far as the House o Commons was concerned, and then his duty was clear. The Government would be able to pass the Affirmation Bill, or it would not. They would be able to introduce it, or its introduction would be obstructed. If they were able it would be his duty to wait a reasonable or unreasonable time, because the advantage of affirmation was so great that as long as the people of Northampton were good enough to give him leave to wait, he should do so. If the Bill were obstructed, hindered, or rejected—it was possible it might be in the House of Commons, and still more possible in the House of Lords—then his duty was clear—to that table he must go again; to that table he would go again. If, then, an accidental majority of the Tories and weak-kneed Whigs, relying upon physical force, and physical force alone, if for the first time in the history of England a majority of the House of Commons, having no law on its side, used force against one man, grave as the issue was, serious as were the consequences, he had looked at them all, and would not give way.

International Freethought Conference, London, September 25th, 1881.

At a gathering at which Freethinkers are present from many foreign countries, it is an acceptable task to endeavor to trace the progress of heresy throughout the world.

It is somewhat wonderful that in the last quarter of the nineteenth century it should be possible, in any civilised country, to make the heresy of any woman or man matter of reproach or hindrance to her or him. It is, indeed, to the heresy of the world that all progress is due. Without the sceptical challenge, the firm enquiry, the examining doubt, the testing and verifying experience, there would always have been the stagnation of ignorance, or the deterioration and warping influence of superstition. In old times much heresy was impossible; there was no general education; there could not be any popular heresy. The heretics were few in number, their brilliant mental achievements and often terrible sufferings marking them out in the darkness of their age and country, as stars stand out clearest in the blackest night. There are many classes of heresy. Religious heresies—challenging either the religion of a particular country, or assailing the very foundation of all religions—political heresies and social heresies. In an International Freethought Conference it is with heresies in questions of religion that we are alone concerned. We do not, in thus limiting our work, mean any slight to earnest workers for human enfranchisement in social or political matters. We only desire to keep our propaganda distinct and clear. Political and social needs may vary in each land, but the conflict between ignorance and reason is in truth but one conflict in all climes, whatever the formula attacked or faith asserted.

In matters of religion there can only be two clear logical positions. One, the completest submission of the intellect to authority: to some book, or church, or man. The other, the most thorough assertion of the right and duty of individual thought and judgment. These positions are so antagonistic that there can be no truce or peace between the defenders of the one and of the other. As Freethinkers we claim this right and duty of individual thought, the free and complete expression of the individual judgment. Guided, and aided too, this thought must needs be, by the thought of yesterday and of to-day. But we deny that yesterday's thought ought to be allowed to conclude all thinking. We deny that yesterday's knowledge may be held to include all that is or can

be knowable. We claim to search for truth, and to show others what we find, that they, with us, may test whether it be true or no. We assert the right to think, and to tell openly and clearly all we can of what it is we think, and how we think it.

We affirm that in no country ought thought on matters of religion to be hindered by penal laws. We declare that in every country religious disabilities should be swept away. We do not want to train our children while babies so that they must grow into the assailants of any creed, but we refuse to allow the priest to twist and distort the infant mind with creed and fear. We would have children's education limited to science, leaving each unfettered to build his theory or choose his creed as brain-strength comes with growth. We have no desire to prevent or punish any religion by law. We would have all religions, like all sciences, on equal terms, the reward being in the future to the greatest discoverer of new truths, not as it has been in the past, to the most obstinate upholder of ancient delusions. We claim the same equality of citizenship for professors of belief, unbelief, and disbelief. But if special honor is claimed for any, then heresy should have it as truest servitor of human kind. We, here, all claim to be Freethinkers, therefore, we are no more all of one thought than we are of one stature or of one country. Nor do we make any claim that we, or any other thinkers, know all that can be known. We stand by the great ocean of the unknown, each mental eye seeing different shades of color on its waves, each thought-diver gathering from its depths truth-corals and pearls, that others missed to grasp or cannot reach.

In one of the very oldest countries, but where education has been most general and most esteemed, there heresy has been reputed and valued, instead of punished. That country is China. Professor Douglas, writing for the Society for Promoting Christian Knowledge, admits that Confucianism "has supplied the guiding principles of all that is great and noble in the life of China for more than twenty centuries". Yet there is nothing of the supernatural in the teachings of Confucius. He troubled himself much as to how men might live. He concerned himself not at all with what should be their career, or if they should

have any career, when they were no longer living. This paradox has no place in his teachings. So of another great child of this Chinese race, Laou-tze. Of him Professor Douglas writes: "Of a personal God, Laou-tze knew nothing; and, indeed, a belief in such a being would be in opposition to the whole tenor of his philosophy". Yet these twain are, with Buddha, the great masters of Chinese thought.

Perhaps the clearest record of heretic progress is preserved to us from Greece. There—almost about the very time when Buddha indelibly engraved his name on Chinese thought—philosophy lifted its head in Greece, and made thought easier in all time for all the Western world. There is not the time to-night to trace the history of Greek Scepticism, nor to linger over the page that tells of the hemlock cup which silenced the tongue without smothering the sayings of questioning Socrates. We must not even—after some centuries leap—stop to pity the sore martyrdom or to admire the eloquence of the pure, the beautiful Hypatia. Temples have been built to these and their heretic brothers and sisters, not in marble or in granite, but in working, stirring, doubting, reasoning, truth-coining, human brains.

It would be ungrateful to quite pass by Arabian heresy and our indebtedness to it, even though we have not space enough to give due honor; it is to the Arab of the tenth and eleventh centuries that we to-day owe much. When learning had been trampled down throughout all Christendom it was the Arab who not only gathered and preserved the mental legacy of India, Italy, Greece, and Egypt, but added to it the tenfold interest of his new discovery and keen thinkings in every then possible branch of science.

But our business to-night is with heresy since real heresy has been possible. That is, possible for the many. That is, since the printing press has been known in Europe, and since men talked to men openly in their own tongue. In the great arsenals of Europe huge monster cannon are built to shatter human homes, and shot and shell are cast and filled with which to load these cannon. The printing press is our grand cannon; thought, question, and affirmation our shot and shell. Book and tongue are our sword and bayonet; pen and speech our

lance and spear. But neither our writers nor our speakers have gone through the fight unscathed.

Italy shows us, during the last three and a-half centuries, a terribly full martyrs' roll. Dungeon, rack, and faggot were the ready arguments of the Roman Catholic Church. And these were freely used. The mere list of names of these Italian martyrs for Freethought would take more time than to-night can be spared; but one name must at least be repeated with much of reverence and more of triumph:—that of the man burned in Rome 281 years ago. A man whose tongue, pen, and body were alike untiring; who in Naples, Switzerland, France, England, Germany, and Venetia worked to make Freethought possible for us; who lay eleven long years in prison; who endured the rack and perished at the stake. True till death, the grand and glorious Giordano Bruno, whose ashes were scattered in Rome, but whose memory still lives, whose energy still survives, whose martyrdom we honor, and whose marble presentment we hope ere long to see challenging the Vatican, with the promise of the Freethought victories which the twentieth century shall bring to crown this nineteenth century effort and to redeem that sixteenth century shame.

In France it was in the seventeenth and eighteenth centuries that the struggle was most fierce, and for some time least fruitful. The mass of the people fed too little to think much, and the work of the Encyclopædists was as that of the sower on the rock so far as concerned the great mass of the nation. But the men who were imprisoned and whose books were burned during the Regency and in the reign of Louis XV made possible the more general intellectual array of this century. Fewer giants perhaps, but more men. The fire which burned Vanini in the beginning of the seventeenth century is quenched for ever; and, though the priestly hatred against Voltaire still lives, the wit they fear, and hate because they fear, has been fruitful mother of freer thought in France.

Holland and Germany have been mighty for thought-leading through Europe, from Spinoza to Kant, Fichte and Feuerbach. In England, from Hobbes to Mill, a grand march of great thinkers. But it is not alone of the great thinkers we have here

to take account; it is of the village orator, the local pamphleteer, the poor and often rough-mannered defender of the right of speech and of publication. These in turn have each and all had hard battles to fight. Gaol for themselves; poverty and contumely for their families. To be "infidel" was worse than to be burglar. For the "sinner" there was welcome by the pious: he might repent. For the heretic thinker, no mercy to be shown him. But the poorer soldiers have left scant personal record of their work. This work is best known by the platform and press which they have won for our use. Who shall tell in each land the histories of those humbler ones who have faced hunger and mockery, prison and shame, to win even the grudged freedom we enjoy to-day? They are the privates in the Freethought army, their loss scarce counted in each country's victorious progress.

In every department of science the triumphs of heresy are distinct and clear. In astronomy the *e pur si muove* has been real moving onwards. The sun and moon are no longer the two great lights, with little twinkling stars, to give light to the central earth. The aforetime heresy of Copernicus and Galileo has conquered. The astronomic heresy which the priests could not crush has become the astronomic science to which they give their sanction. In geology the vast periods to which yet no maximum limit can be set utterly outshadow the old church chronologies, which place the creation of the world B.C. 4,004; and the evolutionist helps us to trace back into the vastnesses of these geologic æons how the development of life has slowly but surely progressed. To-day the churches cannot burn Darwin, Huxley, or Wallace; Broca, Topinard, or Hovelacque; Vogt, Hæckel, or Büchner. The priest of the old altar of the unknown is powerless save for petty spitefulness against the newer workers in the temple of truth. Even in psychology, the domain in which the priest was lord and the creed was master, even there heresy triumphs. Mental diseases are no longer demoniacal possessions; science cures, prevents, and alleviates, where religion chained the lunatic to the walls and exorcised the devil-possessed unfortunate. Maudsley, Huxley, Tyndall, Clifford, Lewes, great living and, in thought

still living, dead, these honored names mark heresy's triumphs.

And perhaps you will pardon a poor addition to these mighty things in the mention that even in the Cortes of Catholic Spain Martos and Castelar are claiming to get rid of the oath, which we, too, have had to fight at home.

Edinburgh, May 28th, 1882.

It is my duty and my pleasure, as President, for the current year, to deliver the closing address of this first Freethought Conference openly held on Scottish soil. We may congratulate ourselves on its national character. Forty towns, some in the extreme south and south-west of England, have sent their delegates, some of them travelling over 500 miles to be present here; so that we may take the gathering as a fair proof of real earnestness. It has been a source of great pleasure to me, and I am sure to all, to find the thorough unity and harmony of discussion prevailing. Our Scotch friends seem to have laid aside to-day their critical swords, but I trust that they do not think that we resent criticism; we have often found theirs most useful. Let me thank all for their efforts to make everything harmonious. One speaker has referred to Scotland as a land of bigotry. Perhaps that is so; but let us not forget that the land of bigotry is also the land of earnestness, and I almost prefer bigoted earnestness to hypocritical indifference. There is hope of winning the one; there is little use in the other. But Scotland has higher attractions to Freethinkers than that of earnestness. Freethought owes enormously to Scotch thought, whether it be for or against itself. Some of the closest reasoners bear Scottish names. Need I add to that of David Hume the names of Dugald Stewart, of Adam Smith, of Sir William Hamilton, to prove how much Scotland has contributed to our strongest thought, not claiming them as agreeing with us, but as helpers to us, since all strong thought makes the possibility and the education of Free-

thought? It is right also to say here that Scotland, above the other English countries, has done most to destroy the hope of bigotry by its universities throwing open the highest education to the children of the poor. Scotch, too, is that Chambers' literature which has done so much for education, without serving one sect more than another. But I must turn from this, lest you should think that I am trying to flatter you, and I know that flattery is considered by a Scotch audience as the worst of bribery, and that you would rather I should break your heads with hard blows against your most cherished opinions than try to win you with compliment, however well deserved and sincerely meant.

The post renewed to me by our society to-day is a post of honor, of higher honor than could have been foreshadowed sixty years ago. Some of you are old enough to remember hearing from lips living at that period what the position of Freethinkers was in Scotland then, how impossible it would have been to have then held such a Conference as ours. One value the post has to me is that it brings me into contact with men of every country who hold that the position entitles me to their friendly greeting, greeting not to me for my own sake, but for your sake in whose trust I stand. This free platform that has been won needs from us to-day vigorous defence. You have heard from Mrs. Besant and Mr. Foote how that liberty is won and is grudged. Won, in that the laws against us are not enforced, but the laws are there and may be enforced. We have not yet won equality with other sects; we have not yet won social liberty and equal right. Our platform is only tolerated. Tolerated? But no one has right to tolerate. I have no right to tolerate the thought of the churches. They have no right to tolerate mine. Their thought is theirs of right; mine is mine of right; and the judgment of to-morrow only can be final both on their thought and on mine. But I ask you to remember that no strong defence can be made by one.

Sixty, nay fifty, years ago men and women went to gaol in Edinburgh for holding the opinions with which we are identified to-night. There was no society to stand by them

then; no organisation to aid them then. We should be as weak as they, were it not for the public opinion made by the organised propaganda we keep up. You have the right to help; you have the duty of work and the right of work, so that all the pressure may not fall on a few. None has the right to stand alone, to refuse to join a society. Why not? Because he could not think save for the thought before him. Because he could not know but for the destruction of the censorship which blotted pages out of the books which teach him. Because his thought would be silenced but for the struggles of gallant thinkers of yesterday. Each who links himself to our Society makes us stronger to meet the powerful organisations against us, and in some measure repays the debt he owes to the Freethinkers of the past.

Mr. Foote has spoken to us of the heretical works of the great dead, of Emerson, of Rossetti, of Darwin. As he spoke I remembered the Anti-Clerical Conference in Rome, held when the Œcumenical Council was sitting there, in which I was invited to take part by Ricciardini. I was reminded also of a remarkable phrase in the London *Spectator*, that Carlyle had denied miracles, while Darwin left no room for a special providence. Westminster Abbey for Darwin's bones; Belfast pulpits against Darwin's brains; and Darwin's monument his work, destroying the Church which enshrines his coffin, and which is the most powerful foe of education in this land.

The signs of persecution spoken of by Mrs. Besant are not confined to England, Scotland, and Ireland. There are traces of fierce activity in France and in Italy; the Roman Catholic Church in those lands must either drive back heresy or be broken; the school is rising against the Church, the schoolmaster against the priest who trades on ignorance. Here among ourselves there is a danger in the growing strength of societies cast out from other lands, and it is not wise to ignore it. We have Cardinal Manning interfering in our political strife; a foreign Cardinal impudently issuing his Bull to a free people; it scarce needs another Luther to burn such Bulls as his. It is too late for Rome to try and grapple with the Rationalistic spirit of to-day!

Is the power of the priest broken? I wish I felt sure it is. Some of the weapons of the priest are broken. His rack, his faggots, his chains, his prisons are broken, but his power, while the power of the confessional exists in these lands, over our mothers and sisters is not broken, and we must break it. The power of the priest is shaken, but I fear another generation or two must pass ere it will be wholly crushed. Yet well may Mr. Foote have said so, when he knows that in Rome itself, where Bruno died, to-day orators speak, under the very shadow of the Vatican, the heresy for whose sake he gave his life. I ask you to-night to join hands to forward this great cause. You need not lectures now and then, not applause of some favorite orator, but that every Freethinker should think it his duty to stand by the colors. There are matters connected with the press which we are bound to guard; we must keep it thoroughly free, and we must try to create a public opinion that will prevent any taint falling on those who work for us, any slur, any injury to their means of livelihood; we must win for the platform the right enjoyed by the pulpit, and give to our speakers the same honor as is given to the most favorite preacher. We want a platform guarded by an enlightened public opinion, so that no bishop, no member of the House of Commons, no assembly of a kirk, shall dare to join immorality with unbelief. Why should these two be united? Why should immorality be connected with unbelief rather than with belief? Freethought should surely rank higher than the mumbling of old prayers!

You will think that I ought not to conclude without some words as to my personal fight. I can only say that I shall fight on, that I have never been beaten in the long run yet, and that I don't mean to be now. I have been reproached for lack of education; one word certainly I have never learned: Defeat, and I am too old to begin to learn it now. So far as their legal attacks are concerned, I will fight them in every court. If bankruptcy must come, let it come to those who commenced the fight; we did not. Let us empty their purses, and teach them to regret that they ever provoked the struggle. That is my fight. On the hustings the fight is yours. You must show

no mercy, no sparing, when you deal there with the men who have insulted the women of our party. We cannot in every case win the seat, but we can always make it lost to the man who has maligned us. No seat of these that I can strike at will I spare. I have settled about a dozen of them already. I do not pretend, friends, that I shall in the future do all you wish; a man can only do his best. My judgment may not always be yours, but I will try to guide it by the best judgments of those who have gone before.

The Edinburgh society has set before us two mottoes: one that of the N. S. S., "We search for truth": the other my own, "Thorough". For the Freethought one I say, that we do not pretend to know all truth, but we have learned enough to know how vast is that for which we search: no statute has the right to check our search; no Church has the right to stop it; no priest has the right to hinder it; no curse has the right to doom it; no prejudice has the right to forbid it. Truth we will have, if human effort may make the road to find it. Our grasp is not big enough to hold all we find, but by gripping some facts we may teach others to grip more strongly, while we learn ever that truth lies beyond. For my own motto, I will strive to justify it, both in the office you have given, and in any other I may win. And when my work is over, and the stone covers the spot wherein I lie, may I be entitled to have the word "Thorough" carven upon its face.

Manchester, May 13th, 1883.

Crowded as this gathering has been, I have seen gaps in it which make sorrow to me — gaps, which old faces used to fill; gaps where sturdy friends, tried in struggle, used to sit; gaps where younger ones sit to-day, but which are still gaps to me, carved by the hand of death, and left empty for ever.

In re-electing me President I would ask you to remem-

ber that I am only what you make me. I have only the strength you give me; I wield only the authority you form for me. I am your mouthpiece, not your dictator; your servant, not your master. I am your standard-bearer, not your leader: standing in the front rank because you put me there. It is the trust you give me, the love you bear me, the sympathy you show me, the loyal work you do in response to my appeal, that make me strong; it is the echo you send out from every village, every valley, every township, when I call to you, that rings into every church and chapel in the land. Therefore, now, I appeal to you that in the coming year you will help and sustain me and the Executive you have elected to do your work. The world expects more from us to-day; the opposition is fiercer, more bitter, more unsparing than ever. It needs that we should be not reckless, but firm; not insulting, but not flinching; we fight not with our own strength, yet with the strength of generations upon generations who lie in their graves, but whose work lives in our work to-day.

I appeal to you to organise and unite. Isolated, you are like the dust, blown by every breath of wind; linked together you are rock. Children linked together could hold a strong man, who could throw them over one by one. Link yourselves together as our cause is linked with all that is great and grand, noble and sublime. There is no need to ask you to unite for great things, but for small: a crisis finds you all ready, but I want you ready when you do not see the crisis, when you do not see the difficulty. I want you to form part of the political life of the district to which you belong. When men see you firm, when they admire your straightforwardness, when they note your courage, they will turn to you as leaders in the hour of strife.

A man whom I will not name, in an influential position, with wealth at his disposal, a power in chapels throughout the land, a man of lifelong integrity, said to me lately: "One thing, Mr. Bradlaugh, I cannot understand, and that is how ready your people are to help ours, though they disagree with us". I answered: "We are ready to help you when we think you right; we judge your work,

not your creed". In all contests, municipal and political, teach men to turn to you, and try to judge with as much freedom from prejudice as you can. If a man is not all you want, yet select the best man you can find and work for him. No Freethinker who can get a vote should remain without one. He is disloyal to the cause if he leaves ungrasped a sword he might use. The suffrage is a weapon, and it is one we will use; those members who have trampled on our rights, those members who have slandered our lives, those members who have gibed at our ignorance, those members who have insulted our women, we will meet those members at the polling-booth, and we will fight them there. We may have a general election before the year now commenced has closed. There are storm-signals flying, and I promise you to keep a sharp look-out, and to give warning of the bursting. We are a fighting party; we are fighting for our existence; our platform is not yet free. The danger is not so much from the prejudiced folly of a man like Mr. Justice North, as from the reasoned views of such a man as Mr. Justice Stephen.

All Liberals have rejoiced to hear, or to read, the humane, the generous, the kindly, the broad, the liberal views of the Lord Chief Justice of England; but we must remember that these views only open out possibilities; they are dicta which may grow into law, if we are careful and wise. Now, the history of the law is really our danger, and in the hands of judges determined to strain the law the platform would be made precarious. Carlile spent nearly nine years and eight months in gaol to make our platform. Poor men went from your valleys in hundreds, and lay in gaol to make the platform safe, to win the right of speech. The right of speech, the right of platform, the right of press, these rights have not been given: they have been bought with hunger, as men in gaol left their families starving outside; they have been bought with torture of heart and torture of body; not with the torture of the rack, for that was merciful—the rack was followed by the grave; this torture left men—living men—surrounded by starving wives and starving children, yet they bore all that they might win freedom for us.

Our worst danger, however, is not from indictment for blasphemy, but from Rome; Rome, which is mingling now in our political strife; Rome, which dared to send message to Northampton to bid free Englishmen vote as the Vatican dictated; Rome, as to which Sir Massey Lopes in the House said he rejoiced in its aid. Rome is too bold; we will not have it. Rome has cursed Italy; it shall not curse us again. Rome shall have free church for its worshippers, free bench for its bishops, free right for its speech; but Rome shall not touch our liberty, Rome shall not master our political life. Rome shall not put back our Freedom's clock to the time of the Middle Ages; we will break first the hands that touch it. We see an ominous union of Newdegate and Manning; the old ultra-Protestant has forgotten the words, bitter and coarse, with which he assailed the scarlet lady of Babylon, words too coarse for repetition in our meeting here. Yet we see him walking into the lobby arm-in-arm with the protégé of Cardinal Manning, and we must admire the forgetfulness of each. But most of all must we admire the forgetfulness of the Protestant; for Cardinal Manning only uses the ultra-Protestant as his tool against a foe more dangerous to Rome. The fight between us and Rome must come one day. It may be far-off; it may be to-morrow—the fight between Rome and Rationalism, between the fullest assertion of the right of private judgment and the most complete submission to authority.

I have now only to dismiss you and to look into the coming year. Shall we have more blasphemy prosecutions? I think not; at any rate as against myself, unless Sir Hardinge Giffard learns some fresh trick of law, I may hope to give reasonable account thereof. But am I right to say that I think there will be no more? Baffled against one, may they not try to touch another whom they deem less skilful of fence? Shall more men wear prison dress? Shall more men live on prison food? I cannot tell you how pained I felt, when, on visiting Holloway Gaol, I heard a letter and a number given to summon one, and then a letter and a number given to summon another, and when two men came in, in dirty brown prison garb, bearing letter and number, and I recognised them as those I knew. They have

offended against good taste? But do you send men to gaol for offending against good taste? Do you dress men in prisoner's garb for offending against good taste? Do you shut men up in small cells for twenty-three hours out of the twenty-four for offending against good taste? Do you make men pick oakum for offending against good taste? At any rate men are not so treated who offend grossly. To-day on the walls of your city I see huge bills headed "Blood and Fire", and if religion be a reality, what could be more offensive than those bills? And if good taste is to be the rule, what of those religionists who libel our dead, who slander our living, who shut our men out of employment, who close colleges against our women, who mock us with our ignorance while they shut us out from knowledge?

I have said many a bitter word and many a harsh thing; perhaps some had been better not said. Yet were I to live my life again, with the knowledge of how cruel, how merciless the Church has been, how it has made speech impossible, how it has poisoned our lives, I might wonder that all my language had not been bitter instead of only some. It is better not to offend, if offence may be fairly avoided, and it is better because we hurt the good men, not the bad. Good men, such as Canon Shuttleworth and my friend, Stewart Headlam; among Dissenters, such as Charles Williams: among the United Presbyterians such as Mr. Marjoribanks; in the Church of England, such as the Vicar of Coalville: we regret to give these men pain, and if we needed anything to make our tongues gentle and to soften our memory of yesterday's wrong, we might find it in one of England's greatest judges, Christian to the utmost, creed-bound to the fullest, wrestling with his creed that he might do justice, and wringing himself with pain that he might not injure us. I ask everyone of our speakers, every one of our writers, while they are striking at the Church which has cursed the land, at least to remember that there was one strong in creed, strong in prejudice, separated from us by an abyss of judgment and of feeling, who yet stretched his hand across the gulf, and strove to be gentle as well as just.

I cannot part with you without reminding you how Freethought is spreading through the world, through India, through New Zealand, through Australia, through the United States, through Holland, through Germany, through Italy, where no Atheist is precluded by his non-belief from the enjoyment of civil rights, through France, where the vast gathering round the grave of the man she loved, where the sympathy, the hope, the love, the patriotism shown, were all without shade of religion. But though the cause is winning, the struggle is not over yet. We struggle against the fetter-customs of yesterday, against the reputations made when men libelled and racked and burned the heretic. Time is on our side? Yes, for our cause; but Time marches with iron scythe and cuts down the living soldiers, and their blood waters the fields over which they march. Time is always on the side of Truth; but in time they have racked our warriors; in time they have burned our martyrs; in time men have lain in dungeon, and the grave had given the fulness of time to the man yearning for freedom.

Friends, I finish gratefully, hopefully; gratefully, for all you have done; hopefully for the coming year. I greet you as fellow-soldiers in the army that fights for liberty. All truth, all right are not ours, but we have the right to search for truth in trust for those who come afterwards, and we will do our best to make the search rich for those for whom we gather.

Plymouth, June 1st, 1884.

Let me congratulate you on your unanimous and hearty way of work: this informal Parliament grows more useful every year, although there is no way of holding it together save by goodwill and by desire for the good of the common cause.

Twenty-four years ago, as has been already said, I was brought up through a hole in the floor into the dock of the Devonport police court; I was not then tried for blasphemy, because the Young Men's Christian Association had been too hasty: they

had arrested me as soon as I had said: "Friends, I am about to address you on the Bible". Even then my reputation had such a peculiar turn that it was thought that these words justified my arrest. We have had some growth since then, some change in position since then. Then, in court in Devonport, in court at Exeter, where I fought the matter, Freethinkers were objected to, and their evidence was rejected on the ground of their heresy. We have destroyed that, but we have not yet destroyed the insult attached to our evidence-giving, we have not destroyed the power of the bigoted to make the giving painful and difficult; but we will. This we may boast, that we have always fought within the law. We have threatened no violence, we have used no violence, we have acquiesced in no violence, we have encouraged no violence. We appeal to men's brains, to men's reason, and we may remind those who are against us that wherever Freethought makes its way in a country, there the reforming spirit in politics is orderly, peaceful, and must be useful.

I am glad that you have carried Mr. Foote's motion on the Blasphemy Laws. For years in that agitation I stood almost alone. Twenty-three years ago I was rebuked by one who then stood high in the Freethought ranks for wasting the energies of the party in attacking obsolete laws. Bad laws live for mischief always. They are weapons in the hands of the cruel, which may be used at any time. The iron was cold then when I struck it, and the effort was wearying; but if we did not repeal the laws, at least we won friends enough not to leave their victims undefended when they were themselves silenced. I ask you not to let this resolution be of words alone. You, who by your presence here, show that you are Freethinkers, I ask you, hundreds of you not enrolled in our ranks, I ask you to come boldly out and join us, for to be Freethinkers to-day, and not active workers, is treason to the common cause. In the coming year there will be fighting enough for all. On June 13th I am to argue whether Atheists have any civil rights at all; whether holding the position you have given me, and which I am proud to hold, whether that position in free England makes me an outlaw, without political

rights. I shall argue with ten times the force because you trust me to argue it, and because I shall know that I am arguing for you and not for myself alone. I mean to win. The matter is so grave that I would not say so to you unless I felt sure, and you know that I have never said so to you unless where I have won before the finish. I cannot tell you when, nor where, but if it has to be in the House of Lords then I will go there to win, and will win there. But I will try to win before.

If we want to measure progress we must not reckon it by the last twenty-four years: twenty-four years is nothing but a speck of time in history. We must not measure it by the twenty-five years before that, although that quarter of a century held in it nine years of gaol for Richard Carlile; although in it hundreds went to prison for blasphemy, out of one shop alone nine men and two women. It is something to be proud of in our movement that women have shared in its perils; something to be proud of that we have women now, able to endure, able to speak, able to instruct, and to make us purer by struggling by our side. We must not measure our progress by the century. One hundred years ago they burned Diderot's works, and this year Freethinkers will gather in honor of Diderot's centenary. One hundred and ten years ago in France penalty of death was put on any who should dare to publish any "book calculated to disturb the public mind". A Nonconformist sent Mr. Foote to gaol last year, but a hundred years ago Lord Mansfield rebuked the persecution of Nonconformists, declaring that the city of London, in paltry thieving spirit, nominated Nonconformists to offices they could not fill, so that they might fine them for the non-fulfilment; Lord Mansfield characterised that persecution as mean and paltry; persecution had been cruel, it had become petty. And persecution is always petty—petty, paltry, and short-sighted. The twelve months' imprisonment have given to Mr. Foote a force and an influence, not among you who love him, but among those who hate him, that no work could have won in the same time.

Three hundred years ago Bruno was burned for Atheism; to-day in the Italian Parliament men sit who hold views

more extreme than those for which Bruno suffered in the Piazzai dei Fiori in Rome. Then Galileo was compelled to recant, while he muttered: *E pure si muove.* Then Spinoza was excommunicated by the Jews, the Jews who have suffered so much, and who suffer still, and who, like many who are persecuted, are sometimes too ready to persecute in their turn. Take Pomponatius racked, Vanini mutilated, and then you can measure the progress made, for as against these the three, or nine, or twelve months' prison may seem as sunshine.

We, meeting in Conference, take this position: that no authority save that of reason is valid; that no place save that of freedom is worthy; we dictate only by the clash of thought, and we are against every form of ecclesiastical establishment, not because we disagree with its creed, but because every form of thought should be equal in opportunity.

I thank the Plymouth Branch that opposite Mr. Foote's words they have put the word I hope to deserve, "Thorough". We mean to be thorough. We claim no right to dictate views to others, but we do claim that none who hold ours shall be forced before a judge; we claim education secular and universal, no social, no political, no religious disabilities put upon us; we will not have toleration, but equality; falsehood should not be tolerated, it should be exposed, but none should punish the man because his views are false. Leave him to judge. Give fair play and free play to all.

It would be unfair now to keep you longer, so I will only say that the morrow is full of promise. Fifty years ago education without religion was impossible; it was superstition or nothing; on your knees or nothing; church prayers or nothing. Now we may try to walk, even if we stumble. I thank you, friends, that you have trusted me to lead you for another year. There is fighting to be done, and I still can fight. I have said nothing to you to-day of my political struggle, because it would not be fair to others. Cordially agreeing as I do with what Mr. Foote said of those who are willing to stand beside us in fighting for liberty, you will recognise how I feel to good folk who disagree with my heresy, but who are good enough to give me their

political trust, and hopeful enough to believe that I shall not dishonor it.

Birmingham, May 24th, 1885.

Not all of you in this great meeting are of us; not all of you are for us: not all of you, perhaps, are even well inclined towards us; yet all of you, every one of you, friendly or hostile, ally or foe, is lending strength to us to-night: is helping us to mark a great step of progress in this land. Progress, but progress not yet complete; which until it is complete must be painfully won, hardly won, sorely won; won, as *he* (Mr. Foote) helped to win it by gaol-suffering as payment won as *she* (Mrs. Besant) helped to win it by house laid desolate, and heart-strings wrung, and child's life torn away.

I congratulate you on the progress Freethought has made throughout the world. Here we meet in this noble hall by grace of your good town. In New Zealand, Robert Stout and John Ballance, men holding the views I hold, speaking as openly as I speak, hold office, one as Prime Minister, the other as a Cabinet Minister. In New Zealand there is perfect equality for all before the law, without mockery of oath to make shame or taunt of. There an Affirmation Bill has given to every one the fullest right, without hindrance, without insult, without question. New Zealand gives us promise of what we shall win; win with your help, if you will give it; win despite your hindering, if you will hinder; win in any case, for we will have it.

To-day we have still many disabilities, but we have also many possibilities of hope. Disabilities not only complained of by men of our own side, but recognised as such by those outside our ranks. Mr. Justice Stephen has sketched the Blasphemy Laws in what he calls "all their naked deformity". Lord Justice Lindley, administering the law against unbelievers, admitted that there were laws against heretics of "cruel severity". We demand the repeal of all

such laws; we demand equality of civil right. We do not ask for toleration from our enemies. Toleration implies superiority; we claim equality. We claim fair play. We say that in the conflict of thought, in the multiplicity of creeds, in the multitude of churches, in the myriads of sects, some must be wrong, all may be wrong, and the duty of each is to give fair play to all.

In a country like Great Britain, in an empire with 350,000,000 of subjects holding differing faiths, the duty of a Government is to hold the scales level, giving privilege to none, putting penalty on none, yielding protection to all. And we are grateful to your Corporation in that it has held the balance even; that it asked no pledge from us that it does not ask from all; put no restriction on us that it does not put on all; and I ask it to believe that we desire to take no advantage beyond that which each body has which meets in this hall. We do not deny to any the right to worship; we do not ask that any shall not be protected in their worship if they need protection: but we do claim that we may stand as safely as they may kneel. We challenge only any special privilege for any; we rebel against any special penalty on any; claiming fair play for all, free ground for all, equality for all before the law.

There must be, with liberty of thought, many shades of thought. We claim free utterance for all of them, however extreme any may be. Let enlightened public opinion hear all, weigh all, judge all. Let all thoughts be equal before the law, with no opinion-penalty, no opinion-imprisonment, no opinion-heartwring. Against special disabilities we are rebels. Years ago, long years ago, generations ago, the fire burned up Bruno. Those fires were relit here, and Priestley saw their flames lick up his library and his instruments; now in this hall his pictured face looks down from the place in which you have raised it high in honor, looks down on a crowd to which our speech utters his thoughts carried further than he carried them. We have the right to think as far as we can. Are you more enlightened than we? then answer us. When our thoughts have been uttered let the best exponents of

orthodoxy answer them; but do not burn, do not imprison. I say nothing of the small obstacles that have lain in my own path; you have helped me to climb them, and you have lifted me higher than I could have lifted myself. We will think, and we will let our thought be heard.

Mr. Foote has referred to Victor Hugo, and we may well join in reverent tribute at his grave, for he was a big man among small men, a big pen writing clear strokes where others scratched, a painter with huge brush painting upon the world what he saw and what he dreamed, beyond the petty gutter-realities of many who mocked him. This man, dying, would have no priest at his side; he was, as described in the *Times*, a "Voltairean Deist". A few years ago he presided with Victor Schœlcher and Maria Desraimes at a Freethought Conference at Paris. Recently he was named on the Committee of Honor for the Bruno Memorial, for that monument which marks the progress of Freethought, which climbs the Roman hill to look down on the Roman mockery that has hindered hope, poisoned Italy, and is now dying of its own corruption.

We have no creed, but we have much faith; faith in the possibility of human progress; faith in digging after truth; faith in searching after truth; not in looking backwards to yesterday but in working for the morrow; not in lying prone on the ground praying, but in climbing upwards towards the light. We believe in the decrease of human woe, as men hate less, as they love more, as each helps the other to make his grip the firmer. We believe in the lessening of human hatreds, as men recognise that varying opinions may be held with equal honesty. We believe in the use of reason instead of force, in peace instead of war. Religion may bless bayonets; Freethought cannot. To us war is murder, capture is theft; we have no joy in ruined homes, in fire-scorched villages, in trampled fields; we would rather strive to raise than to strike down, and we believe that bright eyes and keen intellects are better than armed men.

We do not pretend that we are always right; we only try to be. We do not pretend that we have truth, but that we search for it. Our motto is: "We seek for truth", and with Lessing we believe that he is most ignorant who thinks he

knows all. Let us search. If you have the truth, we will have it from you. We are ready to listen, if we may question; ready to hear, if we may answer; ready to receive, if we may test the purity of the coin you give.

I thank those of you who are not of us. I congratulate those of you who are. I thank those who are not of us for their kindly courtesy, and I would say to them: We are on the side of the poor; we plead for those who are mocked and insulted, for those who are called "dregs" and "scum", and if you help us we will help you, that we may all have our truth truer, healthier, fuller in the age to come.

Glasgow, June 13th, 1886.

In speaking here to-night, and delivering the closing speech of this meeting, I am conscious that there are probably many present who do not hold the views with which we of the National Secular Society have been concerned to-day. On behalf of those who have to-day elected me as their President for another year, I stand here to claim for them from those of you who do not agree with us a right equal to your own: a right to think, to speak, to do. You may say: Have you not that right? Do you not use it? We use it, but your laws do not give it to us; you deny it to us in your habits. Habits cannot be changed in a day, but laws may.

With a general election now imminent, with power in your hands, I would put two points to those who disagree with us. You gain nothing by keeping bad laws. Bad laws give us a right of complaint. While they exist your religion of love is a sham; your declaration of brotherhood is a pretence. You may say, what laws?

First, take the laws about oaths, and see how they hinder us. If we do not take them, they are a difficulty, a block in our way. If we do take them, you who compel us to do so cry out that we are hypocrites. The hypocrisy is yours: the dishonor is yours; so long as you force your oaths on us. North of the

Tweed no unbeliever in future rewards and punishments has any right to take an oath, nor has he any right to affirm. If he state his views, or if his views be known, if he has expressed them in unguarded conversation, his evidence can be objected to. If the case be a civil one, his claim may be shut out; if a criminal one, the criminal may escape, the innocent may suffer, for want of his excluded evidence. A juror who disbelieves in hell can neither affirm nor swear. The witness, however, may by travelling escape his disability. If he goes to Newcastle, the judge will accept him; the objection is valid north, but not south, of the Tweed. The question ought surely not to be one of geographical limitation. Be fair; allow a man his choice between oath and affirmation. A man who is honest enough to avow unpopular opinions is a man likely to speak the truth. Every Christian should work for this reform, until the men who you say mock the oath are no longer compelled to take it. We do not ask to escape the legal penalty attached to false swearing. We are willing that the same penalty shall attach to our simple declaration. We only ask that we may not be forced to go through a form of words of which we do not know the meaning, and to which you attach meanings as various as your opinions. I do not argue with you as to the meaning of the phrases, "Swear not at all"; "Thou shalt not take the name of the Lord thy God in vain". But I remind you that the Bishop of Peterborough has told you that if you pretend we are hypocrites you fail; that if we say words to which we attach no meaning we cannot blaspheme; that in so doing we give no pledge of belief.

Secondly, we complain of the Blasphemy Laws; laws under which Mr. Foote was imprisoned, under which Mrs. Besant was deprived of her child; laws under which the late Lord Amberley's will was cancelled, and the trust he made for his children's education was set aside; laws which Mr. Justice Stephen said he wanted to expose in all their hideous iniquity. We demand that these laws shall be repealed. They are of no service, save for purposes of persecution. They do not serve religion nor check heresy. Voltaire mocked at them: Hobbes sneered at them. You may lock up one or two

by means of them: but you cannot lock up thought. If your religion is true, you should not want them; if it is false, you should not have them. If your religion is love, you should not use them; if it is hate, they should be taken from you as weapon. A Bill is now brought forward to abolish them, brought forward by religious men; by men who believe that persecution is bad, and that it shows the weakness of those who use it.

We appeal for equal right. We shall win that right. You cannot prevent; you can only hinder. Many have been burned, but burning has not stopped thought. Many have been imprisoned, but imprisoning cannot stop speech. Our platform is won, despite stake and gaol. The pen, the telescope, the microscope, are won for fuller teaching, for finer touches, for new fact and new thought. We are heretics, you say; we claim equal right as men. We are men, and you can be no more. We claim the right to reason, the right to argue, the right to answer. The gaol door is no syllogism; the gaoler's key is no argument. But you say we use mocking words. Why not? You mock at every religion save your own, and why not we at yours? But if you would not have us mock, treat us justly; if you would have us kind, treat us kindly; if you want us not to use words that hurt, then be fair. Many creeds have lived and died; perhaps yours may be wrong. If you are sure that you are right, then you can afford to be generous; if you are sure that you have the truth, then the greater need to be just.

I dare not fancy that you all agree with me; I know there are some here who think that we are not right. But remember how many have been denounced in their own time who have been honored afterwards, and though we may not deserve to be ranked with them, yet you may be wrong in your hasty forbiddal of new thought. Bacon was assailed as a Materialist; Newton was decried as a heretic. Men who were branded Atheist in their own age have been canonised in the ages after them for their efforts for human redemption.

I give you thanks for the patience with which you have listened to much with which you disagree, and I bid you all good-night.

South Shields, May 20th, 1888.

It is now my duty to deliver the closing speech of this Conference gathering.

Some of you may be inclined to ask why it is that we invite outsiders who do not agree with us to listen to declarations that must often be offensive to them; you may ask why do we make parade of the strength of a movement which, from your point of view, can only be mischievous and injurious. I will try to answer that question. We ask those who do not agree with us, we ask those who think we are wrong, we ask those who say that they are right and we in error, to give us the evidence of their conviction of having the truth by working to make us as free as they are. We ask that there shall be no penalty on our opinions; we ask that there shall be no disabilities following on the expression of our opinions; we ask that there shall be no privilege connected with any phase of speculative thought. Have you the right? What higher privilege do you ask than the privilege of having it? Have you the right? Then do you need the State to add bribe to duty? Have you the right? Then do you wish to have our error marked with the prison? Have faith in your own conviction. Have belief in your own creed. Fling your truth into the arena of public discussion, relying on its own virtue to bring it out the victor. Who is there among you most convinced of the truth of his religion? On what does he rely? His religion is but one among many; within the limits of this empire there are scores, hundreds, of jostling creeds; how can you be sure that you are right? If you rely on reason, let us reason. Do not gag us when we argue, send us to gaol when we speak. Or are you only sure that you are right so long as there is no challenge? Here is one who is sure he has fine gold, but he will not assay it; who is sure he has gems, but will let no lapidary touch them; who has diamond, ruby, all that is priceless, but who hides them away where none can see them, lest they should prove to be false.

We appeal to you for fair play. We ask you to join us in

demanding for all equal right before the law. We ask you to join us in working for the removal of every disability on opinion. We ask you to join us in securing the repeal of all penalties on heresy. You may say that, granted the laws are harsh, they are not often enforced. Not often enforced! If they are enforced once, it is too often. But they are always being enforced. A man who was on this platform last night, was reproached by the pastor of his church because he had let his roof shelter my ungodly head while we were engaged in political work. We claim that within this empire, wherein exist so many different creeds, that neither the affirmation of one nor the denial of another may avail for privilege or penalty, that the sword of the law shall strike none because he differs from his neighbors in his creed. Neither law nor custom should punish unbelief nor reward belief; a man is neither vicious nor virtuous because of his unbelief; let men's lives be tried and measured by their discharge of duties. We claim that all opinion shall be open to criticism, and that no criticism shall be subject to punishment.

Mrs. Besant spoke of Freethought and Free Speech as means to an end. What end? The enfranchisement of the human mind from the trammels of old legends, which the ignorance of some, the credulity of some, the folly of some, the fraud of some had bound around it, till like the constrictor they cramped and crippled the brain into helplessness. Means to an end! what end? The freeing of the human mind from the fetters of prejudice, prejudice which drives the poor into hypocrisy because of the penalty on honesty. Why should you do the Freethinker wrong? why should you libel him, slander him, starve him? is that the best way to teach him you are right? The man who is outside the chapel because he deems it right to stand there should be subject to no prejudice from the man inside who kneels there because his father knelt there before him. Means to an end! what end? The freedom of the human mind from priestly dominance, whether it be by attempt of Roman bull or as here by a broken-horned bull, who runs against a post which hurts him more than he hurts it. Freedom from the priestly interference which twists science ere

it reaches the child, and which deforms it for men and women. The end that man may work out his own deliverance, free to use his brain as sword, as spade, as plough, without bondage to any.

In the brief but pregnant speech of your townsman, he alluded to your School Board. I am glad that he and other Freethinkers sit on the School Boards of the kingdom, but I am sorry that no School Board, not one, from one end of England to the other, has ever encouraged parents to take advantage of the conscience clause and to withdraw their children from religious education. In four words, themselves a speech, Mr. Peacock said: "Education is our salvation". It should be our salvation. One hundred years ago the ignorant population of France believed that a king might be their salvation. Now, a population spread over every land thinks that the spiritual king in Rome will be their salvation. But education, to be salvation, must begin when the sheet of the new life has nought written on it save the lines of tendencies drawn there by heredity, by the father and mother and their fathers and mothers before them; it must be free to receive the impress of every fact, free to receive the light of every new discovery of science, free, so that as the brain grows it may examine all religions through its microscope, as the biologist examines every minute living form.

Do you ask why we are not content to go on our way, why do we war against other creeds? Because they war on us, they attack us, they will not let us have the salvation of education. You give the Bible to the young children in the school; although it may be criticised by men, you guard it from all criticism till the edge of criticism has been blunted in childhood by belief. We war against creeds, because if a Freethinker endowed a library of Atheist books, the law would take away the endowment and prevent their educative influence. Mrs. Besant spoke of the price some had paid for liberty. But that price is not yet paid. Richard Carlile paid a small part of it, with his nine years of prison. One after another has paid some of it. But no one has yet paid the full price, and when the grave closes over each, each has paid a little more, and even then prejudice exacts the interest of the yet unpaid purchase-money.

We are driven to attack Christianity, because it is the State religion, because it attacks us. And it is hard to say what Christianity is. Christianity in Rome will not let Bruno's monument be raised; but in England a Cardinal goes to Westminster Abbey where Darwin lies among the saints of science. Those who to-day played their tunes outside this hall [the allusion was to the passage of a Salvation Army procession during the morning and afternoon meetings] think that they are Christians. Who is the Christian? This Church or that? All creeds are modifying; all creeds are changing. And this is not only true of our own time. Religions, like languages, like nations, have their periods of growth, their prime, their full strength, their hour of decay, and out of each grows another of a higher type.

I am afraid that I have kept you with my speech even now unfairly, and I will only say one or two words more ere I close this meeting. We are not here to-night in a spirit of defiance or of warfare; we are here letting you know in what we differ, if you do not agree with us. But we are obliged outside to be at war and in defiance, so long as the laws are harsh and customs harsher, so long as the children of the poor are marked out for scorn as though to be unbeliever ought to be brand of contempt. All are infidel to every religion but their own; all are unbelievers in the eyes of those who differ from them. And you who are against us, have you ever thought that as Bruno, who three hundred years ago was bound to the stake with iron, scorched by the flames which licked his life away, is looked on to-day as a martyr of science, so in the future some of you may be marked as infidels who are most believers, and some of us as saints who now are most condemned?

FIVE DEAD MEN WHOM I KNEW WHEN LIVING.

In selecting as the subject for a lecture "Five Dead Men Whom I Knew when They were Living"—Robert Owen, Joseph Mazzini, John Stuart Mill, Charles Sumner, and Alexandre Auguste Ledru Rollin—I do not mean more than that the accidents of my chequered life, having thrown me into contact with these men, I take their lives for the lessons such lives give, without either pretending to maintain their several views, or to imply that all, or either of, the five are, or is, in any fashion identified with my own advanced opinions, except where such identity shall be expressly stated. Naturally, the compass of a lecture is prohibitive of any biographic detail, or of any completeness of statement of the respective teachings of the men I briefly deal with.

I.—ROBERT OWEN.

Robert Owen, the great advocate of English Socialism, was born at Newtown, a Montgomeryshire village, on the 14th May, 1771. His early life-struggles—his rapid, but sober and business-like, conquest of that wealth which the world worships so much, but to which he seems to have attached little value, except as it gave him facilities for spreading his views—are familiar enough. It is at New Lanark, in 1797, and thenceforth for twenty years, that one would wish to show Robert Owen, for if he had never done

aught outside New Lanark, he did enough there alone to win grateful recollection. Surrounding the factory workers in his employment with humanising conditions, ameliorating their position, he made the wage-winners something more than mere human machines. Recognising that it was easier to bend and mould the tendencies of the child than to break the long-acquired habit of the grown man or woman, Robert Owen set an example to all Britain by introducing infant schools in his New Lanark village. It was Robert Owen who practically demonstrated that the child's mind is a sheet of paper, varying in colour, quality, and size, but which cannot be left blank; it must be ornamented or disfigured, fact or falsehood must be written on it. It was Robert Owen who gave an example which might be followed with advantage by teetotal advocates. He made New Lanark a sober village, not so much by denouncing drink, as by providing home inducements and evening amusements which outrivaled the beer-shop or whisky store. Many an unfortunate man, returning to his overcrowded unwholesome dwelling, wearied with his toil, finds that it is foul with the breath of so many huddled together, and he consequently escapes to the glare of the gin palace or the gathering at the beerhouse to fly from the misery he finds at home. It is true that he thus aggravates the ill, but we cannot make men sober unless we purify their lives, unless the domestic hearth has its charms and enticements for them; what we want is, that the workers shall have a dwelling to go to from their work which has in it the real tokens of comfort, purity, and health of life. No four-leaved shamrock, nor magician's wand, could have even been supposed to effect so great a transformation as the persistent Humanitarianism of this earnest Robert Owen effected at New Lanark. His doctrines on the formation of character have found practical and authoritative expression more recently in the law-established reformatory schools. Instead of trampling juvenile criminals still lower into the earth, society now adopts the view which Robert Owen was the first to popularise—although not the first to enunciate—that man is better or worse according to the conditions surrounding the parent previous to the birth of the child, and those which surround the infant itself during its childhood, and accompany the boy or girl during youth. Young criminals are now sought to be made less criminal by being placed for lengthy periods under conditions which shall modify and improve their characters.

In 1817 Robert Owen—who had up to this time been regarded by fashionable society as an amiable but eccentric philanthropist, whose whims were to be pardoned on account of his wealth—startled all England by his famous declaration at the London Tavern. Impeaching the religions of the world, he aroused against him all the clergy, and frightened away most of his titled admirers. It has been the custom of late years for street-corner tub-thumpers—utterly incapable of imitating Owen's unselfish devotion to human improvement—to malign Robert Owen's name, and to cast all kinds of opprobrious epithets against his life. Undoubtedly Robert Owen furnished some cause to his foes, when he declared in his London Tavern speech that all the religions of the world were founded in error. And yet every religious man will contend that all the religions of the world save one, and that one his own, are false. It is said, too, that the doctrine that man is the creature of circumstances involves a theory of fatalism demoralising to the human character. Those who take ground against Mr. Owen overlook the fact that it is better to teach the truth, whatever that truth may be, so that the knowledge may furnish the motive for the selection of improving conditions. Nor is man a merely passive figure to be acted on; he re-acts and modifies his surroundings, improving or aggravating them and their effects. As each drop of water is to the ocean, so is each human unit to the world—part of the great whole, from which it cannot escape, and from which it cannot be eliminated. Freewill theorists delude themselves with empty words when they claim for the phenomena of volition that they are outside all law. The formula that man's character is formed for him, and not by him, does not express all the truth, but it expresses much more than is taught by those whose dogma it is that man may will, uninfluenced by events. Robert Owen has been too fiercely assailed for his views on marriage, those who are his assailants, forgetting how much the laws affecting woman's position and property, and regarding divorce, have been modified during the last fifty years. The marriage question is one hedged round with huge difficulties. In Roman Catholic countries extreme harshness forbids all divorce. In some States of the American Republic great facilities are given for determining a contract, which holds by force of law only, against the desire of each. Human passion enters too much with some into the consideration of this question, and is too utterly excluded by

others. It is chiefly as the inaugurator of the English Socialist Propaganda that Robert Owen will be remembered. No Socialist myself, I yet cannot but concede that the movement had an enormous value, if only as a protest against that terrible and inhuman competitive struggle, in which the strong were rewarded for their strength, and no mercy was shown to the weakest. I am probably too much of an individualist to judge a system fairly which seems to me to neutralise individual effort; but it is only necessary to look to the enormously beneficial results of co-operative effort in the North of England, in order to affirm that the Socialist Missionaries, with good old Robert Owen at their head, have left proud monuments of the effect of their teachings. If any early reconcilement is possible, as I believe it is, between the owners of accumulated capital and the vendors of labour, it must come by the enlightenment which efforts at co-operative manufacturing give to all those who take part in them. The war between capitalists and workers is an insane and suicidal war, aggravated because the rights of life are too often made secondary to the privileges of wealth. Robert Owen's Socialism was the utterance of one of the many efforts to give life and dignity to labour. Honour, then, his human effort, even if you deny his dogma. I first saw Robert Owen as a Sunday evening lecturer on the platform of the old John-street Institution, about 1848, and it was from the same platform, ten years later, that it became my duty, in consequence of the ill-health of Robert Cooper, to read for Mr. Owen the last speech he ever prepared for delivery at a Freethought meeting. No one, friend or foe, could come in contact with Robert Owen without being most thoroughly convinced of the old man's complete conviction of the accuracy of his views on society, and of his full certainty to the very last that those views would all be realised at no distant date. He was a good, pure, one-idead man, whose long life, from its prime to its close, was one never-ceasing struggle to soften the world's harsh conflict, and to create a new moral world for after-livers.

II.—JOSEPH MAZZINI.

GUISEPPE MAZZINI, the untiring preacher of Italian Republican unity, was born at Genoa on June 22nd, 1805: and he tells us it was in April, 1821, just after the unsuccessful Piedmontese insurrection, that he was first impressed with the idea "that we Italians could, and therefore ought to, struggle for the liberty of our country." When about twenty-two years of age Mazzini commenced his literary career by writing brief book notices for a mercantile journal at Genoa, which journal he made sufficiently political to at length bring down upon it a Government decree of suspension. Vetoed in Genoa by the Sardinian authorities, Mazzini, in a second journal, braved more openly the Tuscan Government at Leghorn; but, after about twelve months, the *Indicatore Livornese*, as the new journal was called, was also suppressed. Induced by his new political associates, Mazzini joined the Carbonari, a secret association, in which the police had usually—as is commonly the case in secret political organisations—sufficient members to betray the whole of the plans of the Society. Betrayed and arrested in 1830, Mazzini was confined for some months in the Fortress of Savona, whence he was ultimately released—the formal evidence against him failing—but was exiled, because the Government were only too sure of his Republican tendencies.

It was while a solitary prisoner in Savona that Joseph Mazzini conceived the plan of *La Giovina Italia* (Society of Young Italy). Intensely national, Mazzini believed that "regenerated Italy was destined to arise the *initiatrix* of a new life, and a new and powerful unity to all the nations of Europe." It is doubtful whether the movements of the Southern and Northern races in Europe have not a distinctness of character which must always be fatal to Mazzini's conception of the *rôle* of Italy. Mazzini rightfully asserted the unity of Italy; but Italian intellect is too poetic and too subtle to be the guide of some of the less musical, but not less thorough, politics of the Teutonic races. From

Italy Mazzini went to Lyons, and in 1831 he joined a forlorn expedition into Corsica, intending to cross thence into the Romagna, where an insurrectionary rising was planned. This expedition failing, Mazzini took up his residence at Marseilles, where he formally founded the Society of Young Italy, to create "an Italy, one, free, and powerful; independent of all foreign supremacy, and morally worthy of her great mission." The statutes declared "Young Italy is Republican and Unitarian. Republican, because theoretically every nation is destined, by the law of God and humanity, to form a free and equal community of brothers; and the Republican is the only form of government that ensures this future. Because all true sovereignty resides essentially in the nation, the sole progressive and continuous interpreter of the supreme moral law. Because, whatever be the form of privilege that constitutes the apex of the social edifice, its tendency is to spread among the other classes, and, by undermining the equality of the citizens, to endanger the liberty of the country. Because, when the sovereignty is recognised as existing, not in the whole body, but in several distinct powers, the path to usurpation is laid open, and the struggle for supremacy between these powers is inevitable; distrust and organised hostility take the place of harmony, which is society's law of life. Because the Monarchical element, being incapable of sustaining itself alone by the side of the popular element, it necessarily involves the existence of the intermediate element of an aristocracy—the source of inequality and corruption to the whole nation. Because both history and the nature of things teach us that Elective Monarchy tends to generate anarchy, and Hereditary Monarchy tends to generate despotism. Because when Monarchy is not, as in the Middle Ages, based upon the belief now extinct in right divine, it becomes too weak to be a bond of unity and authority in the State.....Young Italy is Unitarian, because without unity there is no true nation; because without unity there is no real strength.....The means," say the statutes, "by which Young Italy proposes to reach its aim are—education and insurrection, to be adopted simultaneously, and made to harmonise with each other. Education must ever be directed to teach by example, word, and pen, the necessity of insurrection. Insurrection, whenever it can be realised, must be so conducted as to render it a means of national education."

It is a little difficult, when Mazzini teaches that "insurrection, by means of guerilla bands, is the true method of warfare," to understand how guerilla warfare and educational progress can be consistent. Guerilla warfare is so nearly allied to—and so often results in—mere brigandage that the certain evil seems greater than any possible advantage; and, as a matter of fact, history has most clearly shown that these guerilla bands are more effective for mischief on the enemy than for good to the cause on behalf of which they are arrayed. Mazzini himself teaches that "Great revolutions are the work rather of principles than of bayonets, and are achieved first in the moral, and then in the material sphere." In the programme of Young Italy Joseph Mazzini, who was bitterly opposed to what he called Materialism, affirmed that "the reformation of a people rests upon no sure foundation, unless based upon agreement in religious belief." He declared that "the doctrines of Materialism disinherit man of every noble aim, and abandon him to the arbitrary rule of chance or blind force." Joseph Mazzini was, at the same time, devotedly Republican and religious. He blended his piety with his politics, and regarded Republicanism as God-ordained.

Exile, and some sorrow beyond—a sorrow which he alludes to, but does not state—had given a tone of sadness to his life. Tenacious of purpose, he was fit to be the mainspring of a secret society, but hardly so fitted to be the conductor of any open movement where his views would be subject to contradiction or criticism from his co-workers. He was grandly thorough in his Republicanism, but he dreamed it for the working men of Italy before he knew what those working men were; and although he made great efforts to educate the people, he never seems to have recognised the fact that the proclamation of a Republic to a people of whom the majority are not prepared for it, is but a small step towards real Republicanism. In Rome he was —when invested with authority—so roughly brought face to face with the bitter truth, that he says "it was put to the vote whether we should not resign our charge the day following. The population, in consequence of the long corruption of slavery, was ignorant and idle; distrustful and suspicious of all things and of all men."

The extension of the propaganda of the Young Italy became rapidly so formidable, that on the representation of the Italian Government, the French authorities, in August,

1832, ordered Mazzini to quit Marseilles, but the order was rendered inoperative by the extraordinary ability with which Mazzini eluded the police, and yet continued most actively his revolutionary work, so that, by the middle of 1833. the Society of Young Italy had become widely extended, if not powerful, through Lombardy, the Genoese territory, Tuscany, and the Roman States. Treason from some, and incaution on the part of others, giving the Government a clue as to the members of the society, many were arrested and put to death.

Mazzini could not help feeling deeply his own share, as the founder of the Association, in the deaths of his co-workers. Four years afterwards he says: "I feel myself a criminal—conscious of guilt, yet incapable of expiation. The forms of those shot at Alessandria and Chambery rose up before me like the phantoms of a crime, and its unavailing remorse. I could not recall them to life. How many mothers had I caused to weep? How many more must learn to weep should I persist in the attempt to arouse the youth of Italy to noble action, to awaken in them the yearning for a common country? And if that country were indeed an illusion, whence had I derived the right of judging for the future, and urging hundreds, thousands of men, to the sacrifice of themselves, and of all that they held most dear?"

Early in February, 1834, an abortive attempt was made to take a column of insurgents, under the command of General Ramorino, into Italy from Geneva. In this column Joseph Mazzini, although the contriver of the expedition, marched as a private soldier. Treachery on the part of the General, and inefficient means of action, caused the failure of the plan; and the defeat almost made Mazzini despair of his whole mission.

The Swiss authorities—compelled by the representations of the European Powers—seized the war stores of the Italian exiles, and menaced themselves with expulsion.

In Berne, where he then took refuge. Mazzini projected the formation of the Society of Young Europe, a combination of Young Italy with two kindred associations, called Young Poland and Young Germany. The ideal of the Association of Young Europe was the federal association of European Democracy under one sole direction; so that any nation rising in insurrection should at once find the others ready to assist it. To this organisation, later in 1834, was

added the new Society of Young Switzerland. Writing of Switzerland, Mazzini says: "Since January 1st, 1338, that little people has had neither king nor master. It presents the spectacle—unique in Europe—of a Republican flag floating for five centuries above the Alps, although surrounded by jealous and invading Monarchies, as if to be an incitement and a presage to us all. Charles V., Louis XIV., Napoleon, passed away, but that banner remained sacred and immoveable." The Constitution of the Swiss Republic was regarded by Mazzini as specially defective, in that its Diet, or Central Government, is composed of delegates from each Canton, chosen in each case by the grand *conseil* of the Canton, instead of being directly elected by the people. Mazzini also objected that in the Swiss Diet each Canton has but one vote, irrespective of size, or population, or taxation contribution; and he further objected to the *mandat impératif*, or special instruction to the delegate, as nullifying all spontaneity of thought and conscience. Mazzini justified the Association of Young Europe by affirming that "Liberty is an European right. Arbitrary power, tyranny, and inequality cannot exist in one nation without injury to others." In the middle of 1835 "Young Switzerland" had its journal, *La Jeune Suisse*, and a printing press at Bienne, in the Canton of Berne. The European Governments used considerable pressure to prevent the little Swiss Republic from being continued as the centre for this Republican work, and ultimately a *conclusum* of the Swiss Diet, in 1836, condemned Mazzini to perpetual exile from Switzerland.

In January, 1837, the great Italian conspirator arrived in London. This was a gloomy period in Mazzini's life; exiled, poor, doubting, and doubted, it seemed to himself almost as if his young life had been an utter failure. England gives the shelter of its land to the political exile, but it is a cold shelter if he be a poor or an unknown man; and, until Mazzini's pen had won for him a position amongst English writers, he often knew the extremest bitterness of want. Joseph Mazzini found, too, that although the English nation gave nominal protection to his person, the English Government nevertheless was guilty of the baseness of opening his correspondence, and communicating the contents to foreign powers. That Austria utilised the information communicated to her by Lord Aberdeen's Government, which had tampered with letters addressed to Mazzini by

the unfortunate Brothers Bandiera, is now a matter of history. Writing eighteen years later, Mazzini said: "The secret of correspondence is violated in the English Post Office at the present day, precisely as it was in 1844, though perhaps somewhat more rarely." It is certain that in the Irish Post Office letters have been opened by authority during the last few years; and it is also certain that secret police reports have, within the last five years, been furnished in writing by the London Detective Department to the Paris Police. Whether letters are still opened at St. Martin's-le-Grand I have no sufficient means of determining.

The political volcano of 1847-8, shook severely several of the Italian princedoms, and Joseph Mazzini returned to Italy to take part in the struggle which overturned, at any rate temporarily, more than one ducal throne.

On February 9th, 1849—the Pope having fled, and Rome being without any Government—a constituent assembly, chosen by a very large popular vote, and of which Mazzini had been elected member, proclaimed a Republic in Rome. On March 29th, Mazzini, Saffi, and Armellini, were chosen Triumvirs; and on April 25th, the French Republic disgraced itself by landing an army, under General Oudinot, at Civita Vecchia. The story of the siege of Rome, of its heroic defence by Joseph Garibaldi, of its fall at last in July, is too well known to need repeating at length, and is too grand to be pressed into one or two lines. Rome fell, and in July Mazzini was once more a fugitive from his loved Italy.

In 1857 Mazzini endeavoured to organise a general Italian insurrection, and went to Genoa himself to take his part; but although detached risings took place in various parts of Italy, the differences of opinion between the leaders, such as Mazzini, Manin, and Garibaldi, were so great, and the people were so unprepared, that another failure had to be chronicled. Mazzini opposed himself bitterly to the diplomacy of Cavour, who was then endeavouring, chiefly through Prince Jerome Napoleon, to obtain the alliance of France against Austria.

In 1858 Mazzini penned the following words on woman, worthy reproduction, alike from their great merit, and as chronicling this phase of his faith: "Love and respect woman. Seek in her, not merely a comfort, but a force, an inspiration, the redoubling of your intellectual and moral faculties. Cancel from your minds every idea of superiority over her. You have none whatever.....Long prejudice, an

inferior education, and a perennial legal inequality and injustice, have created that apparent intellectual inferiority which has been converted into an argument of continued oppression. But does not the history of oppression teach us how the oppressor ever seeks his justification and support by appealing to a fact of his own creation? The feudal castes that withheld education from the sons of the people, excluded them on the ground of that very want of education from the rights of the citizen, from the sanctuary wherein laws are framed, and from that right of vote which is the initiation of the social mission.....Consider woman as the partner and companion, not merely of your joys and sorrows, but of your thoughts, your aspirations, your studies, and your endeavours after social amelioration. Consider her your equal in your civil and political life."

Mazzini and Mill were alike eloquent pleaders for womanhood, and each deserve woman's tribute of grateful memory.

In 1859 the brain of Mazzini and the arm of Garibaldi effectually moved the peoples of Sicily and Naples, and rousing even the lazzaroni from their lethargy, frightened away Bomba from his Neapolitan Palace. Mazzini and Garibaldi then took entirely different ground, and bitterness arose, which was never cleared away. Mazzini desired Garibaldi to hold the Two Sicilies as Republican, and to strike a blow at Rome for the unity of Italy, while Joseph Garibaldi consented to the annexation of Naples and Sicily to Piedmont, under the rule of Victor Emanuel, and returned to his island home at Caprera, satisfied that his country had advanced one step to the unity, which he, equally with Mazzini, so ardently desired.

It was shortly before this date that I first saw Joseph Mazzini, at his modest lodgings, in Onslow Terrace, Brompton, where he then lived under the name of Signor Ernesti. He was one of the few men who impress you first, and always, with the thorough truthfulness and incorruptibility of their natures. Simple in his manners, with only one luxury, his cigar, he had that fulness of faith in his cause which is so contagious, and by the sheer force of personal contact he made believers in the possibility of Italian Unity even among those who were utter strangers to his thought and hope.

In 1865 the city of Messina elected Mazzini as Deputy to the Italian Parliament; but he refused to take his seat in an Assembly where he would have had to take the oath of allegiance to Victor Emanuel. He said, "Monarchy will

never number me amongst its servants or followers. I dedicate myself wholly, and for ever, to constitute Italy one free, independent, Republican nation. I have lived, I live, and I shall die a Republican, bearing witness to my faith to the last."

When in 1870 Mazzini set foot in Sicily, the Government arrested him, and sent him to Gaeta. A general protest went out through Europe, and the imprisonment was not of long duration, but it was yet enough to weaken the already diminished vitality of the oft-disappointed conspirator for Italian Republican Unity.

On the 10th March, 1872, at Pisa, where, under an assumed English name, he had passed five months in almost complete solitude, Joseph Mazzini died; worn out in body and spirit by the forty years' never-ceasing toil for the liberty and unity of his much-loved native land. At his funeral 80,000 men and women met to testify to his truth, to mourn his death. Sentences of death and exile stood unrevoked against him while living. Italy, from that Rome which Mazzini had defended, could not enforce these penal sentences, but it was only her dead son she honoured. Living, she let his broken heart bear undiminished the sorrows of his intense struggle. Dead, a whole population witnessed that the liberty-lesson his life had taught would bear its fruits now the white-haired teacher could no longer use his pen. In seven-hilled Rome a laurel crown was placed by Italy's hand on the head which had bowed to earth in the mighty effort to teach Italia's children how to compass the freedom of their birth-land.

III.—JOHN STUART MILL.

To record the mere life of John Stuart Mill would present little of lasting interest, especially as Mr. Mill never seems to have sought to use his official knowledge of Indian affairs to govern his conduct as a practical politician, after his connection with the East India Company had been

determined. It is not so much how he lived as what he thought, not so much what he did as what he taught, that is worth remembering. Born May 20th, 1806, and dying May, 1873, he probably, during the last twenty-five years of his life, influenced, more than any other man, the various thinkers in England and America. As a political economist, a logician, a politician, a metaphysician, the exponent of Utilitarianism, and advocate of woman's rights, he stands in all phases remarkable, in some without superior. In political economy it is his merit to have popularised amongst the people a science which had been generally regarded by artisans as cold and hard, only to be used by the rich against the poor; and it is noteworthy that Mr. Mill won his popularity despite his steadfast maintenance of the Malthusian theory of the law of population.

Mr. Mill clearly distinguished between the laws of production of wealth, which are real "laws of nature," dependent on the properties of objects, and the modes of the distribution of wealth, which, subject to certain conditions, depend on the human will. In this he differed from those who pretend that the distribution of wealth is determined by economic laws, which are incapable of being temporarily defeated or modified by human effort.

As a politician, Mr. Mill affirmed that women were entitled to representation on the same terms with men. He supported Mr. Thomas Hare's scheme for obtaining a more perfect representation of minorities; and, whether or not Mr. Hare's proposal shall ever be embodied in a statutory form, Republicans should remember that thorough respect can never be shown to the decisions of the majority unless the minority are afforded a fair occasion to be heard on all important questions. It is right that the majority should decide, but only on condition that the voice of the minority has full utterance prior to the delivery of the final award. Mr. Mill opposed the ballot, and I avow that I should be pleased if voters could be true and self-reliant enough to dispense with the protection it affords.

Admitting "the irresistible claim of every man and woman to be consulted, and to be allowed a voice in the regulation of the affairs which vitally concern them," Mr. Mill desired to give a plurality of votes to "proved superiority of education," in order to secure "the superiority of weight justly due to opinions grounded on superiority of knowledge."

In his Political Economy Mr. Mill had taught that the

right of freehold proprietorship in land could only be maintained subject to the duty of cultivation; and late in life, as the President of the Land Tenure Reform Association, he propounded a scheme by which the unearned augmentation of rent was to be applied otherwise than to the private aggrandisement of the landlord. The land question in England is yet to become a battle question, serious in character, and uncertain as to its method of solution. Only one thing is certain—viz., that thousands must not be allowed to continue to grow poor and wretched, in order that a few dozen persons may become unfairly, as well as enormously, rich.

In the great American struggle Mr. Mill regarded the course of the Southerners, in all its stages, as "an aggressive enterprise of the slave-owners to extend the territory of slavery, under the combined influences of pecuniary interest, domineering temper, and the fanaticism of a class for its class privileges;" and, therefore, when the upper and middle classes in England expressed pro-Southern views, Mr. Mill arrayed himself with the artisan classes of England on the side of the North.

In philosophy, Mr. Mill affirmed that "the prevailing tendency to regard all the marked distinctions of the human character as innate, and in the main indelible, and to ignore the irresistible proofs that by far the greater part of those differences, whether between individuals, races, or sexes, are such as not only might, but naturally would, be produced by differences in circumstances, is one of the chief hindrances to the rational treatment of great social questions, and one of the greatest stumbling-blocks to human improvement." While describing himself, in the Autobiography published since his death, as one who never had a religious belief, John Stuart Mill was, unfortunately, taught that his heretical opinions "could not prudently be avowed to the world." Now, it is true, he affirms that the time appears to have come in religious matters "when it is the duty of all who, being qualified in point of knowledge, have, on mature consideration, satisfied themselves that the current opinions are not only false, but hurtful," to make their dissent known; "and," he adds, "the world would be astonished if it knew how great a proportion of its brightest ornaments—of those most distinguished even in popular estimation for wisdom and virtue—are complete sceptics in religion."

The effect of Mr. Mill's early teaching is manifested by

a reticence which pervades his writings; a reticence often liable to be utterly misunderstood. Three essays, published since his death—in which the subjects he specially refrained from discussing are treated at some length—make us more completely regret that his silence during life leaves his posthumous utterances, if not contradictory, at any rate deficient in that clearness for which his ordinary writings are so remarkable. Perhaps the most distinct declarations from Mr. Mill's pen, published during his lifetime, were: first, the one in which, in his review of Hamilton, he declared it to be profoundly immoral to teach, with Dean Mansel, that it is man's duty to worship "a being whose moral attributes are affirmed to be unknowable by us, and to be, perhaps, extremely different from those which, when we are speaking of our fellow creatures, we call by the same names." Mill says: "If, instead of the 'glad tidings' that there exists a being in whom all the excellences which the highest human mind can conceive, exist in a degree inconceivable to us, I am informed that the world is ruled by a being whose attributes are infinite, but what they are we cannot learn, nor what are the principles of his government, except that 'the highest human morality which we are capable of conceiving,' does not sanction them; convince me of it, and I will bear my fate as I may. But when I am told that I must believe this, and at the same time call this being by the names which express and affirm the highest human morality, I say in plain terms that I will not. Whatever power such a being may have over me, there is one thing which he shall not do—he shall not compel me to worship him. I will call no being good, who is not what I mean when I apply that epithet to my fellow creatures; and if such a being can sentence me to hell for not so calling him, to hell I will go." The other is in the review of Comte: "Candid persons of all creeds may be willing to admit, that if a person has an ideal object, his attachment and sense of duty towards which are able to control and discipline all his other sentiments and propensities, and prescribe to him a rule of life, that person has a religion; and though every one naturally prefers his own religion to any other, all must admit that if the object of this attachment, and of this feeling of duty, is the aggregate of our fellow-creatures, this Religion of the Infidel cannot, in honesty and conscience, be called an intrinsically bad one."

Occasionally, as in the essay on Utilitarianism, there are

passages in Mr. Mill's writings which a Christian would probably read as meaning more than Mr. Mill intended to convey; and in the two last essays of the latest volume there are several positions conflicting seriously with the ground taken in the first essay.

In 1861, when I fought the authorities at Devonport on the question of the right of meeting, Mr. John Stuart Mill, with whom I had up to that time held no communication, sent me a cheque for £25 towards the heavy costs I then incurred; and in 1868, for reasons which he has himself stated towards the close of his Autobiography, he also subscribed towards the expenses of my election struggle at Northampton.

To show how even his opponents can speak of him, I give the following extract from an official lecturer of the Christian Evidence Society, Mr. W. R. Browne, M.A., Fellow of Trinity College, Cambridge :—"John Stuart Mill was one of the keenest, the clearest, the most influential thinkers of his day. He was also a man much beloved by his friends (Heaven forbid that I should stint a word that can be uttered in praise of the dead!), devoted to the welfare of his fellow-men, regular and temperate in his life, honest, upright, sincere; and he was an utter unbeliever in any form of religion whatsoever. This fault, which was tolerably well known in his lifetime, is made perfectly clear and certain by the volume before us. He was all that I have described, morally and intellectually, either in consequence of, or in spite of, his rejection of all that Christians hold true and sacred. Which of these is the case? There can be no denying that, at first sight, his life makes against the party of religion. I know that it has been felt to be so by many; I have felt it to some extent myself. Can that be true which a thinker so careful and so brilliant—the greatest master, in this age at least, of the science of logic and the laws of evidence—pronounced unhesitatingly to be false?"

Mr. Mill's almost sudden death at Avignon was mourned as a national bereavement. As an able writer in the *Daily News* wrote in the obituary notice, "the full measure of his political influence will not be known until the next generation, when the younger men, who of late, at Oxford and the other seats of learning, have drunk in his doctrines, come in their turn to the front, and assume the task of shaping the nation's destinies."

IV.—CHARLES SUMNER.

ENGLISHMEN need to be reminded that slavery was a vice instituted and fostered in the American colonies by aristocra ic and monarchical England. Efforts made by various colonies to check the slave trade were rebuked by the English Government. The barbarism of slavery was the enduring legacy to the West from civilised and Christian England. In the Federation of the United States the right of holding slaves was retained, amongst other State rights, by the Southern States.

As the Republic grew, two hostile elements were distinctly manifested—the one for the abolition, the other for the extension, of the slave power. In 1844 Texas was annexed to the United States by the influence of the Southern members of Congress, and the vast extent of Texan territory promised the Slave States the command of the Gulf of Mexico, and their preponderance as a political party. It was on this occasion that Charles Sumner—known theretofore as a cultivated, eloquent, and rapidly-rising Massachusetts barrister—made his first distinct stand on the side of freedom against slavery. In November, 1845, in a speech in Faneuil Hall against the admission to the Union of Texas as a Slave State, Sumner said: "God forbid that the votes and voices of the freemen of the North should help to bind anew the fetter of the slave." From thenceforward, until the day of his death, Charles Sumner never wavered in the course he had chosen.

Dealing with the matter with the reverence for law, natural to one trained as he had been, Charles Sumner challenged the slaveholders on constitutional grounds; urging that the provisions of the United States constitution, in favour of slaveholding, were merely temporary, and were framed in the expectation that the slave traffic would be abandoned at no distant period. He affirmed that the Congress could, even then, by express legislation, abolish slavery in the district of Columbia, and in any territories; that it could abolish the slave trade on the high seas between the States; and that it could refuse to admit to the Union any new State with a constitution sanctioning slavery;

further, that the people of the United States might, by regular amendment to the constitution, destroy slavery.

In 1851 Mr. Sumner, who was then forty years of age, having been born January 6th, 1811, was elected United States Senator for Massachusetts; and at first he stood at Washington almost alone in his direct pleading for abolition. In 1854, by the Kansas and Nebraska Act, a large extent of fine territory was practically thrown open for competition between free and servile labourers.

Streams of Northern men advocating free soil, and bodies of Southern men, eager to extend slave power, pressed on to the new lands. The Southerners were not, however, content to fight fairly; organised bodies of armed men entered Kansas from Missouri, and controlled the elections with bowie knife and pistol. At the first election of the Kansas Legislature, March 30th, 1855, the revolver and knife were freely used, several unoffending citizens were shot, and the abolitionists, finding themselves overpowered by force, appealed to the Government for protection. Mr. Seward presented to Congress "A Bill for the Admission of Kansas into the Union." During the debate Mr. Sumner delivered, on the 19th and 20th May, 1855, his celebrated speech, "The crime against Kansas," described by the poet Whittier as "a grand and terrible philippic." He said: "The wickedness which I now begin to expose is immeasurably aggravated by the motive which prompted it. Not in any common lust for power did this uncommon tragedy have its origin. It is the rape of a virgin territory, compelling it to the hateful embrace of slavery: and it may be clearly traced to a depraved longing for a new Slave State, the hideous offspring of such a crime, in the hope of adding to the power of slavery in the national government." With almost prophetic voice he added: "The fury of the propagandists of slavery, and the calm determination of their opponents, are now diffused from the distant territory over widespread communities, and the whole country in all its extent; marshalling hostile divisions, and foreshadowing a strife, which, unless happily averted by the triumph of freedom, will become war-fatal, fratricidal, parricidal, war—with an accumulated wickedness beyond the wickedness of any war in human annals."

The speech caused a tremendous sensation through the whole of the South. Previous to its delivery there had been many threats of personal violence against Mr. Sumner; two

days after it had been delivered Preston S. Brooks, member of the House from South Carolina, with a gold-headed gutta-percha cane in his hand, came to the seat in the Senate where Charles Sumner sat writing, and, with scarce a word of warning, struck the abolitionist orator a fearful blow, inflicting a severe wound upon the back of the head, repeating the blows until the cane was shivered to pieces, and Mr. Sumner lay bleeding and insensible on the floor of the Senate. The spirit of Southern slave-holding chivalry was well shown. Richmond and Charleston journals praised Brooks for his dastardly blow. Southern clergymen preached in his favour. South Carolina re-elected him as the representative of the State. Southern ladies bought for him a new cane, in lieu of the one which he had destroyed in his murderous onslaught on Charles Sumner. It was nearly five years before the effects of the attack had sufficiently passed away to enable the Massachusetts Senator to plead again for freedom. Perfect recovery was impossible; the shock to the nervous system had been too severe; and Mr. Sumner never ceased to feel the effect of the cowardly attack.

While travelling in Europe to recruit his health, Mr. Sumner, on the introduction of the Duchess of Argyll, had an interview with Lord Palmerston as to the repression of slavery in Cuba, the particulars of which I will give as nearly as possible in Mr. Sumner's own words: "Prompted to it by nearly the last words John Adams used to me before he died, I reminded his Lordship that his own Circular as Foreign Secretary had, in express terms, pledged any Government, in which he was influential, to an abolition policy; and urged on him that Great Britain could, if it would, at any time put an end to slavery in the island of Cuba." "How?" asked Viscount Palmerston. "By simply enforcing the treaty between Great Britain and Spain, which absolutely prohibited all importation of slaves after a fixed date, and provided that any slaves landed in Cuba in contravention of this convention, should be declared free." I added to this that "more than seven-eighths of the slave population of Cuba were under this provision entitled to their freedom." Lord Palmerston was very courteous, but did nothing.

It was in June, 1860, he spoke of "that better day, near at hand, when freedom shall be restored everywhere under the national government; when the national flag, wherever

it floats, on sea or on land, with n the national jurisdiction, will not cover a single slave; and when the declaration of independence, now reviled in the name of slavery, will once again be reverenced as the American Magna Charta of human rights. Nor is this all. Such an act will be the first stage in those triumphs by which the Republic—lifted in character so as to become an example to mankind—will enter at last upon its noble prerogative of teaching the nations how to live." The story of the election of Abraham Lincoln, the huge war convulsion, the emancipation proclamation, the amendments to the constitution giving the coloured man political equality—this cannot be told here in fitting words.

Sumner is one of the few great warriors for a principle who have lived, not only to witness its emergence from unpopularity and obscurity, but have actually seen victory crown the apparently hopeless effort of their lives.

Charles Sumner, whom I first saw in the autumn of 1873, seemed to feel deeply the charge that he had acted unfairly to England in the matter of the claims arising out of the damage done to United States' commerce by the vessels built for the Southern Confederacy by Messrs. Laird. He said: "I distinguish between the English people, whom I have always regarded with the utmost friendliness, and the English Government. But put yourself in my place. Suppose civil war between Ireland and England; suppose a Member of Congress to build war steamers at Portland under orders from those whom you called the Irish Rebels; suppose the Government at Washington, duly warned, taking no real steps to stop the vessels; suppose these vessels coming direct from the American port—and without ever entering an Irish port at all—being fitted with munitions of war, and burning and destroying your merchant vessels; suppose the builder to sit in Congress, not only without censure, but receiving there constant friendly greeting, and to be treated as a friend by members of the Cabinet—what would be your feelings, Mr. Bradlaugh, as an Englishman, against the America which permitted such a wrong?"

Charles Sumner died on March 11th, 1874; all America felt his loss, and Massachusetts mourned for him as though her dearest son had been taken. At his grave Curtis and Schurz vied with each other in laudations on his life. Amongst those who delivered funeral orations over S.mner

was Robert B. Elliott, Senator for South Carolina, who said: "I am a negro, one of the victim race;" and from this oration I take the following: "Fellow citizens, the life of Charles Sumner needs no interpreter. It is an open, illumined page. The ends he aimed at were always high; the means he used were always direct. Neither deception nor indirection, neither concealment nor disguise of any kind or degree, had place in his nature or his methods. By open means he sought open ends. He walked in the sunlight, and wrote his heart's inmost purpose on his forehead. His activity and capacity of intellectual labour were almost unequalled. Confined somewhat by the overshadowing nature of the anti-slavery cause in the range of his topics, he multiplied his blows, and re-doubled the energy of his assaults upon that great enemy of his country's peace. Here his vigour knew no bounds. He laid all ages and lands under contribution. Scholarship in all its walks—history, art, literature, science—all these he made his aids and servitors. But who does not see that *these* are not his glory? He was a scholar amongst scholars; an orator of consummate power; a statesman familiar with the structure of governments and the social forces of the world. But he was greater and better than one or all of these; he was a man of absolute moral rectitude of purpose and of life. His personal purity was perfect, and unquestioned everywhere. He carried morals into politics. And this is the greatness of Charles Sumner: that by the power of his moral enthusiasm, he rescued the nation from its shameful subservience to the demands of material and commercial interests, and guided it up to the high plane of justice and right. Above his other great qualities towers that moral greatness to which scholarship, oratory, and statesmanship are but secondary and insignificant. He was just, because he loved justice; he was right, because he loved right. Let this be his record and epitaph."

V.—LEDRU ROLLIN.

ALEXANDRE AUGUSTE LEDRU ROLLIN was born February 2nd, 1808, when Napoleon I. was in the height of his power. Louis Philippe—after whose flight Ledru Rollin sought from the popular suffrage the post of chief magistrate—was then thirty-five years of age. Louis Philippe at that time an exile, afterwards to be King, and then an exile once more. Poor France! a line of Bourbon Kings ruling for centuries over starved peoples, and ending in a revolt of despair—an attempt for liberty, rendered impossible by bayonets, hired by England from every corner of Europe, and ending in centralised authority and military mania; a one-man rule, without heart or conscience, save such as the lust for power creates, ending in a ruined France, and a Divine-right King restored to his loving people by Uhlans and Cossacks; 1830, and the fallen successor of Louis XVIII. escorted to Cherbourg with much ceremony, Divine-right Monarchy having collapsed by its own feebleness; then, for a little more than seventeen years, Louis Philippe Citizen King. Louis Blanc says: "Charles X. était tombé, parceque son trône reposait sur un principe faux: Louis Philippe est tombé parceque son trône ne reposait sur aucun principe."

Ledru Rollin, who in 1830 became a barrister, won considerable popularity as an *avocat* by his defence of various persons charged with political offences. In 1834 we find his name amongst a muster-roll of the most brilliant names of France, as one of *les défenseurs choisis par les accusés d'Avril*, and the signature of Ledru Rollin appears to a memoir, telling, in terrible language, the horrible story of the slaughterings by Monarchical authority done in the City of Paris, under the Citizen King, on April 14th, 1834.

During the period of O'Connell's great Repeal gatherings in Ireland, Ledru Rollin, who had married an Irish lady, visited his wife's native country, and, being present at one of the monster assemblages, was cheered by the Irish

peasantry as a delegate from the Republican party in France.

As Louis Philippe's power diminished, the voice of the Republican advocate made itself heard more distinctly, and his influence was felt over a larger area. At Lille, shortly prior to the end of 1847, he pictured the coming revolution, which, "like the waters of the Nile inundating the land, should sweep away the corruptions and impurities, and deposit the germs of a new and rich life." When the first of the Reform banquets was held at the Château Rouge on July 9th, 1847, Ledru Rollin refused to attend, because—although the toast of the King's health was to be omitted—he apprehended there might still be equally obnoxious toasts. On the morning of February 24th, 1848, Louis Philippe was pressed to abdicate by Emile de Girardin—always the consulting physician to dying governments; in the evening the Monarchy had ceased with the King's flight, and a Provisional Government was chosen, of which M. Alphonse de Lamartine was the nominal head, and in which Ledru Rollin became Minister of the Interior. This Government was in name Republican; but at that date no Republic was possible in France. France was not a country with innumerable municipal centres of political vitality; it was rather a huge watch, with Paris for its main-spring. Whoever controlled Paris, the army, and the telegraphs, controlled France. M. Louis Blanc, in the fourth chapter of his "Histoire de la Révolution de 1848," tells the story how the Republic was proclaimed. Unfortunately, Lamartine, in his own account of his acceptance of the conduct of the Provisional Government on February 24th, shows how easily a few active, earnest men in Paris named the Government which was for a brief space to replace that of Louis XV. The new Minister of the Interior is thus described by his fellow-Republican: "He was well suited to his mission, one entirely of revolutionary propaganda. Quick-witted and penetrating, a political energy tempered by frank and engaging manners, an ardent will, integrity, a vehement desire to assure the success of the Republic, and an oratorical talent of the first class. These were the qualities which Ledru Rollin brought to the accomplishment of his functions, and they were heightened in him by a handsome figure, an imposing stature, and an indescribable magnetism, which, when he spoke seemed to pervade each of his

gestures." Lord Normanby, an English ambassador, in his "A Year of Revolution in Paris," thought it right to libel Ledru Rollin, just as former English ambassadors had libelled the men of 1789. Unfortunately for Lord Normanby, and happily for the truth, he published his libels to the world, and there were more newspapers to criticise, and more readers to judge, in 1848 than in the period when Louis XVI. reigned.

On March 5th, by a decree of the Provisional Government, universal suffrage was declared to be the law of France. The law was right; but it should have been demanded by the nation, and voted by the national representatives; the men to whom it was freely given were, in the majority of instances, unable to properly value the right they gained unsought.

Ledru Rollin has been severely assailed on account of an official circular issued just prior to the elections, and addressed to the Commissioners, who acted as his provincial subordinates, directing them to replace the various préfets, sous préfets, and other officials, with persons avowing Republican opinions, and declaring that "all political functions ought to be allotted to men of sure and of Republican principles." Undoubtedly, both Ledru Rollin and Louis Blanc felt justified in using on behalf of Republicanism the centralised authority which had been so long used against it. As a Republican, the exercise of any pressure on the voters was unjustifiable; especially was it unjustifiable when, on April 15th, Ledru Rollin permitted his bulletin newspaper to suggest that, if the result of the elections should prove adverse to Republicanism, a second appeal to the barricades would be necessary on the part of the Parisian populace. A Republican is bound to submit to the vote of a majority, even if that vote annihilates the Republic. An appeal to force is an appeal to the past; it justifies the conduct of the strongest. When some of the regiments of the National Guards were permitted, if not encouraged, to exact from the officers they were electing a pledge, "that in the event of the new Assembly declaring against a Republic, they would march against the Assembly, and put it down," every teaching of Republicanism was outraged.

A few weeks later, Ledru Rollin, as a member of the Executive Commission, found himself obliged to submit to his colleagues, who gave authorisation to Gen. Cavaignac to

use force when the people at the barricades appealed against the decision of the Assembly hostile to the further existence of the Ateliers Nationaux. The bloody days of June were the result of this appeal, and all hope of present Republic was dead. After Ledru Rollin's retirement from the Ministry, he was for a short time *chef du Cabinet* to the Préfet of the Seine; but a strong attack was made upon him, and his popularity became seriously weakened. He was, nevertheless, elected in April, 1849, for Paris, with 129,000 votes.

On June 13th, 1849, Ledru Rollin made an earnest, but ineffectual, appeal in the Assembly against the murder of the Roman Republic by the French army under General Oudinot. The story is told by Joseph Mazzini, how clericalism in France triumphed in inducing the soldiers of one Republic, only just born, to crush the efforts of another Republic struggling into birth.

Forced to quit France, Ledru Rollin was an exile from his native country for twenty-one years. In 1857 he, then in England, was judged *par contumace* for alleged complicity in the attempt by Felice Orsini against the life of Louis Napoleon, but the charge was utterly unfounded, and was probably never even believed by the French police. The only pretence for the use of Ledru Rollin's name in the matter seems to have been that Charles Delécluze, who had established some political associations in France, was known to be in correspondence with the exile; but there was not even a shadow of complicity between Delécluze and Ledru Rollin.

It was in 1857 that I first saw Ledru Rollin, who often consulted me on points of English law during the time of his subsequent residence in St. John's Wood. On one point he was entirely in error: he judged France to be always as he left it in 1849, and was bitterly dis-illusioned when, on his return to Paris in 1870, he found a new generation had grown up with new ideas.

The life of an exile is not a very happy one; the sketch of the career of Joseph Mazzini illustrates this. Ledru Rollin, in his "Decadence de l'Angleterre," says: "Proscribed, we bore with us the sacred right of misfortune, which even amongst barbarians was regarded as a kind of public religion. How has it been respected? We have been each day submitted to insult; the English aristocracy has drawn us about on its journalistic hurdles, denouncing

us to its people as convicts escaped from the galleys, as miserable bandits, as the refuse of the sewers of Paris." Ledru Rollin endured exile for nearly twenty-one years.

In 1870, now with whitened hair, and with his heart withered by the exile chill, Ledru Rollin once more returned to his home at Fontenay aux Roses, and was in 1871 chosen by three departments as deputy to the French Assembly, where, however, he at that time declined to sit. A Republican Society in Paris, the Alliance Républicaine, nominated Ledru Rollin as its President; but the hero of 1848 does not seem to have ever regained his old power in Paris.

At his funeral an enormous mass of Parisians gathered. His career had been honest, his devotion had been sincere. While the Empire lasted he had refused it allegiance; he had been loyal to France.

THE lives of Owen, Mazzini, Mill, Sumner, and Ledru Rollin, present several features of likeness. To the whole of these men the clergy were bitterly hostile, for each of them was an apostle of at least some chapter of the gospel of progress. The Welshman, Robert Owen, who taught the communism imperfectly shadowed out by Jesus and his Apostles, was denounced, with more than ordinary fierceness, from nearly every pulpit in England, the Bishop of Exeter encouraging the cry from his place in the House of Lords. The Italian, Joseph Mazzini, the greatest modern preacher of Republicanism, was excommunicated by the Pope, head of a Church always hostile to liberty, and the Italian patriot was anathematised by almost the whole of the Roman Catholic priesthood. The Englishman, John Stuart Mill, had scarcely been lowered into the grave, at Avignon, when the weak-brained and orthodox *Church Herald* yelled out its curses against the scarce-cold form of one who will always rank amongst the chief of Europe's thinkers; when John Stuart Mill was invited by the electors of Westminster to allow himself to be their candidate for election to Parliament, the cry of "heretic" was loudly raised by all sects of Christian preachers, and a

Liberal dignitary in the Church was bitterly assailed because he cast his ballot for the great logician. The New Englander, Charles Sumner, the Abolitionist, was preached against alike from Northern and Southern pulpits; the unfeed pleading of the Massachusetts barrister, on behalf of dark-skinned humanity, was impartially scorned by the sects who pretended to kneel to a common father: and last, though hardly least, in the value of its testimony, the Frenchman, Ledru Rollin's grave—surrounded by the many thousands of men and women who came to honour his civil burial—marked once more the hostility between progress and the Church.

Robert Owen, though he himself died poor, having devoted to popular redemption the fortune he had created, yet lived to see thousands lifted at least a little from their poverty by the practical co-operative efforts which gradually, and after many trials, grew out of his Socialistic theories. The glory of the experiment in infant education, which he first pressed at New Lanark, was, before he died, claimed by the very religious teachers who had so long hindered all education, and who must in time be destroyed by the rescue of children's brains from the control of priestly manipulators. Joseph Mazzini did not die until his much-loved Rome had been proclaimed the capital of Italy, and—though generations of education in liberty and self-reliance will be required to efface the trace of the Divine Bourbon in Naples and in Sicily—yet the lone man's life was not without its fruitful harvest. John Stuart Mill, dying ere his strength was spent, had nevertheless found himself recognised as the thought-maker of his people. Charles Sumner, who had spoken for freedom when angry and brutal men pointed revolvers in his face; who had continued to speak for abolition when the whole continent of America cried out that the speaking was hopeless; who had fallen in the Capitol—at the close of a grand speech against slavery—bathed in his own blood, shed by a felon hand; Charles Sumner lived to see his speech grow into law. And even Ledru Rollin survived long enough to see the Imperial sham fade away, and to hear the very peasantry of France utter their yearning cry for the Republicanism to which he had devoted himself.

It will not be until another age that full justice will, or can, be awarded to the memories of these men. Statues and monuments are readily erected to princes pensioned

for the merit accruing from accident of birth, or fortune of marriage; memorial stones are easily found to record great wealth and huge rent-rolls. For the dead who lived for the poor, and died in poverty; for the dead who struggled for freedom, and died worn out in the effort to burst the shackles theretofore worn by others; for the dead who, living, were not known by fashion, nor honoured by wealth; for these the monuments can only be slowly raised, as a new generation inherits, without obstacle, the prizes of social advancement and political freedom, which these dead won with bleeding hearts and wearied brains.

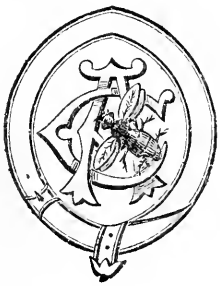
THE TRUE STORY

OF

MY PARLIAMENTARY STRUGGLE.

BY

CHARLES BRADLAUGH.



LONDON:
FREETHOUGHT PUBLISHING COMPANY,
28, STONECUTTER STREET, E.C.
1882.

PRICE SIXPENCE

LONDON:
PRINTED BY ANNIE BESANT AND CHARLES BRADLAUGH,
28, STONECUTTER STREET, E.C.

So much misapprehension and misrepresentation prevails as to what has really taken place in the House of Commons with reference to my Parliamentary struggle, that I reprint the Report of the Second Select Committee and the Evidence taken before such Committee, together with my three speeches at the bar and the resolutions of the House: these together giving the actual facts.

Ordered,—[Tuesday, 25th May 1880]:—THAT Mr. Bradlaugh, the Member for Northampton, having claimed at the Table of this House to make an Affirmation or Declaration instead of the Oath prescribed by Law, founding his claim upon the terms of the Act 29 & 30 Vict. c. 19, and the Evidence Amendment Acts of 1869 and 1870, and stating that he had been permitted to affirm in Courts of Justice by virtue of the said Evidence Amendment Acts: And it having been referred to a Select Committee to consider and report their opinion whether persons entitled, under the provisions of the Evidence Amendment Act, 1869, and the Evidence Amendment Act, 1870, to make a solemn Declaration instead of an Oath in Courts of Justice, may be admitted to make an Affirmation or Declaration instead of an Oath in this House, in pursuance of the Acts 29 & 30 Vict. c. 19, and 31 & 32 Vict. c. 72; And the said Committee, having reported that in their opinion such persons cannot be admitted to make an Affirmation or Declaration, instead of an Oath in pursuance of the said Acts:

And Mr. Bradlaugh having since come to the Table of the House for the purpose of taking the Oath prescribed by the 29 & 30 Vict. c. 19, and the 31 & 32 Vict. c. 72, and objection having been made to his taking the said Oath, it be referred to a Select Committee to inquire into and consider the facts and circumstances under which Mr. Bradlaugh claims to have the Oath prescribed by the 29 & 30 Vict. c. 19, and 31 & 32 Vict. c. 72, administered to him in this House, and also as to the Law applicable to such claim under such circumstances, and as to the right and jurisdiction of this House to refuse to allow the said form of the Oath to be administered to him, and to report thereon to the House, together with their opinion thereon.

Ordered,—[Friday, 28th May 1880]:—THAT the Committee do consist of twenty-three Members.

Committee nominated of—

Mr. Whitbread.
Sir John Holker.
Mr. John Bright.
Lord Henry Lennox.
Mr. Massey.
Mr. Staveley Hill.
Sir Henry Jackson.

Mr. Chaplin.
Mr. Serjeant Simon.
Mr. Secretary Childers.
Mr. Trevelyan.
Sir Richard Cross.
Mr. Gibson.

THAT the Committee have power to send for Persons, Papers, and Records.

THAT Five be the Quorum of the Committee.

REPORT.

THE SELECT COMMITTEE appointed to inquire into and consider the facts and circumstances under which Mr. BRADLAUGH claims to have the OATH prescribed by the 29 & 30 Vict., c. 19, and 31 and 32 Vict., c. 72, administered to him in this House; and also as to the LAW applicable to such claim under such circumstances; and as to the right and jurisdiction of this House to refuse to allow the said form of the OATH to be administered to him; and to Report thereon to the House, together with their Opinion thereon:—HAVE agreed to the following REPORT:—

IN pursuance of the terms of the reference to your Committee, they have inquired into and considered (1) the facts and circumstances under which Mr. Bradlaugh claims to have the oath prescribed by the Parliamentary Oaths Act, 1866, and the Promissory Oaths Act, 1868, administered to him in the House, (2) the Law applicable to such claim under such circumstances, and (3) the right and jurisdiction of the House to refuse to allow the form of the said Oath to be administered to him.

In order to carry out such inquiry and consideration, your Committee thought it right to examine Sir T. Erskine May as a witness before them. Mr. Bradlaugh applied to be permitted to make a statement to your Committee, and the application was granted. After such statement had been made by Mr. Bradlaugh, he submitted himself for examination, and was examined by any Members of your Committee who desired to put questions to him. Under the circumstances appearing in the Evidence and in the Appendix to this Report, your Committee admitted in evidence a letter written by Mr. Bradlaugh to certain newspapers, dated 20th May, 1880. All the evidence taken by your Committee appears in the Appendix to this Report.

Facts of the Case.

The facts and circumstances under which Mr. Bradlaugh claimed to take and subscribe the Oath are as follow: On Monday, the 3rd of May, Mr. Bradlaugh came to the Table of the House and claimed to be allowed to affirm, as a person for the time being by law permitted to make a solemn affirmation instead of taking an oath; and on being asked by the Clerk upon what grounds he claimed to make an affirmation, he said that he did so by virtue of the Evidence Amendment Acts, 1869 and 1870. Whereupon Mr. Speaker informed Mr. Bradlaugh, "that if he desired to address the House in explanation of his claim, he might be permitted to do so." In accordance with Mr. Speaker's intimation, Mr. Bradlaugh stated shortly that he relied on the Evidence Further Amendment Act, 1869, and the Evidence Amendment Act, 1870, adding, "I have repeatedly, for nine years past, made an affirmation in the highest courts of jurisdiction in this realm; I am ready to make such a declaration or affirmation." Thereupon Mr. Speaker acquainted the House that Mr. Bradlaugh having made such claim, he did not consider himself justified in determining it; and having grave doubts on the construction of the Acts above stated, he desired to refer the matter to the judgment of the House. Thereupon a Select Committee was appointed to consider and report their opinion whether persons entitled, under the provisions of the Evidence Amendment Acts, 1869 and 1870, to make a solemn declaration instead of an oath in courts of justice, might be admitted to make an affirmation or declaration instead of an oath, in pursuance of the Acts 29 & 30 Vict. c. 19, and 31 & 32 Vict. c. 72; and on the 20th of May the Committee reported that, in their opinion, persons so entitled could not be admitted to make such affirmation or declaration instead of an oath in the House of Commons.

On the day after the receipt of this Report, Mr. Bradlaugh presented himself at the table of the House to take and subscribe the Oath; and was proceeding to do so, when Sir Henry Drummond Wolff, one of the Members for Portsmouth, objected thereto, and Mr. Bradlaugh having been ordered to withdraw, Sir H. D. Wolff moved, "That, in the opinion of the House, Mr. Bradlaugh, the Member for Northampton,

ought not to be allowed to take the Oath which he then required to be administered to him, in consequence of his having previously claimed to make an affirmation or declaration instead of the Oath prescribed by law, founding his claim upon the terms of the Act 29 & 30 Vict. c. 19, and the Evidence Amendment Acts of 1869 and 1870; and on the ground that under the provisions of those Acts the presiding judge at a trial has been satisfied that the taking of an oath would have no binding effects on his conscience." This Motion was superseded by an Amendment appointing your Committee.

The Law Applicable to Mr. Bradlaugh's Claim.

Your Committee have been furnished by Sir T. Erskine May with a list of precedents which illustrate the jurisdiction and proceedings of the House in regard to the taking of Oaths. These precedents, and others which Mr. Bradlaugh placed before your Committee as bearing on the case, will be found in the Appendix to this Report. They may generally be divided into three classes: first, cases of refusal to take the Oath; secondly, claims to make an Affirmation, instead of taking the Oath; and, thirdly, claims to omit a portion of the Oath of Abjuration. Among them there is no precedent of any Member coming to the table to take and subscribe the Oath, who has not been allowed to do so, nor of any Member coming to the table and intimating expressly, or by necessary implication, that an oath would not, as an oath, be binding on his conscience. The present case is, therefore, one of first impression.

Now there is not only a *prima facie* right, but it is the duty of every Member who has been duly elected to take and subscribe the Oath, or to affirm according to the Statute. No instance has been brought to the attention of your Committee in which any inquiry has been made into the moral, religious, or political opinion of the person who was desirous to take any Promissory Oath, or of any objection being made to his taking such Oath. It would be impossible to foresee the evils which might arise if a contrary practice were sanctioned. But the question remains whether, if a Member when about to take the Oath should voluntarily make statements as to the binding effect of the

Oath on his conscience, it is not within the power of the House to take such statements into consideration, and determine whether such member would, if he went through the form of taking the Oath, be duly taking it within the provisions of the Statute. In the present instance, when Mr. Bradlaugh claimed under the Parliamentary Oaths Acts his right to affirm, and also stated that he had on several occasions been permitted in a Court of Justice to affirm, and had affirmed under the Evidence Amendment Acts, 1869 and 1870, he thereby in effect informed the House that on such occasions a judge of such court had been satisfied that an oath would have no binding effect upon his conscience. Your Committee did not think it right to accept this implication as conclusive without permitting Mr. Bradlaugh an opportunity of making a statement to, and giving evidence before, them. Nothing that has come before your Committee has affected or altered their views as to the effect of that which occurred when Mr. Bradlaugh claimed to affirm, as above stated.

As to the Right and Jurisdiction of the House.

As to the right and jurisdiction of the House to refuse to allow the form of the Oath prescribed to be taken by duly elected Members to be taken by them, your Committee are of opinion that there is and must be an inherent power in the House to require that the law by which the proceedings of the House and of its Members in reference to the taking of the Parliamentary Oath is regulated, be duly observed. But this does not imply that there is any power in the House to interrogate any Member desirous to take the Oath of Allegiance upon any subject in connection with his religious belief, or as to the extent the Oath will bind his conscience; or that there is any power in the House to hear any evidence in relation to such matters.

And your Committee are of opinion that by and in making the claim to affirm, Mr. Bradlaugh voluntarily brought to the notice of the House that on several occasions he had been permitted in a Court of Justice to affirm, under the Evidence Amendment Acts, 1869 and 1870, in order to enable him to do which a Judge of the Court must have been satisfied that an Oath was not binding upon Mr. Brad-

laugh's conscience ; and, as he stated he had acted upon such decisions by repeatedly making the Affirmation in Courts of Justice ; and, as above stated, nothing has appeared before your Committee to cause them to think Mr. Bradlaugh dissented from the correctness of such decisions, your Committee are of opinion that, under the circumstances, the compliance by Mr. Bradlaugh with the form used when an oath is taken would not be the taking of an Oath within the true meaning of the Statutes 29 Vict. c. 19. and 31 & 32 Vict. c. 72 ; and, therefore, that the House can, and in the opinion of your Committee ought, to prevent Mr. Bradlaugh going through this form.

But your Committee desire to point out to your Honorable House the position in which Mr. Bradlaugh will be placed if he is not allowed either to take the Oath or to affirm.

If the House of Commons prevent a duly elected Member from taking the Oath or Affirming, there is no power of reviewing or reversing that decision, however erroneous it may be in point of law.

But it appears to your Committee that if a Member should make and subscribe the Affirmation in place of taking and subscribing the Oath, it would be possible, by means of an action brought in the High Court of Justice, to test his legal right to make such Affirmation.

The Committee appointed to inquire into the law relating to the right of certain persons to affirm in effect recorded that Mr. Bradlaugh was not entitled by law to make the Affirmation.

But, from the fact that this Report was carried by the vote of the Chairman, thus showing a great division of opinion amongst the members of that Committee, the state of the law upon the subject cannot be regarded as satisfactorily determined. Under these circumstances it appears to your Committee that Mr. Bradlaugh should have an opportunity of having his statutory rights determined beyond doubt by being allowed to take the only step by which the legality of his making an Affirmation can be brought for decision before the High Court of Justice.

The House, by an exercise of its powers, can, doubtless, prevent Mr. Bradlaugh from obtaining such judicial decision ; but your Committee deprecate that course.

Your Committee accordingly recommend that should Mr. Bradlaugh again seek to make and subscribe the Affirmation he be not prevented from so doing.

16 *June*, 1880.

LIST OF WITNESSES.

Wednesday, 2*nd June*, 1880.

SIR THOMAS ERSKINE MAY, K.C.B.
MR. CHARLES BRADLAUGH, M.P.

Monday, 7*th June*, 1880.

MR. CHARLES BRADLAUGH, M.P.

MINUTES OF EVIDENCE.

Wednesday, 2*nd June*, 1880.

MEMBERS PRESENT:

Mr. Attorney General.
Mr. John Bright.
Mr. Childers.
Sir Richard Cross.
Mr. Gibson.
Sir Gabriel Goldney.
Mr. Grantham.
Mr. Staveley Hill.
Sir John Holker.
Mr. Beresford Hope.
Mr. Hopwood.
Sir Henry Jackson.
Lord Henry Lennox.
Mr. Massey.
Major Nolan.
Mr. Pemberton.
Mr. Serjeant Simon.
Mr. Solicitor General.
Mr. Trevelyan.
Mr. Walpole.
Mr. Whitbread.
Mr. Watkin Williams.

The Right Honorable SPENCER HORATIO WALPOLE in the Chair.

Sir THOMAS ERSKINE MAY, K.C.B.; Examined.

1. CHAIRMAN: You are the Clerk of the House of Commons?—I am.

2. You, I believe, are perfectly acquainted with what took place when Mr. Bradlaugh came to the table of the House, and proposed to make his affirmation instead of taking the oath?—Yes, I was personally present on that day.

3. Will you have the kindness to state to the Committee exactly what took place on that occasion, in order that we may have the facts upon our proceedings?—I will read what occurred, mainly from the Votes and Proceedings of the House, in which an accurate and authentic record of the proceedings of that day will be found. It appears that on Monday, the 3rd of May, 1880, "Mr. Bradlaugh, returned as one of the Members for the borough of Northampton, came to the table and delivered the following statement in writing to the Clerk: 'To the Right Honorable the Speaker of the House of Commons. I, the undersigned Charles Bradlaugh, beg respectfully to claim to be allowed to affirm, as a person for the time being by law permitted to make a solemn affirmation or declaration, instead of taking an oath. (Signed) CHARLES BRADLAUGH.' And being asked by the Clerk upon what grounds he claimed to make an affirmation, he answered: By virtue of the Evidence Amendment Acts, 1869 and 1870. Whereupon the Clerk reported to Mr. Speaker, that Mr. Bradlaugh, Member for the borough of Northampton, claimed to make an affirmation or declaration instead of taking the Oath prescribed by law, in virtue of the provisions of the Evidence Amendment Acts, 1869 and 1870. Mr. Speaker thereupon informed Mr. Bradlaugh that if he desired to address the House in explanation of his claim he might be permitted to do so. Mr. Bradlaugh addressed the House in accordance with Mr. Speaker's intimation, and then he was directed to withdraw." The Committee will observe that there is no entry in the Votes of the words used by Mr. Bradlaugh; it is not customary on such occasions to make an entry of the observations made, which are considered to be part of the debates of the House, which are not recorded in the Votes and Proceedings; and there was no shorthand writer

authorised by the House to take notes, and therefore there could have been no authentic record upon which one could rely.

4. Have you any reason to believe that something was said upon that occasion by Mr. Bradlaugh other than what appeared upon the Votes?—Mr. Bradlaugh's observations were very short. He repeated that he relied upon the Evidence Further Amendment Act, 1869, and the Evidence Amendment Act, 1870, adding, "I have repeatedly, for nine years past, made an affirmation in the highest courts of jurisdiction in this realm; I am ready to make such a declaration or affirmation." Substantially those were the words which he addressed to the Speaker.

5. What took place after that?—Whereupon Mr. Speaker addressed the House as follows: "I have now formally to acquaint the House that Mr. Bradlaugh, Member for the borough of Northampton, claims to make an affirmation or declaration instead of the oath prescribed by law. He founds this claim upon the terms of the 4th clause of the Act 29 and 30 Vict., c. 19, and the Evidence Amendment Acts, 1869 and 1870. I have not considered myself justified in determining this claim myself, having grave doubts on the construction of the Acts above stated, but desire to refer the matter to the judgment of the House."

6. That is substantially all that took place upon that occasion?—I presume the Committee will scarcely desire that I should proceed through all the subsequent Votes of the House in regard to the appointment of the Committees.

7. There is nothing beyond what you have stated which is material for the Committee to consider?—No, nothing besides what happened on that day in reference to this matter.

8. You are, of course, acquainted with the terms of the reference to this Committee.—Yes.

9. What were the proceedings which took place after the Report of the former Committee?—The Report of the Committee was ordered to lie upon the table, and no further proceedings were taken upon it; it lies upon the table at present.

10. Mr. Gibson: On what day was it laid upon the table?—On the 20th of May, the day on which the House assembled for business.

11. Mr. Attorney General: I think some of the members of the Committee would like to have some account of what took place in the interval between the time when Mr. Bradlaugh claimed to make the affirmation, and the time when he appeared at the table to take the Oath?—Mr. Bradlaugh presented himself at the table to be sworn on the 21st of May, the day after the receipt of the Report from the Committee; and if the Committee would desire it, I can read from the Minutes what took place upon that occasion. "Mr. Bradlaugh, returned as one of the Members for the borough of Northampton, came to the table to take and subscribe the Oath, and the Clerk was proceeding to administer the same to him, when Sir Henry Drummond Wolff, Member for Portsmouth, rose to take objection thereto, and submit a motion to the House; whereupon Mr. Speaker directed Mr. Bradlaugh to withdraw." And then, as the Committee are aware, several proceedings occurred, which extended over some days: the Committee will scarcely desire them to be read.

12. Chairman: Those proceedings are really stated in the Order of Reference to this Committee?—Yes.

13. Mr. Gibson: At what date did this Parliament meet for the first time?—On Thursday, the 29th of April.

14. And on what day did Mr. Bradlaugh claim to make the affirmation?—On Monday, the 3rd of May.

15. The swearing of Members had been going on in the meantime, had it not?—The swearing of Members began on Friday, the 30th of April.

16. You are acquainted with Mr. Bradlaugh's appearance; are you yourself aware whether he had been in the House during the swearing of Members on any of the intervening days?—He had been about the House, unquestionably.

17. Mr. Serjeant Simon: Mr. Bradlaugh was present, I believe, and voted when the Speaker was elected?—Yes; none of the members had then been sworn.

18. Chairman: Since this Committee has been appointed have you made a search into the Journals of the House for any precedents which bear upon the question before the Committee?—Yes, I directed the Clerk of the Journals to make a search for every precedent which would tend to illustrate the jurisdiction and proceedings of the House in regard to the taking of oaths.

19. What is the result of the search?—The result of that search is the paper which is upon the table to-day, and in the hands of all the Members of the Committee.

20. I see that one of those is a precedent of a Member disabled for having sat in the House without taking the Oath; then there is a precedent of a Member being admitted to sit without taking the Oath of Allegiance and Supremacy; then there are precedents of Members being discharged for declining to take the Oath; then there is a precedent of a Member, being a Quaker, refusing to take the Oath; then there is a precedent of a Member expelled for absconding, and not taking the Oath; then there is a precedent of a Member refusing to take the Oath of Supremacy; then there is a precedent of a Member, being a Quaker, claiming to make an affirmation; then there are precedents of Members omitting the words in the Oath of Abjuration, "on the true faith of a Christian;" and lastly, the precedent of a Member stating that he had a conscientious objection to take the Oath. I should like to ask whether there is any precedent amongst those of a member coming to the table and stating that he was ready to take the Oath, and any objection being taken to him in consequence of that statement?—No, there is no precedent to that effect, unless it might be argued that the case of Mr. O'Connell, in 1829, was, to a certain extent, analogous. He claimed, as the Committee are aware, to take the Oath recently provided by the Catholic Relief Act, and which, he contended, was the oath that he was entitled to take; it was a question of law whether that was the oath which he could take.

21. In that case he refused to take the old oath, and he offered to take the new oath under the Catholic Relief Act?—That is so.

22. And the House refused, I believe, to allow him to take that oath?—That was the case. I may state briefly that these precedents may generally be divided into three classes: first, cases of refusal to take the oath; secondly, claims to make an affirmation instead of taking the oath; and thirdly, claims to omit a portion of the Oath of Abjuration. With one or two exceptional cases, those three classes comprehend all the cases which have been laid before the Committee.

23. Mr. BRADLAUGH (through the Committee): I should

like to ask upon that whether the case of Daniel O'Connell was not a case of absolute refusal by the Member to take the oath required by law?—I think the best way will be, perhaps, to read the precedent from this paper, and then any inference can be drawn from it. It is at page 5. "Precedent of Member refusing to take the Oath of Supremacy; Daniel O'Connell, Esq., professing the Roman Catholic religion, returned knight of the shire for the county of Clare, being introduced in the usual manner, for the purpose of taking his seat, produced at the table a certificate of his having been sworn before two of the deputies appointed by the Lord Stewart, whereupon the Clerk tendered to him the Oaths of Allegiance, Supremacy, and Abjuration; upon which Mr. O'Connell stated that he was ready to take the Oaths of Allegiance and Abjuration, but that he could not take the Oath of Supremacy, and claimed the privilege of being allowed to take the oath set forth in the Act passed in the present Session of Parliament 'for the relief of His Majesty's Roman Catholic subjects'; whereupon the Clerk having stated the matter to Mr. Speaker, Mr. Speaker informed Mr. O'Connell that, according to his interpretation of the law, it was incumbent upon Mr. O'Connell to take the Oaths of Allegiance, Supremacy and Abjuration, and that the provisions of the new act applied only to Members returned after the commencement of the said Act, except in so far as regarded the repeal of the declaration against transubstantiation; And that Mr. O'Connell must withdraw unless he were prepared to take the Oaths of Allegiance, Supremacy, and Abjuration. Whereupon Mr. O'Connell withdrew. Motion, That Mr. O'Connell be called back and heard at the table. Debate arising, a Member stated that he was requested by Mr. O'Connell to desire that he might be heard. Debate adjourned. Resolved, That Mr. O'Connell, the Member for Clare, be heard at the bar, by himself, his counsel or agents, in respect of his claim to sit and vote in Parliament without taking the Oath of Supremacy. Mr. O'Connell was called in and heard accordingly: and being withdrawn; Resolved, That it is the opinion of this House that Mr. O'Connell, having been returned a Member of this House before the commencement of the Act passed in this Session of Parliament 'for the relief of His Majesty's Roman Catholic

subjects,' is not entitled to sit or vote in this House unless he first take the Oath of Supremacy. Ordered, That Mr. O'Connell do attend the House this day, and that Mr. Speaker do then communicate to him the said resolution, and ask him whether he will take the Oath of Supremacy. And the House being informed that Mr. O'Connell attended at the door, he was called to the Bar, and Mr. Speaker communicated to him the resolution of the House of yesterday, and the order thereon, as followeth." Then the resolution and the order are repeated. "And then Mr. Speaker, pursuant to the said order, asked Mr. O'Connell whether he would take the said Oath of Supremacy? Whereupon Mr. O'Connell requested to see the said Oath, which being shown to him accordingly, Mr. O'Connell stated that the said Oath contained one proposition which he knew to be false, and another proposition which he believed to be untrue; and that he therefore refused to take the said Oath of Supremacy. And then Mr. O'Connell was directed to withdraw, and he withdrew accordingly;" and then a new writ was ordered.

24. Mr. JOHN BRIGHT: Were those oaths separate oaths? —Yes, they were three separate oaths.

25. And they require three separate acts in taking them? —Yes.

26. Mr. ATTORNEY GENERAL: I think the result is that the House first determined that the Oath of Supremacy which ought to be taken by Mr. O'Connell was the old oath, and not the oath under the Catholic Relief Act?—Clearly.

27. And having determined that it was the old oath that required to be taken, Mr. O'Connell refused to take it?—Certainly.

28. Mr. BRADLAUGH (through the Committee): Have you searched for any precedent affecting the taking of the oath by a Member alleged to be disqualified or ineligible; has your attention been called to the case of John Horne Tooke, in Volume 35 of Parliamentary History, in the year 1801, commencing at page 956?—Not in respect of any question relating to oaths: it is not amongst these precedents.

29. As a fact, was Mr. John Horne Tooke's capacity to sit in the House challenged in this case?—Yes, as being

in Holy Orders, but not in relation to any question of taking the oath.

30. The next question that I have to ask is whether your attention has been called to the case of the alleged ineligibility of Francis Bacon, the King's Attorney General, in 1614, cited in the Commons Journal, Volume I., pp. 459 and 460?—No, my attention has not been directed to any questions of incapacity: it has been confined to questions arising out of the taking of the oaths prescribed by law.

31. There is one other question that I should like to ask, and that is whether your attention has been called to any case in which the House has discussed and dealt with the election of a Member, before that Committee was sworn?—With regard to the Jews, that would apply to Baron Rothschild and to Alderman Salomons.

32. I do not mean a case of a Member refusing to be sworn, but a case in which the House has dealt with the election before the Member had been sworn; has your attention been called to that?—No.

33. There is one case, the case of John Wilkes; the cases of O'Donovan Rossa and Mitchell were cases of legal disability; has your attention been called to any case in which the House has dealt with the election of a Member before he was sworn except for statutory disability?—Sir John Leedes sat in the House without having taken the Oath, and therefore he had clearly vacated his seat, and a new writ was issued.

34. I mean a case in which the Member has not been sworn, and in which there has been a discussion upon his eligibility outside the precedents which you have handed in; I refer to the case of John Wilkes, which is to be found in 38 Commons Journals, p. 977, and Cavendish's Parliamentary Debates, Volume I., extending over many hundred pages, commencing at 827. May I ask Sir Erskine May whether the practice has not been that when a Member appears to take the Oaths within the limited time, all other business is immediately to cease and not to be resumed until he has sworn and has subscribed the roll?—That was the old practice, but it has been superseded by a recent Standing Order under the Parliamentary Oaths Act of 1866, and the rule is now different; Members can be sworn until the

commencement of public business and afterwards; but no debate or business may be interrupted for that purpose.

35. That is not quite the question that I wish to put; the question that I wish to put is whether it is not now and has not always been the practice of the House that within a limited time, whatever that time may be, if a Member appears to take the oaths all other business is immediately to cease and not to be resumed until he has been sworn and has subscribed the Roll?—That was the old practice, when the oaths were required to be taken before four o'clock, but it has since been altered. This is the present Standing Order under which the oaths are administered, and this order was made in pursuance of the Parliamentary Oaths Act of 1866: "That Members may take and subscribe the Oath required by law at any time during the sitting of the House before the Orders of the Day and Notices of Motions have been entered upon, or after they have been disposed of, but no debate or business shall be interrupted for that purpose."

36. Then I again repeat my question, whether the practice has not been that a Member so appearing under the Standing Order just read to take the oath, all other business is immediately to cease and not to be resumed until he has been sworn and has subscribed the Roll?—I have already stated that such was the old practice, which has been distinctly and specifically superseded by the last Standing Order, which is now in force.

37. Is that the Standing Order which you have just read?—Yes, that is the Standing Order now in force.

38. Of course it will be a matter for argument whether it has altered it or not, but is there any other Order altering this practice except the one which you have just read?—There is no other Standing Order, and that Standing Order was made, as I have already stated, in pursuance of the Parliamentary Oaths Act of 1866, which authorised the House to make regulations with regard to the swearing of Members.

39. But except so far as it may have been altered by the Standing Order which you have just read, was the practice that a Member appearing to take the oath all other business was to cease, and not to be resumed until he had sworn and subscribed the Roll?—Yes, certainly.

40. Mr. Attorney General: The present Standing Order is dated the 30th April, 1866, is it not?—It is.

41. Mr. Bradlaugh (through the Committee): Are you aware that the House has refused to make any inquiry as to what is consistent, or what is not consistent with the Oath of Allegiance taken by a Member?—I presume that the reference must be to a case which arose in debate. That I do not consider, in any way, in point in the present inquiry, but the question was this: "In one case an attempt was made to obtain from a Member who was about to bring forward a motion, a repudiation of statements made elsewhere, which were alleged to be at variance with the oath he had taken; but the Speaker stated that it was no part of his duty to determine what was consistent with that oath, and that the terms of the motion were not in violation of any rules of the House." That was a point of Order, and had no reference whatever to the taking of the Oath.

42. Mr. Attorney General: What was the motion?—It is in the 210th volume of "Hansard's Debates," 3rd Series, page 252. It is at page 197 of my book, in a note.

43. Mr. John Bright: In what year?—On the 19th March, 1872; there is merely an incidental reference to it.

44. Mr. Bradlaugh (through the Committee): Are you aware of any precedent for the dealing by the House with the election of any Member not disqualified by statute or common law, until after that Member had sat and been sworn?—My attention has not been directed to any precedent bearing upon that precise point, but I apprehend that the fact of whether the Member had been sworn or not would not interfere with any proceedings. For example, under an election petition, if a Member's seat were contested, under the old system, the matter would have proceeded in the usual way, without reference to the question of whether the Member had taken the Oath or not.

45. But in such a case the Member would have been sworn, and would have sat until the question was decided?—Not necessarily; under the terms of the question I assume that he had not taken his seat.

46. Are there not very numerous cases in which with a petition against a Member for alleged statutory disqualification that Member has been sworn and has sat until the

decision?—Unquestionably; there can be no doubt about it; it frequently happens.

47. Then I ask whether there is any precedent whatever for the House dealing with a Member's election or his right to sit, except in cases of absolute statutory disqualification, until that Member has taken his seat and the oaths?—So far as I understand the question, I should say that whether the Member has been sworn, or not, the matter of his disqualification, or of his right to sit would be open to the decision of the House.

48. I am not arguing the point at the moment; I am only trying to get at the fact. If you have not looked for it, of course I cannot have it; but is there, so far as you know, any precedent of such a thing ever having happened?—I know of none; but I have not searched for any such precedent.

49. Mr. Attorney General: It would not appear, would it?—I hardly know how it would appear; unless one's attention were specifically drawn to any case, there would be no means of discovering it.

50. Mr. Bradlaugh (through the Committee): I will ask whether that question was not raised in the case of Wilkes, and whether it was not in the consideration of that case fully discussed, and whether the House did not resolve that any such dealing with a member was subversive of the rights of the whole body of electors of this kingdom?—I do not understand how that case has any bearing upon the present question.

51. There are three cases: one of expulsion, two of election annulled, and then ultimate reversal of the whole of that and expungment by the House?—Yes, but that has no bearing upon the present case. Of course, I am familiar with the case of Wilkes, but not in connection with any matter arising out of the administration of oaths, which is the special matter referred to this Committee.

52. Have you had your attention called to the Journal of the House of Commons, Vol. I., page 460, in which Sir Francis Bacon, the King's Attorney General, having sworn to his qualification, which was challenged, the House said, "Their oath, their own consciences to look into, not we to examine it?"—That case is not one of the precedents that we have collected.

Mr. BRADLAUGH: They are entered extremely curiously, and one can only take the decision. It begins on page 459, "Eligibility of the Attorney General," and it does not show there that it is Sir Francis Bacon: but I have learnt that by looking up the other records; and there being then a statutory declaration which lasted until a few years ago for all counsel, solicitors, and practising men of the law, it was objected that the King's Attorney General could not sit; it appears that he had to swear to his qualification, and the question of his oath and of his disqualification, being Attorney General, were put, and the House said, "Their oath, their own consciences to look into, not we to examine it," and they left him in the House, resolving that no future Attorney General should sit in it.

CHAIRMAN: That was the case which was raised as to whether the law officers of the Crown, who had for certain purposes seats in the House of Lords, had seats in the House of Commons.

Mr. BRADLAUGH: Not quite that. There was an obsolete statute of the 46th Edward III., which was only repealed eight or nine years ago, but which does not seem to have been attended to, by which all practising barristers and solicitors were disqualified for sitting for counties.

53. Mr. BERESFORD HOPE: Wilkes's precedent being expunged, is it still legible in the Journal, and could it be produced for historical information?—Certainly.

54. Major NOLAN: With regard to the evidence about O'Connell, I think you stated that an Act was passed to enable O'Connell and his co-religionists to sit in Parliament?—Not to enable O'Connell to sit in Parliament, but to enable Roman Catholics to sit in Parliament.

55. O'Connell was not allowed to take advantage of that Act until he was re-elected?—No, because he had been elected prior to the passing of the Act, and the Act was clearly prospective.

56. Was the wording of that particular statute the reason why he was not allowed to take advantage of that Act?—Certainly; distinctly.

57. Would it be possible for the present or any future

Parliament to pass an Act which would enable a man who had been elected previous to the passing of the Act to sit in the House?—It is not for me to say what Act of Parliament might be agreed to by Parliament, but that is quite a distinct case. In that case Mr. O'Connell had actually been elected when the Catholic Relief Act was passed, and there was a clause in the Act which made its operation prospective, and therefore distinctly, and, I believe, intentionally, excluding Mr. O'Connell from the benefits of the Act.

58. Then he was only prevented from taking advantage of that Act owing to the particular wording of that particular clause, and not owing to anything inherent in the House of Commons?—Yes; the decision was founded upon a literal construction of the words of the recent statute.

59. Mr. WHITBREAD: The case of Mr. O'Connell was this: that he declined to take the oath which was required of Members of Parliament elected at the time that he was elected, and that he requested to be allowed to take another form of oath; he was ordered to withdraw, and the House considered his case; is there anything that you have found in the Journals or in the Debates to indicate that if Mr. O'Connell had been willing to take the oath required of him by the House, the House would have objected to his so taking it?—Certainly not; they put it to him whether he would take the Oath of Supremacy, and upon the face of the Journal, it would seem that if he had taken that oath, he would have been admitted.

60. Mr. BRADLAUGH (through the Committee): After John Archdale had claimed to affirm, did not the House absolutely order him to attend in his place for the purpose of being sworn, and tender the oaths to him?—Mr. Archdale was ordered to attend, and the House being informed that Mr. Archdale attended according to order, his letter to Mr. Speaker was read. That letter is printed at full length among the precedents. "And the several statutes qualifying persons to come into and sit and vote in this House were read, viz., of the 30 Car. II., 1 Will. and Mariæ, and 7 & 8 Will. and Mariæ. And then the said Mr. Archdale was called in, and he came into the middle of the House, almost to the table; and Mr. Speaker, by direction of the House, asked him whether he had taken the oaths, or would

take the oaths, appointed to qualify himself to be a Member of this House; to which he answered, That in regard to a principle of his religion he had not taken the oaths, nor could take them; and then he withdrew, and a new writ was ordered."

61. Mr. Serjeant SIMON: With reference to what the Honorable Member for Bedford has put to you just now, Mr. O'Connell refused to take the Oath of Supremacy on the ground that it contained matter which he knew to be untrue, and other matter which he believed to be untrue?—Yes, he so stated.

62. Thereupon he withdrew; but is there any precedent among the Journals to show that a Member stating beforehand that what was contained in the oath was untrue, or a matter of unbelief to him, has been allowed to take the oath under such circumstances?—No, this is the only precedent, so far as I know, of that particular character. The others are cases of absolute refusal to take the oath, or a desire to make an affirmation instead of an oath, or to leave out certain words of the Oath.

63. But is there any precedent where, as in the case of Mr. O'Connell, a Member coming to the table of the House, has made a statement such as Mr. O'Connell made, that the oath contains matter which he knows to be untrue, or believes to be untrue, and has been allowed to take the oath afterwards?—There is no case to be found, so far as I know; certainly there is none in any of these precedents.

64. Mr. Secretary CHILDERS: Is the precedent in Mr. O'Connell's case this; that on the 15th May Mr. O'Connell said that he could not take the Oath of Supremacy, and that, nevertheless, on the 19th, he was asked whether he would take the Oath of Supremacy, although he had previously informed the House that he was unable to take it?—Yes, because he had been heard, in the interval, upon his claim to take the new oath, under the recent Catholic Relief Act.

65. But was not that a precedent for a Member who had already stated that he could not take a certain oath, nevertheless being afterwards asked by the House whether he would take it?—It so appears on the face of the precedents.

66. I will put that question again more clearly; is it not the case that, as appears on page 5 of the Paper which you

have placed before us, Mr. O'Connell on the 15th May said, that he could not take the Oath of Supremacy?—Yes.

67. And that, nevertheless, on the 19th of May it was ordered that Mr. Speaker do communicate to him the Resolution passed on the same day, and ask him whether he would take the Oath of Supremacy?—It was so.

68. Although the House was aware that Mr. O'Connell had said that he could not take it?—Yes; but as I observed before, in the interval he had been heard upon the question of his right to take the new oath; and that, I think, accounts for the fact that the question was repeated to him as to whether, after the decision of the House had been communicated, he still persisted in refusing to take the Oath of Supremacy.

69. Mr. Watkin Williams: Was not Mr. O'Connell's objection to taking the Oath of Supremacy an objection to the truth of the matter sworn to?—Yes, certainly; and it was an oath which no Roman Catholic could take.

70. It was the truth of the matter which he was asked to pledge his oath to that he objected to, and he did not express any disbelief in the binding character of the oath itself?—No. Every Roman Catholic objected to take the Oath of Supremacy; in fact, the Oath of Supremacy was expressly designed to exclude them from Parliament.

71. Mr. Attorney General: And in consequence of the objection a new form of oath was put in the Catholic Relief Bill?—Certainly, because the Oath of Supremacy was intended to exclude Roman Catholics, and did exclude them, and was known to exclude them.

72. Mr. Watkin Williams: It was not his inability to take the oath, but his inability to pledge himself to the truth of what he was asked to swear to?—Certainly.

73. Mr. Staveley Hill: I gather from you that the House never asked O'Connell to take the oath after his giving the grounds of recusancy?—Yes, that is so.

74. Mr. Serjeant Simon: It appears that the Speaker first asked him whether he would take the Oath of Supremacy, and then he says, No, and gives those reasons?—Yes.

75. Mr. Pemberton: In addition to Mr. O'Connell's having been heard after he had at first declined to take the oath, was there not some further discussion in the House

in which other Members took part?—Certainly; those Debates will all be found in Hansard.

76. Sir GABRIEL GOLDNEY: His refusal to take the oath in the first instance was accompanied by a claim at the same time to take the new oath?—Clearly.

77. It was a refusal to take the oath accompanied by a claim for a new one; afterwards he was allowed to be heard upon that point, and then it was that the House, having decided that he could not be admitted on the new oath, he was asked if he chose to take the old oath, which he refused to do?—That is a correct statement of the case.

78. Mr. HOPWOOD: With regard to the point of the Standing Orders as to which Mr. Bradlaugh has asked, as I understand you, under the old practice, as pointed out in Hatsell, and as we know it existed, the occasion of a Member coming to be sworn caused all other business to cease?—Yes.

79. And then as you say, a Standing Order was passed that particular times more appropriate should be allotted for taking those oaths?—Yes.

80. But even though that may be so at the time of taking an oath, no other business can go on?—Clearly not; it is the sole business that is transacted at the moment.

81. No other business can be interposed, and nothing else can be proceeded with but the oath of the Member?—Certainly not; it is the business of the moment, and no other business can interpose.

82. Mr. GIBSON: You have been asked by several honorable Members about O'Connell's case; in your opinion, is there the slightest analogy between the facts and circumstances in O'Connell's case and those of the case now before the Committee?—I see none myself, but I would rather leave such questions for the determination of the Committee. I have stated the case in print, and of course the points of difference are matters of argument.

83. So far as you know, is there any precedent for permitting a Member of the House of Commons to take the Oath after he has stated in the House expressly, or by necessary implication, that it will have no binding effect upon his conscience?—There is no such case on record, so far as I have had the means of ascertaining.

Mr. CHARLES BRADLAUGH, a Member of the House; Examined:

84. CHAIRMAN: You were in the room, I think, when Sir Thomas Erskine May gave that part of his evidence as to a matter which was not on the Votes and Proceedings?—Yes, but which took place upon the occasion of my first coming to offer to affirm.

85. Is that accurately and fully stated?—It is accurately and fully stated. I shall have to ask the indulgence of the Committee if in any of the points which I press there seems to be any undueness in the pressing of them, because, as far as I can see, this is the first occasion on which such a matter has arisen. In the reference which the Committee have to deal with, I claim to be sworn and take my seat by virtue of my due return, a return untainted by illegality of any description, and in pursuance of the Statute of the 5th of Richard II., which puts upon me the duty of coming here to be sworn and do my duty under penalty of fine and imprisonment. I do not know whether the Committee wish that I should read the Statute. It is the second Statute of Richard II.; it is on page 228 of the revised Statutes, Vol. I.; it is a Statute of the year 1382. I submit that although a Member may not sit and vote until he has taken the oaths, he is entitled to all the other privileges of a Member, and is otherwise regarded both by the House and the laws as qualified to serve, until some other disqualification has been shown to exist; and I quote in support of that Sir Thomas Erskine May's book, p. 202, that there is nothing in what I did in asking to affirm which in any way disqualified me from taking the Oath. The evidence that that is so is found in the case of Archdale, on page 3 of the Precedents handed in by Sir Thomas Erskine May, where, after John Archdale had claimed to affirm, he was called into the House, and Mr. Speaker, by direction of the House, asked him if he would take the oaths; that I have never at any time refused to take the Oath of Allegiance provided by Statute to be taken by Members; that all I did was, believing as I then did, that I had the right to affirm, to claim to affirm, and I was then absolutely silent as to the oath; that I did not refuse to take it, nor have I then or since expressed any mental reservation, or stated that the appointed Oath of

Allegiance would not be binding upon me; that, on the contrary, I say, and have said, that the essential part of the oath is in the fullest and most complete degree binding upon my honor and conscience, and that the repeating of words of asseveration does not in the slightest degree weaken the binding effect of the Oath of Allegiance upon me. I may say, that if it would be more convenient for any Member of the Committee to ask me any question upon my statement as I go on, it will not interrupt me at all.

86. I think the Committee would rather hear you through.—I submit that according to law the House of Commons has neither the right nor the jurisdiction to refuse to allow the said form of oath to be administered to me, there being no legal disqualification on my part of which the House can or ought to take notice, and there being on my part an express demand to take the Oath, this demand being unaccompanied by, and free from, any reservation or limitation. I submit that there is no case in which the Oath of Allegiance has been refused to any Member respectfully and unreservedly tendering himself to be sworn. I submit that any Member properly presenting himself to be sworn, and not refusing to be sworn, is entitled to be sworn, and to take his seat without interruption, and that the discussion of any disqualification or ineligibility must in such case, according to the practice and precedent of Parliament, take place after the Member has taken his seat; and I quote in support of that John Horne Tooke's case, which came before the House in 1801. It was alleged that John Horne Tooke was ineligible because he was an ordained clergyman of the Church of England. There he was allowed to take the oaths first, and after he had taken the oaths Earl Temple rose and said (I am quoting from page 956 of the Parliamentary History, Volume 35), that he observed a gentleman who had just retired from the table after having taken the Oaths whom he conceived to be incapable of having a seat in the House in consequence of his having taken priest's orders, and been inducted into a living. Earl Temple agreed he would wait to see if a petition were presented against him, and if not he should move a resolution upon the subject; and ultimately a resolution was moved that John Horne Tooke was ineligible. The House allowed John Horne Tooke to sit, but declared clergymen for the future

to be ineligible for sitting. I rely upon that as showing that the proper course to be pursued, supposing that any Member should think that I am ineligible, is to wait until I have been sworn and have taken my seat, and then to challenge it; and that this is clear, because if it were not so it would be possible for the first 41 Members sworn or for a majority of that 41, that is, for 21 Members to hinder the swearing of all Members coming later to the table without any remedy on the part of the Members aggrieved; and I submit, with great respect for the evidence of Sir Thomas Erskine May, that he has misapprehended the force of the Standing Order that he read to you. Hatsell's Precedents, Volume II., page 90, declares distinctly that when a Member appears to take the oaths within a limited time, all other business is immediately to cease, and not to be resumed until he has been sworn and has subscribed the Roll; and with great submission to Sir Thomas Erskine May, there is no word in the Standing Order which he quoted as altering and changing that practice, which does so alter and change it. All that the Standing Order does is to specify the time and the manner in which the Members might come to the table to be sworn, which had not been hitherto specified; but it does not in any way deal with what was to happen when they did come to the table to be sworn. And if the Committee would permit me respectfully to submit, it would be most dangerous to the House if it were not so. The first batch of Members called over by the Clerk of the House are sworn, and they may then, if the contention raised upon the Standing Order quoted by Sir Thomas Erskine May be correct, prevent every other Member being sworn, if there be more than 40. They may fulfil all the duties of a House of Commons, and do what they please, without any remedy, as the matter stands; every election might be declared null and void, and every one sent back to their constituencies one after another. I submit also that the case of the Attorney General, Sir Francis Bacon, Volume I. of the Commons Journal, page 459, is also a precedent in the same direction. I am obliged to tell the Committee that I cannot quote it with the same reliance that I can put upon Horne Tooke's case, for the notes seem to have been taken, I will not say irregularly, but they do not seem to convey the whole of what took place, and therefore

I can only deal with the result. Sir H. Hobart is quoted as being "the only attorney that hath been in this House;" and then there arises a discussion, some of which does not seem to me to be material, as to whether the then Attorney General could sit or not, and I find in the returns that the Attorney General at that date was Sir Francis Bacon, who, three days after this discussion, elected to sit for the University of Cambridge, and although I have not the legal evidence, because the returns are incomplete for that year, as he elected to sit for the University of Cambridge, the probability is that he had also been returned for a county. There was then a Statute of the 46th Edward III., which has only recently been repealed, which made a practising man of the law absolutely ineligible; and it also appears that there was some oath of qualification, of which I have not been able to find the words, which was then taken by a Member coming to the table; and it appears here that the Oath was alleged in the course of the discussion, and two things were said which I press upon the attention of the Committee; one, that the precedents to disable a Member ought to be shown on the side of those who seek to disable (it is not written so lengthily as that; the words are, "The precedents to disable him ought to be showed on the other side"), and the other is, "Their oath, their own consciences to look unto, not we to examine it," which meant, as I submit, that the House did not constitute itself into an Inquisition to look behind a man coming to take the Oath, but that, subject to his being dealt with by law if he had taken it improperly, or subject to a legal disqualification being made clear to the House, they assumed his oath to be properly taken. I submit that even Members absolutely petitioned against and alleged to be disqualified or ineligible by law, are always allowed to be sworn when they come to the table to be sworn and to sit pending the decision of the petition. The only cases which I have found of absolute legal disqualification in which the Member's election was annulled before he had entered the House, are the cases of Mitchell and O'Donovan Rossa (both of whom were away), and the case of John Wilkes, who was physically incapacitated from taking the oath from the act that he was in the custody of the law at the time, and those who held him would not have permitted him to come to the table to be

sworn. Those are the only cases even with an allegation of an absolute disqualification in the case of O'Donovan Rossa and Mitchell, and of a disqualification alleged, but not admitted, and not legal, not statutory, in the case of Wilkes, that I have been able to find; and in Wilkes's case the House has solemnly decided that it did wrong there, and I submit that it ought not to do it again. But here the return is not questioned. It is not pretended that there has been a single circumstance of illegality connected with the election, the sole point being, Am I qualified to sit? If I am qualified to sit, I have the duty to take the Oath, and the House has neither the right nor the jurisdiction to refuse the Oath to me, nor to interrupt me in the taking of it. If my qualification or eligibility to sit is to be discussed, the precedent for the proper mode of discussing that qualification is in Horne Tooke's case, and rightly so, because then I have the opportunity from my place in the House of defending myself, and of correcting any misstatements that may possibly be urged by Members who may be too anxious that I should not sit, supposing in any other House of Commons it should happen, and it then gives the Member attacked fair play. While I admit entirely that the House has a full and most complete right to expel any sitting Member, and this in its own discretion, and for any reasons in its wisdom sufficient, I submit that it has never done this without first calling upon the Member to be heard in his own defence, and that that cannot possibly happen until the Member is sworn and is sitting. I submit that while the House has the right to annul the election of a person absolutely disqualified by law, it has never, except in one case, that of John Wilkes, claimed the right to interfere, and in that case it ultimately expunged from its proceedings the whole of its hostile resolutions, as being subversive of the rights of the whole body of electors of this kingdom. I quote on that the Commons Journal, Vol. 38, 3rd of May 1782. I do not think that I should be right in troubling the Committee with the very strong arguments used time after time by Edmund Burke, Thomas Pitt, and others; but I want to point out this, that in addition to the charge on which John Wilkes was expelled from the House (and I am not questioning his original expulsion), there were also charges introduced against John Wilkes for his publications outside the

House. That will be found in 1st Cavendish, page 73 and page 129, and they are charges far exceeding anything (if I may judge from the reports which have even been put in) in relation to any supposed publications of my own. None of those charges were ultimately considered by the House to justify the interference of the House with the choice of the constituency. To use the words of Mr. Thomas Pitt, on page 350 of Cavendish, words endorsed by the House itself, "Nothing but a positive law can enable you to circumscribe the electors in their choice of a representative, however, indiscreet they may be in their choice." I consider now on what grounds is it claimed that the House of Commons has the right and jurisdiction, following the words of reference, to refuse to allow me to take and subscribe the Oath? Is it for a disqualification or ineligibility existing prior to my election and continuing down to the time of my election—I mean a disqualification or ineligibility created by Statute or existing at common law? No such disqualification is even pretended. Is it for a disqualification or ineligibility of like legal character arising since my election? No such disqualification is pretended. Is it for conduct not amounting to absolute disqualification legally, but conduct for which the House has in its discretion exercised its rights and jurisdictions by expelling a Member? It must be this, or it is nothing. If there is neither legal disqualification prior to my election, nor legal disqualification subsequent to my election, then there must be such conduct not amounting to absolute legal disqualification as would, were I a sitting Member, justify the House in using its discretion to expel a Member. But if that conduct be prior to the election, then I submit that the constituency is the sole and sovereign judge of the fitness of the candidate, such candidate not being legally disqualified, and that where the chosen and duly returned candidate is ready to perform his duties, this House has neither the right nor the jurisdiction to revoke the decision of the constituency; and that in the only case in which the House did so interfere it afterwards solemnly recorded that its conduct was illegal, as being subversive of the rights of the whole body of the electors of this kingdom. If the complaint against me is for conduct arising since my election, then I submit that even if such matters justify my expulsion as a Member, the point could only be raised after

I had been heard in my place against the Resolution, and that the matter could not arise until I have taken the Oath and become entitled to speak, sit, and vote. Manifestly this must be so, as otherwise it would always be in the power of a majority to exclude from coming to take his seat any Member to whom they might have an objection; and although such a thing is, luckily, not probable now, there have been times, even in the history of the House of Commons, when a majority, even of election committees, as I read in the Records of the House, have sought by mere prejudice to exclude Members. It is, therefore, the more necessary that at any rate a Member should have the right to be heard in his own defence. I submit that there is no precedent whatever for preventing a Member from taking his seat and the Oath, on the ground of conduct not amounting to absolute legal disqualification. There is no such precedent to be found at all, and I have searched very carefully indeed. I put the question to Sir Erskine May lest anything should have escaped me, and I say absolutely there is no precedent. Then I submit that it would not be consistent with the dignity of the House to examine any statement made by any Member outside the House, as to any of its procedure, and that in fact the House has firmly refused to allow a Member to be challenged as to whether or not some of his extra-Parliamentary utterances were inconsistent with his Oath of Allegiance; and here I should like the Committee to come to a decision, because it would alter and abridge my argument. If the Committee thought (I will put a suppositious case) that, say there were some document that they thought they had the right to take into consideration here, then while I should object to that, I should like to have the opportunity of addressing the Committee as to that. So far as the evidence has gone, I have not heard of any, except the mere statement in the House, only I judged from a question put by an honorable and learned Member that something was passing in his mind (which, by the way, did not seem to me to be the fact) justifying a question put to Sir Thomas Erskine May as to whether the Oath could be administered to a man who had done something either actually or by implication repudiating the effect of that Oath. I have heard nothing in the evidence, so far as it has gone, giving the slightest color or warranty for

such a question. If there are any facts to be dealt with by this Committee other than that, then I should like to know the facts, and to argue upon them; but it would be only wasting the time of the Committee to address argument to any point which the Committee would not think it right to consider; and I should be glad if, before going further into my statement, the Committee thought it right to intimate to me their view upon that.

The Committee deliberated.

87. CHAIRMAN: I think the Committee would like to understand from you the kind of objection that you are anticipating before you proceed with your argument; as I understood you, you took this kind of objection: "I wish to know whether the Committee are going into any proceedings external to the proceedings which took place in the House, or will entertain the consideration of those questions," and that if they did so you would wish to be heard upon that point; I understood you also to say that beyond that general question as to any proceedings which may have taken place as part of the transaction in any other place than the House itself, you wish to know whether the Committee would take such matter into their consideration; am I right in supposing that to be the character of your objection?—Not quite. Practically my question is this: Will this Committee take any facts into consideration other than those of which I have heard evidence given, and those which have been stated by myself in the course of my argument? If so, I should like to know, because I understood the permission of the Committee to be that I should address them at the close of the case before their deliberations, and I should submit with all respect that the Committee would not take one matter of fact into their consideration to influence them in their deliberations which I had not the opportunity of addressing them upon. If they have finished, and if there are no facts except those which I have heard to be dealt with, it enables me to turn out and eliminate a portion of the argument which I have prepared.

The Committee deliberated.

88. CHAIRMAN: The Committee have considered the matter which you have submitted to them, and they request me to inform you that members of the Committee do propose, after your statement is concluded, to ask some questions of

you; but I have to inform you, at the same time, that you will be invited, and are invited, to state any objections that you may entertain to any such questions when put, and that you shall have a full opportunity of addressing the Committee after they have heard your answers to the questions so put?—That will enable me to eliminate a portion of my argument. I wish to submit to the Committee one observation on the precedent of Daniel O'Connell, and that is that, as a matter of fact, the evidence of Sir Thomas Erskine May shows that he misapprehended that precedent. It was a refusal by Daniel O'Connell to take the Oaths by law required of a member at the date of his election. Between the date of his election and the date of his refusal the law had changed, but it had not changed (so the House interpreted the Statute, or so the Statute ran, I do not know which) at the date of his election. So that I submit that Daniel O'Connell's case is a case of a Member refusing to take the Oath by law required; and I further submit that the Parliamentary Debates will show that the words which appear as being used by Mr. O'Connell on the 19th of May, sufficiently expressed his reason for refusing to take the Oath of Supremacy some days at least before the House asked him again to take it. Then I have only two other matters which I should wish to submit to the Committee.' One is that I have, neither directly nor indirectly, obtruded upon the House, since I have been a Member, any of my utterances or publications upon any subject whatever; that there is no precedent, except in the case of John Wilkes, for any reference on the part of any opposing Member to such publications by any Member prior to the taking of his seat; and that the ultimate decision of the House in John Wilkes's case is directly against the introduction by any Member hostile to me of any such matter as a reason for my not being allowed to take my seat. Finally, I most respectfully submit that I have grave matter of complaint that my privileges as a Member of the House of Commons have been seriously infringed, and that the rights of the electors, my constituents, have been ignored in the attacks made upon me without previous notice to me; attacks to which I had no opportunity of making a dignified reply; attacks which, if the newspaper reports be accurate, were in many instances based upon absolute misapprehension or

misquotation of my publications, and in one instance at any rate, based upon the most extreme misrepresentation of my conduct. I thank the Committee for listening to me, and I regret if my want of knowledge of the forms of the House has involved my saying anything in a manner in which the Committee would prefer that I should not have said it.

89. That is all you wish to state at present?—That is all I wish to state at present upon the evidence as taken by the Committee. If fresh evidence should be taken, I should ask the permission of the Committee to have the right of addressing them upon that.

90. The Committee will now proceed to examine you.—Before any question is put to me, will you, Sir, tell me when is the proper time to object to any question which I may think I have the right to object to?

91. When the question is put, before answering it?—

Mr. Attorney General: You will understand that I am not in any sense cross-examining you, but merely to clear up what took place in the House.

I am entirely in the hands of the Committee.

92. We know from the Proceedings of the House that you did at the table of the House make a claim, in the first instance, to make affirmation instead of taking the oath?—Yes.

93. And we understand that you did so on the ground that you were a person entitled to make affirmation within the terms of the Evidence Amendment Acts of 1869 and 1870?—That was then my impression of the law, and that was the claim which I made.

94. And I presume, of course, that at the time when you made that claim you founded it upon the belief that you were entitled to make affirmation in the House of Commons?—I made that claim solely upon my belief that the law entitled me to make it.

95. Then as regards your power to give evidence under the Evidence Amendment Acts in courts both civil and criminal, you of course put it before the House of Commons, as a fact, that you were a person entitled in those courts to make affirmation?—Yes.

96. And I presume that you were acquainted with the terms of those Acts, the subject interesting you?—Quite.

97. Were you aware that if you yourself were called as

a witness, it would be necessary before you were allowed to make affirmation in a court, either civil or criminal, under the Acts of 1869 and 1870, that two things should be established; first, that you yourself objected to take the oath, or that your right to take it was objected to by some one else; and then, secondly, that the judge would be required to satisfy himself that the taking of an oath by you would have no binding effect upon your conscience?—No, that is not my interpretation of the Statute, nor do I think it has always been (although I think it has sometimes been) the interpretation of the judge or other presiding officer dealing with it.

98. Would you kindly explain your own view as to the sense in which you read the statute of 1869, which says that the judge must satisfy himself that the oath is not binding upon the conscience of the person wishing to affirm, the words being, "If any person called to give evidence in any court of justice, whether in a civil or criminal proceeding, shall object to take an oath, or shall be objected to as incompetent to take an oath, such person shall, if the presiding judge is satisfied that an oath would have no binding effect on his conscience, make the following promise and declaration"?—My interpretation is that upon certain answers being given by the witness, the judge is bound to take his affirmation, even supposing that the judge himself should not be of opinion that the oath is not binding upon him; and it has been decided so by the Court of Queen's Bench. In the case of *ex parte* Lennard *v.* Woolrych, a man tendered his affirmation at the Westminster Police Court, and the magistrate asked him (I am repeating from memory, but repeating perfectly accurately the substance of what appears in the affidavits filed in the Court of Queen's Bench), "Why do you object?" He said, "I am an Atheist." The magistrate refused to allow him to give evidence upon affirmation, and the court held that upon hearing that answer there was enough under the Act, and that the magistrate was bound to take the man's evidence, and issued a mandamus to compel him.

99. You will not suppose that I am arguing with you, but as I understand that case the witness who tendered himself having said he was an Atheist, the court held that the magistrate was bound to draw the inference from that

assertion that the oath was not binding, and therefore to let him make the affirmation?—That is so. Whether the presiding officer did draw the inference or not, the court held that he was bound to.

100. Then I do not think that there is much difference between us; but I assume that when you come to the table of the House of Commons, and asked leave to make affirmation instead of taking the Oath, you were a person, as I understand it, who, if you had gone into a court of justice and made the same request, would have been held by the presiding judge to be one upon whom the oath would have no binding effect?—I did think so when I applied to affirm. I do not think so since the Report of your Committee, for your Committee has reported that the two oaths are entirely different.

101. It is a question for you: do you draw any distinction between the binding effect upon your conscience of the Assertory Oath, as it is called, and the Promissory Oath?—Most certainly I do. The Testimony Oath is not binding upon my conscience, because there is another form which the law has provided which I may take, which is more consonant with my feelings. The Promissory Oath is and will be binding upon my conscience if I take it, because the law, as interpreted by your Committee, says that it is the form which I am to take, and the Statute requires me to take it.

102. Pray do not answer this question unless you like: am I to understand you that the binding effect upon your conscience of the Oath depends upon whether there is an alternative method of taking that which is to you equivalent to the oath?—No, most certainly not. Any form that I went through, any oath that I took, I should regard as binding upon my conscience in the fullest degree. I would go through no form, I would take no oath, unless I meant it to be so binding.

103. Pray object if you do not wish to answer this question: By virtue of what do you regard that assertion which you make within the Oath as binding?—I have not caught your question, if you will pardon me for saying so.

104. By virtue of what portion of what is contained in the Oath do you feel that your conscience is bound; is it by the mere fact that you repeat the words therein contained, or is it by that which is contained in the form of the Oath?

—Those words, "I do swear that I will be faithful and bear true allegiance to her Majesty Queen Victoria, her heirs and successors, according to law," are to me, binding in the most full and complete and thorough degree on my conscience.

105. If you read a promise out of any book or paper, and said, "I promise so to do," is there more binding effect in those words that you have read than in the mere ordinary assertion of a promise?—Yes, because this reading is by law, and by the decision of your Committee intended to be the form in which I pledge my allegiance as a Member.

106. Then if it were a form sanctioned by law, as in the case of an affirmation, is there any more effect upon your mind if you take it in the form of what we call an oath than if you took it simply by words of affirmation or promise?—If the form sanctioned by law ran "I affirm," or "I declare and affirm," or "I solemnly and sincerely declare and affirm that I will be faithful and bear true allegiance to her Majesty Queen Victoria, her heirs and successors, according to law," that would be equally binding upon my conscience.

107. Do you attach any express or particular meaning to the words "I swear"?—The meaning that I attach to them is that they are a pledge upon my conscience to the truth of the declaration which I am making.

108. But a pledge given, may I ask, to whom?—A pledge given to the properly constituted authorities, whomsoever they may be, who are entitled to receive it from me.

109. Do you attribute any more meaning to those words than a pledge to human beings around you?—I attach no more meaning to those words than I do to a pledge to human beings authorised by law to take such a pledge from me under similar solemn circumstances.

110. But the solemn circumstances, I suppose, are the mere mundane circumstances?—The statutory circumstances. I meant "solemn" simply in the sense of being the statutory circumstances; I meant to distinguish between that and mere conversation.

111. I think we understand from your answers that you do not attribute any more weight to the use of the words "I swear," and to the words "So help me God," than you would to an ordinary promise if it were given under the

same circumstances as those under which you gave that promise in the House of Commons?—I conceive myself entitled by law to distinguish, and I beg therefore to object to so much of the question as deals with the words "So help me God," my objection being founded on the case of Miller *v.* Salomons, in the 17th Jurist, and the case of the Lancaster and Carlisle Railway Company *v.* Heaton in the 4th Jurist, new series.

112. I presume by that answer you mean that "So help me, God" is no part of the oath or promise, but merely the form in which it is taken?—That is so; it is merely a form of asseveration.

113. Will you confine yourself, then, to the words "I swear"?—I will.

114. Do you attribute any greater weight or any meaning to the words "I swear," and to the fact of kissing the book, beyond the words of ordinary promise?—Not beyond the words of ordinary promise made under statutory obligation.

115. Then what greater weight do you attach to a promise made under statutory obligation than to an ordinary promise?—I would prefer not making any promise that I did not intend to keep; but the law has attached a weight to statutory promises, and a penalty and disgrace on the breaking of them.

116. That is a consequence resulting from human action; you do not attribute any other weight to such a promise beyond what results from such penalties?—I object to that question.

117. I will now go to another point. How lately is it that you have claimed a right to affirm in a court of law?—In a superior court or in an inferior court?

118. In any court where you have taken an oath?—Recently in an inferior court, within a few days.

119. How lately prior to your claim in the House of Commons?—Prior to my claim in the House of Commons, about 12 months.

120. You had made a claim on several occasions, I suppose, prior to the period which you have just mentioned?—Yes.

121. What steps, if any, were taken by the judge on such occasions to arrive at the conclusion that the oath would have no binding effect?—On the last occasion, by Mr.

Justice Lindley, none. I presume he thought my claim to affirm well founded, and he simply bowed his head, and the clerk administered the affirmation after looking to him.

122. I suppose you made a claim to affirm?—When the clerk brought the Testament to the witness-box I said, "I desire to affirm," and the clerk looked at Mr. Justice Lindley, who just bowed his head (he happened to be the presiding judge), and I did affirm.

123. Had you reason to think that Mr. Justice Lindley was acquainted with any previous applications by you to affirm?—I should think it possible, because the claim to affirm has been the subject of considerable litigation by myself in the courts.

124. Upon any occasion upon which the judge did make inquiry, what was the nature of the inquiry?—The present Lord Justice Brett, whom I remember distinctly challenging me upon it when he was Mr. Justice Brett, said: "Why do you claim, Mr. Bradlaugh?" and I perfectly remember my answer, but I am just thinking whether I am not entitled to say this: that happened seven years ago; I do not intend to imply that there is any change or anything since, but I think I am entitled to say to this Committee that it is hardly within the limits of their reference to inquire into something that happened in a law court between myself and a judge seven years ago.

125. I should not have asked the question, but you have stated in the House of Commons yourself, in order to support your claim to make affirmation, that you have frequently been permitted to affirm?—That is so.

126. And I think you gave the last nine or ten years?—Yes, and Mr. Justice Brett's question came within that time. I hope you will not consider that I am putting the objection unfairly. What I want to put is this: that the conversation which took place on the occasion of my having affirmed (and I repeat that I have affirmed before different judges) being more or less informal, ought not to be the subject of inquiry by this Committee. The fact is of record. Those were all at *Nisi Prius*.

127. It was before a judge who would have to administer an oath?—Quite so.

128. If you state that you really entertain an objection to the question, I do not wish to press it myself personally?—

I have no objection to answering, except that I have purposely tried to keep out of this discussion any question of my views; otherwise I am quite in the hands of the Committee, and if the Committee are disposed to press the question I will give the answer, having made my objection.

129. I do not wish to go into the views generally entertained by you, except so far as expressed by you that the Testimony Oath had no binding effect upon your conscience?—My answer applied to the Assertory or Testimony Oath.

130. I am asking you what you stated when a Testimony Oath was being administered to you; but if you desire not to answer the question, so far as I, an individual member of the Committee, am concerned, I do not wish to put it to you?—I take the objection.

131. Mr. GIBSON: Can you recall whether within any time since your right to affirm was first recognised in courts of justice, you have taken the Oath?—Never; that is to say, the oath as a witness.

132. Have you ever taken any oath since your right to affirm was first admitted in courts of justice?—It only has been my right to affirm as a witness that has been admitted in a court of justice; I have under cover of that Act, but I think illegally, affirmed as foreman of a special jury, but I have considerable doubt whether the Act covered my affirmation as a juryman.

133. With that knowledge now present to your mind, is it the fact that the oath which you seek to take at the table of the House is, if you are permitted to take it, the first oath that you will have taken since you were permitted to affirm in courts of justice?—It is the first occasion upon which there has been any reason for my taking or not taking the Oath of Allegiance since I have been permitted to affirm.

134. Or any other form of oath?—My memory is not quite clear upon that; I am not sure. There was a case in which I took evidence as a Commissioner from America, and I am not at all sure whether the completion of that Commission was before or after the passing of the Affirmation Act.

135. But since the passing of the Act?—I cannot quite pledge my mind as to that; but except in that case in which

I was a Commissioner for taking some evidence in relation to an American process, in which I may have done so, I certainly have not.

136. Then am I to understand that you seek now to take this oath with exactly the same meaning in your mind as you would take the affirmation?—Which affirmation?

137. The affirmation which you originally sought to take at the table of the House, the Promissory Affirmation?—I seek to take the Oath of Allegiance just as I should seek to take the Affirmation of Allegiance.

138. And do you attach in your mind no different meaning to the word "swear" than you would to the word "affirm?"—The law does not.

139. Do you, in your own mind, attach any difference to the sanction?—I object that the question put to me asks me to make a distinguishment which the law does not make.

140. I do not wish to press anything to which you object; do you desire to tell the Committee that, in your own mind, there is no distinction drawn when you use the word "affirm" and when you use the word "swear"?—To me, on the Statute they have the same meaning; that is, they are a pledge that what I put after those words is binding upon me in the most complete degree.

141. I suppose you are aware of all the ordinary definitions of an oath contained in the law books?—I am afraid that would be saying more than I have any right to say. I am fairly well read, but not sufficiently to say that I know them all.

142. You know a great many of them, I suppose?—I have learnt a few.

143. You said to my honorable and learned friend, the Attorney General, that you regarded the word "swear" as a pledge given to a properly constituted authority, and that that was the meaning you attached to the word "swear"; what do you mean by the "properly constituted authority" that you referred to in that answer?—Whatever may be the authority established by Statute for the purpose of taking such an oath.

144. A human authority?—All authorities established by Statute for the taking of oaths are human authorities

Any authority outside a Statute is illegal, and any person administering such an oath is indictable.

145. You are aware of the meaning of the expression "sanction of an oath"; what do you consider would be the sanction of the Oath if you took it?—I am not sure that I apprehend the meaning that is in your mind when you use the words "sanction of an oath."

146. I will read the definition which is contained in Mr. Baron Martin's judgment in the case of Miller *v.* Salomon's, where it refers to the case of Omichund *v.* Barker, as reported in the "Law Journal": "The doctrine laid down by the Lord Chancellor (Hardwicke) (Omichund *v.* Barker), and all the other judges, was that the essence of an oath was an appeal to a Supreme Being in whose existence the person taking the oath believed, and whom he also believed to be a rewarder of truth and an avenger of falsehood, and that the form of taking an oath was a mere outward act, and not essential to the oath which might be administered to all persons according to their own peculiar religious opinions, and in such manner as most affected their consciences." You have listened to that statement?—Yes; and I have also read the judgment of the Court of Error in the following year, in which they say that the essential words of the oath are those without the appeal, and that the words "So help me, God" are words of asseveration, the manner of taking the oath; but the words preceding them are, it appears to me, an essential part of the oath; and in the case of the Lancaster and Carlisle Railway Company *v.* Heaton, it was held that the oath was completely taken without the addition of that appeal.

147. I am not at all upon the words "So help me, God," which are the words referred to in the last case to which you referred. I am now upon what contains a promise that an oath is being taken when a man uses the word "swear"; do you object to the definition which I have read?—I object to that definition as overruled by the Court of Error in its final decision in error, confirmed by a subsequent decision of Lord Campbell in the Lancaster and Carlisle Railway Company *v.* Heaton, when it was held that the appeal was not a part of the oath.

148. CHAIRMAN: In both those cases I think the judges in holding that view had reference simply to the words

"So help me, God"?—Simply to the words "So help me, God.

149. I think we are a little misunderstanding each other? —I hope not; I want to be candid with the Committee.

150. Mr. GIBSON: I am not at all on the words which that case went on of "So help me, God," but I am on what must be the essential distinction between an oath and an affirmation; what, I ask you now, do you conceive to be the essential distinction between an oath and an affirmation?— Following the judgment of the Court of Error, repeated in the other judgment which I quoted, I regard the essential words of the oath as beginning with "I swear," and ending with "according to law." I submit that it is no part of my duty to draw any distinction, if distinction exists, between the value of that and the value of an affirmation, because the Statute has declared that they both have the same value.

151. Do you consider that the taking of an oath implies in the person taking it the existence of a belief in God, and that he will reward and punish us according to our deserts? —That depends upon the form of the oath; and since the decision you quoted very many forms of oath have been entirely changed by the Legislature.

152. Do you consider that if you use the word "swear," you appeal to a God?—I consider that I take an oath which is binding upon my honor and conscience.

153. Without any reference to God?—I consider that I take an oath which is binding upon my honor and conscience.

154. And supposing that you break that oath, what what would be the consequences which you consider would result to you?—I am not aware that the Statute has provided that I shall declare my opinion upon those consequences.

155. Am I to understand that you decline to answer?—I am objecting that the question is one which would not be put in a court of law, and therefore, much more, should not be put here.

156. In answer to the Attorney General, and in your statement also, you used the words "essential part of the Oath," and the words of the Oath are, "I do swear that I will be faithful and bear true allegiance to Her Majesty

Queen Victoria, her heirs and successors, according to law;" do you consider that all the words there present to your mind are equally definite and clear meaning?—I consider that the whole of those words are essential; I hold them to be essential, and I submit myself to the construction which the Court has put upon them.

157. Is there any word in the Oath in the Statute which does not convey to your mind any clear and definite meaning?—There is no word in that which does not convey to me a clear and definite meaning.

158. And do you regard the words at the end of it, "So help me, God," as conveying any definite meaning, or merely as a useless addendum to the promise?—I object that this Committee will not ask me my opinion upon those words, because they have been held by the highest court of law in this realm, subject to appeal, to be no necessary part of the Oath.

159. Sir HENRY JACKSON: If your counsel were here I should put to him this question, which do not answer if you object; I will treat you as if you were your own counsel; I understand your view to be that the Act of 1866 or the Act of 1868, gives you two alternative methods of taking your seat, the one of affirmation and the other of oath, and that it is open to you to take whichever of the two you prefer; you prefer the affirmation, but it having been decided not to be competent for you to make the affirmation, you now propose to take the Oath?—That is exactly my construction.

160. Now I will tell you my doubt, and perhaps you will be good enough to tell me what you say upon it. It occurs to me that these two alternatives are what lawyers call true alternatives; that is to say, that each excludes the other, and that the Committee having decided (perhaps you will say erroneously) that you cannot affirm, you have by your claim to affirm excluded yourself from the alternative claim to take the Oath; are not the two mutually exclusive?—No; the House of Commons decided that, fortunately for me, and that saves me the trouble of thinking on it for myself. When John Archdale applied to affirm, the House held that he could not affirm, and they ordered him to take the Oath.

161. Was that under the Statute which regulates the

present procedure?—No, but it was under the claim of a man who thought that he had alternative courses, and who refused to take the Oath.

162. That is the answer which you give to my doubt?—I am not sure whether I have answered fully.

163. You do not condescend to any argument upon the Statute, but you think that the one alternative is not exclusive of the other?—I thought then, and subject to the Report of the Committee against me, which I presume binds me, I should still think that I have the right to affirm, and if there were any way in which I thought I could legally raise the question, I should try to do so.

164. But on the hypothesis that the decision of the Committee was right, have you anything except the Archdale precedent, from which you would argue that these two Acts of Parliament do not create two mutually exclusive alternatives?—I should simply reply that if that be so, and you told me that I did not come within the one, I must come within the other.

165. Mr. Staveley Hill: I wish to ask you one question with reference to what took place before Lord Justice Brett (then Mr. Justice Brett), and, of course, if you think proper, you will take the objection as you did to what the Attorney General asked you: when Mr. Justice Brett admitted you to affirm, what steps did he take with a view to satisfy himself that an oath would not be binding upon your conscience?—He put to me the question, "Why?" and I gave to him three words as an answer, and these three words apparently satisfied him, and he directed the clerk to allow me to affirm. He put no question to me as to whether the oath was binding upon me or not.

166. Have you any objection to tell the Committee what those three words were?—The question put by Mr. Justice Brett was, "Why?" I object to tell the answer, because it would be an inquiry into a man's religious opinions, and Sir George Grey, in introducing the Parliamentary Oaths Act in 1866, under which I claim, said, "We will make no inquiry into any man's religious opinions; let the constituencies be the judges of that."

167. But those three words, whatever they were, satisfied Mr. Justice Brett that an oath would not be binding upon your conscience?—I cannot say that, but they satisfied him

sufficiently that he gave the clerk directions to allow me to affirm.

168. When did that take place?—About eight years ago, speaking roughly; it may be six or seven years, but I am not certain about the time.

169. Was it reported in the newspapers, and is it generally known?—I am not sure; there have been cases reported.

170. Mr. PEMBERTON: I wish to ask whether, since you were returned as a Member of this House, and since the Report of the last Committee, you authorised the publication of a letter which appeared in the newspapers of the 21st of May in reference to the proceedings which have taken place on this matter?—I ask that the question may not be put to me, because I say that the House has already decided that they will not put any inquiry to a member as to what happens outside the House to determine what was consistent with the Oath, or not.

171. Of course I do not press the question more than to remind you that it had reference to proceedings which have taken place in this House, and in a Committee of this House?—Many things I have read (I do not know whether they are accurate or inaccurate), speeches made by Members referring to proceedings in this House, and to that Committee in relation to this matter. To put it roughly, I should submit that this Committee should not examine me as to extra-Parliamentary utterances in reply to extra-Parliamentary utterances. For example, one honorable Member, Sir Henry Drummond Wolff, made a speech at Chichester——

172. Lord HENRY LENNOX: Not at Chichester?—The papers said so; they may be very likely wrong, only it shows still more, I submit, the force of the objection that extra-Parliamentary publications in reply to extra-Parliamentary utterances should not be the subject of questions before this Committee.

173. Mr. PEMBERTON: I will only again point out that it was not in reply to an extra-Parliamentary utterance, but had reference to proceedings in this House?—That assumes what would be passing in the mind of the writer and what he had in view in assuming it, and I decline to discuss any subject of that kind.

174. I am to take it that you decline to answer the question?—No, I object to answer it. If the Committee think that I ought to answer it I will answer it. I do not take a legal objection. You quite understand that if the Committee think I ought to answer it, I will answer it at once.

The Committee deliberated.

CHAIRMAN: The Committee have come unanimously to the conclusion that the question put by the honorable Member for East Kent ought to be answered; but, in arriving at that conclusion, I am requested to inform you what I will now read: "That the Committee think Mr. Bradlaugh should answer the question put to him by Mr. Pemberton, on the ground that it refers to matters written by him directly in relation to the question involved in the order of reference to the Committee, and for the purpose of expressing his views on such questions since the claim was made by him to make the affirmation, and before the appointment of the Committee."

175. Mr. PEMBERTON: I wish to ask whether, since you were returned as a Member of this House, and since the Report of the last Committee, you authorised the publication of a letter which appeared in the newspapers of the 21st May, in reference to the proceedings which have taken place on this matter, such letter being signed in your name?—I think one of the members of the Committee has a copy, which I handed to him; I have not seen the print; and as I sent to all the newspapers a lithographed copy, I prefer, for greater accuracy, to ask him to return it to me. I hold in my hand a copy which I have no doubt is the same.

176. CHAIRMAN: Do you object to that letter being put in?—The moment the Committee decided that I ought to answer that question, I had no reserve in saying that I left myself in the hands of the Committee on it. I shall take the liberty of wishing to address a word or two to the Committee presently upon it. *(The letter was handed in.)*

177. Mr. WATKIN WILLIAMS: Do you propose to take the Oath in the form given in the Statute of 1868, which I will read to you: "I., A. B., do swear that I will be faithful and bear true allegiance to her Majesty Queen

Victoria, her heirs and successors, according to law. So help me, God?"—I do, that being the form in the Statute.

178. If you are permitted to take that oath, do you intend the Committee to understand and believe that it will be binding upon your conscience as an oath?—Yes.

179. In taking such oath, do you consider yourself as appealing to some Supreme Being as a witness that you are speaking the truth?—I submit that having said that I regard the oath as binding upon my conscience, this Committee has neither the right nor the duty to further interrogate my conscience.

180. Sir RICHARD CROSS: You know of course that in taking the oath in the form prescribed by the Statute, and according to the custom of taking oaths, you will have to kiss the Testament: do you attach the smallest weight to the kissing of that book?—I attach the weight attached by the law to the whole of the formula.

181. Do you attach the smallest weight to the kissing of the book; do you think that the kissing of that book adds in the slightest degree to the weight upon your conscience of the words which you have already spoken without kissing the book?—The law has said that the whole of that is to be complete; I have not the right, therefore, to form an opinion, or to formulate an opinion as to how much of that I would leave out had I any choice in the matter.

182. Then do you attach any further importance to the word "swear" in the oath itself, and to the fact of the kissing of the book than if the word "swear" were written "affirm," and no kissing of the book were required?—I have already said that I attach to the complete affirmation the most complete binding effect on my conscience. If I were allowed a preference, I would and still prefer the affirmation. The law says that the oath is the form, and I shall regard that form as in all its respects binding upon my conscience.

183. Do you look upon the kissing of that particular book as adding any more sanction than the kissing of any other book?—I decline to do that which the law has not done; the law has not split up the formula into parts, and expressed an opinion upon each part separately, and I deny the right of the Committee to ask me to do that which the law has not done.

184. I will ask you one other question; do not answer it unless you like?—I will not.

185. Do you think that the fact of the kissing of that book has any relation to an appeal to a Supreme Being, that you will, before Him, perform the oath which you have taken?—The law has not required me, in any case, to express an opinion as to that by itself. As to the whole Oath I have expressed an opinion.

186. As regards the kissing of that book, would you look upon that, so far as your conscience is concerned, as an idle form?—The law has not required me to look upon it by itself, and I dispute the right of the Committee to divide the Oath into parts, and to take one part by itself without the other. I have already answered that the whole of the Oath when taken by me, and if taken by me, will be binding upon my conscience.

187. But still you consider that a certain part of that Oath, which the Statute imposes upon you the necessity to take, is an idle, and empty, and meaningless form?—I have never said so at any time.

188. But do you consider it so?—Most certainly I do not consider the most considerable portion of it an idle and empty form.

189. Some portion of it, I said?—I consider no portion of the essential Oath an idle and empty form.

190. That is to say, that you would take the Oath because the Statute says you must do so in order to take your seat?—That is not so. I take the Oath because the Statute says that I must do so, intending to be bound in my honor and conscience by the oath I take. Every Member takes the Oath because he must do so in order to take his seat, and he could not take it without it.

191. But you do not think that the forms of the Oath, as settled by law, adds anything to the binding of your conscience further than saying "I solemnly affirm"?—Your question presumes a form of thought which I have not enunciated.

192. Mr. JOHN BRIGHT: Do I understand you aright that you have never said that the oath, as you propose to take it, is less binding upon your conscience than it is supposed to be on the consciences of other men?—I have never said so; and in 1868, when I stood for election, there being

then no form of affirmation possible for me, I had gravely considered the question.

193. It is within your knowledge that some men, and not a few men, who do not absolutely refuse to take an oath, still greatly prefer to make an affirmation?—If it would not be impertinent to say it, many Members of the House have told me so since this question has been pending.

194. CHAIRMAN: I think you said, when I informed you that the Committee thought that the letter should be put in, that it was a subject upon which you wished to make an observation?—I wish just to make the slightest observation upon that, and upon one or two points that arose in questions that have been put to me. If the Committee would allow me to think for a moment I believe I can compress it within very slight limits.

195. Sir GABRIEL GOLDNEY: Your statement to Mr. Justice Brett, I understood, you would think over?—No, that my answer did not apply to. If the Committee think that I ought to answer that question in the same way, the question as to the three words, or rather four words, that I answered to Mr. Justice Brett, I am quite in the hands of the Committee, and Ishould not decline to answer them.

196. Mr. STAVELEY HILL: The reason why I asked you what they were, and where they were to be found if you did not answer the question, was on purpose that one might look for them, because it must be a matter of public notoriety what the words were?—I should think it very possible. I have taken my objection, and if there is even a thought in the Committee that I had better answer the question, I should not object to do so.

197. CHAIRMAN: What are the observations which you wish to offer in consequence of your examination?—As the House will now have before it the statement, I ask the Committee in examining it to take it complete, not to separate one or two words in it and to take those without the countervailing words, and to remember that in this letter I declare that the oath, if I take it, would bind me, and I now repeat that in the most distinct and formal manner; that the Oath of Allegiance, viz.: "I do swear that I will be faithful and bear true allegiance to her Majesty Queen Victoria, her heirs and successors, according to law," will, when I take it, be most fully, completely, and unreservedly binding upon

my honor and conscience; and I crave leave to refer to the unanimous judgment of the full Court of the Exchequer Chamber, in the case of Miller *v.* Salomons, 17th Jurist, page 463, and to the case of the Lancaster and Carlisle Railway Company *v.* Heaton, 4th Jurist, new series, page 708, for the distinguishment between the words of asseveration and the essential words of an oath. But I also desire to add, and I do this most solemnly and unreservedly, that the taking and subscribing, or repeating of those words of asseveration, will in no degree weaken the binding effect of the oath on my conscience. I should like, finally, simply to submit to the Committee, and especially to the honorable and learned gentleman on the left of the Chairman, that there has not been from the beginning to the end of this matter, any declaration, either distinct or implied, that the Oath if taken by me would be less binding upon me than upon him; and I do submit to this Committee that this House has never sought to inquire or to distinguish in any fashion as to the religious views of its Members, except so far as any of them have found themselves obliged by their conscience to refuse to comply with some form that the House has put before them. On the contrary, in the Lords' protest on the discussion of the Promissory Oaths Municipal Bill, Lord Holland and other Lords put it in the most distinct fashion that no sort of inquisition and no sort of inquiry ought to be tolerated involving any examination of a man's theological views. Lord Holland added, in words better than I can command: "That there is no tribunal which he knows competent to make that examination, and that the purely secular and political duties called upon to be performed were not such as to entitle that examination to be made." I thank the Committee for having listened to me, and I submit myself to their decision.

198. CHAIRMAN: You mentioned some precedents which you thought might usefully be added to the list of precedents which we have already had: could you conveniently add those cases?—Yes, I will do so.

Monday, 7th June 1880.

MEMBERS PRESENT:

Mr. Attorney General.	Mr. Hopwood.
Mr. John Bright.	Lord. Henry Lennox
Mr. Secretary Childers.	Sir Henry Jackson.
Mr. Chaplin.	Mr. Massey.
Sir Richard Cross.	Major Nolan.
Mr. Gibson.	Mr. Pemberton.
Mr. Grantham.	Mr. Serjeant Simon.
Mr. Staveley Hill.	Mr. Solicitor General.
Sir John Holker.	Mr. Trevelyan.
Mr. Beresford Hope.	Mr. Walpole.

The Right Honorable SPENCER HORATIO WALPOLE, in the Chair.

Mr. CHARLES BRADLAUGH, a member of the House; further Examined.

199. CHAIRMAN: There was some reference, I think, made to you by Mr. Whitbread, with regard to which you desire to make some observations?—There was a point urged by Mr. Whitbread upon the first Committee. I do not know whether I should be in order in referring to it. I thought it had been sufficiently covered by what I had said, until I reflected upon it, and then I thought it had not. I wish to submit to this Committee that it ought not to consider that I claimed to affirm because I regarded the oath as not binding upon my conscience, under the spirit of the Evidence Further Amendment Act, 1869, for that Statute runs: "If any one shall object to take an oath, or be objected to as incompetent to take an oath;" and that it is quite possible (perhaps wrongly, and undoubtedly wrongly, as the Committee have so decided) that I might claim to affirm, objecting to take the oath, and that the Committee have not on the evidence here either the right or the duty to assume anything more as against me in dealing with it now. That is all I wish to put before the Committee.

APPENDIX.

Appendix No. 1.

PRECEDENTS RELATIVE TO PARLIAMENTARY OATHS.

PRECEDENT of a MEMBER disabled for having sat in the House without taking the Oath.

Sir JOHN LEEDES hath been in the House and not taken the Oath.

Sir John Leedes not to come into the House till further Order.

Sir E. COKE: That by the law Sir J. Leedes is disabled to serve this Parliament, and therefore ought to be discharged, and a new Writ.

Mr. PAWLETT, accordant.

Sir J. STRANGWAYS: Can pretend no ignorance, for a Member of the House last Parliament.

Mr. CREW, for Sir J. Leedes: No question but he is incapable. 2. He is to be punished.

Resolved, Sir J. Leedes incapable of being a Member of this House, as if never returned.

Mr. HACKWYLL: To have him removed; a Writ for a new choice; and to punish him, by sending him to the Tower.

Sir G. MOORE: To have no question made, but where it is questioned.

Mr. SECRETARY: The fault great, especially because of last Parliament. To order, he shall be discharged now, and to serve no more this Parliament.

Sir J. Leedes, brought to the Bar, confesseth he was of the House last meeting in Parliament; and that he hath sit this Parliament in the House, and hath not taken his Oath.

Mr. T. FANSHAW: That he must be punished as one that hath come into the House, not being chosen.

Sir E. SANDES: To pay the Serjeant his fees, and no further punishment; because, but negligence, no presumption, and is willing to take the Oath.

Mr. CHIDLEY: To have an order to disable him for this Parliament.

A Warrant for a new Writ in his room.

PRECEDENT of a MEMBER Admitted to sit without taking the OATHS of ALLEGIANCE and SUPREMACY.

Ordered, That WILLIAM AYRES, Esquire, being legally elected and returned a Member of this House, his election being returned and remitted of Record, shall be admitted to sit in this House, without taking the Oaths of Supremacy and Allegiance.

Ordered, That an Ordinance be brought in by Mr. Lisle, to-morrow morning, for repealing that clause in the Act of * * That no person be admitted to sit as a Member of this House, before he hath taken the Oath of Allegiance and Supremacy.

Ordered, That all and every the Sheriffs of the respective counties in England and Wales do henceforth execute their several places and offices of Sheriffs of their several and respective counties, according to the duty of their said office, without taking the Oaths of Allegiance and Supremacy.

PRECEDENT of a MEMBER Discharged for declining to take the OATHS.

The House being informed, that Sir HENRY MOUNSON attended, according to the Order on Saturday last;

Resolved, That he be called in, and tendered the Oaths and Declaration directed to be taken, made, repeated, and subscribed by the Members of the House.

He was called in accordingly; and came up to the table: And Mr. Speaker acquainted him, That the House had taken notice that he had been about the town a considerable time; but yet did not attend the service of the House: And that he had directions to tender him the Oaths and the Declarations.

Whereupon, Sir Henry Mounson said: That he was sorry

that for some reasons he could not comply to qualify himself to sit in the House: But that those reasons would no way incline him to disturb the Government; and that he submitted himself to the House.

And then withdrew.

Resolved, That Sir Henry Mounson be discharged from being a Member of the House.

New Writ Ordered.

PRECEDENT of a MEMBER Discharged for declining to take the OATHS.

The House being informed, That the Lord FANSHAW attended at the door, according to the order of Saturday last.

Resolved, That he be called in, and tendered the Oaths and Declaration, directed to be taken, made, repeated, and subscribed by the Members of the House.

He was called in accordingly; and came up to the table: And Mr. Speaker acquainted him, That the House had taken notice that he had been about the town a considerable time; but yet did not attend the Service of the House; and that he had direction to tender him the Oaths and Declaration.

Whereupon the Lord Fanshaw said, that it was true, he had been about town a great while indeed; but had been in the country, if his health would have permitted him; but that he had been in a strict course of physick, and was in the same condition still of physick and diet; but, however, that since he was absent there was an Act of Parliament passed for taking the Oaths; and he was not qualified to sit in the House, in regard he was not satisfied to take the Oaths; and therefore he could not appear.

And then withdrew.

Resolved, That the Lord Fanshaw be discharged from being a Member of the House.

And there being a Petition in, touching the Election, the granting a new Writ was respited.

PRECEDENT of a MEMBER Committed to the TOWER for declining to take the OATHS.

The House being acquainted, that Mr. CHOLMLY attended according to their order of Tuesday last;

He was called in, and came up to the table: And Mr Speaker, by the direction of the House, acquainted him to this effect, viz., That the House had taken notice of his being absent from their service a considerable time, and that now he was come he was to tender him, and accordingly did tender him, the Oaths of Allegiance and Supremacy appointed to be taken by the Members of the House, according to an Act of this present Parliament.

To which Mr. Cholmly replied, That as to his absence, both when he was in the country and since he came to town, he had been infirm and lame, and had been under the doctor's hands, and could not as yet recover himself. And that he had endeavored to qualify himself to be a sitting Member of the House, by taking the Oaths, as the House expects, but that he could not as yet do it: And therefore humbly submitted himself to the House; and that he did it not out of any wilful humor.

Upon which he was commanded to withdraw.

And being withdrawn accordingly;

Resolved, That Francis Cholmly, Esquire, a Member of this House, for his contempt in refusing to take the Oaths, * * , be committed Prisoner to the Tower of London.

Ordered, That the Serjeant-at-Arms attending this House do take into his custody the said Mr. Cholmly, and convey him to the Tower: And that Mr. Speaker do issue his Warrant for that purpose.

PRECEDENT of a MEMBER, being a QUAKER, refusing to take the OATH.

House called over,

And the name of John Archdale, Esquire, a burgess for the borough of Chipping Wicomb, in the county of Bucks, being called over a second time:

Mr. Speaker acquainted the House that Mr. Archdale had been with him this morning, and delivered him a letter sealed, which Mr. Speaker presented to the House.

And the same was opened and read, and is as followeth, viz.:—

"London, the 3rd of the 11th month, called January 1698—9.

"Sir.

"Upon the call of the House it will appear that I am duly chosen and returned to serve in Parliament for the borough of Chipping Wycomb, in the county of Bucks; and, therefore, I request of thee to acquaint the honorable House of Commons the reason I have not as yet appeared, which is, that the burgesses being voluntarily inclined to elect me, I did not oppose their inclinations, believing that my declarations of fidelity, etc., might, in this case, as in others, where the law requires an oath, be accepted, I am, therefore, ready to execute my trust if the House think fit to admit of me thereupon; which I do humbly submit to their wisdom and justice; and shall acquiesce with what they will be pleased to determine therein: This being all at present, I remain,

"Thy real and obliged friend,

"JOHN ARCHDALE."

Day appointed for considering the contents of the said letter.

Mr. Archdale ordered to attend.

The House being informed, that Mr. Archdale attended according to order;

His letter to Mr. Speaker was again read;

And the several statutes qualifying persons to come into and sit and vote in this House were read, viz., of the 30 Car. II., 1 Will. and Mariæ, and 7 and 8 Will. and Mariæ.

And then the said Mr. Archdale was called in,

And he came into the middle of the House, almost to the table;

And Mr. Speaker, by direction of the House, asked him whether he had taken the Oaths or would take the Oaths, appointed to qualify himself to be a member of this House; To which he answered, That in regard to a principle of his religion he had not taken the Oaths, nor could take them.

And then he withdrew.

A new Writ ordered.

PRECEDENT of a MEMBER expelled for absconding, and not taking the OATHS.

The House was called over according to order.

And the names of such as made default to appear were taken down.

Ordered, That the names of such as made default be now called over.

And they were called over accordingly.

And several of them appeared, and others were excused upon account of their being ill, some in the country, some in town; and others upon account of their being in the country upon extraordinary occasions; and some as being upon the road.

Upon calling over the names of * * LEWIS PRICE, Esquire, * * they were not excused.

Several Members sent for.

Ordered, That Lewis Price, Esquire, be sent for, in custody of the Serjeant-at-Arms attending this House.

The Serjeant-at-Arms being called upon to give the House an account of what he had done in relation to Lewis Pryse, Esquire, who was, the 8th of August last, ordered to be sent for in custody, for not attending the Service of the House; he acquainted the House, That the messenger he sent to bring up Mr. Pryse, had been at his house at Gargathen, but that he was not there; nor could the messenger have any intelligence where he was.

Ordered, That Lewis Pryse, Esquire, do surrender himself into the custody of the Serjeant-at-Arms attending this House, by this day month at the farthest, upon pain of occurring the farther displeasure of this House, and of being proceeded against with the utmost severity.

The order of the 2nd of February last being read requiring Lewis Pryse, Esquire, to surrender himself into the custody of the Serjeant-at-Arms attending this House by that day month at farthest;

The Serjeant was called upon to know whether he had heard from the said Mr. Pryse, and he acquainted the House, That he had not heard from him.

Mr. Speaker acquainted the House, that he had received a letter from the said Mr. Pryse, and he delivered the same

to the Clerk to be read; and the same was read accordingly, and is as follows, viz.:

"Sir,

"'Tis with pleasure that I embrace every opportunity of returning you my acknowledgments for the good offices you have done me, as often as the case of my unavoidable absence has come under debate in the House. The repeated experience I have had of your friendship in this point, encourages me to hope for the continuance of them, which I shall not offer to desire longer than the reasonableness of my case shall appear to deserve them.

"I beg leave once more to represent it to you; and through your assistance to the honorable House; whose displeasure as it is a very sensible affliction to me, I should be glad by any means in my power to remove. That as it is impracticable for me to attend by the time appointed, because of a very severe fit of the gout which I am now afflicted with, and thereby give satisfaction to the House in the method they have insisted on; I hope they will accept of such as is in my power, and give me a favorable hearing when I represent to them, that I was chose knight of the shire of Cardigan when I was at 100 miles distant from it, and had been absent thence for ten months before the time of my election; which I was so far from seeking, that I never asked a vote for it, and was chose even against my inclinations.

"I know not how far a man is obliged to stand to the choice a county makes of him. Sure I am that I have reason to complain of a force that has administered the occasion of my disobliging the honorable House, by an absence caused by infirmities, under which I labored at the time of my choice, and which have continued upon me ever since with the greatest severity, and with little or no intermission.

"In these circumstances I would fain hope that the honorable House will rather blame the country's choice than him who has been unwillingly forced into a post, and lies under the misfortune (for I flatter myself 'twill not be thought a crime) of not being able to attend the business of it; and will therefore lay aside their displeasure, and remit the sentence ordered against me.

"And I am the rather encouraged to hope this, because

Mr. Prynne, in his comment on the fourth book of Sir Edward Coke's Institutes, shows, from various records, that incurable distempers have been constantly allowed by the House for a just excuse of non-attendance; and upon debates in such cases, no other punishment has been inflicted than excusing the service of the Member, and ordering a new writ for electing a person duly qualified, and capable of attending the business of the House. This being the course of Parliamentary proceedings in such cases as mine, which I have now truly represented to you, and can produce hundreds of witnesses to confirm, I hope that the unhappy incapacity I am under of attending the service of the House, will be thought to deserve no severer treatment than has been usual in the like cases; and that my ready submission to the honorable House's pleasure in this point, will be a means to restore me to their favorable opinion, and engage you to promote the request of

"Your most obliged and obedient humble servant,

"LE PRYSE.

"Aberllefenny, 18th February, 1715.

"I know not how far the House in their last order about me, might be influenced by any report of the messenger who came down to my house; but to prevent misrepresentation I think it proper to assure you, that within three days after a very dangerous fit of the gout suffered me to come downstairs, I came from thence hither to my father-in-law's, eighteen miles in my way to London. But the motion of even so small a journey brought another fit upon me immediately, with which I have been laid up here ever since, and not having been yet so much as able to return to my own house."

Then the journal of the * day of May, 1689, in the case of Mr. Cholmondley was read.

(House interrupted—Conference.)

The House resumed the consideration of the matter relating to Mr. Pryse.

Resolved, That Lewis Pryse, Esquire, a Member of this House, having been sent for in custody of the Serjeant-at-Arms attending this House, the 8th day of August last, for not attending the service of this House, and having never qualified himself as a Member of this House, by taking the oaths at the table, be forthwith brought up in custody

The Messenger gives the House an account of what he had done pursuant to the order of the House.

Resolved, That Lewis Pryse, Esquire, a Member of this House, having been sent for in custody of the Serjeant-at-Arms attending this House, the 8th day of August last, for not attending the service of this House, and having never qualified himself as a Member of this House by taking the Oaths at the table; and having been on the 2nd of February last summoned to surrender himself into custody of the Serjeant-at-Arms, upon pain of being proceeded against with the utmost severity, and he having absconded, and peremptorily refused to surrender himself into custody, be, for the same contempt, expelled this House.

PRECEDENT of a MEMBER refusing to take the OATH of SUPREMACY.

DANIEL O'CONNELL, Esq., professing the Roman Catholic religion, returned Knight of the Shire for the County of Clare, being introduced in the usual manner, for the purpose of taking his seat, produced at the table a certificate of his having been sworn before two of the deputies appointed by the Lord Steward, whereupon the clerk tendered to him the Oaths of Allegiance, Supremacy, and Abjuration; upon which Mr. O'Connell stated, that he was ready to take the Oaths of Allegiance and Abjuration, but that he could not take the Oath of Supremacy, and claimed the privilege of being allowed to take the Oath set forth in the Act passed in the present Session of Parliament "for the Relief of his Majesty's Roman Catholic Subjects;" whereupon the Clerk having stated the matter to Mr. Speaker, Mr. Speaker informed Mr. O'Connell that, according to his interpretation of the law, it was incumbent on Mr. O'Connell to take the Oaths of Allegiance, Supremacy, and Abjuration, and that the provisions of the new Act applied only to Members returned after the commencement of the said Act, except in so far as regarded the repeal of the Declaration against transubstantiation; and that Mr. O'Connell must withdraw unless he were prepared to take the Oaths of Allegiance, Supremacy, and Abjuration.

Whereupon Mr. O'Connell withdrew.

Motion, That Mr. O'Connell be called back and heard at the table. Debate arising.

A Member stated that he was requested by Mr. O'Connell to desire that he might be heard.

Debate adjourned.

Resolved, That Mr. O'Connell, the Member for Clare, be heard at the Bar, by himself, his counsel or agents, in respect of his claim to sit and vote in Parliament without taking the Oath of Supremacy.

Mr. O'Connell was called in, and heard accordingly: And being withdrawn;

Resolved, That it is the opinion of this House, that Mr. O'Connell having been returned a Member of this House before the commencement of the Act passed in this Session of Parliament "for the Relief of his Majesty's Roman Catholic Subjects," is not entitled to sit or vote in this House unless he first take the Oath of Supremacy.

Ordered, That Mr. O'Connell do attend the House this day, and that Mr. Speaker do then communicate to him the said resolution, and ask him whether he will take the Oath of Supremacy.

And the House being informed that Mr. O'Connell attended at the door, he was called to the Bar, and Mr. Speaker communicated to him the resolution of the House of yesterday, and the order thereupon, as followeth:—

Resolved, That it is the opinion of this House, that Mr. O'Connell having been returned a Member of this House before the commencement of the Act passed in this Session of Parliament, "for the Relief of his Majesty's Roman Catholic Subjects," is not entitled to sit or vote in this House unless he first take the Oath of Supremacy.

Ordered, That Mr. O'Connell do attend the House this day, and that Mr. Speaker do then communicate to him the said resolution, and ask him whether he will take the Oath of Supremacy.

And then Mr. Speaker, pursuant to the said order, asked Mr. O'Connell whether he would take the said Oath of Supremacy? Whereupon Mr. O'Connell requested to see the said Oath, which being shown to him accordingly, Mr. O'Connell stated that the said Oath contained one proposition which he knew to be false, and another proposition

which he believed to be untrue; and that he therefore refused to take the said Oath of Supremacy.

And then Mr. O'Connell was directed to withdraw; and he withdrew accordingly.

Ordered, That Mr. Speaker do issue his warrant to the Clerk of the Crown in Ireland to make out (subject to the provisions of an Act passed in this Session of Parliament, intituled, "An Act to amend certain Acts of the Parliament of Ireland relative to the election of Members to serve in Parliament, and to regulate the qualification of persons to vote at the election of Knights of the Shire of Ireland") a new writ for the electing of a Knight of the Shire to serve in this present Parliament for the County of Clare, in the room of Daniel O'Connell, Esq., who, having been returned a Member of this House before the commencement of an Act passed in this Session of Parliament "for the Relief of his Majesty's Roman Catholic Subjects," has refused to qualify himself to sit and vote as a Member of this House, by taking the Oath of Supremacy.

PRECEDENT of a MEMBER being a QUAKER, claiming to make an AFFIRMATION.

Several Members attended at the table to take the Oaths; and Joseph Pease, Esquire, returned for the Southern Division of the County of Durham, having stated that, being one of the people called Quakers, he claimed the privilege of making an Affirmation, instead of taking the Oaths; whereupon he was desired by Mr. Speaker to retire until the sense of the House could be taken upon his claim; and he retired accordingly.

Ordered, That a Select Committee be appointed to search the Journals of the House, and to report to the House such precedents, and such Acts or parts of Acts of Parliament as relate to the right of the people called Quakers to take their seats in Parliament, and to the privilege conferred upon them to make their solemn Affirmation in Courts of Justice, and other places where by law an Oath is allowed, authorised, or required to be taken.

Report:—

Resolved, That it appears to this House, that Joseph Pease is entitled to take his seat upon making his solemn Affirmation

and Declaration to the effect of the Oaths directed to be taken at the table of this House.

The Counsel and Agents in the case of the Coleraine Election, being returned to the bar, the Clerk appointed to attend the said Committee delivered into the House a reduced List; and the same was called over, and is as follows:—

* * * * *

And the Members of the Committee being as usual, come to the Table to be sworn, and Joseph Pease, Esquire, a Quaker, being one of the said Members, Mr. Speaker submitted to the House whether Mr. Pease was capable of serving on the said Election Committee without having been sworn.

* * * * *

And the House being unanimously of opinion, That Mr. Pease was capable of serving on the said Committee;

The rest of the Committee were sworn, and Mr. Pease made his solemn Affirmation, as follows:

* * * * *

PRECEDENT of a MEMBER omitting the words in the OATH of ABJURATION "On the true Faith of a Christian."

The Baron LIONEL NATHAN DE ROTHSCHILD, returned as one of the members for the City of London, came to the table to be sworn; and being asked by the Clerk what Oath he wished to take, the Protestant or the Roman Catholic Oath, he replied, "I desire to be sworn upon the Old Testament."

Whereupon the Clerk having stated the matter to Mr. Speaker, Mr. Speaker directed Baron Rothschild to withdraw.

[Debate on Question relative to the matter adjourned.]

Ordered, That Baron Lionel Nathan de Rothschild, one of the Members for the City of London, having demanded to be sworn on the Old Testament, be called to the table, and that Mr. Speaker do ask him why he has demanded to be sworn in that form.

Whereupon Baron Lionel Nathan de Rothschild, having come to the Table, was asked by Mr. Speaker—

"Baron de Rothschild, you have demanded to be sworn

on the Old Testament, and I am directed by the House to ask you why you have demanded to be sworn in that form?"

To which Baron Lionel Nathan de Rothschild replied:

"Because that is the form of swearing that I declare to be most binding on my conscience."

And then Mr. Speaker directed him to withdraw.

Ordered, That Baron Lionel Nathan de Rothschild, one of the Members for the City of London, having presented himself at the table of the House, and having previously to taking the Oaths, requested to be sworn on the Old Testament (being the form which he has declared at the table to be most binding on his conscience), the Clerk be directed to swear him on the Old Testament accordingly.

The Baron Lionel Nathan de Rothschild, having come to the table, Mr. Speaker acquainted him that the House had made the following Order:

"That Baron Lionel Nathan de Rothschild, one of the Members for the City of London, having presented himself at the table of the House, and having previously to taking the Oaths, requested to be sworn on the Old Testament (being the form which he has declared at the table to be most binding on his conscience), the Clerk be directed to swear him on the Old Testament accordingly."

Whereupon the Clerk handed to him the Old Testament, and tendered him the Oaths; and he accordingly took the Oaths of Allegiance and Supremacy, repeating the same after the Clerk; the Clerk then proceeded to administer the Oath of Abjuration, which the Baron de Rothschild repeated after the Clerk so far as the words "upon the true faith of a Christian," but upon the Clerk reading those words, the Baron de Rothschild said, "I omit those words as not binding on my conscience;" he then concluded with the words "So help me, God" (the Clerk not having read those words to him), and kissed the said Testament:—Whereupon he was directed to withdraw.

Question for a new writ negatived.

Resolved, That the Baron Lionel Nathan de Rothschild is not entitled to vote in this House, or to sit in this House during any debate, until he shall take the Oath of Abjuration in the form appointed by law.

Resolved, That this House will, at the earliest opportunity in the next Session of Parliament, take into its serious con-

sideration the form of the Oath of Abjuration, with a view to relieve her Majesty's subjects professing the Jewish religion.

[The House refuses to hear Petitioners by Counsel in favour of a resolution admitting Baron Lionel de Rothschild.]

[*See* case of David Salomons, Esq., July, 1851, *infra.*]

Bill to provide for the relief of her Majesty's subjects professing the Jewish Religion. Brought from the Lords, 13th July. Royal assent, 23rd July, 1858.

[Oaths Bill Passed: By the Lords with Amendments; Lords' Amendments disagreed to; Lords insist, and assign reasons.]

Resolved, That this House does not consider it necessary to examine the reasons offered by the Lords for insisting upon the exclusion of Jews from Parliament, as by a Bill of the present Session, intituled, "An Act to provide for the relief of her Majesty's subjects professing the Jewish Religion," their Lordships have provided means for the admission of persons professing the Jewish Religion to seats in the Legislature.

Resolved, That this House doth not insist upon its disagreement with the Lords in their Amendments to the said Bill.

Baron Lionel Nathan de Rothschild, returned as one of the Members for the City of London, came to the table to be sworn; and stated that, being a person professing the Jewish religion, he entertained a conscientious objection to take the Oath which, by an Act passed in the present Session, has been substituted for the Oaths of Allegiance, Supremacy, and Abjuration, in the form therein required. Whereupon the Clerk reported the matter to Mr. Speaker, who desired Baron Lionel Nathan de Rothschild to withdraw, and he withdrew accordingly.

Resolved, That it appears to this House that Baron Lionel Nathan de Rothschild, a person professing the Jewish religion, being otherwise entitled to sit and vote in this House, is prevented from so sitting and voting by his conscientious objection to take the oath which, by an Act passed in the present Session of Parliament, has been substituted for the Oaths of Allegiance, Supremacy, and Abjuration, in the form therein required.

Resolved, That any person professing the Jewish religion may henceforth, in taking the oath prescribed in an Act of the present Session of Parliament to entitle him to sit and vote in this House, omit the words "and I make this declaration upon the true faith of a Christian."

Baron Lionel Nathan de Rothschild having again come to the table, desired to be sworn on the Old Testament, as being binding on his conscience.

Whereupon the Clerk reported the matter to Mr. Speaker, who then desired the Clerk to swear him upon the Old Testament.

Baron Lionel Nathan de Rothschild was sworn accordingly, and subscribed the Oath at the table.

[*See* case of Baron Mayer Amschel de Rothschild, 15th Feb., 1859, *infra.*]

Parliament dissolved, 23rd April, 1859; met, 31st May, 1859.

Baron Lionel Nathan de Rothschild, Member for the City of London, came to the table to be sworn, and stated that being a person professing the Jewish religion, he had a conscientious objection to take the oath in the form required by the Act 22 Vict. c. 48. The Clerk having reported the circumstance to Mr. Speaker, Baron Lionel Nathan de Rothschild was directed to withdraw, and he withdrew accordingly.

Resolved, That it appears to this House that Baron Lionel Nathan de Rothschild, a person professing the Jewish religion, being otherwise entitled to sit and vote in this House, is prevented from so sitting and voting by his conscientious objection to take the oath, which by an Act passed in the 22nd year of her Majesty has been substituted for the Oaths of Allegiance, Supremacy, and Abjuration in the form therein required.

Resolved, That any person professing the Jewish religion may henceforth in taking the oath prescribed in an Act passed in the twenty-second year of her Majesty to entitle him to sit and vote in this House, omit the words "and I make this declaration upon the true faith of a Christian."

Whereupon Baron Lionel Nathan de Rothschild, Alderman David Salomons, and Baron Mayer Amschel de Rothschild, being Members professing the Jewish religion, having come to the table, were sworn upon the Old Testa-

ment, and took the oath, omitting the words "and I make this declaration upon the true faith of a Christian," and subscribed the same.

PRECEDENT of a MEMBER omitting the words in the OATH OF ABJURATION, "on the true faith of a Christian."

DAVID SALOMONS, Esq., returned as one of the Members for the borough of Greenwich, came to the table to be sworn; and being tendered the New Testament by the Clerk, stated that he desired to be sworn on the Old Testament: Whereupon the Clerk reported the matter to Mr. Speaker, and Mr. Speaker asked him why he desired to be sworn on the Old Testament; he answered, because he considered it binding on his conscience; Mr. Speaker then desired the Clerk to swear him upon the Old Testament; the Clerk handed to him the Old Testament, and tendered him the oaths; and he took the Oaths of Allegiance and Supremacy, repeating the same after the Clerk. The Clerk then proceeded to administer the Oath of Abjuration, which Mr. Salomons read as far as the words "upon the true faith of a Christian," which he omitted, concluding with the words "So help me, God. And the Clerk having reported to Mr. Speaker that Mr. Salomons had omitted to repeat the words "upon the true faith of a Christian," Mr. Speaker desired Mr. Salomons to withdraw. He thereupon retired from the table and sat down upon one of the lower benches, upon which Mr. Speaker informed him that, not having taken the Oath of Abjuration in the form prescribed by the Act of Parliament, and in the form in which the House had upon a former occasion expressed its opinion that it ought to be taken, he could not be allowed to remain in the House, but must withdraw. And he withdrew accordingly.

Motion for new writ withdrawn.

The House resumed the further proceedings.

Mr. Alderman Salomons entered the House, and took his seat within the Bar: Whereupon Mr. Speaker said that he saw that a Member had taken his seat without having taken the Oaths required by law; and that he must therefore desire that the honorable Member do withdraw.

Mr. Alderman Salomons continued in the seat within the Bar.

Ordered (after Debate), That Mr. Alderman Salomons do now withdraw.

Whereupon Mr. Speaker stated that the honorable Member for Greenwich had heard the decision of the House, and hoped that the honorable Member was prepared to obey it.

Mr. Alderman Salomons continuing to sit in his seat, Mr. Speaker directed the Serjeant-at-Arms to remove him below the Bar.

Whereupon Mr. Serjeant-at-Arms having placed his hand on Mr. Alderman Salomons, he was conducted below the Bar.

[The House refuses to hear Petitioners by Counsel at the Bar of the House in defence of their right to elect their own Representative.]

Resolved (after Debate), That David Salomons, Esq., is not entitled to vote in this House, or to sit in this House, during any debate, until he shall take the Oath of Abjuration in the form appointed by law.

PRECEDENT of a MEMBER stating that he had a conscientious objection to take the OATH.

Baron MAYER AMSCHEL DE ROTHSCHILD, returned for the town and port of Hythe, came to the table to be sworn, and stated that, being a person professing the Jewish religion, he entertained a conscientious objection to take the oath, which by an Act passed in the last Session has been substituted for the Oaths of Allegiance, Supremacy, and Abjuration, in the form therein required. Whereupon the Clerk reported the matter to Mr. Speaker, who desired Baron Mayer Amschel de Rothschild to withdraw; and he withdrew accordingly.

Resolved, That it appears to this House that Baron Mayer Amschel de Rothschild, a person professing the Jewish religion, being otherwise entitled to sit and vote in this House, is prevented from so sitting and voting by his conscientious objection to take the oath, which by an Act passed in the last Session of Parliament has been substituted for the Oaths of Allegiance, Supremacy, and Abjuration in the form therein required.

Resolved, That any person professing the Jewish religion may henceforth, in taking the oath prescribed in an Act of the last Session of Parliament to entitle him to sit and vote in this House, omit the words "and I make this declaration upon the true faith of a Christian."

Baron Mayer Amschel de Rothschild, being again come to the table, desired to be sworn on the Old Testament as binding on his conscience.

Whereupon the Clerk reported the matter to Mr. Speaker, who then desired the Clerk to swear him upon the Old Testament.

Baron Mayer Amschel de Rothschild was sworn accordingly, and subscribed the oath at the table.

Appendix No. 2.

PAPER handed in by Mr. Bradlaugh, 2nd June, 1880.

PRECEDENTS RELATING TO PARLIAMENTARY OATHS.

CASE of Attorney General Sir FRANCIS BACON, Commons Journals, Vol. 1, page 459, 11th April, 1614, continued from page 456, 8th April.

ELIGIBILITY of the Attorney General to sit in Parliament. By 46 Edward III., 1372, no practising barrister could be Knight of the Shire.

Page 459.—"The precedents to disable him ought to be showed on the other side."

Page 460.—"Their Oath their own consciences to look unto, not we to examine it."

At that date each Member had to make Oath that he was duly qualified.

1. Question whether he shall for this Parliament remain of the House or not:—*Resolved*, He shall.

2. Question.—Whether any Attorney General shall after this Parliament serve as a Member of this House:—*Resolved*, No.

CASE of JOHN WILKES, Esquire, Commons Journal, 38, page 977, 3rd May, 1782.

THE House was moved, that the entry in the Journal of the House, of the 17th day of February, 1769, of the Resolution, "That John Wilkes, Esquire, having been in this Session of Parliament expelled this House, was and is incapable of being elected a Member to serve in this present Parliament," might be read, and the same being read accordingly;

A motion was made, and the question being put, That the said resolution be expunged from the Journals of this House, as being subversive of the rights of the whole body of electors of this Kingdom.

The House divided.

The Yeas went forth.

Tellers for the Yeas, Sir Philip Jennings Clarke and Mr. Byng, 115.

Tellers for the Noes, Mr. John St. John and Sir William Augustus Cunynghame, 47,

So it was resolved in the affirmative.

And the same was expunged by the Clerk at the table, accordingly.

Ordered, That all Declarations, Orders, and Resolutions of this House, respecting the election of John Wilkes, Esquire, for the county of Middlesex, as a void election, the true and legal election of Henry Lawes Luttrell, Esquire, into Parliament for the said county, and the incapacity of John Wilkes, Esquire, to be elected a Member to serve in the said Parliament, be expunged from the Journals of this House as being subversive of the rights of the whole body of electors of this Kingdom.

By Cavendish's Parliamentary Debates, Vol. I., page 73, 24th November, 1768, it appears that *inter alia* were used to justify the original and subsequently expunged Resolutions—first. "the copy of the record of the proceedings, on an information in the Court of King's Bench, against John Wilkes, Esquire, for blasphemy"—page 123; "three obscene and impious libels"; "an impious libel with intent to blaspheme the Almighty God."

CASE of Mr. JOHN HORNE TOOKE, Parliamentary History, Vol. 35, page 956, 16th February, 1801.

Mr. John Horne Tooke took the Oaths and his seat for Old Sarum. He was introduced by Sir Francis Burdett and Mr. Wilson. This being done, Earl Temple rose and said, he had observed a gentleman who had just retired from the table, after having taken the Oaths, whom he conceived to be incapable of a seat in that House, in consequence of his having taken priest's orders and been inducted into a living. He would wait the allotted time of fourteen days to see whether there was any petition presented against his return; if not he should then move that the return for Old Sarum be taken into consideration.

Page 1323, 10th March, 1801.—Earl Temple moved that Mr. Boucher, Deputy Registrar of Salisbury, be called in to prove that Mr. Horne Tooke, being a priest in orders, was not eligible to a seat in that House. After debate, in which Mr. John Horne Tooke spoke—Amendment and Division—Motion agreed to (page 1342),—Select Committee appointed (page 1343). Two reports given, pages 1343 to 1349, were made, giving all the cases of "any of the clergy" returned to Parliament.

4th May, 1801.—Earl Temple moved (pages 1349 to 1374), "That Mr. Speaker do issue his warrant to the clerk of the Crown in Great Britain, to make out a new writ for the election of a burgess to serve in this present Parliament for the Borough of Old Sarum, in the county of Wilts, in the room of the Rev. John Horne Tooke, who being at the time of his election in priest's orders, was and is incapable of sitting in this House." A debate took place in which Mr. John Horne Tooke spoke (pp. 1350 to 1402), division, and the motion negatived.

Jurist, Vol. 17, Page 463.—Exchequer Chamber; Error from the Court of Exchequer: Coram, Lord Campbell, Chief Justice, and Coleridge, Cresswell, Wightman, Williams, and Crompton, J.

One judgment by Lord Chief Justice Campbell for the whole Court.

Lord Campbell (page 464).—The words "so help me, God," are words of asseveration, and of the manner of taking the oath; but the words preceding them are, it appears to me, an essential part of the oath.

Fisher's Digest, Vol. 3, page 6179.—By a private Act, no person appointed to act as tithe valuer shall be capable of acting until he shall have taken and subscribed an oath in the words following: "I, A. B., do swear that I will faithfully, etc., execute, etc.; so help me, God." Held, that the oath had nevertheless been properly administered according to the Statute, for the words omitted were no part of the oath, but only an indication of the manner of administering it. Lancaster and Carlisle Railway Company *v.* Heaton, 8 El. & Bl., 952; 4 Jur., N. S., 707; 27 L. J., Q. B., 195."

Appendix No. 3.

PAPER handed in by Mr. BRADLAUGH, 2nd June, 1880.

STATEMENT on the OATH QUESTION by Mr. BRADLAUGH.

20, Circus Road, St. John's Wood, London, N.W.,
20th May, 1880.

WHEN elected as one of the Burgesses to represent Northampton in the House of Commons, I believed that I had the legal right to make affirmation of allegiance in lieu of taking the oath, as provided by section 4 of the Parliamentary Oaths Act, 1866. While I considered that I had this legal right, it was then clearly my moral duty to make the affirmation. The oath, although to me including words of idle and meaningless character, was, and is, regarded by a large number of my fellow countrymen as an appeal to Deity to take cognizance of their swearing. It would have been an act of hypocrisy to voluntarily take this form if any other had been open to me, or to take it without protest, as though it meant in my mouth any such appeal. I, therefore, quietly and privately notified the Clerk of the House of my desire to affirm. His view of the law and practice differing from my own, and no similar case having theretofore arisen, it became necessary that I should tender myself to affirm in a more formal manner, and this I did at a season deemed convenient by those in charge of the business of the

House. In tendering my affirmation, I was careful when called on by the Speaker to state my objection, to do nothing more than put in the fewest possible words my contention that the Parliamentary Oaths Act, 1866, gave the right to affirm in Parliament to every person for the time being by law permitted to make an affirmation in lieu of taking an oath, and that I was such a person, and therefore claimed to affirm. The Speaker neither refusing, nor accepting my affirmation, referred the matter to the House, which appointed a Select Committee to report whether persons entitled to affirm under the Evidence Amendment Acts, 1869 and 1870, were, under Section 4 of the Parliamentary Oaths Act, 1866, also entitled to affirm as Members of Parliament. This Committee, by the casting-vote of its Chairman, has decided that I am not entitled to affirm. Two courses are open to me, one of appeal to the House against the decision of the Committee; the other, of present compliance with the ceremony, while doing my best to prevent the further maintenance of a form which many other Members of the House think as objectionable as I do, but which habit, and the fear of exciting prejudice, has induced them to submit to. To appeal to the House against the decision of the Committee would be ungracious, and would certainly involve great delay of public business. I was present at the deliberations of the Committee, and while naturally I cannot be expected to bow submissively to the statements and arguments of my opponents, I am bound to say that they were calmly and fairly urged. I think them unreasonable; but the fact that they included a legal argument from an earnest Liberal deprives them even of a purely party character. If I appealed to the House against the Committee, I, of course, might rely on the fact that the Attorney General, the Solicitor General, Sir Henry Jackson, Q.C., Watkin Williams, Q.C., and Mr. Serjeant Simon are reported in the *Times* to have interpreted the law as I do; and I might add that the Right Honorable John Bright and Mr. Whitbread are in the same journal arrayed in favor of allowing me to affirm. But even then the decision of the House may endorse that of the Committee, and should it be in my favor it could only, judging from what has already taken place, be after a bitter party debate, in which the Government specially and the Liberals generally would be sought to be

burdened with my anti-theological views, and with promoting my return to Parliament. As a matter of fact, the Liberals of England have never in any way promoted my return to Parliament. The much-attacked action of Mr. Adam had relation only to the second seat, and in no way related to the one for which I was fighting. In 1868, the only action of Mr. Gladstone and of Mr. Bright was to write letters in favor of my competitors; and since 1868 I do not believe that either of these gentlemen has directly or indirectly interfered in any way in connection with my Parliamentary candidature. The majority of the electors of Northampton had determined to return me before the recent union in that borough, and while pleased to aid their fellow Liberals in winning the two seats, my constituents would have at any rate returned me had no union taken place. My duty to my constituents is to fulfil the mandate they have given me, and if to do this I have to submit to a form less solemn to me than the affirmation I would have reverently made, so much the worse for those who force me to repeat words which I have scores of times declared are to me sounds conveying no clear and definite meaning. I am sorry for the earnest believers who see words sacred to them used as a meaningless addendum to a promise, but I cannot permit their less sincere co-religionists to use an idle form in order to prevent me from doing my duty to those who have chosen me to speak for them in Parliament. I shall, taking the oath, regard myself as bound, not by the letter of its words, but by the spirit which the affirmation would have conveyed had I been permitted to use it. So soon as I am able, I shall take such steps as may be consistent with Parliamentary business to put an end to the present doubtful and unfortunate state of the law and practice on oaths and affirmations. Only four cases have arisen of refusal to take the oath except, of course, those cases purely political in their character; two of those cases are those of the Quakers John Archdale and Joseph Pease. The religion of these men forbade them to swear at all, and they nobly refused. The sect to which they belonged was outlawed, insulted and imprisoned; they were firm, and one of that sect sat on the very committee, a member of her Majesty's Privy Council, and a member of the actual Cabinet. I thank him gratefully that, valuing

right so highly, he cast his vote so nobly for one for whom I am afraid he has but scant sympathy. No such religious scruple prevents me from taking the oath as prevented John Archdale and Joseph Pease. In the case of Baron Rothschild and Alderman Salomons the words "upon the true faith of a Christian" were the obstacle. To-day the oath contains no such words. The Committee report that I may not affirm, and protesting against a decision which seems to me alike against the letter of the law and the spirit of modern legislation, I comply with the forms of the House.

CHARLES BRADLAUGH.

MR. BRADLAUGH'S SPEECHES.

MR. BRADLAUGH'S First Speech at the Bar of the House of Commons, delivered June 23rd, 1880.

SIR,—I have to ask the indulgence of every member of this House while, in a position unexampled in the history of this House, I try to give one or two reasons why the resolution which you have read to me should not be enforced. If it were not unbecoming I should appeal to the traditions of the House against the House itself, and I should point out that in none of its records, so far as my poor reading goes, is there any case in which this House has judged one of its members in his absence, and taken away from that member the constitutional right he has (hear, hear). There have been members against whom absolute legal disqualification has been urged. No such legal disqualification is ventured to be urged by any member of this House against myself. But even those members have been heard in their places; those members have been listened to before the decision was taken against them; and I ask that this House to myself shall not be less just than it has always been to every one of its members (hear, hear). Do you tell me I am unfit to sit amongst you? (hear, hear, and Order, order.) The more reason, then, that this House should show the generosity which judges show to a criminal, and allow every word he has to say to be heard. But I stand here, Sir, as no

criminal. I stand here as the chosen of a constituency of this country, with my duty to that constituency to do. I stand here, Sir—if it will not be considered impertinent to put it so—with the most profound respect for this House, of which I yet hope and mean to form a part, and on whose traditions I should not wish to cast one shadow of reproach. I stand here returned duly; no petition against my return; no impeachment of that return. I stand here returned duly, ready to fulfil every form that this House requires, ready to fulfil every form that the law permits this House to require, ready to do every duty that the law makes incumbent upon me. I will not in this presence argue whether this House has or has not the right to set its decision against the law, because I should imagine that even the rashest of those who spoke against me would hardly be prepared to put in the mouth of one whom they consider too advanced in politics an arguments so dangerous as that might become. I speak within the limits of the law, asking for no favor from this House for myself or for my constituents, but asking the merest justice which has always been accorded to a member of the House (hear, hear, and Order.) I have to ask indulgence lest the memory of some hard words which have been spoken in my absence should seem to give to what I say a tone of defiance, which it is far from my wish should be there at all; and I am the more eased because although there were words spoken which I had always been taught English gentlemen never said in the absence of an antagonist without notice to him, yet there were also generous and brave words said for one who is at present, I am afraid, a source of trouble and discomfort and hindrance to business. I measure the generous words against the others, and I will only make one appeal through you, Sir, which is, that if the reports be correct that the introduction of other names came with mine in the heat of passion and the warmth of debate, the gentleman who used those words, if such there were, will remember that he was wanting in chivalry, because, while I can answer for myself, and am able to answer for myself, nothing justified the introduction of any other name beside my own to make a prejudice against me (cheers and cries of Question and Order.) I fear lest the

strength of this House, judicially exercised as I understand it to be—with infrequency of judicial exercise—that the strength of this House makes it forget our relative positions. At present I am pleading at its bar for justice. By right it is there I should plead. [The hon. member pointed to the seats.] It is that right I claim in the name of those who sent me here. No legal disqualification before my election, or it might have been made the ground of petition. No legal disqualification since my election—not even pretended. It is said: "You might have taken the oath as other members did." I could not help when I read that, Sir, trying to put myself in the place of each member who said it. I imagined a member of some form of faith who found in the oath words which seemed to him to clash with his faith, but still words which he thought he might utter, but which he would prefer not to utter if there were any other form which the law provided him, and I asked myself whether each of those members would not then have taken the form which was most consonant with his honor and his conscience. If I have not misread, some hon. members seem to think that I have neither honor nor conscience. Is there not some proof to the contrary in the fact that I did not go through the form, believing that there was another right open to me? (hear, hear, and Order.) Is that not some proof that I have honor and conscience? Of the gentlemen who are now about to measure themselves against the rights of the constituencies of England I ask what justification had they for that measurement? They have said that I thrust my opinions on the House. I hold here, Sir, the evidence of Sir Thomas Erskine May, and I can find no word of any opinion of mine thrust upon the House at all. I have read—it may be that the reports misrepresent—that the cry of "Atheist" has been raised from that side. [The hon. member pointed to the Opposition side.] No word of all mine before the committee put in any terms those theological or anti-theological opinions in evidence before the House. I am no more ashamed of my own opinions, which I did not choose, opinions into which I have grown, than any member of this House is ashamed of his; and much as I value the right to sit here, and much as I believe that the justice of this House will accord it to me before the struggle is finished, I would

rather relinquish it for ever than it should be thought that by any shadow of hypocrisy I had tried to gain a feigned entrance here by pretending to be what I am not (cheers, and cries of Order.) On the report of the committee as it stands, on the evidence before the House, what is the objection to either my affirming or taking the oath? It is said I have no legal right to affirm. I will suppose that to be so. It is the first time that the House has made itself a court of law from which there may be no appeal, and deprived a citizen of his constitutional right of appeal to a court of law to make out what the statute means in dealing with him. There is no case in which this House has overridden everything, and put one of its members where he had no chance of battling for his right at all. Take the oath. It is possible that some of the lawyers, who have disagreed among themselves even upon that (the Opposition) side of the House, may be right, and that I may be wrong in the construction I have put upon the oath, but no such objection can come. There is no precedent—there is, I submit respectfully, no right—in this House to stand between me and the oath which the law provides for me to take, which the statute, under penalty even upon members of this House themselves if they put me out from my just return, gives me the right to take. What kind of a conflict is provoked here if this resolution be enforced? Not a grave conflict in a court of law, where the judges exclude passion, where they only deal with facts and evidence. I do not mean that these gentlemen do not deal with facts; but, if I am any judge of my own life's story, there have been many things which I can hardly reckon in the category of facts put against myself. I don't mean that they are not right, for hon. members may know more of myself than I do myself; but, judging myself as I know myself, some of the members who have attacked me so glibly during the last few days must have been extraordinarily misinformed, or must have exceedingly misapprehended the matters they alleged. It has been said that I have paraded and flaunted some obnoxious opinions. I appeal to your justice, sir, and to that of the members of this House, to say whether my manner has not been as respectful as that of man could be—whether in each case I have not withdrawn when you told me. If I now come here with even the appearance of self-assertion,

it is because I would not be a recreant and a coward to the constituency that sent me to represent them; and I mean to be as members have been in the best history of this assembly. I ask the House, in dealing with my rights, to remember how they are acting. It is perfectly true that by a majority they may decide against me now. What are you to do then? Are you going to declare the seat vacant? First, I tell you that you have not the right. The moment I am there—[the hon. member pointed inside the House]—I admit the right of the House, of its own good will and pleasure, to expel me. As yet I am not under your jurisdiction. As yet I am under the protection of the law. A return sent me to this House, and I ask you, sir, as the guardian of the liberties of this House, to give effect to that return. The law says you should, and that this House should. And naturally so; because, if it were not so, any time a majority of members might exclude anyone they pleased. What has been alleged against me? Politics? Are views on politics urged as a reason why a member should not sit here? Pamphlets have been read—I won't say with accuracy, because I will not libel any of the hon. members who read them; but, surely, if they are grounds for disqualification they are grounds for indictment to be proved against me in a proper fashion. There is no case in all the records of this House in which you have ransacked what a man has written and said in his past life and then challenged him with it here. My theology? It would be impertinent in me, after the utterances of men so widely disagreeing from me that have been made on the side of religious liberty during the past two nights—it would be impertinent in me to add one word save this. It is said that you may deal with me because I am isolated. I could not help hearing the ring of that word in the lobby as I sat outside last night. But is that a reason, that, because I stand alone the House are to do against me what they would not do if I had 100,000 men at my back? (cries of Oh). That is a bad argument which provokes a reply inconsistent with the dignity of this House and which I should be sorry to give. I have not yet used—I hope no passion may tempt me to be using—any words that would seem to savor of even a desire to enter into conflict with this

House. I have always taught, preached, and believed the supremacy of Parliament, and it is not because for a moment the judgment of one Chamber of Parliament should be hostile to me that I am going to deny the ideas I have always held; but I submit that one Chamber of Parliament—even its grandest Chamber, as I have always held this to be—had no right to override the law. The law gives me the right to sign that roll, to take and subscribe the oath, and to take my seat there [pointing to the benches]. I admit that the moment I am in the House, without any reason but your own good will, you can send me away. That is your right. You have full control over your members, but you cannot send me away until I have been heard in my place, not a suppliant as I am now, but with the rightful audience that each member has always had. There is one phase of my appeal which I am loth indeed to make. I presume you will declare the seat vacant. What do you send me back to Northampton to say? I said before, and I trust I may say again, that this assembly was one in which any man might well be proud to sit—prouder I that I have not some of your traditions and am not of your families, but am of the people, the people that sent me here to speak for them. Do you mean that I am to go back to Northampton as to a court, to appeal against you? that I am to ask the constituency to array themselves against this House? I hope not. If it is to be, it must be. If this House arrays itself against an isolated man—its huge power against one citizen—if it must be, then the battle must be too. But it is not with the constituency of Northampton alone—hon. members need not mistake—that you will come into conflict if this appeal is to go forward, if the House of Commons is to override the statute law to get rid of even the vilest of members. Had you alleged against me even more than against one man whose name was mentioned in this House last night, I should still have held that the House cannot supersede the rights of the people. But not as much is alleged against me as was alleged against that man, in whose case the House itself said that its conduct had been subversive of the rights of the people. I beg you, for your own sakes, don't put yourselves in that position. I have no desire to wrestle with you for justice. I admit that I have

used hard words in my short life, giving men the right in return to say hard things of me; but is it not better that I should have the right to say them to your faces? If they are within the law, let the law deal with me fairly and properly; but if they are without the law, not unfairly, as I submit you are doing now. You have the power to send me back, but in appealing to Northampton I must appeal to a tribunal higher than yours—not to courts of law, for I hope the days of conflict between the assembly which makes the law and the tribunals which administer it are passed. It must be a bad day for England and for Great Britain, if we are to be brought again to the time when the judges and those who make the law for the judges are in rash strife as to what they mean. But there is a court to which I shall appeal—the court of public opinion, which will have to express itself. You say it is against me. Possibly; but if it be so, is it against me rightly or wrongly? I am ready to admit, if you please, for the sake of argument, that every opinion I hold is wrong and deserves punishment. Let the law punish it. If you say the law cannot, then you admit that you have no right, and I appeal to public opinion against the iniquity of a decision which overrides the law and denies me justice. I beg your pardon, Sir, and that of the House too, if in this warmth there seems to lack respect for its dignity; and as I shall have, if your decision be against me, to come to that table when your decision is given, I beg you, before the step is taken in which we may both lose our dignity—mine is not much, but yours is that of the Commons of England—I beg you, before the gauntlet is fatally thrown—I beg you, not in any sort of menace, not in any sort of boast, but as one man against six hundred, to give me that justice which on the other side of this hall the judges would give me were I pleading there before them (loud cheers and cries of Order, amid which Mr. Bradlaugh again bowed and retired).

Mr. Bradlaugh's Second Speech at the Bar of the House of Commons, delivered April 28th, 1881.

Mr. Speaker,—I have again to ask the indulgence of the House while I submit to it a few words in favor of my claim to do that which the law requires me to do. Perhaps the House will pardon me if I supply an omission, I feel unin-

tentionally made, on the part of the hon. member for Chatham in some words which have just fallen from him. I understood him to say that he would use a formal statement made by me to the Committee against what the Chancellor of the Duchy had said I had said. I am sure the hon. and learned member for Chatham, who has evidently read the proceedings of the Committee with care, would, if he had thought it fair, have stated to the House that the statement only came from me after an objection made by me—a positive objection on the ground that it related to matters outside this House, and that the House in the course of its history had never inquired into such matters; but I can hardly understand what the member for Chatham meant when he said that he contrasted what I did say with what the Chancellor of the Duchy said I said, for it is not a matter of memory, it is on the proceedings of this House, that being examined formally before the Committee, I stated: "That the essential part of the oath is in the fullest and most complete degree binding upon my honor and conscience, and that the repeating of the words of asseveration does not in the slightest degree weaken the binding of the allegiance on me." I say now I would not go through any form—much as I value the right to sit in this House, much as I desire and believe that this House will accord me that right—that I did not mean to be binding upon me without mental reservation, without equivocation. I would go through no form unless it were fully and completely and thoroughly binding upon me as to what it expressed or promised. Mine has been no easy position for the last twelve months. I have been elected by the free votes of a free constituency. My return is untainted. There is no charge of bribery (cheers), no charge of corruption, nor of inducing men to come drunken to the polling booth. I come here with a pure untainted return—not won by accident. For thirteen long years have I fought for this right—through five contested elections, including this. It is now proposed to prevent me from fulfilling the duty my constituents have placed upon me. You have force—on my side is the law. The hon. and learned member for Plymouth spoke the truth when he said he did not ask the House to treat the matter as a question of law, but the constituencies ask me to treat it as a question of law. I, for them, ask you to treat it as a question of law.

I could understand the feeling that seems to have been manifested were I some great and powerful personage. I could understand it had I a huge influence behind me. I am only one of the people, and you propose to teach them that on a mere technical question you will put a barrier in the way of my doing my duty which you have never put in the way of anyone else. The question is, has my return on the 9th of April, 1881, anything whatever to impeach it? There is no legal disqualification involved. If there were it could be raised by petition. The hon. member for Plymouth says the dignity of this House is in question. Do you mean that I can injure the dignity of this House? This House which has stood unrivalled for centuries? This House supreme among the assemblies of the world? This House, which represents the traditions of liberty? I should not have so libelled you. How is the dignity of this House to be hurt? If what happened before the 9th of April is less than a legal disqualification, it is a matter for the judgment of the constituency and not for you. The constituency has judged me; it has elected me. I stand here with no legal disqualification upon me. The right of the constituency to return me is an unimpeachable right. I know some gentlemen make light of constituencies; yet without the constituencies you are nothing. It is from them you derive your whole and sole authority. The hon. and learned member for Plymouth treats lightly the legal question. It is dangerous to make light of the law—dangerous because if you are only going to rely on your strength of force to override the law, you give a bad lesson to men whose morality you impeach as to what should be their duty if emergence ever came (hear, hear). Always outside the House I have advocated strenuous obedience to the law, and it is under that law that I claim my right. It is said by the right hon. baronet who interposes between me and my duty that this House has passed some resolution. First, I submit that that resolution does not affect the return of the 9th April. The conditions are entirely different, there is nothing since the date of that return. I submit next that if it did affect it the resolution was illegal from the beginning. In the words of George Grenville, spoken in this House in 1769, I say if your resolution goes in the teeth of the law—if against the statute—your reso-

lution is null and void. No word have I uttered outside these walls which has been lacking in respect to the House. I believe the House will do me justice, and I ask it to look at what it is I claim. I claim to do that which the law says I must. Frankly, I would rather have affirmed. When I came to the table of the House I deemed that I had a legal right to do it. The courts have decided against me, and I am bound by their decision. I have the legal right to do what I propose to do. No resolution of yours can take away that legal right. You may act illegally and hinder me, and unfortunately I have no appeal against you. "Unfortunately" perhaps I should not say. Perhaps it is better that the Chamber which makes the law should never be in conflict with the courts which administer the laws that the Chamber makes. I think the word "unfortunately" was not the word I ought to have used in this argument. But the force that you invoke against the law to-day may to-morrow be used against you, and the use will be justified by your example. It is a fact that I have no remedy if you rely on your force. I can only be driven into a contest, wearying even to a strong man well supported, ruinous and killing to one man standing by himself—a contest in which if I succeed it will be injurious to you as well as to me. Injurious to me because I can only win by lessening your repute which I desire to maintain. The only court I have the power of appealing to is the court of public opinion, which I have no doubt in the end will do me justice. The hon. member for Plymouth said I had the manliness on a former occasion to make an avowal of opinions to this House. I did nothing of the kind. I have never, directly or indirectly, said one word about my opinions, and this House has no right to inquire what opinions I may hold outside its walls, the only right is that which the statute gives you; my opinions there is no right to inquire into. I shelter myself under the laws of my country. This is a political assembly, met to decide on the policy of the nation, and not on the religious opinions of the citizens (cheers). While I had the honor of occupying a seat in the House when questions were raised which touched upon religious matters, I abstained from uttering one word. I did not desire to say one word which might hurt the feelings of even the most tender (hear).

But it is said, why not have taken the oath quietly? I did not take it then because I thought I had the right to do something else, and I have paid the penalty. I have been plunged in litigation fostered by men who had not the courage to put themselves forward (loud cheers below the gangway). I, a penniless man, should have been ruined if it had not been that the men in workshop, pit, and factory had enabled me to fight this battle (interruption). I am sorry that hon. members cannot have patience with one pleading as I plead here. It is no light stake, even if you put it on the lowest personal grounds, to risk the ambition of a life on such an issue. It is a right ambition to desire to take part in the councils of the nation, if you bring no store of wisdom with you, and can only learn from the great intellects that we have (hear, hear). What will you inquire into? The right hon. baronet would inquire into my opinions. Will you inquire into my conduct, or is it only my opinions you will try here? The hon. member for Plymouth frankly puts it opinions. If opinions, why not conduct? Why not examine into members' conduct when they come to the table, and see if there be no members in whose way you can put a barrier? (Hear, hear.) Are members, whose conduct may be obnoxious, to vote my exclusion because to them my opinions are obnoxious? As to any obnoxious views supposed to be held by me, there is no duty imposed upon me to say a word. The right hon. baronet has said there has been no word of recantation. You have no right to ask me for any recantation. Since the 9th April you have no right to ask me for anything. If you have a legal disqualification, petition, lay it before the the Judges. When you ask me to make a statement, you are guilty of impertinence to me, of treason to the traditions of this House, and of impeachment of the liberties of the people. My difficulty is that those who have made the most bitter attacks upon me only made them when I was not here to deal with them. One hon. and gallant member recently told his constituents that this would be made a party question, but that the Conservative members had not the courage to speak out against me. I should have thought, from reading "Hansard," not that they wanted courage, but that they had cultivated a reticence that was more just. I wish to say a word or two on the attempt which has been

made to put on the Government of the day complicity in my views. The Liberal party has never aided me in any way to this House. (Oh, from the Opposition.) Never. I have fought by myself. I have fought by my own hand. I have been hindered in every way that it was possible to hinder me, and it is only by the help of the people, by the pence of toilers in mine and factory, that I am here to-day, after these five struggles right through thirteen years. I have won my way with them, for I have won their hearts, and now I come to you. Will you send me back from here? Then how? You have the right, but it is the right of force, and not of law. When I am once seated on these benches, then I am under your jurisdiction. At present I am under the protection of the writ from those who sent me here. I do not want to quote what has happened before, but if there be one lesson which the House has recorded more solemnly than another, it is that there should be no interference with the judgment of a constituency in sending a man to this House against whom there is no statutory disqualification. Let me appeal to the generosity of the House as well as to its strength. It has traditions of liberty on both sides. I do not complain that members on that (the Conservative) side try to keep me out. They act according to their lights, and think my poor services may be injurious to them. (Cries of No.) Then why not let me in? (Cheers.) It must be either a political or a religious question. I must apologise to the House for trespassing upon its patience. I apologise because I know how generous in its listening it has been from the time of my first speech in it till now. But I ask you now, do not plunge with me into a struggle I would shun. The law gives me no remedy if the House decides against me. Do not mock at the constituencies. If you place yourselves above the law, you leave me no course save lawless agitation instead of reasonable pleading. It is easy to begin such a strife, but none knows how it would end. I have no court, no tribunal to appeal to; you have the strength of your votes at the moment. You think I am an obnoxious man, and that I have no one on my side. If that be so, then the more reason that this House, grand in the strength of its centuries of liberty, should have now that generosity in dealing with one who to-morrow may be forced into a struggle for public opinion against it (cheers).

Mr. Bradlaugh's Third Speech at the Bar of the House of Commons, delivered February 7th, 1882.

Sir,—In addressing the House for the third time from this position, I feel the exceeding difficulty of dealing fairly with myself without dealing unfairly with the House. If I were to follow the hon. member who has just sat down into his errors of law, of history, and of memory, into his reckless misconceptions as to what are the views I hold and write about, I should only be giving pain to numbers of members here, and departing from that mandate with which my constituents have trusted me. It is—I say it with all respect—not true that I done anything more with reference to the succession than maintain the right of Parliament, meaning by Parliament both Houses, to control it; and any member who pretends that I done anything else, either does it, not having read what I have written, or heard what I have said, or having forgotten entirely what I have written or said, and being extremely careless in representing my views to the House. I regret that the hon. member should have imported into the discussion some fact supposed to have occurred in a police-court since I stood here before. I can only give the House my positive assurance that the hon. member is perfectly inaccurate in his representation of what took place. It is exceedingly painful to bandy words in this way. The hon. member was good enough to say he did not hear—he could not well have heard, for the magistrate did not refuse my affirmation at all. I happened to have been before Sir J. Ingham before, and he knew me, and knew the particular form of affirmation, and when the clerk read it to me no discussion took place on the subject. I hope the House will forgive me for contradicting such a small thing, but small things are sometimes much used. They have been used to work my ruin since I stood here before, and I regret that the shame of reticence did not at least keep it from this House, that the hon. member thought it his duty, by a common informer, to attempt to drive me into the Bankruptcy Court, and outside this House has boasted that the question would be solved in that way. It may be a brave boast, it may be consonant with piety from the hon. member's point of view, but I believe that every other gentleman's sense of piety would revolt against the notion of driving a single man into

bankruptcy, and then canvassing for subscriptions—(hear, hear)—for the "bold and vigorous, and patriotic and noble conduct," as the advertisement said, which consisted in hurrying in a cab to find the common informer to issue a writ against me. I dismiss that, however. I ask the House to pardon me for having wasted its time on this poor thing. I do not hope, I dare not think, that any word I may say here will win one vote; and I would have let this go silently against me, were it not that I owe a duty to the constituency that has twice entrusted me with its suffrages, a duty to every constituency right through the land in time to come—(hear, hear)—whose representative may be challenged as Northampton's has been. (Hear, hear, and No.) Some gentlemen say "No," but where is the challenge to stop? (Hear.) It is not simply theology, it is politics too (hear, hear). It is not simply theology that is brought before the House, but the wild imaginings of some member who, with the nightmare of panic upon him, and a wild imagining of the French Revolution clothed in terrors of which I know nothing, comes here to tell you of mighty Russia successful, and of the unfortunate United States with its Presidents assassinated because of religious and political opinions. Panic of that kind is not evidence as to my opinions. If this House intends to try me for my opinions, let it do it reasonably, and at least have the evidence before it. I would show you how unfair it is to trust to memory of words. The hon. member was good enough to tell the House that I had declared to a Committee of the House that certain words were meaningless. I hold in my hand the report of the Committee and the minutes of evidence, and no such words exist in any declaration of mine. (Hear, hear. Mr. Newdegate shook his head.) The hon. member does not believe me. I cannot make more than facts. I cannot make the comprehension which should distinguish when prejudice has determined that nothing shall be right that is put. The only way in which it can be pretended that anything of the kind in reference to the oath can be brought in is by taking my letter of the 20th of May, written outside the House, which does not contain a specific declaration the hon. member has put into it, which letter I protested ought not to be brought before the Committee at all, which I never

volunteered to the Committee—(Opposition laughter)—which I objected to the Committee having before them. (Oh, and laughter from the Opposition.) The gentlemen who laugh, laugh because the laugh is the only answer that could be given. No reason can be given in reply, no facts can be quoted; and I ask hon. members who laugh to remember that I am pleading as though a quasi-criminal at this bar, and that I have a right to an audience from them, and I appeal to the House at least to give me a silent hearing. Judges do that. If you are unfit to be judges, then do not judge (hear, hear). It shows, at least, the difficulty of dealing with a question like this, when those who are to judge have come to a judgment already, not upon any facts, but upon what they think ought to be the facts. I ask the House to deal legally and fairly with me. Legally you are bound to deal; fairly, as an assembly of English gentlemen, you ought to deal with me, even if you have differences with me, even if you think my opinions so obnoxious, even if you think that the politics with which you identify me in your minds are dangerous to you (oh, oh). If I am not dangerous, why not let me speak there? (pointing to the seat he occupied last Session.) If there is no danger, why strain the law? If there is no danger, why disobey the law? It is put by the hon. gentleman who spoke last that there are certain words of the oath which the courts of law have declared essential, The courts of law have declared the exact opposite. So far as a decision has been given, the very report of the Committee shows that the highest court of judicature in this realm has decided the words are not essential to the oath at all. I ask the House to deal with me with some semblance and show of legality and fairness, and first I say that they ought not to go behind my election of the 9th of April, 1881, and that the House ought to reject the resolution moved by the right hon. gentleman, because it deals with matters which antedate my election, and because the House has nothing to do with me before the 9th of April, 1881. That is the return of which the Clerk at the table has the certificate. That is my only authority for being here. If I did aught before that rendered me unworthy to sit here, why did the House let me sit here from the 2nd of July to the 29th of March? If what I did entitles the House not to receive me, why has

not the House had the courage of its opinions and vacated the seat? Either the seat is mine in law, and in law I claim it from you, or I am unworthy to hold it, and then why not vacate the seat and let the constituency express its opinion again? But my return is unimpeached, it is unimpeachable, and there has been no petition against me. The hon. member who went into back alleys for common informers could not find a petitioner to present a petition against it. If I speak with temper—(Opposition laughter)—the House, I trust, will pardon me. I have read within the last few days words spoken, not by members of no consequence, but by members occupying high position in this House, which make me wonder if this is the House of Commons to which I aspired so much. I have read that one right hon. member, the member for Whitehaven—(laughter from the Ministerial side)—was prompted to say to his constituents that I was kicked down stairs last Session, and that he hoped I should be again. If it were true that I was kicked downstairs I would ask members of the House of Commons on whom the shame, on whom the disgrace, on whom the stigma? I dare not apply this, but history will when I have mouldered, and you too, and our passions are quite gone. But it is not quite true that I was kicked downstairs, and it is a dangerous thing to say that I was, for it means that hon. members who should rely on law rely on force. It is a dangerous provocation to conflict to throw to the people. If I had been as wicked in my thought as some members are reported to have been in their speech, this quarrel, not of my provoking, would assume a future to make us all ashamed. I beg this House to believe, and I trust, Sir, that you at least will believe me, that I have tried as much as man might to keep the dignity of this House. I submitted last Session, and the Session before, to have had things said against me without one word of reply, because having had your good counsel, I felt it might provoke discussion upon matters which this House would willingly not have speech upon, and that I had far better rest under some slight stigma than occupy the House with my personality. I appeal to the recollection of every member of the House whether from the moment of my entering into it I did not utterly disregard everything that took place prior to my coming into it, and direct myself to the business for which

my constituents sent me here. The most extraordinary statements are made as to my views, statements as inaccurate as those which have fallen, no doubt unconsciously, from the hon. member who has last addressed the House. One noble lord in a great London gathering convoked against me, a gathering which was not as successful as some that have taken place in my favor, denounced me as a Socialist. I do not happen to be one. I happen to think that Socialists are the most unwise and illogical people you can happen to meet. But the noble lord knew that I ought to be something (laughter). I am a red rag to a wild Conservative bull, and it must rush at me and call me Socialist. I ask this House to be more fair and just. If I am to be tried, at least let me be tried for the opinions I hold and the views I express. Why, there are members who have soiled their tongues with words about social relations and marriage for which I have no proper reply in this House, as unfortunately the forms of the House do not permit me to use the only fitting answer, and perhaps it is as well. But I ask the House, Do not let this be the kind of weapon with which a return is met. Deal with me as the law directs, and in no other way. It is said "You have brought this upon yourself" (hear, hear). One baronet who has spoken of me with a kindness more than I deserve, in the very borough which I represent said I had brought it upon myself, because when I originally came to the House I flaunted and most ostentatiously put my opinion upon the House (hear, hear). Well, not one word of that is true. Not a shadow of it is true. I hold in my hand the sworn evidence of Sir Erskine May. I do not ask gentlemen to take my word, for it is clear they will not, but that of their own officer. And when the right hon. baronet said I claimed under the statute, and drew an inference from it, he knows that my claim contained no such words until the clerk at the table of the House challenged me as to the law under which I claimed. I do not quarrel with him, but I submit that the Clerk of the House had no right to put that question to me. I submit that the House had nothing whatever to do with it—that it certainly is no ostentatious flaunting by me. I submit, that at any rate, that it is prior to the 9th of April, 1881, and the House had no right to revive it against me. I ask the House to try and deal with me with some show

of fairness. They will find when I was before the Committee, instead of obtruding my opinions, I said I had never directly or indirectly obtruded upon the House any of my utterances or publications upon any subject whatever, and when pressed by one of the members sitting on that (the Opposition) side of the House as to certain opinions I was supposed to hold, by asking me particular words I was supposed to have used in a judicial proceeding, I said that if the Committee wished I would answer, but that I objected to answer, because I had carefully refrained from saying any word which would bring my opinions before the House. I ask, therefore, the House whether it is not monstrously unfair to say that I have obtruded any opinions here when I have expressly, carefully, and thoroughly kept them from the House? But it is said by the right hon. baronet that it would be a profanation to allow me to take the oath, and that the House would be no party to such a profanation (Opposition cheers). Does the House mean that it is a party to each oath taken? (hear.) There was a time when most clearly it was not so a party. There was a time when the oath was not even taken in the presence of members at all. But does the House mean it is a party now? Was it a party the Session before last? Was it a party when Mr. Hall walked up to that table, cheered by members on the other side who knew his seat was won by deliberate bribery? (loud Opposition cries of Order.) Bribery sought to be concealed by the most corrupt perjury. Did the House join in it? (renewed cries of Order.) If the House did not join in it, why did you cheer so that the words of the oath were drowned? But was the House a party when John Stuart Mill sat in this House? (hear, no.) A member who is, I think, now within the walls of the House—the hon. member for Greenwich—in addressing his constituents, said that Mr. Bradlaugh's opinions were hardly more objectionable than those of some other members of the House. If the hon. member knew that, then he was a party to the profanation of the oath: but perhaps they were on his own side, and he did not feel the profanation so acutely (hear, hear, and laughter). But it is said, "Our real objection is that you have declared that the oath is not binding upon you" (hear, hear, from Mr. Alderman Fowler). That is exactly the opposite

of what I did declare. The hon. member whose voice I hear now, I unfortunately heard on the 3rd of August; and heard so that I shall never forget it. (Mr. Bradlaugh here looked towards Alderman Fowler and paused.) The hon. member admits that is the point—that I have declared the oath is not binding upon my conscience; but, unfortunately, all the print goes the other way. I am asked by the Committee who sat as to whether the oath is binding, and on page 15 I reply.: "Any form that I went through, any oath that I took, I shall regard as binding upon my conscience in the fullest degree, and I would go through no form and take no oath unless I meant it to be so binding." Again, I am asked as to the word "swear." I say: "I consider when I take an oath it is binding upon my honor and upon my conscience"; and with reference to the words of asseveration to which the hon. member for North Warwickshire referred, he would at least have been more generous towards myself, if generosity be possible with him, if he had said: "I desire to add—and I do this most solemnly and unreservedly—that the taking, and subscribing, and repeating these words of asseveration will in no degree weaken the binding effect of the oath upon my conscience." I say here, Sir, before you, with all the solemnity man can command, that I know the words of the oath the statute requires me to take, that I am ready to take that oath according to law, and that I will not take an oath without intending it to be binding upon me, and that if I do take the oath it will be binding upon my honor and conscience. (Conservative cries of "Oh! oh!") Members of the House who are ignorant of what is honor and conscience——(Loud cries of "Order," "Oh, oh," and "Withdraw," from the Opposition.) If members will allow me to finish my sentence——(Cries of "Withdraw.") Members of this House who are ignorant of what is——(Renewed cries from the Opposition of "Withdraw.") These (Mr. Bradlaugh pointing to the Opposition benches) are my judges. Members of this House who are ignorant of what is the honor and conscience of the man who stands before them—(Oh," and laughter from the Opposition)—have a right to shout "Withdraw;" but they must beware lest a greater voice outside—("Oh, oh," and laughter from the Opposition) —at the ballot-box, where it has a right to express it,

may not only say "withdraw," but make withdraw all those who infringe the constitutional rights of the nation, as they seek to infringe them now. If I knew any kind of word which might convince members whom I desire to convince that I would take no pledge that I did not mean to be binding, I would use that form of words. But I have found myself so harshly judged, so unfairly dealt with, that one feels a difficulty in understanding whether any form of words, however often repeated, would convey any kind of conviction to some minds. I presume that this House will repeat its vote of April 26th. What then? Will it have the courage of its opinions, and vacate my seat? (Hear, hear.) If it does not, this House leaves me in an unfair position before the law. I am bound to come to this table, and will come to this table, as long as the mandate of my constituents sends me here, unless the House vacates the seat. If my seat be vacated, it is my duty to bow to the House, and appeal to my constituents again; and then the verdict rests with them. But to take away part of the right, and deal with it in this fashion, leaving me with the full legal responsibility and no kind of legal authority, I submit is not generous. Well, will this House repeat its vote of 9th May? Will it substitute force for law? At present the law is on my side (No, no, and hear, hear). If not, let me sit and sue me (hear, hear). If not, try by petition. If not, bring an action. But shouting "No" won't decide the law, even with the united wisdom of the members of this House who shout it. I know that no man is a good advocate for a great principle unless he himself be worthy of the principle he advocates, and I have felt acutely the judgment properly passed upon me by many members of this House, who, knowing their superiority to me, say how unworthy I am that this question should be fought in my person. I admit I am unworthy, but it is not my fault that I have this fight to make. I remind you of the words of one of the greatest statesmen who sat in this House more than a hundred years ago, that whenever an infringement of the constitutional right was attempted, it was always attempted in the person of some obnoxious man (hear, hear). I ask the House for a moment to carry its mind to the 3rd of August last. I do that because either I do not understand what took place then, or my memory

has failed me, as the memory of other hon. members sometimes does, or things happened without my consciousness. I thought I had stood aside until Parliament had dealt with the pressing business of the nation. I thought that had been recognised by this House. I thought I only came saying at the very door of the House that I was ready to obey its lawful orders, and I thought I was then seized by force while saying it. My memory may not serve me well on that, but I think it does. There were plenty of witnesses to the scene. I saw one hon. member climb on to a pedestal to see how fourteen men could struggle with one. It was hardly generous, hardly brave, hardly worthy of the great House of Commons, that those sending out to the whole world lessons of freedom, liberty, and law, should so infringe and so stamp them under foot. I had no remedy in any court, or I would have taken it. With all respect to you, Sir, and the officers of this House, if there had been any possibility of trying at law against the mighty privilege of this House, I would have appealed to that possibility. Let me now, before I finish, ask the ear of the House for one moment. It is said it is the oath and not the man; but others, more frank, say it is the man and not the oath. Is it the oath and not the man? I am ready to stand aside, say for four or five weeks, without coming to that table, if the House within that time, or within such time as its great needs might demand, would discuss whether an Affirmation Bill should pass or not. I want to obey the law, and I tell you how I might meet the House still further, if the House will pardon me for seeming to advise it. Hon. members have said that would be a Bradlaugh Relief Bill (hear, hear). Bradlaugh is more proud than you are (hear, hear). Let the Bill pass without applying to elections that have taken place previously, and I will undertake not to claim my seat, and when the Bill has passed I will apply for the Chiltern Hundreds (cheers.) I have no fear. If I am not fit for my constituents, they shall dismiss me, but you never shall. The grave alone shall make me yield (hear, hear, and "Oh").

A CARDINAL'S BROKEN OATH.

A Letter

TO HIS EMINENCE HENRY EDWARD, CARDINAL-ARCHBISHOP OF WESTMINSTER.

BY

CHARLES BRADLAUGH.

To his Eminence

HENRY EDWARD,

CARDINAL-ARCHBISHOP OF WESTMINSTER.

Three times your Eminence has—through the pages of the *Nineteenth Century*—personally and publicly interfered and used the weight of your ecclesiastical position against me in the Parliamentary struggle in which I am engaged, although you are neither voter in the borough for which I am returned to sit, nor even co-citizen in the state to which I belong. Your personal position is that of a law-breaker, one who has deserted his sworn allegiance and thus forfeited his citizenship, one who is tolerated by English forbearance, but is liable to indictment for misdemeanor as "member of a society of the Church of Rome." More than once, when the question of my admission to the House of Commons has been under discussion in that House, have I seen you busy in the lobby closely attended by the devout and sober Philip Callan, or some other equally appropriate Parliamentary henchman. Misrepresenting what had taken place in the House of Commons when I took my seat on affirmation in July, 1880, your Eminence wrote in the *Nineteenth Century* for August, 1880, that which you were pleased to entitule "An Englishman's Protest" against my being allowed to sit in the Commons' House, to which the vote of a free constituency had duly returned me. In that protest you blundered alike in your law and in your history. You gave

the Tudor Parliamentary oath Saxon and Norman antiquity. You spoke of John Horne Tooke as having had the door of the House shut against him by a by-vote, no such by-vote having been carried, and the statute which disabled clergymen in the future not affecting John Horne Tooke's seat in that Parliament. You declared that in the French Revolution the French voted out the Supreme Being; there is no record of any such vote. In March, 1882, when the House had expelled me for my disobedience of its orders in complying with the law, and taking my seat, you again used the *Nineteenth Century*. This time for a second protest, intended to prevent my re-election. You, in both your articles, reminded the bigots that I might be indicted for blasphemy. Your advice has since been followed. Persecution is a "two-edged sword," and I return the warning you offer to Lord Sherbrooke. When I was in Paris some time since, and was challenged to express an opinion as to the enforcement of the law against the religious orders in France, I, not to the pleasure of many of my friends, spoke out very freely that in matters of religion I would use the law against none; but your persecuting spirit may provoke intemperate men even farther than you dream. In this country, by the 10th George IV., cap. 7, secs. 28 and 29, 31, 32 and 34, you are criminally indictable, Cardinal-Archbishop of Westminster. You only reside here without police challenge by the merciful forbearance of the community. And yet you parade in political contest your illegal position as "a member of a religious order of the Church of Rome," and have the audacity to invoke outlawry and legal penalty against me. Last month, in solemn state, you, in defiance of the law, in a personal and official visit to the borough of Northampton itself, sought to weaken the confidence of my

constituents; and you were not ashamed, in order to injure me, to pretend friendship with men who have for years constantly and repeatedly used the strongest and foulest abuse of your present Church. An amiable but ignorant Conservative mayor, chief magistrate of the borough, but innocent of statutes, was misled into parading his official robe and office while you openly broke the law in his presence. In the current number of the *Nineteenth Century* you fire your last shot, and are coarse in Latin as well as in the vulgar tongue. Perhaps the frequenting Philip Callan has spoiled your manners. It else seems impossible that one who was once a cultured scholar and a refined gentleman could confuse with legitimate argument the abuse of his opponents as "cattle." But who are you, Henry Edward Manning, that you should throw stones at me, and should so parade your desire to protect the House of Commons from contamination? At least, first take out of it the drunkard and the dissolute of your own Church. You know them well enough. Is it the oath alone which stirs you? Your tenderness on swearing comes very late in life. When you took orders as a deacon of the English Church, in presence of your bishop, you swore "so help me, God," that you did from your "heart abhor, detest and abjure," and, with your hand on the "holy gospels," you declared "that no foreign prince, person, prelate, state, or potentate hath, or ought to have, any jurisdiction, power, superiority, pre-eminence, or authority, ecclesiastical or spiritual, within this realm." You may now well write of men "whom no oath can bind." The oath you took you have broken; and yet it was because you had, in the very church itself, taken this oath, that you for many years held more than one profitable preferment in the Established Church of England.

You indulge in inuendoes against my character in order to do me mischief, and viciously insinuate as though my life had in it justification for good men's abhorrence. In this you are very cowardly as well as very false. Then, to move the timid, you suggest "the fear of eternal punishment," as associated with a broken oath. Have you any such fear? or have you been personally conveniently absolved from the "eternal" consequences of your perjury? Have you since sworn another oath before another bishop of another church, or made some solemn vow to Rome, in lieu of, and in contradiction to, the one you so took in presence of your bishop, when, "in the name of the Father, Son, and Holy Ghost," that bishop of the church by law established in this country accepted your oath, and gave you authority as a deacon in the Church you have since forsaken. I do not blame you so much that you are forsworn: there are, as you truly say, "some men whom no oath can bind;" and it has often been the habit of the cardinals of your Church to take an oath and break it when profit came with breach; but your remembrance of your own perjury might at least keep you reticent in very shame. Instead of this, you thrust yourself impudently into a purely political contest, and shout as if the oath were to you the most sacred institution possible. You say "there are happily some men who believe in God and fear him." Do you do either? You, who declared, "So help me, God" that no foreign "prelate . . . . ought to have any jurisdiction or authority ecclesiastical or spiritual within this realm." And you—who in spite of your declaration on oath have courted and won, intrigued for and obtained, the archbishop's authority and the cardinal's hat from the Pope of Rome—you rebuke Lord Sherbrooke for using the

words "sin and shame" in connexion with oath-taking; do you hold now that there was no sin and no shame in your broken oath? None either in the rash taking or the wilful breaking? Have you no personal shame that you have broken your oath? Or do the pride and pomp of your ecclesiastical position outbribe your conscience? You talk of the people understanding the words "so help me, God." How do you understand them of your broken oath? Do they mean to you: "May God desert and forsake me as I deserted and forsook the Queen's supremacy, to which I so solemnly swore allegiance"? You speak of men being kept to their allegiance by the oath "which binds them to their sovereign." You say such men may be tempted by ambition or covetousness unless they are bound by "the higher and more sacred responsibility" involved in the "recognition of the lawgiver in the oath." Was the Rector of Lavington and Graffham covetous of an archbishopric that he broke his oath? Was the Archdeacon of Chichester ambitious of the Cardinal's hat that he became so readily forsworn? Lord Archbishop of Westminster, had you, when you were apostate, remained a poor and simple priest in poverty and self-denial, although your oath would have still been broken, yet you might have taunted others more profited by their perjuries. But you, who have derived profit, pride, and pomp from your false swearing—you, who sign yourself "Henry Edward, Cardinal-Archbishop" by favor of the very authority you abjured in the name of God—it is in the highest degree indecent and indecorous for you to parade yourself as a defender of the sanctity of the oath. As a prince-prelate of the Church of Rome you have no right to meddle with the question of the English Parliamentary oath.

Your Church has been the foe of liberty through the world, and I am honored by your personal assailment. But you presume too much on the indifference of the age when, in this free England, you so recklessly exhibit as weapons in an election contest the outward signs of the authority the Vatican claims, but shall never again exercise, in Britain.

NORTHAMPTON

AND THE

HOUSE OF COMMONS.

20, Circus Road, St. John's Wood, London, N.W.,
March 1*st*, 1884.

To the Right Hon. Sir Stafford H. Northcote, M.P., G.C.B.

Sir,—If, on either of the occasions when recently moving against me in the House of Commons, you had accorded or claimed for me opportunity of speech in self-defence, I might have been spared the need for this letter.

Apparently your view is that a member unfortunate enough to have the majority of the House against him need not have even the semblance of fairness shown him—that you, being strong, need not be troubled with scruples, and that the mere fact that the member is, like yourself, the chosen member of a constituency does not entitle him to the smallest courtesy or consideration.

You have taught me, Sir, many lessons during the past four years. Some of these I trust to remember and profit by in the future. You have taught me that a temporary majority of the House may, year after year, exclude any member of Parliament from his seat, although he has strictly obeyed every Standing Order—and this without vacating that seat—that it may so exclude the member although he has been a decent and orderly member of the

House, attending regularly for months to all its duties, and one against whom no charge or pretence of Parliamentary misconduct was made whilst he so served in it.

You have taught me, Sir, that the leader of a great party may sit silent, and acquiesce in it by his support, while the law-abiding electors of a great constituency are called "mob," "dregs," and "scum"—that such a leader may permit his followers to openly accuse two of the highest judges of our country of having judicially decided unfairly from corrupt party motives—that he may even, without dishonor, keep silence whilst it is suggested that the whole judicial bench is so corrupt that it will be ready to decide unjustly at the bidding of a government—and that the first law officer of the Crown is ready to be fraudulently collusive with myself. Did you believe these things, Sir, when they were stated and loudly cheered by those who sit around you on your side of the House? If yes, I am glad that your experience of humanity has been less fortunate than my own. I have regarded our judges as at least striving to be just and independent. You seem to think it nothing that the highest judges should, in your presence, be charged with judging unjustly from favoritism for the government of the day.

You have encouraged and practised deliberate violation of the law, and, to cover this law-breaking, you have connived at, and been party to, the basest insinuations against those whose duty it is to judicially pronounce on matters of legal dispute. You have, without rebuke, permitted your followers to declare that if the High Court of Judicature declared the law to be in my favor, that then they and you still intended to defy and disobey the law.

The first resolution you moved against me, on the 11th

February, was worse than futile, for it forbade me to do that which I had already done, and which you well knew that I had so done, in order to compel the submission to the judgment of a competent tribunal of the legality of my act.

The ridiculous form of your resolution arose because you—having bargained with me in writing through Mr. Winn that I should come to the table immediately after questions, and not before—intended to interpose ere I could reach the table. This would have been a dishonest trick had you succeeded; it became contemptibly ridiculous when you failed; but it is a lesson to me that I must be careful, indeed, when English gentlemen of name and family make treaties with me.

Your second resolution, on February 11th, was a spiteful, paltry, and cowardly insult to myself and to my constituents, for it was pressed by you despite that my colleague offered for me the express undertaking that you pretended you wished to secure, and was still pressed by you though Mr. Burt offered for me that I would at once personally give such undertaking, These two resolutions, utterly illegal and dangerous to Parliamentary repute, you have renewed on Thursday, the 21st, although you had heard read by Mr. Speaker an undertaking from me to the House that I would not attempt to take my seat until the judicial interpreters of the law had given formal judgment. And they are very cowardly and inexcusable resolutions, spiteful in excess of any ever passed in previous years. They exclude me, not only from the House, but from the reading-room, library, tea-room, dining-rooms, and exterior lobbies, though there is not the faintest suggestion that I have used my right to go to those places

to enable me to disturb the House. If I had not taken the precaution to anticipate your malice, I should actually have been hindered by force from going to the proper officer to obtain the certificate of my return. Yours is a mean and spiteful act, Sir, unworthy an English gentleman. And I admit that you have inconvenienced me, for you have deprived me of access to the library of the House, and you may thus put me to some expense and annoyance in the procurement of law books and Parliamentary records in the litigation in which I am involved in defending the rights of my constituents.

It is too much that, in 1884, a duly-elected and properly-qualified burgess of Parliament should be shut outside by such votes.

To repeat to you words signed, in September, 1656, by your own ancestor, Sir John Northcote, M.P. for the County of Devon: "we who have been duly chosen to be members of the Parliament, have an undoubted right to meet, sit, and vote in Parliament," and "no part of the representative body are trusted to consent to anything in the nation's behalf if the whole have not their free liberty of debating and voting in the matters propounded." To continue the language of your sturdy ancestor, you have "now declared that the people's choice cannot give a man a right to sit in Parliament, but the right must be derived from *your* gracious will and pleasure." You reply that you have the force on your side; but Sir John Northcote declared that: "The violent exclusion of any of the people's deputies from doing their duties and executing their trust freely in Parliament doth change the state of the people from freedom into a mere slavery;" and if you tell me that the majority of the present members of the House are

with you in what you do, I recall Sir John Northcote's protest: "That all such chosen members for Parliament as shall take upon them to approve of the forcible exclusion of other chosen members, or shall sit, vote, and act by the name of the Parliament of England while, to their knowledge, any of the chosen members are so by force shut out, we say such ought to be reputed betrayers of the liberties of England."

You cannot now pretend with any hope that sane men will believe you, that you desire "to prevent the profanation of the oath." In 1880 you prevented the second reading of the Affirmation Bill, introduced by my colleague, Mr. Labouchere, under the pretext that such a measure ought to be introduced by the Government. In 1881, after you yourself had said the matter should be dealt with by legislation, you prevented the Government from introducing it. In 1882 your friends blocked the Affirmation measure again proposed by my colleague, and in 1883 you exerted every influence to defeat, and successfully defeated, the Affirmation Bill brought forward by the Government.

If you had really believed the oath profaned by me, you would have been one of the first to aid in removing the possible profanation by substituting the right of affirmation. In Ulster you took credit for keeping an Atheist out of Parliament, but it was not my Atheism you kept out, for I actually sat with you day by day, speaking, voting, and serving, from the beginning of July, 1880, until the end of March, 1881. And, during the whole of that time, my care was to be at least as good and loyal a member of that House as any sitting within its walls I do not plead my conduct there, whilst using all my right, as anything on my behalf, for I at most could do no more

than my duty; but at least I have the right to say that it was never suggested that I was other than a good working member of the House, strict in my attendance at and during every one of its sittings. It cannot be pretended that I used my right of speech to force upon the House one word which did not relate to the business then being dealt with, or that in any fashion I obtruded upon what should be a purely political assembly any views of mine on matters of religion.

You have permitted in public my conduct to be misstated in your presence, and utterances in Parliament to be attributed to me which are none of mine, and you have done this because you hoped that, by exciting religious and social prejudice against me, you might weaken the Government, and crawl back into office. To injure the Liberal party, you have allowed words which you pretend are sacred to be used as party cries, and you have made hundreds of thousands examine into and declare in favor of my opinions and expressions on religious questions who but for you might perhaps have never even known my name. You have allied yourself at Westminster with men whom you denounced in Ireland as "traitors and disloyal," in order that, with their help, you might insult an English constituency; and you have succeeded in bringing Parliamentary Government into contempt by parading the House of Commons as the chief law-breaking assembly in the world. In four years against me you have done your worst to destroy me; with your own purse you have helped the various projects to ruin me; and you have so failed that clergymen and Nonconformist ministers have been driven to support me from very indignation against the injury you have done to the cause of religion. Your

Conservative associations have flooded the country with leaflets containing garbled and misleading extracts from my speeches and writings, and have thus excited the curiosity of many whom I could have never reached. These, procuring my works, and finding that my words have been distorted and taken out of context, give a favor to me that I should perhaps have never otherwise won.

Few believe that you are moved by religious motives. Mr. Newdegate is regarded as sincere, though his sanity is doubted; but when men recollect the past and even present lives of many of those around you, whose tongues so loudly declare their piety, they come, not unnaturally, to the conclusion that he is the worst infidel who trails the banner of his church in the mire of political warfare, and permits the votes of the drunken, the dissolute, the dishonest, and the disloyal to be canvassed by his whips so that they may be counted on the side which he parades as that of the pure and the holy.

On the 7th February, 1882, I told you and your majority: "If I am not fit for my constituents, they shall dismiss me, but you never shall." I have gone since voluntarily to my constituents—to those from whom you presented a petition with 10,400 mock signatures upon it. The answer has come at the ballot-box. My constituents bid me resist you, and I will. They trust me to defeat you, and I will. The law is on my side, and you fear its pronouncement. You kept me from the possibility of obtaining a decision as long as you could, but on the 11th February I broke through your barriers. Then you fruitlessly tried to erase all trace of my voting, and when you found that I beat you on this by adding a new vote as you rubbed out the vote before, then, in malicious spite, you

shut me out of the tea-room, dining-room, cloak-room, and library. For shame, Sir Stafford Northcote! This was worthy of "O'Donnell," but not of the leader of a great party. You wear knightly orders. You should be above a knave's spitefulness.

My turn is coming. You have won sympathy for me throughout the land; you have made Northampton men stand by me closer than ever; you are now awaking the country to stand by Northampton. Mr. Justice Stephen says that the appeal is to the constituencies, and I appeal. In the name of justice, by the hope of liberty, in memory of English struggles for freedom, I appeal, and I hear the answer growing as you shall hear it, too, on the day when, from my place in the House, I move: "That all the resolutions respecting Charles Bradlaugh, member for Northampton, hindering him from obeying the law, and punishing him for having obeyed the law, be expunged from the Journals of this House as being subversive of the rights of the whole body of electors of this kingdom."

CHARLES BRADLAUGH.

30, St. James' Place, S.W.

March 4th, 1884.

SIR,—There are some points in the letter you have addressed to me, which I am unwilling to pass over in silence lest I should be taken to admit your assertions.

In the first place, it is necessary that I should point out to you that the action of the House of Commons with respect to yourself has not been arbitrary or capricious,

but has been founded on principles deliberately adopted by a large majority of its members of various political opinions, to which principles they have steadily adhered, and which they have always been prepared to justify.

In the second place it should be clearly understood that in all the steps which we have taken with respect to yourself, including some which we took with the greatest reluctance, we were acting on the defensive, in consequence of your repeated attempts to override or to evade the repeated decisions of the House of Commons.

The brief history of your case is this. You were duly elected member for Northampton at the General Election of 1880. On presenting yourself to take your seat you tendered an affirmation instead of an oath, and supported your claim to affirm by reference to the fact that you had been permitted to do so in a court of law under the E idence Amendment Acts of 1869 and 1870. That claim at once, and necessarily, brought under the notice of the House that you must either yourself have objected in a court of law to take an oath, or must have been objected to as incompetent to do so, and that the presiding judge must have been satisfied that the taking of an oath would have no binding effect upon your conscience.

That being so, a Committee was appointed by the House to consider whether the Evidence Amendment Acts were applicable to the case of a member of the House of Commons desiring to take his seat and to comply with the necessary conditions.

It was held by the Committee that they were not so applicable, and this finding of the Committee was subsequently confirmed by the judgment of the Court of Appeal.

Upon being refused permission to affirm, you immediately

came to the table of the House and offered to take the oath. This proceeding was objected to, and the majority of the House (still, as theretofore, composed of members of different shades of politics) refused to allow you to go through the form of taking an oath, which, by the hypothesis on which your original claim to affirm was founded, as well as by the evidence afforded by a letter of your own, they held you to be incompetent really to take, and which they considered it would be a profanation to allow you to pretend to take.

That was the ground taken by the House on the 23rd June, 1880, and it is the ground which it has maintained ever since.

You have, since the adoption of that resolution, made various attempts to force the House to admit you to a seat, while still maintaining its objection; and those attempts have, on more than one occasion, led to scenes of a very indecent and disorderly character. In its anxiety to prevent the recurrence of such scenes, the House has felt itself obliged to adopt measures of rigid exclusion, which it would gladly have avoided.

I do not think it necessary to enter into the details of these scenes.

I am, however, obliged to take notice of your allegation that my action on the 11th February involved a breach of an arrangement previously made through Mr. Winn.

The arrangement which I authorised Mr. Winn to make in my name, and which he did make in a letter to Mr. Labouchere, was as follows:

"If Mr. Bradlaugh will write you a letter to the effect that he will not go up to the table to take the oath, nor make any other move with regard to his seat until Monday, February

11th, and will do so on that day, say immediately after questions, I am quite sure that Sir Stafford will neither move anything himself respecting Mr. Bradlaugh's seat, nor employ anyone else to do so, *previous to that day*."

The meaning of this is perfectly obvious, and it was in strict conformity with it that I myself abstained, and urged my friends to abstain, from taking any step whatever in relation to Mr. Bradlaugh until the day named. When, upon that day, you came forward in defiance of the Speaker's repeated calls to order, and began to go through the form of taking the oath, I had no option but to support the Chair, and to support also the repeatedly pronounced resolutions of the House in former sessions.

I do not take notice of other passages in your letter reflecting on the course of the majority, and more particularly of myself.

But I will add, in conclusion, what your letter does not show, that your exclusion from the precincts of the House is terminable at any moment when you may be willing to undertake not to disturb the proceedings of the House. The inconveniences of which you complain are inconveniences which you might, if you chose, put an end to to-morrow.

I have the honor to remain,

Your obedient servant,

STAFFORD H. NORTHCOTE.

C. BRADLAUGH, Esq., M.P.

23, Circus Road, St. John's Wood, London, N.W.,
March 7th, 1884.

To the Right Hon. Sir Stafford Northcote, Bart, M.P.

Sir,—In reply to your favor of the 4th instant, in which you say that the House held me to be incompetent to take the oath, will you permit me to answer: 1. That the question of competence or incompetence to take the oath is one of law, fit only for the decision of a judicial tribunal, to which tribunal I have always desired and endeavored to refer such question. 2. That if the "principle deliberately adopted" by a large majority of the members of the House of Commons had been that they desired to prevent "a profanation of the oath," then they ought, during the sessions of 1882—1883, to have gladly facilitated the passage of the Affirmation Bill, which would have prevented the necessity for the fulfilling by me of that which you describe as profanation, but which I contend is the duty imposed on me by law.

In your very temperate historic narrative, you omit the fact that when the House passed its resolution of the 23rd June, 1880, it had before it my declaration, made three weeks earlier, in answer to question 102 of the second Select Committee:

"Any form that I went through, any oath that I took, I should regard as binding upon my conscience in the fullest degree. I would go through no form, I would take no oath, unless I meant it to be so binding."

And as you refer to my letter of the 20th May, printed in the report of that committee, it is also fair to recall my answer thereon on the same day to question 197:

"I ask the Committee in examining it to take it complete,

not to separate one or two words in it and to take those without the countervailing words, and to remember that in this letter I declare that the oath, if I take it, would bind me, and I now repeat that in the most distinct and formal manner; that the Oath of Allegiance, viz.: 'I do swear that I will be faithful and bear true allegiance to her Majesty Queen Victoria, her heirs and successors, according to law," will, when I take it, be most fully, completely, and unreservedly binding upon my honor and conscience; and I crave leave to refer to the unanimous judgment of the full Court of the Exchequer Chamber, in the case of Miller *v.* Salomons, 17th Jurist, page 463, and to the case of the Lancaster and Carlisle Railway Company *v.* Heaton, 4th Jurist, new series, page 708, for the distinguishment between the words of asseveration and the essential words of an oath. But I also desire to add, and I do this most solemnly and unreservedly, that the taking and subscribing, or repeating of those words of asseveration, will in no degree weaken the binding effect of the oath on my conscience."

In your reference to my attempts to take the seat to which I am by law entitled, you have omitted to state that on the 27th April, 1881, you personally advised me to wait for legislation, and that when I did so wait, your friends of the majority and yourself prevented such legislation.

In recalling the arrangement made by Mr. Winn on your behalf, you have omitted his most explicit and latest letter:

"Nostell Priory, Wakefield,
"January 28th, 1884.

"Dear Mr. Labouchere,—On the distinct understanding and agreement that Mr. Bradlaugh does not come to the table to take the oath, or adopt any other course with reference to his seat in the House of Commons, until immediately after questions on Monday, the 11th of February next, and that he will on that day and time come to the table, as he has intimated his intention of doing, I am prepared to say that Sir Stafford Northcote will not previous to Monday the 11th make

any motion hostile to Mr. Bradlaugh, nor support any motion coming from any of our independent friends on the subject.

"I am, yours very truly,

"ROW. WINN.

"H. Labouchere, Esq., M.P."

My charge against you is that, despite this agreement, you had gone down to the House with a resolution prepared beforehand, and by its wording showing that it was intended to be moved before I should be able to get near the table to which you had made me specifically agree then to come.

You conclude by saying that I can put an end to any personal inconvenience by undertaking not to disturb the proceedings of the House. I gave such an undertaking last year in express words; it is printed in the journals of the House, and you did not accept it. Immediately before you moved your resolution of 21st February, you heard Mr. Speaker read my undertaking to do nothing until a legal decision was obtained. This you refused, and I have no reason to suppose that any second offer from me would be accepted. If what you really desire is that, if the law decides in my favor, I shall none the less join in your insult to my constituents by refusing to try to serve in the Parliament to which they have lawfully returned me, I can only say that I will never give such an undertaking.

I have the honor to be, Sir,

Your most obedient Servant,

C. BRADLAUGH.

A REGISTER OF EVENTS

Which have occurred since April 2nd, 1880.

BY

W. MAWER.

"No, not an oath. . . . . .
Swear priests, and cowards, and men cautelous,
Old feeble carrions and such suffering souls
That welcome wrongs; unto bad causes swear
Such creatures as men doubt; but do not stain
The even virtue of our enterprise,
Nor the insuppressive metal of our spirits,
To think that or our cause or our performance
Did need an oath."—*Julius Cæsar*, Act II., Scene 1.

THE LATEST

CONSTITUTIONAL STRUGGLE.

1880.

April 2nd.—After twelve years' fight and three repulses, Mr. Charles Bradlaugh is elected member of Parliament for Northampton. The polling was as follows:—

Labouchere (L.)	....	....	....	....	4,158
Bradlaugh (R.)	....	....	....	....	3,827
Phipps (C.)	....	....	....	....	3,152
Merewether (C.)	....	....	....	....	2,826

The *Weekly Dispatch* said: Mr. Bradlaugh's achievement of the position he has been aiming at so long and so zealously is a notable sign of the times. Whatever his critics may think of him, he will enter Parliament as the representative of a vastly larger constituency than the whole electorate or the whole population of Northampton.

The *Birmingham Daily Mail:* Mr. Bradlaugh holds extreme views on some subjects, but he will none the less be a useful man in Parliament, his unflinching courage in the exposure of abuses being unquestionable.

The *Standard:* Mr. Bradlaugh, now that he has got to the House of Commons, is not likely to efface himself in speechless obscurity.

The *Southampton Times:* The most signal and portentous triumph is that which has been achieved by Mr. Bradlaugh. His election shows what the unity of the Liberal party must have been.

The *Christian World:* His contributions to the discussions of the House may not be without value.

During the election Mr. Samuel Morley telegraphed to Mr. Labouchere as follows: I strongly urge necessity of united effort in all sections of Liberal party, and the sinking of minor and personal questions, with many of which I deeply sympathise, in

order to prevent the return, in so pronounced a constituency as Northampton, of even one Conservative.

April 15th.—Mr. S. Morley, speaking at Bristol, said, respecting his telegram to Northampton: He made no reference to candidates, nor did the friend who wrote the telegram go into detail, but he advised union. Those who had known him all his life would believe that he viewed with the intensest repugnance the supposed opinions, both social and religious, of one of the candidates. Afterwards, writing to the *Record*, Mr. Morley said he deeply regretted his telegram.

The *Weekly Dispatch*, commenting on Mr. Morley's conduct, said: Let the bigots who have taken him to task for his temporary aberration from the path of pharisaism make what they can of his pitiful excuse. Other people can only regret that a man so useful in many ways, both as a politician and a philanthropist, should show himself so narrow-minded.

The *Edinburgh Evening News:* In their disappointment, the defeated party have eagerly caught at the election of Mr. Bradlaugh as supplying the most pungent taunt that can be thrown at their victorious opponents.

The *Sheffield Telegraph:* Bradlaugh is an M.P. . . . . the bellowing blasphemer of Northampton.

Mr. Bradlaugh announces that he considers he is legally entitled to avail himself of the Freethinkers' affirmation, and that there is some reason to hope that other members will join him in that course.

April 17th.—*Sheffield Independent's* "London Correspondent" says: Tenets which constitute the religious faith of Mr. Bradlaugh are understood to constitute an insuperable difficulty in the way of his being sworn a member of "the faithful Commons."

April 29th.—Parliament opens.

May 3rd.—At the table of the House Mr. Bradlaugh handed in a written paper to the Clerk of the House; on this were written the words: "To the Right Honorable the Speaker of the House of Commons. I, the undersigned Charles Bradlaugh, beg respectfully to claim to be allowed to affirm, as a person for the time being by law permitted to make a solemn affirmation or declaration, instead of taking an oath. Charles Bradlaugh." Asked if he desired to state anything to the House, Mr. Bradlaugh said: I have to submit that the Parliamentary Oaths Act, 1866, gives the right to affirm to every person for the time being permitted by law to make affirmation. I am such a person; and under the Evidence Amendment Act, 1869, and the Evidence Amendment Act, 1870, I have repeatedly, for nine years past, affirmed in the highest courts of jurisdiction in this realm. I am ready to make the declaration or affirmation of allegiance.

At the request of the Speaker Mr. Bradlaugh then withdrew, in order that the House might consider the claim, and Lord F.

Cavendish, urging that it would be manifestly inconvenient that when any hon. member had applied to take his seat in the House, any unnecessary delay should intervene, moved the appointment of a committee of inquiry which should lay before the House the material on which the House itself should found its decision. Sir Stafford Northcote seconded. Several other members spoke, and Mr. Beresford Hope said that the grievance of one man was very little compared with a great principle; at present the House of Commons was only a half-hatched chicken. The committee was then agreed to.

May 11th.—Appointment of committee carried by 171 votes against 74, after a two hours' debate.

May 20th.—The committee report: "that in the opinion of the committee, persons entitled under the provisions of 'the Evidence Amendment Act, 1869,' and 'the Evidence Amendment Act, 1870,' to make a solemn declaration instead of an oath in courts of justice, can not be admitted to make an affirmation or declaration instead of an oath in the House of Commons, in persuance of the Acts 29 and 30 Vict., c. 19, and 31 and 32 Vict., c. 72."

The draft report, proposed by the Attorney-General, was to the effect that "persons so admitted," etc, *may be* admitted, etc. This was lost by the casting vote of the chairman (Mr. Walpole), the other members of the committee voting as follows. Ayes: Mr. Whitbread, Mr. John Bright, Mr. Massey, Mr. Sergeant Simon, Sir Henry Jackson, Mr. Attorney-General, Mr. Solicitor-General, Mr. Watkin Williams. Noes: Sir John Holker, Lord Henry Lennox, Mr. Staveley Hill, Mr. Grantham, Mr. Pemberton, Mr. Hopwood, Mr. Beresford Hope, Mr. Henry Chaplin.

Mr. Bradlaugh makes a public statement of his position with regard to the oath. He considered he had a legal right to choose between the alternatives of making an affirmation or taking the oath, and he felt it clearly his moral duty, in that case, to make an affirmation. The oath included words which, to him, were meaningless, and it would have been an act of hypocrisy to voluntarily take this form if any other had been open to him. He should, taking the oath, regard himself as bound not by the letter of its words, but by the spirit which the affirmation would have conveyed, had he been allowed to make it, and as soon as he might be able he should take steps to put an end to the present doubtful and unfortunate state of the law and practice on oaths and affirmations.

May 21st.—Amid a tumult of cries from the Conservative benches Mr. Bradlaugh goes to the table for the purpose of being sworn. Sir H. D. Wolff objecting, the Speaker requested Mr. Bradlaugh to withdraw. He (the Speaker) was bound to say he knew of no instance in which a member who had offered to take the oath in the usual form was not allowed by the House to do

so. Sir H. D. Wolff then moved that Mr. Bradlaugh should not be allowed to take the oath, alleging against Mr. Bradlaugh his repute as an Atheist, and his authorship of "The Impeachment of the House of Brunswick." Mr. Alderman Fowler seconded the motion, stating that he held in his hand a petition praying the House not to alter the law and the custom of the realm for the purpose of admitting an Atheist to Parliament. Mr. Gladstone, in the course of replying, said: "it was not in consequence of any regulation enforced by the authority of this House—of a single branch of the legislature, however complete that authority may be over the members of this House, that the hon. member for Northampton presents himself to take the oath at the table. He presents himself in pursuance of a statutory obligation to take the oath in order that he may fulfil the duty with which, as we are given to understand, in a regular and formal manner, his constituents have entrusted him. That statutory obligation implied a statutory right." He moved that it be referred to a select committee to consider and report for the information of the House whether the House has any right to prevent a duly-elected member, who is willing to take the oath, from doing so. A long debate ensued, characterised by the fierceness with which Mr. Bradlaugh's admission to Parliament was opposed. Mr. John Bright, however, asked if the House were entitled thus to obstruct what he called the right of a member to take his seat on account of his religious belief, because it happened that his belief or no belief had been openly professed, what reason was there that any member of the House should not be questioned as to his beliefs, and if the answer were not satisfactory that the House should not be at liberty to object to his taking his seat? After two or three adjournments of the debate the Premier's amendment was virtually withdrawn, and a motion by the Attorney-General was carried to the effect that a committee should be appointed to report whether it was competent to the House to prevent Mr. Bradlaugh, by resolution, from taking the oath.

May 28th.—Committee nominated—twenty-three members.

Mr. Labouchere gives notice to ask leave to bring in a Bill to amend the law of Parliamentary Oaths, to provide that any member may, if he desire, make a solemn affirmation in lieu of taking the oath.

June 2nd.—Mr. Bradlaugh gives evidence before Select Committee, in the course of which he said: "I have never at any time refused to take the oath of allegiance provided by statute to be taken by members; all I did was, believing as I then did that I had the right to affirm, to claim to affirm, and I was then absolutely silent as to the oath; that I did not refuse to take it, nor have I then or since expressed any mental reservation, or stated that the appointed oath of allegiance would not be binding

upon me; that, on the contrary, I say, and have said, that the essential part of the oath is in the fullest and most complete degree binding upon my honor and conscience, and that the repeating of words of asseveration does not in the slightest degree weaken the binding effect of the oath of allegiance upon me." [It had been persistently represented that Mr. Bradlaugh had refused to take the oath.] "Any form that I went through, any oath that I took, I should regard as binding upon my conscience in the fullest degree."

June 16th.—The committee report that the compliance by Mr. Bradlaugh with the form used when an oath is taken would not be the taking of the oath within the true meaning of the statutes; that if a member make and subscribe the affirmation in place of taking the oath it is possible by means of an action in the High Court of Justice, to test his legal right to do so; and that the committee recommend that should Mr. Bradlaugh again seek to make and subscribe the affirmation he be not prevented from so doing. (Majority in favor of his being allowed to affirm—four.)

June 21st.—Mr. Labouchere moved in the House of Commons that Mr. Bradlaugh be admitted to make an affirmation instead of taking the oath, seconded by Mr. M'Laren. Sir H. Giffard moved a resolution seeking to debar Mr. Bradlaugh from both oath and affirmation. Alderman Fowler seconded, a man who did not believe in a God was not likely to be a man of high moral character. The majority of the people were opposed to an Atheist being admitted to Parliament. Many other members spoke. General Burnaby said the making of the affirmation by Mr. Bradlaugh would pollute the oath. Mr. Palmer said Mr. Bradlaugh had a legal right with which the House had no power to interfere. The Attorney-General said he had come to the conclusion that Mr. Bradlaugh could not take the oath, chiefly on the consideration that he was a person entitled to affirm. Mr. John Bright said it was certainly open to any member to propose to take either oath or affirmation; probably if Mr. Bradlaugh had had any suspicion that the affirmation would have been refused him, he would have taken the oath as other members take it—very much, he was afraid, as a matter of form. Debate adjourned.

June 22nd.—Mr. Gladstone said that the House, by agreeing to the amendment, would probably be entering on the commencement of a long, embarrassing, and a difficult controversy, not perhaps so much within as beyond the limits of the House, perhaps with the result of ultimate defeat of the House. The more he looked at the case the stronger appeared the arguments which went to prove that in the essence of the law and the constitution the House had no jurisdiction. In interfering between a member and what he considered his statutory duty,

the House might find itself in conflict with either the courts of law or the constituency of Northampton. No doubt an action could not be brought against the House, but he was not so clear that an action could not be brought against the servants of the House. He was still less willing to face a conflict with the constituency. The House had commonly been successful in its controversies with the Crown or House of Lords, but very different was the issue of its one lamentable conflict with a constituency.—Sir Henry Tyler, with execrable taste, dragged in the name of a lady with whom Mr. Bradlaugh is associated in business. At last, by a majority of 45—the numbers voting being 275 and 230—another triumph against liberty was scored.

The *Christian World* regretted that some Nonconformists helped to swell the Tory majority.

The *Jewish World* held it as a reproach to Judaism, that members of their community should have gone over to the party which once strove to detain them in bondage.

In 1851, Mr. Newdegate protested against the idea "that they should have sitting in the House, an individual who regarded our redeemer as an impostor," and yet Baron de Worms voted with Mr. Newdegate for the exclusion of a man with whose tenets he disagreed.

The *Whitehall Review* headed an article "God *v.* Bradlaugh," and said the majority had "protected God from insult."

June 23rd.—Mr. Bradlaugh again claimed at the table of the House of Commons to take the oath, and the Speaker having informed him of the resolution passed the previous evening, requested his withdrawal. Mr. Bradlaugh thereupon asked to be heard, and after some debate the demand was complied with.

Mr. Bradlaugh spoke from the bar of the House, asking no favor, but claiming his right, and warning hon. members against a conflict with public opinion.

Mr. Labouchere moved, and Mr. Macdonald seconded, the rescindment of the resolution of the 22nd, which was lost on division.

Mr. Bradlaugh was then recalled and requested to withdraw from the House. Standing by the table, he said: "I respectfully refuse to obey the order of the House, because the order is against the law." The raging of the bigots and Tories recommenced. Mr. Gladstone declined to help them out of the pit into which they had leapt: "Those who were responsible for the decision might carry it out as they chose." After a sharp discussion Mr. Bradlaugh was, on the motion of Sir Stafford Northcote, "committed to the Clock Tower." In the division the numbers were 274 for and 7 against, the Radicals having left the House.

June 24th.—On the motion of Sir Stafford Northcote, Mr. Bradlaugh is released from custody, "not upon apology, or reparation, or promise not to repeat his offence, but with the full

knowledge and clear recollection of his announcement that the offence would be repeated *toties quoties* till his object was effected."

June 25th.—Mr. Labouchere gives notice of motion to rescind the resolution of the 22nd, and Government agreed to give an early day for the discussion of the same.

June 28th.—Baron de Ferrieres announced his intention to move that the seat for Northampton be declared vacant, and that a Bill be brought in providing for the substitution of an affirmation for the oath at the option of members. Mr. Wyndham (Conservative) asked Mr. Gladstone whether the Government would bring in a Bill to remove all doubts as to the legal right of members to make a solemn affirmation. Mr. Gladstone said the Government did not propose to do so, and gave notice for Thursday (1st July) to move as a standing order that members-elect be allowed, subject to any liability by statute, to affirm at their choice. Mr. Labouchere then said he would not proceed with his motion. On another motion, however, by the same member, leave was given to bring in a Bill for the amendment of the Parliamentary Oaths and Affirmations, which was read a first time.

July 1st.—After a futile attempt made by Mr. Gorst to show that Mr. Gladstone's resolution was a disorderly one, the Premier, in moving it said, in the course of an extremely fair speech, that the allegation of members that Mr. Bradlaugh had thrust his opinions upon the House was untrue. His (Mr. Bradlaugh's) reference to the Acts under which he claimed to affirm had only been named in answer to a question from the clerk of the House. Sir Erskine May, in his evidence before the recent committee, stated that Mr. Bradlaugh simply claimed to affirm.

Sir Stafford Northcote admitted that when Mr. Bradlaugh was called upon to affirm he was not disrespectful, but firm. He opposed the resolution as humiliating to the House. Several members protested against any course for facilitating the admission of Mr. Bradlaugh. General Burnaby stated that in order to obtain "authoritative" opinions on the matter he had obtained letters or telegrams from the Moravian body, the Bishop of London, the Roman Catholic Archbishop of Ossory, the Bishop of Ratho, the Archbishop of Dublin, the Bishop of Galway, and the Bishop of Argyle and the Isles, and the Secretary of the Pope of Rome, all of whom expressed themselves in the strongest terms against the admission of an Atheist into Parliament. Mr. Spurgeon, who was unfortunately from home, had expressed his opinion strongly adverse to it, and the Chief Rabbi—(loud laughter)—although refusing to interfere with political questions, felt very deeply on the subject. (Laughter, and cries of "the Sultan," and "Shah.")

When the House divided the numbers were 303 for, and 249 against.

July 2nd.—Mr. Bradlaugh takes the affirmation of allegiance, and his seat.

During the struggle several hundreds of indignation meetings were held in London and the provinces, and petitions, letters, telegrams, etc., in immense numbers, poured in upon the Government and the House, in favor of Mr. Bradlaugh's rights.

July 2nd.—Mr. Bradlaugh gives his first vote, and was thereupon served with a writ to recover against him a penalty of £500 for having voted and sat without having made and subscribed the oath, the plaintiff being one Henry Lewis Clarke, who, as subsequently appeared, was merely the tool of the actual common informer, Charles Newdigate Newdegate, M.P. This writ was ready so quickly that, if not issued actually before Mr. Bradlaugh had taken his seat, it must have been prepared beforehand.

July 8th.—Mr. Norwood asks the first Lord of the Treasury whether, considering the Government declined to introduce a bill to amend the Oaths Act, it would instruct the law officers of the Crown to defend the junior member for Northampton against the suit of the common informer. Mr. Callan asked whether the Government would remit the penalty. Mr. Gladstone said no application had been received for remission of the penalties, and that his reply to Mr. Norwood must be in the negative.

July 14th.—Read first time in the House of Commons, a bill "to incapacitate from sitting in Parliament any person who has by deliberate public speaking, or by published writing, systematically avowed his disbelief in the existence of a supreme being." It was prepared and introduced by Sir Eardley Wilmot, Mr. Alderman Fowler and Mr. Hicks. Owing to an informality the Bill could not come on for second reading.

The Rev. Canon Abney, of Derby, speaks of Mr. Bradlaugh as "the apostle of filth, impurity, and blasphemy."

July 16th.—Parliament indemnifies Lord Byron against an action, he having sat and voted without being sworn.

July 20th.—Sir Eardley Wilmot gives notice of moving that it is repugnant to the constitution for an Atheist to become a member of "this Honorable House." He afterwards postponed his motion.

At a meeting of the Dumfries Town Council, a member said: "If the law courts should decide that it was legal for an Atheist to sit in the House of Commons, he should feel it is duty to give notice of petition to Parliament to have the law altered; he would not allow Mr. Bradlaugh to go into a hundred acre field beside cattle, let alone the House of Commons."

The Rev. Chas. Voysey writes, that he feels disgraced by the

people of Northampton electing Mr. Bradlaugh, and declares that "most of the speeches in the Bradlaugh case in favor of his exclusion, strike me as singularly good, wholesome and creditable." He repeats the myth of Mr. Bradlaugh forcing his objections to the oath upon the House.

July 21st.—Sir John Hay, M.P., speaking about Mr. Bradlaugh at New Galloway, made a most infamous, cowardly, and uncalled for attack on Mrs. Besant. The *Scotsman* refused to print the remarks, as "the language was so coarse that it could hardly have dropped from a Yahoo."

Aug. 1st.—The *Nineteenth Century* prints "An Englishman's Protest," written by Cardinal Manning, personally directed against Mr. Bradlaugh.

Aug. 24th.—Mr. Bradlaugh gives notice that early next session he will call attention to perpetual pensions.

Sept. 7th.—Parliament prorogued. Hansard credits Mr. Bradlaugh with about twenty speeches during the Session. (Mr. Newdegate told the Licensed Victuallers that Mr. Bradlaugh "had made one speech, and proved himself a second or third-rate speaker.")

1881.

Jan. 6th.—Parliament reopens. Mr. Bradlaugh renews his notice as to perpetual pensions. Great interest in the question throughout the kingdom.

Jan. 24th.—Mr. Bradlaugh makes a speech in the House of Commons against Coercion in Ireland.

Jan. 31st.—Mr. Newdegate, speaking in the House, described Northampton as an "oasis in the Midland Counties."

Feb. 4th.—Mr. Bradlaugh makes a speech against the second reading of the Coercion Bill, and concluded by moving that it be read that day six months.

Feb. 15th.—Date of motion for inquiry into perpetual pensions fixed for March 15th. (When the day arrived Mr. Bradlaugh, on an appeal from Mr. Gladstone, allowed the motion to be postponed, in order to allow supply to be taken. 848 petitions had been presented to the House, with 251,332 signatures in favor of the motion.)

Feb. 17th.—Mr. Dawson, M.P. for Carlow, said that Irish members were much indebted to Mr. Bradlaugh for what he had done on the Coercion Bill.

Feb. 25th.—Mr. Bradlaugh made final speech against third reading of the Coercion Bill.

March 7th.—The case of Clarke v. Bradlaugh heard by Mr. Justice Mathew.

March 10th.—Mr. Bradlaugh brought before the House the case of the imprisoned Maoris.

March 11th.—Judgment in the case given, which was for the plaintiff, that he was entitled to recover the penalty, subject to appeal. Mr. Bradlaugh gave notice of appeal.

Mr. Gorst gave notice to move that Mr. Speaker issue his warrant for new writ for the borough of Nottingham [!].

March 14th.—Upon Mr. Bradlaugh rising to present petitions against perpetual pensions, signed by over 7,000 persons, Mr. Gorst rose to order, on the ground that the seat for Northampton was vacant. After discussion the Speaker called upon Mr. Bradlaugh to proceed with the presentation of his petitions.

March 15th.—At request of Mr. Gladstone, Mr. Bradlaugh postponed his motion for enquiry into perpetual pensions.

March 23rd.—Mr. Bradlaugh moved the Court of Appeal to expedite the hearing of his appeal, and also to expedite the trial of the issues in fact. The Court gave the appeal priority over other cases.

March 28th.—Mr. Bradlaugh made his last speech in the House against flogging in the Army.

March 30th.—Appeal heard.

March 31st.—Judgment given against the defendant. Plaintiff not yet entitled to execution, but seat vacated, Mr. Bradlaugh undertaking not to appeal so far as the affirmation was concerned.

Mr. Bradlaugh again seeks the suffrages of the electors of Northampton.

April 6th.—The Tories serve notice on the Mayor not to accept Mr. Bradlaugh's nomination, which the Mayor disregarded. Mr. Edward Corbett nominated by Tories.

April 9th.—Mr. Bradlaugh re-elected by 3,437 votes to Corbett 3,305.

April 26th.—Mr. Bradlaugh, accompanied by Mr. Labouchere and Mr. Burt, came to the table of the House, and, "the book" having been handed to him, was about to take the oath when Sir Stafford Northcote interposing, he was requested to withdraw, in order that the House might consider the new conditions under which the oath was proposed to be taken. Mr. Bradlaugh withdrew to the bar of the House, and Sir Stafford Northcote moved that he be not allowed to go through the form of taking the oath. Mr. Davey moved and Mr. Labouchere seconded an amendment to the effect that where a person who had been duly elected presented himself at the table to take the oath he ought not to be prevented from doing so by anything extraneous to the transaction. Other members spoke, and Mr. Bright regretted "the almost violent temper with which some hon. gentlemen came to the consideration of the question."

Mr. Bradlaugh, speaking at the bar, claimed that his return

was untainted, that it had not been brought about by the Liberal party, but by the help of the people, by the pence of toilers in mine and factory. He begged the House not to plunge into a struggle with him, which he would shun. Strife was easy to begin, but none knew where it would end. There was no legal disqualification upon him, and they had no right to impose a disqualification which was less than legal.

Mr. Gladstone made a lengthy and fine speech in favor of Mr. Bradlaugh, the text of which was Mr. Bradlaugh's own words given above as to imposition of a new disqualification; on a division, however, the bigots again had it.

Mr. Bradlaugh again stepped to the table, and demanded the administration of the oath, refusing to obey the Speaker's order to withdraw. Sir Stafford Northcote asked the Prime Minister whether he proposed to offer the House any counsel. Mr. Gladstone said he should leave it to the majority to carry out the effects of their vote. Eventually the Speaker called upon the Sergeant-at-Arms to remove Mr. Bradlaugh, who during the debate had been standing at the table. Mr. Bradlaugh withdrawing with the Sergeant three times to the bar, as often returned to the table. After further passages at arms between Mr. Gladstone and Sir Stafford Northcote, the House adjourned.

April 27th.—Mr. Bradlaugh again found at the table of the House claiming to be allowed to take the oath. At the bidding of the Speaker the Sergeant-at-Arms again caused Mr. Bradlaugh to withdraw to the bar, where he remained during the discussion which followed.

Mr. Labouchere asked the Prime Minister whether he would give him reasonable facilities to introduce his Affirmation Bill, if so Mr. Bradlaugh would not interfere with the resolution passed last night.

Mr. Gladstone said the giving facility for that purpose, meant the postponement of very serious and very urgent business, and he had no assurance as to the disposition of the House. He could not see his way to consent if it was to be an opposed Bill. After further discussion, however, Mr. Gladstone said it might be possible to test the feeling of the House by one or more morning sittings.

April 29th.—Mr. Gladstone announces the intention of the Government of bringing in a bill amending the Parliamentary Oaths Act.

May 2nd.—The Attorney-General moved that the House resolve itself into committee with a view of his asking leave to introduce the Bill. Debate on motion adjourned to the 5th with the view of fixing the time on the 6th, when the discussion should be resumed.

Mr. MacIver gave notice to ask the Prime Minister whether he was prepared to reconsider his decision of last session, and will

introduce "a short measure" for the partial disfranchisement of Northampton. (The question was never put.)

May 6th.—Further obstruction of the Bigots.

May 10th.—After 1.15 a.m. the Government proposed a morning sitting for that day (Tuesday), to discuss the introduction of their Bill. Further obstruction, wrath, and bitterness, and the Government abandoned the intention to hold a morning sitting.

At the afternoon sitting a resolution was arrived at, which authorised the Sergeant-at-Arms to prevent Mr. Bradlaugh from entering the House.

Lord Selborne (Lord Chancellor) in reply to a letter relative to Mr. Bradlaugh and the oath, says equal justice is due to Christian and infidel; he saw no possibility of refusing to afford by legislation to all who scruple to take the oath, the same option in Parliament as they have in courts of law, to make an affirmation.

May 25th.—Mr. Newdegate formally blocked the Bill, of which Mr. Labouchere gave notice, for indemnifying Mr. Bradlaugh against penalties for having sat and voted on affirmation.

June 19th and 20th.—The common informer's action tried at *Nisi prius* before Mr. Justice Grove. Verdict against Mr. Bradlaugh for penalty and costs.—*Rule nisi* for new trial afterwards, granted by Justices Grove and Lindley; this rule was made absolute by Justices Denman and Hawkins, but was set aside by Lords Justices Brett, Cotton and Holker.

Mr. Bradlaugh appeals to the country. The country answers.

Aug. 3rd.—Mr. Bradlaugh, acting on his right to enter the House of Commons, is seized at the door of the House by fourteen men, police and ushers (Inspector Denning said ten), and roughly hustled out into Palace Yard, Mr. Bradlaugh protesting against such treatment as illegal. "In the passage leading out to the yard Mr. Bradlaugh's coat was torn down on the right side; his waistcoat was also pulled open, and otherwise his toilet was much disarranged. The members flocked down the stairs on the heels of the struggling party, but no pause was made until Mr. Bradlaugh was placed outside the precincts and in Palace Yard."—*Times*. Alderman Fowler was heard to call, "Kick him out." This he afterwards denied, but there is evidence that he did so. (Mr. Bradlaugh suffered the rupture of the small muscles of both his arms, and erysipelas ensued).

Many thousands of people went up to the House with petitions, urging the House to do justice to Northampton and Mr. Bradlaugh.

In the House Mr. Labouchere moved a resolution condemning, as an interference with the privilege of members, the action of the authorities in expelling Mr. Bradlaugh from the lobby.

This was rejected by 191 votes against 7, and a motion of Sir Henry Holland, declaring the approval of the House of the course taken by the Speaker, was agreed to without controversy.

At a crowded meeting at the Hall of Science the same evening Mr. Bradlaugh stated that he had told Inspector Denning in Palace Yard that he could come back with force enough to gain admittance, but that he had no right to risk the lives and liberties of his supporters.

Aug. 4th.—The *Times* declares, in an article favorable on the whole to Mr. Bradlaugh's claims, that the House of Commons was yesterday the real sufferer in dignity, authority, and repute. It says: "the question contains within itself the baleful germ of a grave constitutional contest between the House of Commons and any constituency in the land;" and "such a conflict can but have one conclusion, as all history shows."

The *Daily News*, in a similar article, concludes thus: "Sooner or later it will be generally acknowledged that Mr. Bradlaugh's exclusion was one of the most high-handed acts of which any legislative body has ever been guilty."

The following unique paragraph from *The Rock* is worth preserving in its original form: "The question now is whether the Christian people of this realm will quietly allow clamorous groups of infidels, Radicals, and seditionists, by organised clamor, bluster, and menace, to overawe the legislature, and by exhibitions of violence—not at all unlikely, if permitted to develop into outrage and riot—to cause an organic and vital change to be made in our Constitution and laws, in order that brazen-faced Atheism might display itself within the walls of the British Parliament."

Mr. E. D. Girdlestone writes: "If the present Cabinet does not secure your admission to the House in some way or other, I can only wish they may soon be turned out of office. I don't know what more I can do than say, 'Go on! and go in!'"

Aug. 5th.—Mr. Bradlaugh's application at Westminster Police Court for summons against Inspector, for having assaulted him at the House of Commons on the 3rd inst., refused.

Mr. Bradlaugh confined to the House with severe erysipelas in both arms, resulting from the injuries inflicted. Attended by Drs. Ramskill and Palfrey. The latter, on August 12th, ordered his immediate removal from town, to prevent yet more dangerous complications.

Aug. 13th.—Mr. Bradlaugh went to Worthing to recruit his health. Outside the station there, weary and exhausted, both arms in a sling, he was rudely stared at by a clergyman, who, having satisfied himself as to Mr. Bradlaugh's identity, walked away saying loudly: "There's Bradlaugh; I hope they'll make it warm for him yet."

The *Northern Star* (a Tory paper) suggested that Mr. Bradlaugh was malingering—"simply carrying on the showman business."

Aug. 24th.—Sir Henry Tyler, in the House of Commons, attempts to discredit the South Kensington department for allowing science and art classes at the Hall of Science. Mr. Mundella gives those classes great credit.

Aug. 27th.—Parliament prorogued.

Further appeal to England.

1882.

Jan. 9th.—The Earl of Derby, in a speech at the Liverpool Reform Club, says: "For my part I utterly disbelieve in the value of political oaths. . . . I should hope that if Mr. Bradlaugh again offers to take the oath, as he did last year, there will be no further attempt to prevent him."

Feb. 7th.—Reopening of Parliament. Mr. Bradlaugh again attended at the table to take the oath, and Sir Erskine May, the clerk of the House, was about to administer the same when Sir Stafford Northcote, interposing, moved that Mr. Bradlaugh be not allowed to go through the form. Sir W. Harcourt, in moving the previous question, said the Government held the view that the House had no right to interpose between a duly-elected member and the oath.

Mr. Bradlaugh, addressing the House from the bar for the third time, begged the House to deal with him with some semblance and show of legality and fairness. He concluded: "I want to obey the law, and I tell you how I might meet the House still further, if the House will pardon me for seeming to advise it. Hon. members had said that an Affirmation Bill would be a Bradlaugh Relief Bill. Bradlaugh is more proud than you are. Let the Bill pass without applying to elections that have taken place previously, and I will undertake not to claim my seat, and when the Bill has passed I will apply for the Chiltern Hundreds. I have no fear. If I am not fit for my constituents they shall dismiss me, but you never shall. The grave alone shall make me yield."

When a division was taken there were for the previous question 228, against 286. Mr. Samuel Morley voted with the majority against the Government. Sir Stafford Northcote's motion was then agreed to without a division.

Feb. 8th.—Mr. Labouchere, in committee of the whole House, proposed for leave to bring in a Bill to amend the law of Parliamentary Oaths and Affirmations. The Bill was afterwards formally blocked by Mr. Molloy.

Feb. 17th.—Mr. Labouchere asked the Attorney-General whether the resolution of Feb. 7th had not vacated the seat. Sir Henry James answered that it had not.

Feb. 18th.—Mr. Gladstone writes Mr. Bradlaugh that the Government have no measure to propose with respect to his seat.

Feb. 21st.—Mr. Bradlaugh of himself takes and subscribes the oath, and takes his seat.

Feb. 22nd.—Mr Bradlaugh expelled the House of Commons.

Mar. 2nd.—Re-elected for Northampton. For Bradlaugh, 3,796; for Corbett, 3,688.

Mar. 6th.—On the motion of Sir Stafford Northcote, the House reaffirms its motion of the 7th Feb., Mr. Gladstone supporting an amendment moved by Mr. Marjoribanks, by which the House would have declared the desirability of legislation, for the purpose of giving members an option between oath and affirmation.

Mar. 7th.—Lord Redesdale introduces in the House of Lords a Bill, requiring every peer and every member of the House of Commons before taking the oath or making the affirmation, to declare and affirm his belief in Almighty God. The Bill, introduced "from a sense of what was due to Almighty God," was afterwards withdrawn "in deference to Lord Salisbury."

To this date, 317 petitions with 62,168 signatures had been presented against Mr. Bradlaugh being allowed to take his seat; while in favor of the same 1,051, with 250,833 signatures, had been presented.

Mr. Labouchere's Affirmation Bill blocked by Earl Percy.

1883

Jan. 11th.—Mr. Justice Field gave judgment that the privileges of the House of Commons prevented Mr. Bradlaugh from obtaining any redress for the assault upon him on August 3rd, 1881.

Feb. 15th.—Great demonstration in Trafalgar Square; from eighty to one hundred thousand people present. (*Evening Standard* says 30,000; *Daily News*, 50,000 an hour before the meeting.) Mr. Adams, chairman; Rev. W. Sharman, Jos. Arch, and Mr. Bradlaugh, speakers.

Opening of Parliament. (Mr. Gladstone at Cannes.) Government give notice for to-morrow for leave to introduce bill to amend the Oaths Act, 1866. Sir R. Cross gives notice of opposition on second reading of same. Mr. Bradlaugh consents, with the approval of his constituents, expressed on the 13th inst., to await the fate of the measure.

Feb. 16th.—Sharp succession of frantic speeches in the House of Commons by Mr. Newdegate, Alderman Fowler, Mr. Warton, Mr. Henry Chaplin, Mr. Onslow, Mr. Grantham, Mr. Beresford Hope, Lord H. Lennox, Lord C. Hamilton, Mr. A. Balfour, Mr. Ashmead Bartlett, and Mr. A. O'Connor. Divisions: from two to three to one for Government. The Marquis of Hartington consents to adjourn the motion for Bill until Monday at twelve.

Feb. 18th.—The *Observer* says that when Conservatives ask Liberals whether they really mean to alter the law for the purpose of admitting Mr. Bradlaugh, it is fair for Liberals in turn to ask Conservatives whether they really mean to maintain an admitted abuse and injustice for the mere purpose of excluding Mr. Bradlaugh.

Feb. 19th.—First reading of Bill carried on division by 184 votes to 53; second reading formally fixed for that night week.

Feb. 20th.—*Daily News* says Bill will be carried by large majorities, and will be regarded by the House and the country as the appropriate settlement of an unfortunate controversy.

The *Times* says the leaders of the opposition will not succeed in finally preventing the Bill from becoming law. Its real concern is that Mr. Bradlaugh has been substantially in the right; that he has been unjustly excluded from taking the seat which belongs to him.

The *Morning Advertiser* thinks the Government may yet find it difficult to persuade the House to adopt the Bill.

The *Morning Post* justifies the irregular opposition to the first reading of the Bill, and thinks notice of the measure should have been given in the Queen's Speech. No measure had created more excitement or raised more indignation in the country, which desired to see it rejected by a decisive majority.

March 5th.—Appeal case Bradlaugh v. Clarke part heard before the House of Lords.

March 6th.—Case concluded; judgment deferred.

March 9th.—Action for maintenance—Bradlaugh v. Newdegate—tried before Lord Coleridge and a special jury. Henry Lewis Clarke, the common informer, swore that he had not the means to pay the costs, and would not have brought the action if he had not been indemnified by Mr. Newdegate. Case adjourned for argument of legal points.

March 17th.—Maintenance action argued; four counsel appearing for Mr. Newdegate. Lord Coleridge reserved judgment.

March 20th.—The Solicitors to the Treasury compelled Mr. Bradlaugh to pay the costs of the House of Commons in the action against the deputy Sergeant-at-Arms.

PART I.

MAN: WHENCE AND HOW?

OR,

REVEALED AND REAL SCIENCE IN CONFLICT.

BY CHARLES BRADLAUGH.

Is it true, as alleged by the Hebrew chronology, that about 6,000 years back from the present date one man (Adam) and one woman (Eve) were created, and that these were the first of the human family on earth, and that from them were descended the entire human race? The answer to this question touches the very root of the Christian religion. If Adam and Eve were not the first parents of the whole human race, then the gospel of Christianity is a false pretence. If Adam was not the first man, then his fall, by disobedience, in Eden's Garden, did not bring death and sin as heritage for all human kind. To re-quote the words of the pious and erudite Sir William Jones: "Either the first eleven chapters of Genesis, all due allowances being made for a figurative Eastern style, are true, or the whole fabric of our national religion is false." (Essay on the Gods of Greece, Italy, and India; "Asiatic Researches," vol. i., p. 225.) The task in these pages shall be to show that no portion of the Genesaic story of man's creation, fall, and dispersion on the earth can be regarded as historic.

As it is sometimes disputed—by clergymen, Scripture-readers, and other persons unacquainted with the contents of the Bible—that any such limitation as 6,000 years is made to man's existence on earth, I shall first present the exact proof, by chapter and verse, of this allegation. In the orthodox chronologies used in the English schools and colleges the date of the creation of the world itself was fixed at about 4,004 years before the Christian era. First, I direct attention to the Bible account of man, as given in the Hebrew, Septuagint, and, so far as the Pentateuch is concerned, Samaritan versions. The credibility of these versions will be dealt with, after examining their several testimonies, before presenting the evidence offered by History, Ethnology, Anthropology, and Geology against the Bible.

Luke Burke, in the *Ethnological Journal*, page 17, prepared a "chronological arrangement of the Patriarchal ages, from the creation to the birth of Abraham, according to the Hebrew, Samaritan, and Septuagint versions of the Old Testament." To this are now added the chapters and verses from the ordinary orthodox version, to make the evidence complete at a glance :—

	Before Generation.			After Generation.			Total Ages.		
	Heb.	Sam.	Sep.	Heb.	Sam.	Sep	Heb.	Sam.	Sep.
Adam (Gen. v. 3, 4, 5)	130	130	230	800	800	700	930	930	930
Seth (6, 7, 8)	105	105	205	807	807	707	912	912	912
Enos (9, 10, 11)	90	90	190	815	815	715	905	905	905
Cainan (12, 13, 14)	70	70	170	840	840	740	910	910	910
Mahalaleel (15, 16, 17)	65	65	165	830	830	730	895	895	895
Jared (18, 19, 20)	162	62	162	800	785	800	962	847	962
Enoch (21, 22, 23)	65	65	165	300	300	200	365	365	365
Methuselah (25, 26, 27)	187	67	167	782	653	802	969	720	969
Lamech (28, 30, 31)	182	53	188	595	600	565	777	653	753
Noah (32)	500	500	500						
Added century to Deluge (vii. 11)	100	100	100						
Date of Deluge ...	1656	1307	2242						

These totals show the exact period of the Noachian Deluge after the creation of Adam, and are exactly agreed with by Samuel Sharpe, in his "Translation of the Hebrew Scriptures," page 8. The generations after the Deluge are :—

	Before Generation.			After Generation.			Total Ages.		
	Heb.	Sam.	Sep.	Heb.	Sam.	Sep.	Heb.	Sam.	Sep.
Shem (Gen. xi. 10, 11)	2	2	2	500	500	500	600	600	600
Arphaxad (12, 13)	35	135	135	403	303	400	438	438	535
Cainan (omitted in the orthodox Genesis, but inserted in Luke iii. 36)			130			330			460
Salah (14, 15)	30	130	130	403	303	330	433	433	460
Eber (16, 17)	34	134	134	430	270	270	464	404	404
Peleg (18, 19)	30	130	130	209	109	209	239	239	339
Reu (20, 21)	32	132	132	207	107	207	239	239	339
Serug (22, 23)	30	130	130	200	100	200	230	230	330
Nahor (24, 25)	29	79	179	119	69	125	148	148	304
Terah (26, 32)	70	70	70	135	75	135	205	145	205
From alleged date of Deluge to birth of Abraham ...	292	942	1172						

Making, from the creation of Adam to the birth of Abraham, 1,948 years according to the authorised orthodox English version which follows the Hebrew, according to the Samaritan 2,249, and according to the Septuagint 3,414. That these versions contradict one another is no help to the defender of the Bible. They are his witnesses. Nor is it honest to teach the first version to children as truth, and then to fly for help, against grown men, to the longer chronologies in the Samaritan and Septuagint, when the falsity of the shorter chronology has been demonstrated. Yet this is precisely what has been done by many of the clergy, and notably by the Rev. Canon Rawlinson, Professor of Ancient History at Oxford, when, as mouthpiece of the Christian Evidence Society, he sought, in stumbling words, to explain away the chronological difficulties of Genesis. The learned and reverend professor says, on pages 8 and 9 of his lecture, delivered under the auspices of the Christian Evidence Society: "We possess the Pentateuch in three very ancient forms—in Hebrew, in the Greek version known as the Septuagint, and in Samaritan. Our English numbers represent those of the Hebrew text. The numbers of the Septuagint and the Samaritan version are different. Those of the Samaritan version extend the period between the Deluge and the birth of Abraham from the 292 years of the Hebrew text to 942 years—an addition of six centuries and a half—while those of the Septuagint, according to some copies,

give 1,072 years as the interval, according to others 1,172 years, thus increasing the period between the Deluge and Abraham by a space of nearly eight, or nearly nine, centuries. Now, if the Greek, or even if the Samaritan, numbers are the right ones; if they represent, that is, the original text, it may be questioned whether anything more is wanted. It may be questioned whether a term of from six to eight centuries is not enough for the production of that state of things which we find existing in Babylonia and in Egypt when the light of history first dawns upon them, whether within that space might not have been produced such a state of civilisation, so much progress in art, such differences of physical type, and such diversities of language as appear to have existed at that period.....If, however, the ultimate verdict of calm reason, and rigid scientific inquiry, should be against this view; if more time seem to be absolutely wanted for the development of settled government, of art, science, language, ethnical diversities, varieties of physical type, and the like, than even the enlarged chronology of the Septuagint allows, then I should not be afraid to grant that the original record of Scripture on this point may have been lost, and that, as it is certain that we cannot possess the actual chronological scheme of Moses in more than one of the three extant versions of his words which have come to us with almost equal authority, so it is quite possible that we may not possess his real scheme in any. Nothing in ancient MSS. is so liable to corruption from the mistakes of copyists as the numbers; the original mode of writing them appears, in all countries of which we have any knowledge, to have been by signs not very different from one another; the absence of any context determining in favour of one number rather than another, where the copy is blotted or faded, increases the chance of error; and thus it happens that in almost all ancient works the numbers are found to be deserving of very little reliance. Where they to any extent check one another, they are generally self-contradictory; where they do not, they are frequently in the highest degree improbable." That is, Professor Rawlinson really abandons the whole of the Bible chronologies, but lacks the candour to put his abandonment into plain language. If the reader thinks this impeachment of the Rev. Professor's candour harsh, he is referred to another controversial essay from the Professor's pen, entitled "Historical Illustrations of the Old Testament."

Dr. Kalisch, who rejects the Septuagint and Samaritan as "intentionally corrupt," gives the following chronological table on page 8 of his introduction to "Genesis:"—

A.M.	B.C.	Events and their computation according to years of the world.
	4160	Adam created.
130	4030	Seth born (Genesis v. 3).
235	3925	Enos born (v. 6; 130+105=235).
325	3835	Cainan born (v. 9; 235+90—325).
395	3765	Mahalaleel born (v. 12; 325+70=395).
460	3700	Jared born (v. 15; 395+65=460).
622	3538	Enoch born (v. 18; 460+162=622).
687	3473	Methuselah born (v. 21; 622+65=687).
874	3286	Lamech born (v. 25; 687+187=874).
1056	3104	Noah born (v. 28; 874+182=1056).
1556	2604	Shem born (v. 32; 1056+500=1556).
1656	2504	The Deluge began (vii. 11; 1056+600=1656).
1657	2503	The Deluge ceased (viii. 14).
1659	2501	Arphaxad born (xi. 10; two years after the Flood).
1694	2466	Salah born (xi. 12; 1659+35=1694).
1724	2436	Eber born (xi. 14; 1694+30=1724).
1758	2402	Peleg born (xi. 16; 1724+34=1758).
1788	2372	Reu born (xi. 18; 1758+30=1788).
1820	2340	Serug born (xi. 20; 1788+32=1820).
1850	2310	Nahor born (xi. 22; 1820+30=1850).
1879	2281	Terah born (xi. 24; 1850+29=1879).
1949	2211	Abraham born (xi. 26; 1879+70=1949).
1959	2201	Sarah born (xvii. 17; 1949+10=1959).
2024	2136	Abraham emigrated from Haran (xii. 4; 1949+75=2024).
2035	2125	Ishmael born (xvi. 16; 1949+86=2035).
2048	2112	Covenant and Circumcision of Abraham and Ishmael (xvii. 24; 1949+99=2048).
2049	2111	Isaac born (xxi. 5; 1949+100=2049).
2084	2076	Terah died (xi. 32; 1879+205=2084).
2086	2074	Sarah died (xxiii. 1; 1959+127=2086).
2089	2071	Isaac married Rebekah (xxv. 20; 2049+40=2089).
2109	2051	Jacob and Esau born (xxv. 26; 2049+60=2109).
2124	2036	Abraham died (xxv. 7; 1949+175=2124).
2149	2011	Esau married (xxvi. 34; 2109+40=2149).
2172	1988	Ishmael died (xxv. 17; 2035+137=2172).
2193	1966	Jacob married Leah and Rachel (2109+84=2193).
2200	1960	Joseph born (xxx. 25; 2193+7=2200).
2217	1943	Joseph sold into Egypt (xxxvii. 2; 2200+17=2217).
2229	1931	Isaac died (xxxv. 28; 2049+180=2229).
2230	1930	Joseph appt. Viceroy of Egypt (xli. 46; 2200+30=2230).
2239	1921	Jacob & family settled in Egypt (xlvii. 9; 2109+130=2239).
2256	1904	Jacob died (xlvii. 28; 2239+17=2256).
2310	1850	Joseph died (l. 22, 26; 2256+54=2310).
2669	1491	Exodus of the Israelites from Egypt (Exodus xii. 40; 2239+430=2669).

This statement shows practically the same date to the birth

of Abraham, and gives us 2,669 years from the creation of Adam to the Exodus. This takes the stay of the Israelites in Egypt at 430 years.

Bishop Colenso ("Pentateuch," part i., page 92) urges that, according to Exodus vi. 16—20, no more than 350 years, on the most extravagant supposition, can be accorded for the sojourn of the Israelites in Egypt from Jacob to the Exodus. He says :—

"Now, supposing that Kohath was only an *infant* when brought down by his father to Egypt with Jacob (Genesis xlvi. 11), and that he begat Amram at the very end of his life, when 133 years old, and that Amram, in like manner, begat Moses when he was 137 years old, still these two numbers added to 80 years, the age of Moses at the time of the Exodus (Exodus vii. 7), would only amount to 350 years, instead of 430.

"It is stated that 'Amram took him Jochebed, his father's sister'—Kohath's sister, and, therefore, Levi's daughter—'to wife.' And we read, Numbers xxvi. 59 : 'The name of Amram's wife was Jochebed, *the daughter of Levi, whom (her mother) bare to him in Egypt.*'

"Now, Levi was one year older than Judah, and was, therefore, 43 years old when he went down with Jacob into Egypt, and he was 137 years old when he died.

"Joseph was 30 years old when he 'stood before Pharaoh,' as governor of the land of Egypt (Genesis xli. 46), and from that time nine years elapsed (seven of plenty, and two of famine) before Jacob came down to Egypt. At that time, therefore, Joseph was 39 years old. But Judah was about three years older than Joseph; for Judah was born in the *fourth* year of Jacob's marriage (Genesis xxix. 35), and Joseph in the *seventh* (Genesis xxx. 24—26, xxxi. 41). Hence Judah was 42 years old when Jacob went down to Egypt.

"Levi, therefore, must have lived, according to the story, 94 years in Egypt. Making here again the extreme supposition of his begetting Jochebed in the last year of his life, she may have been an infant 94 years after the migration of Jacob and his sons into Egypt. Hence it follows that, if the sojourn in Egypt was 430 years, Moses, who was 80 years old at the time of the Exodus, must have been born 350 years after the migration into Egypt, when his mother, even on the above extravagant supposition, must have been at the very least 256 years old."

If the arguments of Bishop Colenso are accepted as valid, the effect will be to still further abridge the Biblical Chronology.

If the twentieth verse of Acts xiii. be true, the period of the Judges was 450 years, to which must be added 40 years for the wilderness wandering, making, in all, 490 years, to the time of Samuel. It is evident, however, that if 1 Kings vi. 1 be accurate, that then Paul or the author of the Acts blundered, as 476 years from the Exodus are precisely fixed to the date of Solomon's accession to the throne, which would then be 3,145 years from the date of the creation of Adam. From Solomon to the Captivity is as follows:—

1. Solomon	(1 Kings	xi. 42)	reigned	40	years.
2. Rehoboam	,,	xiv. 21	,,	17	,,
3. Abijam	,,	xv. 2	,,	3	,,
4. Asa	,,	xv. 10	,,	41	,,
5. Jehoshaphat	,,	xxii. 42	,,	25	,,
6. Jehoram	(2 Kings	viii. 17)	,,	8	,,
7. Ahaziah	,,	viii. 26	,,	1	,,
8. Athaliah	,,	xi. 3	,,	6	,,
9. Jehoash	,,	xii. 1	,,	40	,,
10. Amaziah	,,	xiv. 2	,,	29	,,
11. Azarrah or Uzziah.	,,	xv. 2		52	,,
12. Jotham	,,	xv. 33	,,	16	,,
13. Ahaz	,,	xvi. 2	,,	16	,,
14. Hezekiah	,,	xviii. 2	,,	29	,,
15. Manasseh	,,	xxi. 1	,,	55	,,
16. Amon	,,	xxi. 19	,,	2	,,
17. Josiah	,,	xxii. 1	,,	31	,,
18. Jehoahaz	,,	xxiii. 31	,,	3	months.
19. Jehoiakim	,,	xxiii. 36	,,	11	years.
20. Jehoiakin	,,	xxiv. 8	,,	3	months.
21. Zedekiah	,,	xxiv. 18	,,	11	years.

Making, from Solomon to the Babylonian Captivity, 433 years, 6 months, or 3,578 years and 6 months, from the creation of Adam, or, as the marginal chronology of the Bible makes it, 590 years B.C. The Captivity lasts until the accession of Cyrus, King of Persia (Ezra i. 1), who, according to Ctésias, was born B.C. 599, being the son of Cambyses, and who conquered Babylon B.C. 536, or, according to the Bible chronology, exactly 3,622 years after the creation of Adam. We have now historic dates, and need no further texts; this makes about 4,158 years to the date fixed for the alleged birth of Jesus—viz., 1,875 years ago, or 5,933 from

the creation of Adam to the present date. Doubtless these figures are incorrect; but up to the Captivity they are carefully taken from the English Bible, on which all blame of error must rest.

Thus it is clear that the Hebrew text and our English Bible teach in express terms that the first man (Adam) was created less than 6,000 years ago. Dr. John Lightfoote, in his "Harmony of the Old Testament," published 238 years since, had no doubt on this point, and three years earlier had expressly calculated "5,572 years since the creation." For almost 200 years more nine out of every ten clergymen of the Established Church taught the doctrine that man had only existed about 6,000 years. The last forty years have made a great change; but even to-day—while many, very many, clergymen of the Church of England know that the statement is not true—they are reticent; they keep the knowledge to themselves, and give no help to clear away the falsehood.

In truth, our orthodox version and the Hebrew Bible alike agree in making the whole universe older than the first man only by five clear days of twenty-four hours each. Many efforts have been made to evade this conclusion, but these efforts have been all miserably weak. Dr. Harold Browne, Bishop of Ely, in the Speaker's Commentary, that latest effort of pious weakness, tries the reconciliation of truth, as shown by science, and falsehood, as told by Genesis. The learned Bishop, aided by the counsel of other prelates and divines, says: "Countless ages *may have elapsed* between what is recorded in verse 1, and what is stated in verse 2," of the first chapter of Genesis. Yes, but they *may not have* elapsed. Supposition against supposition, and the Genesis story is not improved. In fact, there is no break in the Hebrew narrative for these "countless ages" between verses 1 and 2. The state of the earth, as given in verse 2, is evidently intended as its earliest state, immediately consequent on the creation; and no one dreamed of this non-natural reading of the text until the demands of science for a longer chronology became too imperative to be resisted. And even if, without any warranty, and only to evade the objection, you inserted the "countless ages" between those verses, it would not improve the story. You would equally need more "countless ages" between other verses to account for the time required for later changes in the earth's surface. Changes which have gone slowly on

since the heat had so radiated off as to permit seas and lands to mark the earth. Long changes after these, vast in their lengths, and yet brief measured by the preceding enormous periods. Ages during which the flora of the world crept out, struggled into growth, and flourished in its richest luxuriance. Ages still, during which life-conditions gradually grow. Ages more, while the fauna of the earth were evolved from the merest sign of animal vitality to the huge monster, life-devouring, who roamed the forests or traversed the seas. And there are no verses in the Bible story between which you, by any pious hocus-pocus, or philosophic legerdemain, can insert these "countless ages."

An able writer in the orthodox *British Quarterly Review*, vol. xliii., pp. 120, 121, Egyptian Antiquities, says: "We are accustomed to suppose that we possess an undoubted canon of ancient chronology in the Holy Scriptures; but perhaps next to a clear acquaintance with what the sacred volume does undoubtedly contain, the most valuable knowledge is of what it does not. In the Universal History, above one hundred and twenty dates are given for the creation, most of them made out by persons who regard with most sincere reverence, and derive their arguments from, the sacred writings. The first of these places that event B.C. 6984; the last, 3616; differing by the moderate amount of more than three thousand years. The period of the Deluge is fixed with no greater uniformity. The Septuagint gives B.C. 3246; the Hebrew text (according to Usher) 2348. We shall add, as more connected with our subject, the extreme dates assigned to the Exodus, which is fixed by Josephus (according to Dr. Hales, nearly the same with Des Vignolles) B.C. 1648; by the English Bible (on the authority of Usher) 1491; by the vulgar Jewish chronology 1312. Our concern, however, is merely to show that the best Scripture chronology affords ample space for the highest antiquity which the great Egyptian kingdom can fairly claim. For the period between the Flood and the first connection of sacred history with Egypt we have four distinct authorities—the version of the LXX.; the Samaritan; Josephus, who professes to have adhered faithfully to the sacred volume; and the Hebrew chronology adopted in our Bibles. None of these, strictly speaking, agree, but the three first concur in assigning a much longer period between the Deluge and the birth of Abraham—the LXX. 1070 years, the Hebrew only 292. If it should be urged

that the translators of the Septuagint, environed on all sides by Egyptian antiquities, and standing in awe of Alexandrian learning, endeavoured to conform their national annals to the more extended chronological system; and that Josephus, either influenced by their authority, or actuated by the same motives, may have adopted the same views, yet the ancient Samaritan text still remains, an unexceptionable witness to the high antiquity of the more extended period. In fact, we are, perhaps, wasting our time in contesting this point, as we may fairly consider the Hebrew chronology of this period almost exploded."

Ordinarily, it is possible to check the chronological periods of nations by monuments, or later, by writings. Unfortunately for the student, neither the good nor bad qualities of the Jews provoked notice in any extant writer, outside their own nation, prior to 400 B.C. Much as has been done to discover evidences in Egypt, neither papyrus, pyramid, nor obelisk say aught about the 600,000 armed Jews who left the land of the Nile, laden with spoil, under Moses. Prior to David, all the Jewish chronology is the purest conjecture, and the conjecture is embarrassed by the mass of fabrication to be cleared away before real investigation becomes possible. The conquest of Judea, under Rehoboam (1 Kings xiv. 25), by Shiskak, or Sheshonk, King of Egypt, is the earliest ascertained and vouched period of contact between the Jews and other nations. Much stir has been made by the clergy, now and then, upon finding partial corroboration of names or dates occurring subsequently to Solomon, in the Old Testament. No necessity arises for the unbeliever to challenge the muster-roll of Jewish kings, from Solomon to the Captivity. There are blunders of names and dates, and facts, and unhistoric statements interwoven, but the list of kings is, probably, in the main part, correct; many of the reigns are probably fairly stated, and some of the wars referred to in Kings and Chronicles, doubtless, took place. What is needed to be remembered is, that verifying the names of some kings after Solomon does not prove the exactness of the chronology prior to David. Bunsen, so lauded as a Christian, says: "As regards the Jewish computation of time, the study of Scripture had long convinced me that there is, in the Old Testament, no connected chronology prior to Solomon." ("Egypt's Place in Universal History," vol. i., Preface.) And again (vol. iii., page 247) he affirms that

the Hebrew tradition of earlier times "contains no chronology whatever."

G. R. Gliddon, in his archæological introduction to the tenth chapter of Genesis ("Types of Mankind," p. 627), gives five periods as specially marking changes in the Hebrew text, viz. :—

"First period, B.C.—'In most ancient times, the Hebrew text was corrupt;' and the Codex (says, 'Fragmentary Books') used by the Greek interpreters of the Old Testament, at Alexandria, was undoubtedly Hebrew, but a copy not sufficiently emended. Even Buxtorf is obliged to admit—'Judaos a tempore Esdra negligentiores fuisse circa textum Hebraum, et non curiosos circa lectionem veram'—the Jews in the time of Esdra neglected the Hebrew text, and were indifferent as to the true reading. The numerals were expressed by *letters;* the five *final* letters (ך ם ן ף ץ) had not then been invented; the words were still *undivided.*

"Second period, A.D. down to 500.—The texts were more corrupt in the time of Philo and Josephus. Neither in their day, nor in that of Origen, third century, were the *Commandments* (Exod. xx., 3—17) divided into ten, in the manner they are now. In Philo the division is *quinary,* after the fashion of Pythagoreans. About the latter epoch commences the Talmudic *Mishna;* and, in the fifth century, the *Gemara;* each of which books proves the increase of textual errors. So do the writings of the Fathers during all this age—notably St. Jerome; while the apostolic books demonstrate that the *Greek* differed, more or less, from the Hebrew original.

"Third period, A.D. 500 to 1000.—Aside from the later and less reliable Fathers, two Hebraical works establish that no expurgations of error had been made in the text, viz., the *Robboth,* after A.D. 700, and the *Pirke Eliezar,* after 800. About the sixth century, the Rabbis of Tiberias commenced the 'Masora;' a labour that would not have been undertaken but for the reasons above given, and the wretched condition of the text in their time; as proved by the multitudes of *Keri velo Kethib* (the read, but not the written) or *Kethib velo Keri* (the written, but not the read).

"Fourth period, A.D. 1000 to 1450.—The Jewish schools of Babylonia seek refuge in Spain about 1040; between which era and 1240 flourished the four great Rabbis. Their works prove not merely different readings,

but absolute mistakes in copies of the text. Things then existing in manuscripts of the Old Testament now exist no longer, and *vice versâ;* while the 'Masora' itself, already in confusion inextricable, only rendered matters worse. It is of this age alone that we possess those Hebrew manuscripts by us called *ancient*—not one 900 years old!

"Fifth period, A.D. 1450 to 1750.—Printing invented; the art was first applied to *Psalms* in the year 1477; and to the whole Hebrew text in 1488; that entire edition, save one-third of a copy, being immediately by Neapolitan Jews. But here, upon editions now following each other with rapid succession, the Rabbis begin their restorations and their lamentations. Continental scholars now set to work upon *Hebrew* in earnest, without professorships; whilst, in England, King James's version is a splendid record of Professors without Hebraism, during the years 1603—1611. Fifty years later, Walton redeems the shame of Oxford; and yet, one hundred years later still, Kennicott himself chronicles: 'the reader will be *pleased* to observe, that as the study of the Hebrew language has only been *reviving* during the last one hundred years:' to end which sentence logically, we ourselves consider that there could be no 'revival' where, in 1600, there was scarcely a *beginning;* and, *ergo*, that the Doctor's attestation must refer to incipient efforts, in his century commencing, to resuscitate the *Hebrew tongue* after twenty centuries of burial."

The Rev. Dr. Porter, Professor of Biblical Criticism at Belfast, says: "Scientific teaching does not come within the province of revelation.....Revelation does not give a scientific cosmology. That lies outside its province..... Revelation does not touch on geology; but it leaves room for the fullest development of the successive strata of the earth's crust, even though it could be proven that millions of years had been occupied in their formation. 'In the beginning God created the heavens and the earth.' No date is given." ("Science and Revelation: a Review of Tyndall, Huxley, Darwin, and Herbert Spencer," p. 35.) Professor Porter says no date is given. What meaning then does he attach to Exodus xx. 11, "In six days the Lord made heaven and earth, and all that in them is?" Genesis i. says that man was made on the sixth day. Where is there the fullest, or any room, for the "millions of years?" That Genesis does not give us a scientific cosmology is clear. But as it does give a cosmology full of details, as what kind of

a cosmology would the learned Professor describe it? No date given. What, then, but dates are the added ages of Adam and his successors? Professor Porter says that "the historical record of creation seems to have a scientific basis, as if the writer, by a divine prescience, had anticipated the results of modern research." But if Genesis is God's revealed word, the writer would record actual facts not *foreknown*, but then known to God. But which part of Genesis i. has a scientific basis? Is it the creation of the firmament to divide the upper and lower waters? The firmament in which windows existed at the time of the deluge. Windows which God opened to let the waters down (vii. 11). A firmament in which God set the sun, moon, and stars. Has this firmament a scientific basis? Is there any scientific basis for the existence of seas on the earth's surface before the creation of the sun and moon? Where is the scientific basis for the earth bringing forth grass, herb, with seed, and fruit tree yielding fruit before there was yet sun to encourage and ripen vegetation?

But says Mr. Goodwin, in the famous "Essays and Reviews:" "It can scarcely be said that this chapter is not intended in part to teach and convey at least some physical truth, and taking its words in their plain sense it manifestly gives a view of the universe adverse to that of modern science. It represents the sky as a watery vault, in which the sun, moon, and stars are set. But the discordance of this description with facts does not appear to have been so palpable to the minds of the seventeenth century as it is to us. The mobility of the earth was a proposition startling not only to faith but to the senses. The difficulty involved in this belief having been successfully got over, other discrepancies dwindled in importance. The brilliant progress of astronomical science subdued the minds of men; the controversy between faith and knowledge gradually fell to slumber: the story of Galileo and the Inquisition became a school commonplace, the doctrine of the earth's mobility found its way into children's catechisms, and the limited views of the nature of the universe indicated in the Old Testament ceased to be felt as religious difficulties.

"The school books of the present day, while they teach the child that the earth moves, yet assure him that it is a little less than six thousand years old, and that it was made in six days. On the other hand, geologists of all

religious creeds are agreed that the earth has existed for an immense series of years—to be counted by millions rather than by thousands; and that indubitably more than six days elapsed from its first creation to the appearance of man upon its surface."

Luke Burke, *Ethnological Journal* (p. 14), annihilates alike the chronologies of the Hebrew and other versions: "All careful investigation of the facts of natural history, will, he argues, "prove that there are determinate relations between the period of puberty and the total duration of life. In birds, the multiple is sometimes very high; in fishes, still more so; but in the mammalia generally, and especially in man, it will be found that the highest possible duration of life is seven times the age of finished puberty. Few human beings, especially in civilised life, ever reach this period; none, we believe, have ever exceeded it. The age of puberty greatly varies in different races of men, and the natural duration of their lives is longer or shorter accordingly. As, at the present day, all civilised and partially civilised nations are composed of an amalgamation of various primitive races, we find the period of puberty varying even in individuals in the same family; but still the law will be found equally applicable, in these individual cases, as when applied to the whole races of men. Now the chronology before us is at utter variance with this great law of nature. Mahalaleel begot Jared at the age of sixty-five, and lived 895 years afterwards, more than thirteen times the period of complete puberty. This is the same as saying that a person at the present day, whose natural life would extend to 80, 90, or 100 years, might be a man, and have children, at the age of six, seven, or eight years. In the postdiluvian period we have even a higher multiple than this. Sala begot Eber in his thirtieth year, and yet lived 433 years; more than fourteen times the age at which his son was born. Several other patriarchs have ages assigned to them ten, eleven, twelve, and thirteen times longer than the period of perfect puberty. Ought we not, then, to require that numbers which so directly contradict the known laws of nature, should come to us supported by evidence of a most unquestionable character? And what evidence is there in favour of these numbers, except that they, at present, form part of a treatise generally supposed to be of divine revelation? All genuine history is entirely opposed to the admission of such extreme longevity. Neither

in ancient or modern times is there one authenticated instance of any human being having reached the age of 200 years, to say nothing of such enormous periods as 969 years." The believer is, by Luke Burke, placed in a worse strait than ever, for if the ages of the patriarchs are shortened to reasonable periods, another reduction will have to be made from the already too short chronology of 6000 years.

Dr. Kalisch, in his introduction to his "Commentary on Genesis" (p. 2) thus states the chronological difficulty:— "According to chronological computations based on the Old Testament, the earth, as a part of the universe, was created B.C. 4160, or about six thousand years hence. Even the larger chronologies of the Septuagint, Hales and others fix this date not further back than between seven and eight thousand years. But the researches of the natural sciences, especially geology, lead to widely different conclusions; they prove an antiquity of the earth of such vastness, that our imagination fails to conceive, and our numbers are almost unable to express it." And from the verified discoveries of Geologists he thus states the facts warranting the conclusions hostile to Genesis (p. 8): "The old red sandstone includes the fossils of zoophytes, conchifera, some tribes of fish, some traces of land plants; perhaps, also, the first perfect birds, some of small, others of gigantic size; and the foot-prints of those batrachians which have attracted the most zealous attention, and to which we shall later have occasion to allude in a very curious connection. But both in the new red sandstone, and still more in the subsequent oolitic strata, occur in great abundance the huge lizard-like animals, of extraordinary size, power, and armature; the voracious *ichthyosaurus*, of the length of a young whale, fitted both to live in the water and to breathe the atmosphere; of the general form of a fish, to which, however, were added the teeth and breast-bone of a lizard, the paddles of the whale tribes, the beak of a porpoise, and the teeth of a crocodile; the *plesiosaurus*, of similar bulk and equal rapacity, with a turtle-like body and paddles, a serpent neck, terminating in a formidable lizard head, and most extensively preying upon the finny tribes; further the *megalosaurus*, an enormous lizard, forty-five feet long, a carnivorous land creature; the *pterodactylus*, or *flying saurian*, a lizard with bat-like wings; *crocodiles*, some of which were herbivorous, as, for instance, the iguanodon, reaching the amazing length of a hundred

feet, or twenty times the size of the iguana of the Ganges, its present representative. Strongly, indeed, do these monstrous and terrible forms remind us of those strange creatures of fancy popular in ancient times and in the middle ages, the winged dragons and griffins, the gorgons, hydras, and chimeras; their huge jaws threatened with fearful teeth; their necks were almost equal in length to half that of the entire body of the boa-constrictor; they had enormous, mail-like impenetrable bodies, and terrific claws; and all darted upon their prey with irresistible vehemence. The oolitic beds contain, further, the remains of about twelve hundred other astonishing species and forms, the first specimens of insects, and about fifty plants.

"But only in deposits above the chalk formations do we meet with mammifers. About four thousand forms, all different from the present species, are found in the tertiary strata; some of them are most remarkable for their size and form, as the palæotherium, the ponderous dinotherium, with the bent tusks in its lower jaw, and many other thick-skinned animals *(pachydermata)*, like the hippopotamus and rhinoceros. Some of the species of elephants were of enormous magnitude; the mastodon, with his tusks projecting from both upper and under jaw, reached the height of twelve feet; the mammoth, the megatherium, with claw-armed toes more than two feet in length, and the megalonyx, were of gigantic proportions and iron-like organisation; we find, further, the bear, the horse, and the dog, seals, dolphins, and whales; massive oxen, camels, and other ruminants; the majestic Irish elk, with its broad plank-like horns; and even several felinæ or carnivora, and traces of monkeys (quadrumana): till at last the older creatures became extinct, and were succeeded by the existing occupants of the land and the water.

"Now, we ask, if the earth was created within six days, how, and for what conceivable purpose were these numberless, and often huge and appalling, forms of being, *exhibiting every stage of growth*, embedded in the different strata of the earth? We believe there is scarcely any man preposterous or blasphemous enough to impute to the Deity such planless and reckless destruction in the midst of his majestic acts of creation. Many species, and even many distinct genera, have thus entirely disappeared; they are no longer represented on the earth. Generally, even the organic beings of one formation exist no more in the next higher group of rocks.

Do not these circumstances compel us to suppose an indefinite antiquity of the earth's crust? Many have certainly ascribed all those destructions to the influence of the Noachian Deluge; they advance, that first submarine volcanoes, by ejecting their molten masses through different successive explosions, formed the massive layers below; and that then the land-floods, sweeping away the islands and continents, with their organic creations, produced the second or higher formations. But, besides failing entirely to account for the production of the tertiary strata, this theory introduces the agency of *fire* also in the Deluge, of which we read nothing in the Biblical record; it assumes a series of volcanic eruptions of such rapid succession as could only be caused by a miraculous intervention, of which nothing is mentioned; and it starts from the objectionable supposition, that strata, demonstrably separated from each other by immense periods, were formed within the space of a few months. For the facts, that very different fossils are found in the same formations, and that the same petrified species occur in different layers, cannot overthrow the general theory of slow successive stratification; the vast climatic changes which our planet has undergone, and the great variety in the internal structure of the various organic beings, are sufficient, together with other obvious circumstances, to account for these facts."

The argument from the fauna of the world is thus admirably summarised (p. 10): "Hitherto about 3,000 genera of fossil plants have been discovered in the beds of the earth; and this number is considered insignificant, compared with the probable real amount of vegetable life in the preceding conditions of our earth. Although some plants are less capable of resisting the action of water than others, and some are even totally decomposed if for some time immersed in that element, especially the simplest forms of flowerless (cryptogamic) vegetation; the proportion of the different families found in a fossil state leads, on the whole, to a safe conclusion with regard to the primitive flora of the earth; the plants which have been preserved are in themselves amply sufficient to serve as a basis for such conclusions. Now those vegetable remains—it is remarkable to observe—have more or less a *tropical* character, which is a sure proof of the higher temperature of our planet in former epochs; they show a surprising uniformity of plants over the whole earth, with but very little local difference, though

they bear a different character in different periods, and consist, in each individual epoch, of but a very limited number of species, which are as many witnesses for the former more equal distribution of heat on the earth. It is most interesting to observe that every later period shows the *prevalence* of a more perfect genus of plants than the preceding one, so that the different epochs might be almost described by their predominant vegetation. The profoundest botanists have arrived at the conclusion that the earlier flora contained the same principal classes and families, though not all the minor species, of the present flora, but that the former possessed the simpler forms of vegetation in the highest possible perfection, whilst the latter only produced the higher and more complicated genera, *so that a successive and ascending development in the vegetable kingdom, which is still in endless progress, is manifest from the remotest periods; that the number of species has during the succeeding geological epochs steadily increased.*"

Dr. Kalisch, it is true, as a pious Theist, looks for some "supernatural cause" to account for all this; but, adopting the words of John Stuart Mill, the reader will be asked throughout this volume to understand by Nature "the aggregate of all powers and properties," "the sum of all phenomena, together with the causes which produce them, including not only all that happens, but all that is capable of happening." We here do no injustice to Dr. Kalisch in continuing to state his summary:—

"It appears that many of the plants are 'hereditary' through various geological epochs, and that certain species have traversed many thousands, perhaps hundreds of thousands, of years, in spite of the local and successive revolutions on the earth's surface. For submarine forests in several parts of the globe consist of trees which still cover the neighbouring continents, though the *animals* found in the same localities in a petrified state have ceased to exist, and many species of plants are not found in regions where they might thrive perfectly well, according to their structure, or to the present condition of the globe. They seem to be absent from such countries only because they did not exist there in former geological epochs. Ligneous plants existed formerly in many parts where the soil is at present not capable of producing them; the middle tertiary rocks present a mixture of exotic forms now peculiar to warm climates, together with others equally characteristic of tem-

perate countries; the conditions of the earth and the atmosphere must, therefore, before the creation of man, have been more favourable, especially as regards the proportions of temperature. Sometimes islands and their neighbouring continents, at present insurmountably separated from them by the sea, contain the same species. It appears, therefore, that at a primitive epoch they joined together, and formed one continent. Summits of mountains very distant from each other offer the same species, and the same aquatic plants are found in very different countries; the transport which, in the present condition of the earth, is perfectly impossible, must have taken place at an anterior period. For, on the other hand, frequently countries very near each other offer very little resemblance, and often great difference, in their vegetable productions. All the plants did not proceed from one limited portion of the earth, for instance, the Paradise (as Linné maintained); nor did they gradually spread from the Polar region southwards, in proportion as the globe cooled down (as Buffon asserted); nor did they first appear on the mountains, and thence extend to the lower parts of the earth as the waters receded; but the different species are aboriginal in numerous different regions, although these centres of creation cannot be indicated with certainty, in consequence of the vast changes which the surface of our planet has suffered. The production of the various species was probably progressive, ascending from the less to the more perfect plants; and every species has most likely commenced with a multiplicity of individuals. It is certain, both from ocular evidence and from inductive conclusions, that most of the animals discovered as fossils in the strata of the earth have died in a natural course on the spot where they enjoyed life. Now, as many of them are creatures of long life, and many reached an age far beyond the time now allotted to the creatures of the earth, it is impossible that they should have accomplished the full circle of their existence in a few days." And yet Exodus says: "In six days the Lord made heaven and earth, the sea, and all that in them is, and rested the seventh day."

The answer by defenders of the Bible is, that the word day used in the first chapter of Genesis, does not mean a period of twenty-four hours, but really represents an indefinite period of time, so that each day stands for a vast age. Dr. Kalisch says, p. 43: "In order to gain scope for the geological epochs, many critics have proposed to interpret the term 'day' יוֹם

as a *period*, or an *indefinite epoch*. But this is equally inadmissible. In our plain, purely historical, and calm narrative, this metaphorical use of the word is rendered impossible by the repeated phrase, 'And evening was, and morning was,' both forming one natural day. Nor can the circumstance, that on the fourth day only the sun was created to divide the day from the night, prove that the word 'day' denotes, in the preceding verses at least, an unlimited time; if it means *day* in one verse, it has the same signification throughout the whole narrative, or we should be obliged to take the day of Sabbath likewise as 'a period of rest.'

"The word ביום 'in the day,' is sometimes used as a conjunction of time, in the general sense of *when;* but יום alone is in no prosaical part of the Scriptures applied in a similar signification.

"Hugh Miller once believed that the 'six days' were ordinary days of twenty-four hours each, and that the latest of the geologic ages was separated by a great chaotic gap from our own. But at that time his labours, as a practical geologist, had been restricted to the palaeozoic and Secondary Rocks; later, however, he directed his attention to the more recent formations also, and studied their peculiar organisms; and his unavoidable conclusions were, that 'for many ages ere man was ushered into being, not a few of his humble contemporaries of the fields and woods enjoyed life in their present haunts, and that for thousands of years anterior to even *their* appearance, many of the existing molluscs lived in our seas;' and, consequently, he *since then accepted the six days of creation as vastly extended periods*, perhaps 'millenniums of centuries.' We have introduced this opinion as a type of many similar views. It is perfectly unworthy of Biblical science, constantly to modify the interpretation according to the successive and varying results of other sciences, just as if the Biblical text were composed of indefinite and vague hieroglyphics, capable of every possible construction; it is a most objectionable practice to make the Hebrew narrative subservient to all the fluctuating movements of heterogeneous studies, which are based upon premises perfectly different from the Biblical notions, and which, as systematic sciences, neither derive support from them, nor require their authority and sanction. Scientific honesty and manly firmness prescribe a far different conduct, at once more simple and more decided. Let the true and authentic senses of the Biblical narrative

be ascertained with all possible assistance of learning and philological knowledge: independently of this, let the other sciences bearing on the subject be zealously studied; and then let the results of both researches be compared, without bias and without anxious timidity. If careful geological studies press upon the mind the conviction, that even the present epoch commenced many ages before the appearance of man on earth; let it be admitted, without unavailing reluctance, that the Mosaic record speaks of a creation in six days, which is irreconcilable with those investigations, since it is philologically impossible to understand the word 'day' in this section in any other sense but a period of twenty-four hours.

"The device that the days denote epochs, is not only arbitrary, but ineffective; for the six 'epochs' of the Mosaic creation correspond in no manner with the gradual formation of the cosmos. More than one attempt has, however, been made to show this agreement; but they crumble into nothing at the slightest touch."

Before dealing with the authorised English and accepted Hebrew versions, I will present a few conflicting opinions on the value of the Samaritan and Septuagint texts, each of which I shall then take leave to dismiss as utterly valueless in the present inquiry.

The Reverend Dr. Irons, in dealing with the popular theory on the Bible, thus refers to the Septuagint version: "The striking fact, however, which confronts us is, that in the first century the Greek translation of the Old Testament was more in use among the *Jews* also than the Hebrew; and that this had possibly been the case for generations. It seemed even to be thought by some, that this Greek version fixed the sense of some passages of the Hebrew. Anyhow, this version lies in the pathway of the investigation, which evidently cannot be avoided, between the first century and the times of the old Prophets ending with Malachi. What is this Greek version, or 'Septuagint,' as it is called? Who made it? From what originals was it made? And when? And why? And what is its present state?

"It must be owned that we have here come to a somewhat difficult parenthesis—if it may be so termed—in our examination of the Old Testament of the Hebrew Prophets. The story used to be believed, however, that 270 years, or more, before Christ, some seventy Jews were employed by

Ptolemy Philadelphus to translate 'the Jewish Scripture' into Greek: Josephus says, that it was the Pentateuch. An account of the miraculous agreement of these seventy translators, working in seventy separate cells, is found in the letter of Aristæus to Philocrates. It has been respectfully referred to by Christian writers of such high name as Tertullian and St. Jerome (and our esteem for their sagacity cannot thereby be increased). Bellarmine, however, no more rejects it than did Josephus and Philo. It has been thought not unworthy of being 'done into English,' by Dr. Donne, Dean of St. Paul's. But this letter cannot be regarded in the nineteenth century (any more than the Talmud was) as 'historical.' We may pass it.

"Strictly speaking, no one knows who made the Septuagint. No one knows from what copies of the originals any parts of that version were made. It appears to be a growth of at least two generations; and, as might be expected, the style is not the same throughout. Has it, then, no authority at all, it may be asked? Was it not used by the Jews themselves, and bequeathed in fact by the Jewish Church to the Christian? Yes. That, such as it is, is the ground of its authority, for all purposes of practical edification. But this does not assist our investigation as to the literary condition of the Hebrew Scriptures at that time; unless we are to assume that the Septuagint corrects the sense of ancient Hebrew manuscripts now lost? Few would think, however, of thus setting aside the present Hebrew text in favour of the Septuagint, in those places where they now differ. The state of the text of the Septuagint itself is far, also, from satisfactory; and if it is to be set up as the principal authority for the Old Testament, the historical continuity of the originally Written Word is given up." ("The Bible and its Interpreters," p. 25).

He also says, "Versions in other tongues will not settle the Hebrew text," and that "the character which is used in the Hebrew Bible is thought by most learned men to be not the character used by Moses or the prophets."

It used to be pretended that the Septuagint version was made by seventy-two persons, shut up in the Island of Pharos, under Ptolemy Philadelphus; but as Hartwell Horne (vol. ii., pt. 1, cap. 5, sect. 1 § 2) admits that "the majority of the learned in our own time are fully agreed in considering the story as fictitious," there is no necessity for further comment. Justin Martyr, a pious Christian, improved the story

by shutting up each translator in a separate cell, where each executed a distinct version, making the whole of their work agree word for word. Epiphanius, another pious Christian, in the fourth century, finding this story too much for his credulity, reduced the cells to thirty-six, and shut up the translators two and two.

The case in favour of the Septuagint is perhaps put most forcibly by a writer in the *Quarterly Review*, vol. xxiii., p. 321, which is here reproduced, that the reader may have both statements before him. The business of this work is not to occupy itself with the Septuagint, but rather to demolish the Hebrew record, which limits man's origin to one pair, and brings that pair into being less than 6,000 years from the present date:—

"According to all historical evidence, to the united testimony both of Jews and Christians, and the full belief of all competent judges, the Septuagint version, as it was carefully made for the use of Jews who spoke the Greek language, was, from its first formation, generally received by them, and publicly read in their synagogues, as a true, faithful, and accurate version of Scripture. Scaliger says that it was read in the synagogues through the whole of Asia, Greece, and Egypt. '*All persons*,' says Walton, '*agree in this*, that it was used, especially among the Hellenistic Jews, *ab ultima antiquitate*, both in public and in private, whence R. Azarias assures us that the interpretation of the Greeks was confirmed by the whole assembly of the Israelites.' The inspired Evangelists and Apostles often quoted from the Septuagint; this fact alone, if every other testimony were wanting, proves incontestably not only that they believed and knew it to represent Scripture faithfully, but also that it was familiarly used and received by the Jews as Scripture at that time.

"As to the assertion that our present Septuagint is not substantially the same with that originally designated by that name, it is borne down by such overwhelming proofs to the contrary, that it is perfectly astonishing how anyone could dare to make it. The general historical evidence of its identity may probably of itself be deemed sufficient; but this evidence applies with much greater force in the case of the Septuagint than in that of the works of any ancient author, from its having been publicly read as Scripture in many ancient churches, and therefore guarded with the most scrupulous care, the most sacred reverence. Nor is this

all. The Apostles and the Evangelists undoubtedly quoted in many passages from different parts of the Septuagint; and the very passages which they quoted from the version as it existed in their day, remain in that version as it exists in ours. Again, many of the ancient Fathers, whose works have come down to us, have written commentaries on different books of Scripture, which they read according to the Septuagint; for instance, Augustin on the Psalms, Cyril on Isaiah, with many others; and any person comparing their commentaries with the text we now possess, must immediately perceive that it is substantially the same with that which they illustrated. Many of the early Fathers again have made direct quotations from the Septuagint, which appear in our present copies of that version; some have even incidentally remarked on passages in it, to which there are none corresponding in the Hebrew, and *vice versâ;* and the very same discrepancies which are noted by them are found to the present day."

Having thus given a very orthodox and one-sided plea for the Septuagint, it may be well to add one more reverend if not orthodox witness against it. The Rev. R. G. Browne, Vicar of Alnwick ("Mosaic Cosmogony," page 108), says :— "To think of the Septuagint version as an inspired or as a Divinely-preferred work is a perpetuation of the folly of Aristæus, and an erection of a superstructure of puerile conceits upon a fable and an imposition. It was, as is every translation, a merely human operation, bearing in its history and in its texture an endless tissue of human error and human inconsistency. We can never come to a true notion of God's ancient, and that his only genuine, word from the Septuagint version."

Luke Burke, in the *Ethnological Journal* (p. 23), says: "It must be evident, at the first glance, that the Samaritan chronology, taken as a whole, cannot be the original one. It is as inconsistent with itself as it is untrue to nature. At a time when it makes the duration of life from 230 to 438 years, it makes the generations twice as long as when men lived eight or nine hundred years. Nothing so absurd as this could ever have been drawn up by the writer of the book of Genesis, nor by any person, as an original draft. Such contradictions could only have arisen from the perversions and patchwork of subsequent times." Samuel Sharpe says, in his "Hebrew Nation and its Literature" (p. 265): "The Samaritan Pentateuch is not a version into a language dif-

ferent from the Hebrew. It is merely a transcript, which professes to make no change in the words, but to give the Hebrew words in the Samaritan letters. The Hebrew square characters declare their high antiquity by their pictorial form, and by their close resemblance to the Egyptian hieroglyphics, from which they seem to be copied. Moreover, it is very improbable that the Jews, reverencing their books so highly, should have ever ventured to change the characters in which they were first written. The Samaritans, on the other hand now (perhaps B.C. 480), for the first time building a temple, and proposing to have a priesthood of the line of Aaron, would naturally wish for a transcript of the sacred books, if the characters in which the Jews had written them were not so well understood on Mount Gerizim. The argument that the Samaritan letters are the oldest, because no Hebrew monuments can now be shown that are as old as the Samaritan letters on the Maccabee coins, is of little weight, because those coins are too modern to have much bearing in the controversy. Upon the whole it seems probable that the Hebrew Scriptures were in Jerusalem always written in square characters, much the same as those in which we now read them, and that the Samaritan transcript of the Pentateuch was made from the square characters soon after the time of Nehemiah. The Samaritan Bible does not reach beyond the Pentateuch, which circumstance alone should settle that it is a transcript, having no claim to be the original. The Samaritans seem never to have taken the trouble to complete the task."

The Rev. Dr. Wall, who was more favourable to the Samaritan codex, says ("Grounds for a Revision of the Authorised Version," p. 607): "The Samaritan Pentateuch was brought under notice and referred to by a series of Christian writers, extending from Eusebius, in the beginning of the fourth century, to Georgius Syncellus, about the end of the eighth; after which it was lost sight of in Christendom till the year 1631, when Father Morin, of the Oratory in Paris, published an account of two copies then recently brought from the East, which were purchased, one of them at Constantinople, by M. de Sancy, the French Ambassador there, and afterwards Archbishop of St. Maloes; and the other at Damascus, by Pietro della Valle, a Roman knight."

Noticing that Benjamin is written in "pure Hebrew" in the Samaritan Pentateuch, and in the orthodox Hebrew version only appears in "its Chaldaic corruption," Dr. Wall argues

that: "It would appear, as far as a valid inference can be drawn from a single example, that, as the Samaritan characters approach nearer than the Jewish ones to the oldest known shapes of the Hebrew letters, so likewise, in the few instances in which the termination of corresponding words in the two editions differ, the Samaritan endings are those of greater antiquity."

The best that can be said for the Samaritan Pentateuch on the orthodox side is given in "Horne's Introduction" (part 1, chap. i., sect. 2); but as this admits a space "upwards of 1000 years," during which there is no trace of this Samaritan version, its evidence is not very valuable. There are two versions of this Samaritan Pentateuch, one being in Arabic, the other in Aramæn. It must not be supposed that the MSS. of these versions go anywhere near the date given by Mr. Sharpe, of 408 years B.C. The Darghestan roll of the Pentateuch is claimed by Mr. Forsyth, Q.C., to be the most ancient MS. of the Old Testament, and this dates only to A.D. 580, even if that date be conceded. This would leave a blank of centuries in which there is no record. Many critics would put the Darghestan roll as considerably more modern. Bishop Colenso commences part 4 of the Pentateuch with an essay on the Samaritan text, for which he fixes as a highly probable date, an epoch more modern by 200 to 250 years than that above stated by Mr. Sharpe.

But it is not simply a question of versions; the genuineness and authenticity of the whole text is challenged. Spinoza considered it "clear as the noonday light" that Moses was not the author of any part of the Pentateuch; and urges, that which to-day nearly all competent Biblicists admit, viz., that nothing is known as to when, where, or by whom the Book of Genesis was penned, or by whom it was preserved ("Tractatus Theologico-Politicus," caps. vii., viii., and ix.). He declares that many blemishes have crept into the Hebrew text itself, and that even the most ancient Jewish writers have animadverted on various doubtful readings and on several imperfect and truncated passages. He also urges that our Hebrew canon rests upon the decision of the Pharisees of the second Temple, who, on grounds to us unknown, selected the Books we have from amongst a great number, and that their decision was far from unanimous; one book (Ezekiel) becoming the Word of God, through the support given to it by Neghunja, the son of Hiskias; and another (Ecclesiastes) narrowly escaping suppression,

because objected to by certain learned persons referred to in the Talmud, by Rabbi Jehuda, surnamed Rabi ("Tractatus Sabbathi," cap. ii., fol. 30, p. 2). These persons, he says, also desired to suppress the Book of Proverbs. Rabbi Jacob ben Chajim admits in his "Introduction to the Rabbinical Bible" (sec. 5) that "Some of the later great sages of blessed memory" taught that "during the Babylonish captivity, when the sacred books were lost and scattered about, and those wise men who were skilled in the Scriptures were dead, the men of the great synagogue found different readings in the sacred books; and in every place where they met with a doubtful or perplexing case, they wrote down a word in the text, but did not put the vowels to it, or wrote in the margin and left it out in the text, not being sure what they found." And yet this is pretended to be God's infallible message to human kind. The same writer (sec. 10) quotes Ephodi as authority for a statement that Ezra, and the scribes who followed him, made the Keri and Kethiv (*i.e.*, various readings of words read but not written, and written but not read), "in every passage in which they met with some obliterations and confusion, not being sure what the precise meaning was." The word Ephodi is made of the initials of a phrase-signature used by Isaac Ha-Levi, a writer against Christianity about 470 years ago. Jacob ben Chajim (sec. 11) declares himself surprised that so holy a man as Rabbi Kimchi (who wrote at the end of the twelfth and the beginning of the thirteenth centuries) should say that "It appears that these marginal and textual readings originated because the sacred books were lost and scattered about during the Babylonian captivity, and the sages who were skilled in the Scriptures were dead."

In 1820, Mr. Whittaker, of St. John's College, Cambridge, writing then to defend the authorised version against Mr. Bellamy, says: "There are many passages, particularly in the Old Testament, of such acknowledged difficulty, that learned men never did, and perhaps never will, agree about them." And yet reverend men without hesitation circulate these as God's message to his creatures.

It is surprising, in the face of the researches of the most erudite Biblicists, that any educated men should maintain that the original Hebrew text of God's revelation to mankind has been preserved by the Jewish Rabbis uncorrupted, and without loss or variation of a single letter or word. And why do they speak of the original Hebrew in which

Moses wrote? It can hardly be pretended that the Deity selected the Hebrew for its flexibility and capacity for expressing his meaning. On the contrary, the Greek far excels the Hebrew as a written tongue. Nor is the Hebrew the most ancient written language. The construction of the various Hebrew roots affords reason to the contrary, and it is absolutely certain that the whole of the vowel-points (which in many cases entirely change the meaning of the text) are of comparatively modern date, say, from the second to the fifth century of the present era—probably not earlier than A.D. 450. The present square-letter form of Hebrew, and the twenty-two letter alphabet, are also of limited antiquity. The Hebrew Scriptures are neither the most ancient nor the most perfect of Scriptures. That the Hebrew text of Genesis has been corrupted there can be no doubt whatever; and that the authorised translation, circulated broadcast by the Bible Society as God's Word, is imperfect is admitted by the Church sanction to the revision now going on. Luke Burke, referring to the comparative merits of the Samaritan, Hebrew, and Septuagint versions, says: "The Jew naturally prefers the reading which exists in his own version, the Samaritan contends for the superiority of his copy, and the generality of Christians prefer of course the Septuagint [this refers to the first few centuries of our era]. Each party accuses the other of wilful corruption of the text, and some at least of these accusations must be true" (*Ethnological Journal*, p. 19). Dr. Wall speaks of the "blemishes in the existing condition of the Hebrew text," some of which he attributes to fraud, and others to gross ignorance ("Grounds for Revision of the Hebrew Bible," pp. 102 and 545); and it is declared by competent critics that the Hebrew text, even after the Masoretic correction and purification, was "deficient, imperfect, interpolated, and full of errors." Before the Christian era there were no divisions between words of the Hebrew text, and the five final letters were not invented. From then till A.D. 1000 the texts of the various codices were not only in a most corrupt and unreliable state, but nearly all the early fathers were unable to read the Hebrew character. The English translation (authorised version) is wretchedly imperfect. Errors abound in it, and some of them are of a most laughable description. On this account great calls have been made for the new translation, which is now in the course of manufacture, and also for a new

edition of the Hebrew, which no one is competent to undertake; but neither a new translation nor a new Hebrew text will remove the difficulties developed during the last fifty years. Science has rendered the objections to the narrative insurmountable. The pretended revelation must in the end succumb before the scientific advocates it so long impeded.

Spinoza, treating of the true method of interpreting Scripture, says: "The first great 'difficulty' connected with our method arises from the consummate knowledge of the Hebrew tongue which its due application implies. But whence is this now to be obtained? The ancient masters of the Hebrew tongue have left nothing to posterity on the elements and principles of the language; we, at all events, have little or nothing of theirs—no dictionary, no grammar, no syntax. The Hebrew nation has lost all that it ever had of the elegances and ornaments of life (nor is this wonderful after such long ages of depression, disaster, and persecution), and has preserved nothing but a few fragments of its language and its literature. Then the meaning of many nouns and verbs which are met with in the Bible is either entirely unknown or is a subject of dispute. With all this, when we apply ourselves to study the syntax of this language, a matter of much moment, and seek to discover the idioms and modes of expression peculiar to the Hebrew people, we find that time, the consumer, has blotted them almost all from the memory of man. We shall, therefore, not be able, as we would wish, to determine the precise meaning of every passage which the common uses of the language would permit, and we shall come upon many sentences which, although expressed in words extremely well-known, are nevertheless of meaning most obscure, and are sometimes incomprehensible. To these difficulties must be added those which arise from the constitution and nature of the language itself, which occasion so many ambiguities that it is impossible to find such a method as shall assuredly teach us how to investigate the true sense of all the expressions of Scripture." After pointing out that doubt and obscurity result from the use of one letter in lieu of another, from the various meanings attaching to conjunctions and adverbs, and from the imperfections of the verb, Spinoza adds: "Besides the three causes of obscurity now noted in the Hebrew language, there yet remain to be mentioned two others, each of much more moment than all the rest. The first of these is that the Hebrew has no vowels; the second that

it is without spaces between the words and sentences, and has no accents to indicate the proper pronunciation; and although these two deficiencies—viz., the vowels and signs of accentuation, are wont to be supplied by points, it is impossible that we should acquiesce in the sufficiency of these, inasmuch as they are the invention and resource of men of these later times, whose authority can have no weight with us. The ancient Hebrews wrote without points (*i.e.*, without vowels and accents), as appears from the most ample testimony. The moderns supplied vowel-points and accents, as it seemed good to them that the Bible should be interpreted; wherefore they are to be regarded as mere interpretations of yesterday, and deserve no greater faith, as they have no higher authority, than the lucubrations of ordinary commentators" ("Tractatus Theologico-Politicus," cap. vii., p. 156). Gesenius admits that the ancient translators of the Hebrew, "evidently often translated by conjecture only" ("Hebrew Lexicon," by Leo, p. 17).

The learned Irenæus gives us a statement on the Hebrew, which shows either that he was utterly ignorant on the subject, or that since his time (A.D. 160) the language has entirely changed. He says ("Against Heresies," book 2, cap. xxiv., sec. 2): "For these ancient, original, and generally called sacred letters of the Hebrews, are ten in number (but they are written by means of fifteen), the last letter being joined to the first. And thus they write some of these letters according to their natural sequence, just as we do, but others in a reverse direction, from the right hand towards the left, thus tracing the letters backwards."

Bishop Colenso believes that he succeeds in identifying the work of at least four several authors in the Book of Genesis, and these he describes as 1st Elohist, 2nd Elohist (that is, two writers who respectively use the word Elohim אלהים ALEIM for God); 1st Jehovist, 2nd Jehovist (two writers who respectively use the word Jehovah יהוה IEUE for God); and Deuteronomist. Elohist No. 2 is supposed by the Bishop not to be a different writer from the 1st Jehovist, but to represent an earlier stage of the Jehovist's literary activity. In a synoptical table in Part V. of the Pentateuch the Bishop presents the results of the critical analysis of the Book of Genesis, and apportions the 1,533 verses of the Book of Genesis as follows: To the 1st Elohist, 336 verses; to the 2nd, 106 verses; to the 1st Jehovist, 1,028 verses; to the 2nd, 24 verses; and to the

Deuteronomist, 39 verses. The word Deuteronomist is used by Dr. Colenso for the later editor of the Pentateuch, and is fixed at about the time of King Josiah. These points are none of them material to the case to be made out in this volume, and are only given to show that modern Biblical criticism utterly rejects the notion of the Hebrew Pentateuch as the work of one pen.

The question of disputed authorship is not confined to the problem as to who wrote the first Book, or the first five Books, but extends to the whole Bible. Spinoza says ("Tractatus Theologico-Politicus," p. 158; Latin edition, cap. vii., sec. 58): "Of the authors—or, if you please, writers—of many of the Books, we either know almost nothing, or we entertain grave doubts as to the correctness with which the several Books are ascribed to the parties whose names they bear. Then we neither know upon what occasion, nor at what time, those Books were indited, the writers of which are unknown to us. Further, we know nothing of the hands into which the Books fell; nor of the codices which have furnished such a variety of readings, nor whether perchance there were not many other variations in other copies."

Peyrere followed Spinoza, and said: "God suffered the autographs to perish, and only very imperfect copies to come down to us" (De Wette, vol. i., dio. 1, sec. 84). In the Apocryphal Book of Esdras, it is distinctly stated that in consequence of the "law being burnt" (Esdras, cap. xiv., v. 31), Esdras took five rapid writers, and shut himself up forty days, so that they might "write all that had been done in the world since the beginning;" and it is alleged that these, having "understanding given them by the highest," wrote in forty days 204 books of things, "which they knew not." Eusebius, after speaking of the wonderful unanimity of the translators of the Septuagint, who, as before noticed, were alleged to have been shut up in seventy-two separate cells, and without intercourse with each other, to have made the whole translation in just the same words and letters, quoted from Irenæus. "Neither was it anything extraordinary that God should have done this, who, indeed, in the captivity under Nebuchadnezzar, *when their Scripture had been destroyed*, and the Jews returned to their country after seventy years, in the time of Artaxerxes, King of the Persians, *inspired Esdras, the priest of the tribe of Levi, to compose anew all the discourses of the ancient prophets, and to restore to*

the people the laws given them by Moses." ("Ecclesiastical History," book 5, cap. viii., Cruse's translation, p. 171.)

Bishop Colenso says: "It is quite possible—and, indeed, so far as our present inquiries have gone, highly probable—that Moses may be a historical character, that is to say, it is probable that legendary stories, connected with his name, of some remarkable movement in former days, may have existed among the Hebrew tribes, and these legends may have formed the foundation of the narrative. But this is merely conjectural. The result of our inquiries, as far as we have proceeded, is that such a narrative as that contained in the Pentateuch could not have been written in the age of Moses, or for some time afterwards."

Sharp says of Genesis ("Historic Notes on the Old and New Testaments," Moxon, 1854, p. 6): "We have no account of when this first of the Hebrew Books was written, or by whom. It has been called one of the Books of Moses, and some small part of it may have been written by that great law-giver, and leader of the Israelites. But it is the work of various authors and of various ages."

Michel Nicolas says ("Etudes Critiques sur la Bible, Ancien Testament," p. 2), quoting as his authorities Esdras, Irenæus, Jerome, and Augustine, "that there was a tradition generally received amongst the Israelites, that Esdras has been the restorer of the Mosaic writings, which had suffered great damage at the destruction of the Jewish kingdom, and which writings, according to some, had even been totally destroyed.....St. Jerome held it indifferent to regard the Pentateuch as the work of Moses, or as retouched and put in order by Ezra." Nicolas adds that, although the Protestants have more firmly insisted on Moses as the author of the five Books than have their Catholic brethren, yet it is amongst the Protestants that the first doubts were raised amongst the Christian public as to the authorship.

Kurtz ("Colenso," part iv., p. 15), writing to prove that the whole Pentateuch as at present existing is from the hand of Moses, at last admits that the results of his examination have convinced him that several authors have taken part in the composition of the Pentateuch. Ewald, who commenced by asserting one author for Genesis, now admits that more than one hand may be traced in the Book. Delitzch, while contending for Moses, admits other authors, and the employment of pre-existing documents. Spinoza distinctly

declares that the original writings of Moses [if they ever existed] are no longer extant, and that the present Books of the Old Testament are a selection from a greater number finally put together, and approved by a Council of Pharisees, so that it depended on the votes of certain Rabbis whether or no a particular Hebrew Book was or was not God's revelation to his people. It is quite certain that, if Moses wrote the Pentateuch, he did not write it in the square-letter Hebrew, which is comparatively a modern language, and which did not exist in his time. It is not contended that any other language was used by Moses, and there is no pretence for carrying modern Hebrew, or any proof in favour of carrying ancient Hebrew, as a language with written characters to such a period as that assigned to Moses. It is hardly possible that any work so voluminous as the Pentateuch could have been graven on stone in hieroglyph, and carried about on the Levites' shoulders in the ark, yet this is the only depository assigned to the Mosaic Books.

De Wette says: "Without doubt, it [the ancient Hebrew] originated in the land [of Canaan], or was still further developed therein after the Hebrew and other Canaanitish people had migrated thither from the mother country." (De Wette on the "Old Testament," part ii., secs. 30 and 35.) And he regards Hebrew, Arabic, and Aramean as branches from a common stem. In what language, then, is Moses to be supposed to have written? Some of the Talmudists taught that the ancient Hebrew language became entirely extinct during the captivity. Genesis itself does not speak of writing amongst the patriarchs; on the contrary, remarkable events were chronicled by the help of heaps of stones, trees, altars, &c., which were named after the events. The first allegation of writing is on the tables of stone; but surely this, if written, was not in Hebrew characters. The Hebrews had been slaves to the Egyptians, and might have gathered from them some of the hieroglyph lore of that age; but surely nothing more can be claimed for the ignorant slaves than was in use amongst their educated masters. De Wette says ("Book of Moses," sec. 163): "The opinion that Moses composed these Books is not only opposed by all the signs of a later date, which occur in the Book itself, but also by the entire analogy of the history of Hebrew literature and language."

The conclusions founded on the foregoing statements are very clear and simple.

1. The Bible alleges that man has existed on this earth not more than 6,000 years, and that all humankind are descended from one pair.

2. There is no corroboration to the Bible story, either in the character of its chronology or the coherence of its narrative.

3. The Bible itself is an unvouched and untrustworthy witness, its real authorship unknown, and with the additional disadvantage that authors have been claimed for parts of the Hebrew Bible who cannot by possibility have penned a word of it.

As some aid to modern divines in estimating the value of the Bible history, I quote the words of an early Father of the Church—Origen, who flourished in the third century; the "pious" Origen, the "illustrious" Origen, the "devout" Origen, for these and a score of like prefixes are given to him by good Christians. The extract is from "De Principiis," book 4, cap. i, sec. 16:—

"For who that has understanding will suppose that the first, and second, and third day, and the evening and the morning, existed without a sun, and moon, and stars? and that the first day was, as it were, also without a sky? And who is so foolish as to suppose that God, after the manner of a husbandman, planted a paradise in Eden, towards the east, and placed in it a tree of life, visible and palpable, so that one tasting of the fruit by the bodily teeth obtained life? and, again, that one was a partaker of good and evil by masticating what was taken from the tree? And if God is said to walk in the paradise in the evening, and Adam to hide himself under a tree, I do not suppose that any one doubts that these things figuratively indicate certain mysteries, the history having taken place in appearance, and not literally. Cain also, when going forth from the presence of God, certainly appears to thoughtful men as likely to lead the reader to inquire what is the presence of God, and what is the meaning of going out from him. And what need is there to say more, since those who are not altogether blind can collect countless instances of a similar kind recorded as having occurred, but which did not literally take place? Nay, the Gospels themselves are filled with the same kind of narratives—*e.g.*, the Devil leading Jesus up into a high mountain, in order to show him from thence the kingdoms of the whole world, and the glory of them. For who is there among those who do not read such accounts

carelessly that would not condemn those who think that with the eye of the body—which requires a lofty height, in order that the parts lying [immediately] under and adjacent may be seen—the kingdoms of the Persians, and Scythians, and Indians, and Parthians, were beheld, and the manner in which their princes are glorified among men? And the attentive reader may notice in the Gospels innumerable other passages like these, so that he will be convinced that in the histories that are literally recorded, circumstances that did not occur are inserted."

That which the pious, illustrious, and devout Origen wrote more than 1,600 years ago is repeated by a living Bishop of the Church of England, who says (Colenso on "Pentateuch," part 4, cap. xi.):—

"The statements in Genesis i., if regarded as statements of historical matter-of-fact, are directly at variance with some of the plainest facts of natural science, as they are now brought home, by the extension of education, to every village—almost, we might say, to every cottage—in the land. It is idle for any minister of religion to attempt to disguise this palpable discordance. To do so is only to put a stumbling-block in the way of the young—at all events, of those of the next generation—who, well-instructed themselves in these things, and having their eyes open to the real facts of the case, may be expected either to despise such a teacher as ignorant, or to suspect him as dishonest, and, in either case, would be very little likely to attach much weight to his instructions in things of highest moment."

In part 2, cap. iii, page 186, the same writer says:—

"It should be noticed that the Books of the Pentateuch are never ascribed to Moses in the inscriptions of Hebrew manuscripts, or in printed copies of the Hebrew Bible. Nor are they styled the 'Books of Moses' in the Septuagint or Vulgate, but only in our modern translations, after the example of many eminent Fathers of the Church, who, with the exception of Jerome, and, perhaps, Origen, were, one and all of them, very little acquainted with the Hebrew language, and still less with its criticism.

"The Jews do not speak of the first, second, &c., Book of Moses, but designate each Book by the first word which occurs in it in Hebrew, except that for Numbers they employ במדבר 'In the wilderness,' which word occurs in the first verse, and is probably chosen as more expressive than the

first word וידבר 'And he said,' which was used in the days of Jerome."

The Rev. Dr. Rowland Williams, in his "Rational Godliness," page 294, says: "The Scriptural writers, after all, were men, and the condition of mankind is imperfection. They spake of old; but all old times represent, as it were, the childhood of the human race, and therefore had childish things, which we must put away." And yet it is this collection of childish things, bound in one volume, and labelled "The Holy Bible," which is to be taught to-day to little children in our schools. If, by the admission of so high an authority, grown men are to put away the Bible as unfit for the knowledge of the present age, why should the clergy of the same Church persist in forcing the very Book on our schools as part of the every-day instruction of our boys and girls?

Having dealt with the case presented by the Bible, we now turn to the sciences of ethnology, anthropology, and geology, to see what aid they can give us in our inquiry.

"Ethnology," says Luke Burke (*Ethnological Journal*, page 1), "is a science which investigates the mental and physical differences of mankind, and the organic laws upon which they depend; and which seeks to deduce from these investigations principles for human guidance in all the important relations of social existence. Ethnology divides itself into two principal departments, the scientific and the historic. Under the former is comprised everything connected with the natural history of man, and the fundamental laws of living organisms; under the latter, every fact in civil history which has any important bearing, directly or indirectly, upon the question of races."

Anthropology was defined by my friend, the late Dr. James Hunt, as "the science of the whole nature of man." Mr. C. S. Wake says ("Aim and Scope of Anthropology," *Anthropological Journal*, July, 1870, pages 3 and 4):—"Mr. Bendyshe defines anthropology as that which 'deals with all phenomena exhibited by collective man, and by him alone, which are capable of being reduced to law;' while Dr. Broca declares it to be 'that science which has for its object the study of the human group, considered in its *ensemble*, in its details, and in its relations to the rest of nature.' Anthropology has relation chiefly to mankind *as a whole*, and is concerned with individual man only so far as he forms part of that whole. Of course, as Dr. Broca

observes, 'a collection of individuals cannot be studied in its *ensemble*, if we do not commence with the study of the individual type which forms the unit of the number.' The latter study, however, has more especial reference to the *differences* which characterise man when compared with other natural objects; the identification of these differences resulting in the determinate idea of 'man' in his individual aspect. Anthropology, on the other hand, has rather to do with *resemblances*—its general aim being the generalisation of the phenomena which are displayed by mankind as a whole, so as to discover the laws of human being, in relation to its continued activity—past, present, and future—as well as, if possible, to define the nature of that being itself. When 'man,' as distinguished from other organic existences, has been clearly defined, the idea thus obtained requires to be extended, so as to embrace all those who answer to the definition. We have here the starting point of anthropology."

Here it is now proposed to show—by the aid of the sciences of Ethnology and Anthropology—the diversity existing of human type; and—by the aid of History and Anthropology—it is proposed to demonstrate:—first, that these diverse types of mankind can be traced back to a date prior to the Noachian deluge; and, next, by the additional aid of geology, it is intended to prove man's existence on earth long prior to the alleged creation of Adam.

"One feature," says Agassiz ("Types of Mankind," page 58), "in the physical history of mankind is the natural relations between the different types of man and the animals and plants inhabiting the same regions. The sketch here presented is intended to show, as far as it is possible in a mere outline delineation, that *the boundaries, within which the different natural combinations of animals are known to be circumscribed upon the surface of our earth, coincide with the natural range of distinct types of man.* Such natural combinations of animals circumscribed within definite boundaries are called *faunæ*, whatever be their home—land, sea, or river. Among the animals which compose the fauna of a country we find types belonging exclusively there, and not occurring elsewhere; such are, for example, the ornithorhynchus of New Holland, the sloths of America, the hippopotamus of Africa, and the walruses of the Arctics: others, which have only a small number of representatives beyond the fauna which they specially characterise, as, for instance,

the marsupials of New Holland, of which America has a few species, such as the opossum; and, again, others which have a wider range, such as the bears—of which there are distinct species in Europe, Asia, or America—or the mice and bats, which are to be found all over the world, except in the Arctics. That fauna will, therefore, be most easily characterised which possesses the largest number of distinct types, proper to itself, and of which the other animals have little analogy with those of neighbouring regions, as, for example, the fauna of New Holland.

"The inhabitants of fresh water furnish also excellent characters for the circumscription of faunæ. The fishes, and other fluviatile animals from the larger hydrographic basins, differ no less from each other than the mammalia, the birds, the reptiles, and the insects of the countries which these rivers water. Nevertheless, some authors have attempted to separate the fresh-water animals from those of the land and sea, and to establish distinct divisions for them, under the name of fluviatile faunæ. But the inhabitants of the rivers and lakes are too intimately connected with those of their shores to allow of a rigorous distinction of this kind. Rivers never establish a separation between terrestrial faunæ. For the same reason, the faunæ of the inland seas cannot be completely isolated from the terrestrial ones, and we shall see hereafter that the animals of southern Europe are not bound by the Mediterranean, but are found on the southern shore of that sea, as far as the Atlas. We shall, therefore, distinguish our zoological regions according to the combination of species which they enclose, rather than according to the element in which we find them.

"If the grand divisions of the animal kingdom are primordial and independent of climate, this is not the case with regard to the ultimate local circumscription of species: these are, on the contrary, intimately connected with the conditions of temperature, soil, and vegetation. A remarkable instance of this distribution of animals with reference to climate may be observed in the Arctic fauna, which contains a great number of species common to the three continents converging towards the North Pole, and which presents a striking uniformity, when compared with the diversity of the temperate and tropical faunæ of those same continents.

"The Arctic fauna extends to the utmost limits of the cold and barren regions of the North. But from the moment that forests appear, and a more propitious soil permits a

larger development of animal life and of vegetation, we see the fauna and flora, not only diversified according to the continents on which they exist, but we observe also striking distinctions between different parts of the same continent; thus, in the Old World, the animals vary, not only from the Polar circle to the equator, but also in the opposite direction —those of the western coast of Europe are not the same as those of the basin of the Caspian Sea, or of the eastern coast of Asia, nor are those of the eastern coast of America the same as those of the western.

"The first fauna, the limits of which we would determine with precision, is the Arctic. It offers, as we have just seen, the same aspects in three parts of the world, which converge towards the North Pole. The uniform distribution of the animals by which it is inhabited forms its most striking character, and gives rise to a sameness of general features which is not found in any other region. Though the air-breathing species are not numerous here, the large number of individuals compensates for this deficiency, and among the marine animals we find an astonishing profusion and variety of forms.

"In this respect the vegetable and animal kingdoms differ entirely from each other, and the measure by which we estimate the former is quite false as applied to the latter. Plants become stunted in their growth or disappear before the rigours of the climate, while, on the contrary, all classes of the animal kingdom have representatives, more or less numerous, in the Arctic fauna.

"Neither can they be said to diminish in size under these influences; for, if the Arctic representatives of certain classes, particularly the insects, are smaller than the analogous types in the tropics, we must not forget, on the other hand, that the whales and larger cetacea have here their most genial home, and make amends, by their more powerful structure, for the inferiority of other classes. Also, if the animals of the North are less striking in external ornament—if their colours are less brilliant—yet we cannot say that they are more uniform, for though their tints are not so bright, they are none the less varied in their distribution and arrangement.

"The limits of the Arctic fauna are very easily traced. We must include therein all animals living beyond the line where forests cease, and inhabiting countries entirely barren. Those which feed upon flesh seek fishes, hares, or lemmings,

a rodent of the size of our rat. Those which live on vegetable substances are not numerous. Some gramineous plants, mosses, and lichens, serve as pasture to the ruminants and rodents, while the seeds of a few flowering plants, and of the dwarf birches, afford nourishment to the little granivorous birds, such as linnets and buntings. The species belonging to the sea-shore feed upon marine animals, which live, themselves, upon each other, or upon marine plants.

"The larger mammalia which inhabit this zone are—the white bear, the walrus, numerous species of seal, the reindeer, the musk ox, the narwal, the cachalot, and whales in abundance. Among the smaller species we may mention the white fox, the polar hare, and the lemming. The birds are not less characteristic. Some marine eagles, and wading birds in smaller number, are found; but the aquatic birds of the family of palmipedes are those which especially prevail. The coasts of the continents and of the numerous islands in the Arctic seas are peopled by clouds of gannets, of cormorants, of penguins, of petrels, of ducks, of geese, of mergansers, and of gulls, some of which are as large as eagles, and, like them, live on prey. No reptile is known in this zone. Fishes are, however, very numerous, and the rivers especially swarm with a variety of species of the salmon family. A number of representatives of the inferior classes of worms, of crustacea, of mollusks, of echinoderms, and of medusæ, are also found here.

"Within the limits of this fauna we meet a peculiar race of men, known in America under the name of Esquimaux, and under the names of Laplanders, Samojedes, and Tchuktshes in the north of Asia. This race, so well known since the voyage of Captain Cook and the Arctic expeditions of England and Russia, differs alike from the Indians of North America, from the whites of Europe, and the Mongols of Asia, to whom they are adjacent. The uniformity of their characters along the whole range of the Arctic seas forms one of the most striking resemblances which these people exhibit to the fauna with which they are so closely connected.

"The semi-annual alternation of day and night in the Arctic regions has a great influence upon their modes of living. They are entirely dependent upon animal food for their sustenance, no farinaceous grains, no nutritious tubercles, no juicy fruits, growing under those inhospitable latitudes. Their domesticated animals are the reindeer in Asia, and a

peculiar variety of dog, the Esquimaux dog, in North America, where even the reindeer is not domesticated.

"Though the Arctic fauna is essentially comprised in the Arctic circle, its organic limit does not correspond rigorously to this line, but rather to the isotherme of thirty-two degrees Fahr., the outline of which presents numerous undulations. This limit is still more natural when it is made to correspond with that of the disappearance of forests. It then circumscribes those immense plains of the North, which the Samoyedes call *tundras*, and the Anglo-Americans, *barren lands*.

"The naturalists, who have overlooked this fauna, and connected it with those of the temperate zone, have introduced much confusion in the geographical distribution of animals, and have failed to recognise the remarkable coincidence existing between the extensive range of the Arctic race of men, and the uniformity of the animal world around the Northern Pole.

"The types which characterise best this fauna, are the white or Polar bear, the walrus, the seal of Greenland, the reindeer, the right whale, and the eider duck. The vegetation is represented by the so-called reindeer moss, a lichen which constitutes the chief food of the herbivorous animals of the Arctics and the high Alps during winter.

"To the glacial zone, which encloses a single fauna, succeeds the temperate zone, included between the isothermes of thirty-two degrees and seventy-four degrees Fahr., characterised by its pine forests, its amentacea, its maples, its walnuts, and its fruit trees, and from the midst of which arise, like islands, lofty mountain chains, or high table-lands, clothed with a vegetation which, in many respects, recalls that of the glacial regions. The geographical distribution of animals in this zone forms several closely-connected, but distinct, combinations. It is the country of the terrestrial bear, of the wolf, the fox, the weasel, the marten, the otter, the lynx, the horse and the ass, the boar, and a great number of stags, deer, elk, goats, sheep, bulls, hares, squirrels, rats, &c.; to which are added southward, a few representatives of the tropical zone.

"Wherever this zone is not modified by extensive and high table-lands and mountain chains, we may distinguish in it four *secondary* zones, approximating gradually to the character of the tropics, and presenting, therefore, a greater diversity in the types of its southern representation than we

find among those of its northern boundaries. We have first, adjoining the Arctics, a *Sub-Arctic* zone, with an almost uniform appearance in the Old, as well as the New World, in which pine forests prevail, the home of the moose; next a *cold temperate zone*, in which amentaceous trees are combined with pines, the home of the fur animals; next, a *warm temperate zone*, in which the pines recede, whilst to the prevailing amentaceous trees a variety of evergreens are added, the chief seat of the culture of our fruit trees, and of the wheat; and a *sub-tropical zone*, in which a number of tropical forms are combined with those characteristics of the warm temperate zone. Yet there is, throughout the whole of the temperate zone, one feature prevailing; the repetition, under corresponding latitudes, but under different longitudes, of the same genera and families, represented in each botanical or zoological province by distinct so-called *analogous, or representative species*, with a very few subordinate types, peculiar to each province; for it is not until we reach the tropical zone that we find distinct types prevailing in each fauna and flora.

"Again, owing to the inequalities of the surface, the secondary zones are more or less blended into one another, as for instance, in the table-lands of Central Asia, and Western North America, where the whole temperate zone preserves the features of a cold temperate region; or the colder zones may appear like islands rising in the midst of the warmer ones, as the Pyrenees, the Alps, &c., the summits of which partake of the peculiarities of the Arctic and sub-Arctic zones, whilst the valleys at their base are characterised by the flora and fauna of the cold or warm temperate zones. It may be proper to remark, in this connection, that the study of the laws regulating the geographical distribution of natural families of animals and plants upon the whole surface of our globe, differs entirely from that of the associations and combinations of a variety of animals and plants within definite regions, forming peculiar faunæ and flora.

"Considering the whole range of the temperate zone from east to west, we may divide it in accordance with the prevailing physical features into—1st, an *Asiatic* realm, embracing Mantchuria, Japan, China, Mongolia, and passing through Turkestan into—2nd, the *European* realm, which includes Iran as well as Asia Minor, Mesopotamia, Northern Arabia, and Barbary, as well as Europe, properly so-called; the western parts of Asia, and the northern parts of Africa

being intimately connected by the geological structure with the southern parts of Europe; and—3rd, the *North American* realm, which extends as far south as the table-land of Mexico.

"With these qualifications, we may proceed to consider the faunæ which characterise these three realms. But, before studying the organic characters of this zone, let us glance at its physical constitution. The most marked character of the temperate zone is found in the inequality of the four seasons, which give to the earth a peculiar aspect in different epochs of the year, and in the gradual, though more or less rapid, passage of these seasons into each other. The vegetation particularly undergoes marked modification; completely arrested, or merely suspended, for a longer or shorter time, according to the proximity of the Arctic or the tropical zone, we find it by turns in a prolonged lethargy, or in a state of energetic and sustained development. But in this respect there is a decided contrast between the cold and warm portions of the temperate zone. Though they are both characterised by the predominance of the same families of plants, and in particular by the presence of numerous species of the coniferous and amentaceous plants, yet the periodical sleep which deprives the middle latitudes of their verdure, is more complete in the colder region than in the warmer, which is already enriched by some southern forms of vegetation, and where a part of the trees remain green all the year. The succession of the seasons produces, moreover, such considerable changes in the climatic conditions in this zone, that all the animals belonging to it cannot sustain them equally well. Hence a large number of them migrate at different seasons from one extremity of the zone to the other, especially certain families of birds. It is known to all the world that the birds of Northern Europe and America leave their ungenial climate in the winter, seeking warmer regions as far as the Gulf of Mexico and the Mediterranean, the shores of which, even those of the African coasts, make a part of the temperate zone. Analogous migrations take place also in the north of Asia. Such migrations are not, however, limited to the temperate zone; a number of species from the Arctic regions go for the winter into the temperate zone, and the limits of these migrations may aid us in tracing the natural limits of the faunæ, which thus link themselves to each other, as the human races are connected by civilisation.

"The temperate zone is not characterised, like the Arctic, by one and the same fauna; it does not form, as the Arctic does, one continuous zoological zone around the globe. Not only do the animals change from one hemisphere to another, but those differences exist even between various regions of the same hemisphere. The species belonging to the western countries of the Old World are not identical with those of the eastern countries. It is true that they often resemble each other so closely that until very recently they have been confounded. It has been reserved, however, for modern zoology and botany to detect these nice distinctions. For instance, the conifera of the Old World, even within the sub-Arctic zone, are not identical with those of America. Instead of the Norway and black pine, we have here the balsam and white spruce; instead of the common fir, the *Pinus rigida;* instead of the European larch, the hacmatac, &c.; and farther south the differences are still more striking. In the temperate zone proper, the oaks, the beeches, the birches, the hornbeams, the hophornbeams, the chestnuts, the buttonwoods, the elms, the linden, the maples, and the walnuts, are represented in each continent by peculiar species differing more or less. Peculiar forms make, here and there, their appearance, such as the gum-trees, the tulip-trees, the magnolias. The evergreens are still more diversified; we need only mention the camellias of Japan, and the kalmias of America, as examples. Among the tropical forms extending into the warm temperate zone, we notice particularly the palmetto in the southern United States, and the dwarf chamærops of southern Europe. The animal kingdom presents the same features. In Europe we have, for instance, the brown bear, in North America the black bear, in Asia the bear of Tubet: the European stag and the European deer are represented in North America by the Canadian stag, or wapiti, and the American deer; and in eastern Asia by the musk deer. Instead of the monflon, North America has the big-horn or mountain sheep, and Asia the argali. The North American buffalo is represented in Europe by the wild anerochs of Lithuania, and in Mongolia by the yak; the wild cats, the martens and weasels, the wolves and foxes, the squirrels and mice (excepting the imported house-mouse), the birds, the reptiles, the fishes, the insects, the mollusks, &c., though more or less closely allied, are equally distinct specifically. The types peculiar to the Old or New World are few; among

them may be mentioned the horse, the ass, and the dromedary of Asia, and the opossum of North America; but upon this subject more details may be found in every text-book of zoology and botany. We would only add that in the present state of our knowledge we recognise the following combinations of animals within the limits of the temperate zone, which may be considered as so many distinct zoological provinces or faunæ:—

"In the *Asiatic realm*—1st, a north-eastern fauna, the *Japanese fauna*—2nd, a south-eastern fauna, the *Chinese fauna*, and a central fauna, the *Mongolian fauna*, following westwards by the *Caspian fauna*, which partakes partly of the European zoological character; its most remarkable animal, antelope saiga, ranging west as far as Southern Russia. The Japanese and Chinese fauna stand to each other in the same relation as Southern Europe and North Africa, and it remains to be ascertained by farther investigations whether the Japanese fauna ought not to be sub-divided into a more eastern insular fauna, the *Japanese fauna proper*, and a more western continental fauna, which might be called the *Mandshurian*, or *Tongonsian* fauna. But since it is not my object to describe separately all faunæ, but chiefly to call attention to the coincidence existing between the natural limitation of the races of man, and the geographical range of the zoological provinces, I shall limit myself here to some general remarks respecting the Mongolian fauna, in order to show that the Asiatic zoological realm differs essentially from the European and the American. The most remarkable animals of this fauna are the bear of Tubet (ursus thibetanus), the musk-deer (moschus moschiferus), the Tzeiran (antilope gutturosa), the Mongolian goat (capra sibirica), the argali (ovis argali), and the yak (bos grunniens). This is also the home of the Bactrian, or double-hunched camel, and of the wild horse (equus caballus), the wild ass (equus onager), and another equine species, the Dtschigetai (equus hemionus). The wide distribution of the musk-deer in the Altai, and the Himalayan and Chinese Alps, shows the whole Asiatic range of the temperate zone to be a most natural zoological realm, sub-divided into distinct provinces by the greater localisation of the largest number of its representatives.

"If we now ask, what are the nations of the men inhabiting those regions, we find that they all belong to the so-called Mongolian race, the natural limits of which

correspond exactly to the range of the Japanese, Chinese, Mongolian, and Caspian faunæ, taken together, and that peculiar types, distinct nations of this race, cover respectively the different faunæ of this realm. The Japanese inhabiting the Japanese zoological province; the Chinese, the Chinese province; the Mongols, the Mongolian province; and the Turks, the Caspian province; eliminating, of course, the modern establishment of Turks in Asia Minor and Europe.

"The unity of Europe (exclusive of its Arctic regions), in connection with south-western Asia and northern Africa, as a distinct zoological realm, is established by the range of its mammalia and by the limits of the migration of its birds, as well as by the physical features of its whole extent. Thus we find its deer and stag, its bear, its hare, its squirrel, its wolf and wild-cat, its fox and jackal, its otter, its weasel and marten, its badger, its bear, its mole, its hedgehogs, and a number of bats, either extending over the whole realm in Europe, western Asia, and north Africa, or so linked together as to show that in their combination with the birds, reptiles, fishes, etc., of the same countries, they constitute a natural zoological association analogous to that of Asia, but essentially different in reference to species.

"Like the eastern realm, this European world may be subdivided into a number of distinct faunæ, characterised each by a variety of peculiar animals. In western Asia we find, for instance, the common camel, instead of the Bactrian, whilst Mount Sinai, Mounts Taurus and Caucasus have goats and wild sheep, which differ as much from those of Asia as they differ from those of Greece, of Italy, of the Alps, of the Pyrenees, of the Atlas, and of Egypt. Wild horses are known to have inhabited Spain and Germany; and a wild bull extended over the whole range of central Europe, which no longer exists there. The Asiatic origin of our domesticated animals may, therefore, well be questioned, even if we were still to refer western Asia to the Asiatic realm; since the ass, and some of the breeds of our horse, only belong to the table-lands of Iran and Mongolia, whilst the other species, including the cat, may all be traced to species of the European realm. The domesticated cat is referred by Rüppell to *felis maniculata* of Egypt; by others, to *felis catus ferus* of Central Europe; thus, in both cases, to an animal of the European realm. Whether the dog be a species by itself, or its varieties derived from several species

FROM A PORTRAIT TAKEN BY W. V. AMLY, OF LANDPORT, IN 1885

Autobiography of Mr. Bradlaugh.

[*Reprinted from the "National Reformer", August 31st, 1873.*]

At the request of many friends, and by way of farewell address on leaving for America, I, for the first time in my life, pen a partial autobiographical sketch. I do not pretend that the narrative will be a complete picture of my life: I only vouch the accuracy of the facts so far as I state them. I have not the right in some cases to state political occurrences in which others now living are involved, nor have I the courage of Jean Jacques Rousseau, to photograph my inner life. I shall therefore state little the public may not already know.

I was born on the 26th September, 1833, in a small house in Bacchus Walk, Hoxton. My father was a solicitor's clerk with a very poor salary, which he supplemented by law writing. He was an extremely industrious man, and a splendid penman. I never had the opportunity of judging his tastes or thoughts, outside his daily labours, except in one respect, in which I have followed in his footsteps. He was passionately fond of angling.

Until 1848 my life needs little relation. My schooling, like that of most poor men's children,

was small in quantity, and, except as to the three R's, indifferent in quality. I remember at seven years of age being at a national school in Abbey Street, Bethnal Green; between seven and nine I was at another small private school in the same neighborhood; and my "education" was completed before I was eleven years of age, at a boy's school in Coal-harbor Street, Hackney Road.

When about twelve years of age I was first employed as errand lad in the solicitor's office where my father remained his whole life through. After a little more than two years in this occupation, I became wharf clerk and cashier to a firm of coal merchants in Britannia Fields, City Road. While in their employment the exitement of the Chartist movement was at its height in England, and the authorities, frightened by the then huge continental revolution wave, were preparing for the prosecution of some of the leaders amongst the Chartists. Meetings used to be held almost continuously all day on Sunday, and every week-night in the open air on Bonner's Fields, near where the Consumption Hospital now stands. These meetings were in knots of from fifty to five hundred, sometimes many more, and were occupied chiefly in discussions on theological, social, and political questions, any bystander taking part. The curiosity of a lad took me occasionally in the week evenings to the Bonner's Fields gatherings. On the Sunday I, as a member of the Church of England, was fully occupied as a Sunday-school teacher.

This last-named fashion of passing Sunday was

broken suddenly. The Bishop of London was announced to hold a confirmation in Bethnal Green. The incumbent of St. Peter's, Hackney Road, the district in which I resided, was one John Graham Packer; and he, desiring to make a good figure when the Bishop came, pressed me to prepare for confirmation, so as to answer any questions the Bishop might put. I studied a little the Thirty-nine Articles of the Church of England, and the four Gospels, and came to the conclusion that they differed. I ventured to write the Rev. Mr. Packer a respectful letter, asking him for aid and explanation. All he did was to denounce my letter to my parents as Atheistical, although at that time I should have shuddered at the notion of becoming an Athiest; and he suspended me for three months from my office of Sunday-school teacher. This left me my Sundays free, for I did not like to go to church while suspended from my teacher's duty; and I went instead to Bonner's Fields, at first to listen, but soon to take part in some of the discussions which were then always pending there.

At the commencement I spoke on the orthodox Christian side; but after a debate with Mr. J. Savage, in the Warner Place Hall, in 1849, on the "Inspiration of the Bible", I found that my views were getting very much tinged with Freethought, and in the winter of that year, at the instigation of Mr. Packer, to whom I had submitted the "Diegesis" of Robert Taylor, I—having become a teetotaler, which in his view brought out my infidel tendencies still more vigorously—had three days given me by my employers, after consultation

with my father, to "change my opinions or lose my situation". I am inclined to think now that the threat was never intended to have been enforced, but was used to terrify me into submission. At that time I hardly knew what, if any, opinions I had, but the result was that, sooner than make a show of recanting, I left home and situation on the third day, and never returned to either.

I was always a very fluent speaker, and now lectured frequently at the Temperance Hall, Warner Place, Hackney Road, at the small Hall in Philpot Street, and in the open air in Bonner's Fields, where, at last, on Sunday afternoons, scores or hundreds congregated to hear me. My views were then Deistical, but rapidly tending to the more extreme phase into which they ultimately settled. I now took part in all the gatherings held in London on behalf of the Poles and Hungarians, and actually fancied that I could write poetry on Kossuth and Mazzini.

It was at this time I made the acquaintance of my friend and co-worker, Mr. Austin Holyoake, at his printing office in Queen's Head Passage, and I remember him taking me to John Street Institution, where, at one of the pleasant Saturday evening gatherings, I met the late Mrs. Emma Martin. At Mr. Austin Holyoake's request, Mr. George Jacob Holyoake, to my great delight, presided at one of my lectures in Philpot Street, and I felt special interest in the number of the *Reasoner* which contained a brief reference to myself and that lecture.

I wrote my first pamphlet, "A Few Words on the Christian's Creed," about the middle of 1850, and was

honored by Dr. Campbell of the *British Banner* with a leading article vigorously assailing me for the lectures I had then delivered.

After leaving home I was chiefly sheltered by Mrs. Sharples Carlile, with whose children, Hypatia, Theophila, and Julian, I shared such comforts as were at her disposal. Here I studied hard everything which came in my way, picking up a little Hebrew and an imperfect smattering of other tongues. I tried to earn my living as a coal merchant, but at sixteen, and without one farthing in my pocket, the business was not extensive enough to be profitable. I got very poor, and at that time was also very proud. A subscription offered me by a few Freethinkers shocked me, and awakened me to a sense of my poverty; so, telling no one where I was going, I went away, and on the 17th of December, 1850, was, after some difficulty, enlisted in the Seventh Dragoon Guards. With this corps I remained until October, 1853, being ultimately appointed orderly-room clerk; the regiment, during the whole of the time I remained in it, being quartered in Ireland. While I was in the regiment I was a teetotaler, and used often to lecture to the men in the barrack-room at night; and I have more than once broken out of Portobello barracks to deliver teetotal speeches in the small French Street Hall, Dublin. Many times have I spoken there in my scarlet jacket, between James Haughton and the good old father, the Rev. Dr. Spratt, a Roman Catholic priest, then very active in the cause of temperance. While I was in the regiment my father died, and in the summer of 1853 an aunt's death left me

a small sum, out of which I purchased my discharge, and returned to England, to aid in the maintenance of my mother and family.

I have now no time for the full story of my army life, which, however, I may tell some day. Before I left the regiment I had won the esteem of most of the privates, and of some of the officers. I quitted the regiment with a "very good character" from the Colonel; but I am bound to add that the Captain of my troop would not have concurred in this character had he had any voice in the matter. The Lieutenant-Colonel, C. P. Ainslie, earned an eternal right to grateful mention at my hands by his gentlemanly and considerate treatment. I cannot say the same for my Captain, who did his best to send me to gaol, and whom I have not yet quite forgiven.

On returning to civilian life, I obtained employment in the daytime with a solicitor named Rogers, and in the evening as clerk to a Building Society. Soon after entering this employ I began again to write and speak; and it was then, to avoid in some degree the efforts which were afterwards made to ruin me, I took the name of "Iconoclast", under which all my anti-theological work down to 1868 was done. I give Mr. Rogers' name now, for he is dead, and malice cannot injure him. Many anonymous letters were sent to him to warn him of my irreligious opinions; he treated them all with contempt, only asking me not to let my propaganda become an injury to his business.

Soon after my discharge from the army I had a curious adventure. While I was away a number of poor men had subscribed their funds together and had

erected a Working Man's Hall, in Goldsmith's Row, Hackney Road. Not having any legal advice, it turned out that they had been entrapped into erecting their building on freehold ground without any lease or conveyance from the freeholder, who asserted his legal right to the building. The men consulted me, and finding that under the Statute of Frauds they had no remedy, I recommended them to offer a penalty rent of £20 a year. This being refused, I constituted myself into a law court; and without any riot or breach of the peace, I, with the assistance of a hundred stout men, took every brick of the building bodily away, and divided the materials, so far as was possible, amongst the proper owners. I think I can see now the disappointed rascal of a freeholder when he only had his bare soil left once more. He did not escape unpunished, for, to encourage the others to contribute, he had invested some few pounds in the building. He had been too clever: he had relied on the letter of the law, and I beat him with a version of common-sense justice.

I lectured once or twice a week in the small Philpot Street Hall; very often then in the Hall of Science, City Road; and then in the old John Street Institution, until I won myself a name in the party and through the country.

In 1855 I had my first notable adventure with the authorities in reference to the right of meeting in Hyde Park, and subsequently gave evidence before the Royal Commission ordered by the House of Commons, presided over by the Right Hon. Stuart Wortley. I was very proud that day at Westminster, when, at

the conclusion of my testimony against the authorities, the Commissioner publicly thanked me, and the people who crowded the Court of Exchequer cheered me, for the manner in which I denied the right of Sir Richard Mayne, the then Chief Commissioner of Police, to issue the notices forbidding the people to meet in the Park. This was a first step in a course in which I have never flinched or wavered.

In 1856 I undertook, with others, the publication of a series of papers entitled "Half-hours with Free-thinkers," the late John Watts being one of my co-workers. I also by myself commenced the publication of my "Commentary on the Pentateuch", which has since been entirely re-written, and now forms my "Bible: what it is."

During the autumn of 1857 I paid my first lecturing visit to Northampton.

Early in 1858, when Mr. Edward Truelove was suddenly arrested for publishing the pamphlet "Is Tyrannicide Justifiable?", I became Honorary Secretary to the Defence, and was at the same time associated with the conduct of the defence of Simon Bernard, who was arrested at the instigation of the French Government for alleged complicity in the Orsini tragedy. It was at this period I gained the friendship of poor Bernard, which, without diminution, I retained until he died; and also the valued friendship of Thomas Allsop, which I still preserve. My associations were thenceforward such as to encourage in me a strong and bitter feeling against the late Emperor Napoleon. Whilst he was in power I hated him, and never lost an opportunity

of working against him until the *échéance* came. I am not sure now that I always judged him fairly; but nothing, I think, could have tempted me either to write or speak of him with friendliness or kindliness during his life. *Le sang de mes amis était sur son âme.* Now that the tomb covers his remains, my hatred has ceased; but no other feeling has arisen in its place. Should any of his family seek to resume the Imperial purple, I should remain true to my political declarations of sixteen years since, and should exert myself to the uttermost to prevent France falling under another Empire. I write this with much sadness, as the years 1870 to 1873 have dispelled some of my illusions, held firmly during the fifteen years which preceded. I had believed in such men as Louis Blanc, Ledru Rollin, Victor Hugo, as possible statesmen for France. I was mistaken. They were writers, talkers, and poets; good men to ride on the stream, or to drown in honest protest, but lacking force to swim against, or turn back, the tide by the might of their will. I had believed too in a Republican France, which is yet only in the womb of time, to be born after many pangs and sore travailing.

In 1859 I saw Joseph Mazzini for the first time, and remained on terms of communication with the great Italian patriot until the year 1869, from time to time bringing him correspondence from Italy, where my business sometimes took me. After 1869 we found ourselves holding diverse opinions on the Franco-Prussian question—Mazzini went for Prussia, I for France—and I never saw him again.

In June, 1858, I held my first public formal theo-

logical debate with the Rev. Brewin Grant, B.A., at that time a Dissenting Minister at Sheffield. Mr. Grant was then a man of some ability, and if he could have forgotten his aptitudes as a circus jester, would have been a redoubtable antagonist. During this year I was elected President of the London Secular Society, in lieu of Mr. George Jacob Holyoake, who had theretofore led the English Freethought party, but who has of late years devoted himself more completely to general journalistic work.

In November, 1858, I commenced editorial duties with the *Investigator*, formerly conducted by the late Robert Cooper, which I continued until August, 1859. It had but a small circulation, and was financially a very great failure.

For the encouragement of young propagandists, I may here insert a little anecdote of my early lecturing experience. I had lectured in Edinburgh in mid-winter; the audience was small, the profits microscopical. After paying my bill at the Temperance Hotel, where I then stayed, I had only a few shillings more than my Parliamentary fare to Bolton, where I was next to lecture. I was out of bed at five on a freezing morning, and could have no breakfast, as the people were not up. I carried my luggage (a big tin box, corded round, which then held books and clothes, and a small black bag), for I could not spare any of my scanty cash for a conveyance or porter. The train from Edinburgh being delayed by a severe snow-storm; the corresponding Parliamentary had left Carlisle long before our arrival. In order to reach Bolton in time for

my lecture, I had to book by a quick train, starting in about three-quarters of an hour, but could only book to Preston, as the increased fare took all my money, except 4½d. With this small sum I could get no refreshment in the station, but in a little shop in the street outside I got a mug of hot tea and a little hot meat pie. From Preston I got with great difficulty on to Bolton, handing my black bag to the station-master there, as security for my fare from Preston, until the morning. I arrived in Bolton about a quarter to eight; the lecture commenced at eight, and I, having barely time to run to my lodgings, and wash and change, went on to the platform cold and hungry. I shall never forget that lecture; it was in an old Unitarian Chapel. We had no gas, the building seemed full of a foggy mist, and was imperfectly lit with candles. Everything appeared cold, cheerless, and gloomy. The most amusing feature was that an opponent, endowed with extra piety and forbearance, chose that evening to specially attack me for the money-making and easy life I was leading. Peace to that opponent's memory: I have never seen him since. It was while in Scotland on this journey I made the acquaintance, and ultimately won the friendship, of the late Alexander Campbell, of Glasgow—a generous, kindly-hearted old Socialist Missionary, who, at a time when others were hostile, spoke encouragingly to me, and who afterwards worked with me for a long period on the *National Reformer*.

Occasionally, the lectures were interfered with by the authorities, but this happened oftener in the provinces than in London. In March, 1859, I was to have

lectured in the Saint Martin's Hall on "Louis Napoleon," but the Government—on a remonstrance by Count Walewski, as to language used at a previous meeting, at which I had presided for Dr. Bernard—interfered; the hall was garrisoned by police, and the lecture prevented. Mr. Hullah, the then proprietor, being indemnified by the authorities, paid damages for his breach of contract, to avoid a suit which I at once commenced against him.

Later in the same month I held a debate in Northampton with Mr. John Bowes, a rather heavy but well-meaning old gentleman, utterly unfitted for platform controversy. The press now began to deal with me tolerably freely, and I find "boy", "young man", and "juvenile appearance" very frequent in the comments. My want of education was an especial matter for hostile criticism, more particularly so when the writer had neither heard nor seen me.

Discussions now grew on me so thick and fast that even some of the most important debates may perhaps escape notice in this imperfect chronicling. At Sheffield I debated with a Reverend Dr. Mensor, who styled himself a Jewish Rabbi. He was then in the process of gaining admission to the Church of England, and had been put forward to show my want of scholarship. We both scrawled Hebrew characters for four nights on a black board, to the delight and mystification of the audience, who gave me credit for erudition, because I chalked the square letter characters with tolerable rapidity and clearness. At Glasgow I debated with a Mr. Court, representing the Glasgow Protestant

Association, a glib-tongued missionary, who has since gone to the bad; at Paisley with a Mr. Smart, a very gentlemanly antagonist; and at Halifax with the Rev. T. D. Matthias, a Welsh Baptist Minister, unquestionably very sincere. All these were formal debates, and were reported with tolerable fulness in the various local journals.

In the early part of 1860 I, aided by my friends at Sheffield, Halifax, and other parts of England, projected the *National Reformer* in small shares. Unfortunately, just after the issue of its prospectus, Joseph Barker returned from America, and was associated with me in the editorship. The arrangement was peculiar, Mr. Barker editing the first half of the paper and I the second. It was not precisely a happy union, and the unnatural alliance came to an end in a very brief period. In August, 1861, I officially parted company with Joseph Barker as editor. We had been practically divorced for months before: the first part of the paper usually contained abuse of those who wrote in the second half. He came to me originally at Sheffield, pretending to be an Atheist and a Republican, and soon after pretended to be a Christian, and spoke in favor of slavery. I am sometimes doubtful as to how far Mr. Barker deluded himself as well as others, in his various changes of theological and political opinions. If he had had the slightest thoroughness in his character, he would have been a great man; as it is, he is only a great turn-coat.

In June 1860, I debated again with the Reverend Brewin Grant, every Monday for four weeks, at Brad-

ford, and during this debate had a narrow escape of my life. In one of my journeys to London, the Great Northern train ran through the station at King's Cross, and many persons were seriously injured. I got off with some trifling bruises and a severe shaking.

Garibaldi having at this time made his famous Marsala effort, I delivered a series of lectures in his aid, and am happy to be able to record that, though at that time very poor, I sent him one hundred guineas as my contribution by my tongue. This money was chiefly sent through W. H. Ashurst, Esq., now Solicitor to the General Post Office, and amongst the few letters I preserve I have one of thanks from "G. Garibaldi", for what I was then doing for Italy.

In this year I debated for four nights with Dr. Brindley, an old antagonist of the Socialists, at Oldham; for two nights with the Rev. Dr. Baylee, the President of St. Aidan's College, at Birkenhead, where a Church of England curate manufactory was for some time carried on; and for two nights with the Rev. Dr. Rutherford, of Newcastle. Dr. Rutherford has since so identified himself with the cause of the Tyneside workers, that I read with regret any harsh words that escaped me in that debate. Although during late years I have managed to keep all my meetings free from violence or disorder, this was not always so.

In October, 1860, I paid my first visit to Wigan, and certainly lectured there under considerable difficulty, and incurred personal danger, the resident clergy actually inciting the populace to physical violence, and

part destruction of the building I lectured in. I, however, supported by one courageous woman and her husband, persevered, and, despite bricks and kicks, visited Wigan again and again, until I had, *bon gré mal gré*, improved the manners and customs of the people, so that I am now a welcome speaker there. I could not improve the morals of the clergy, as the public journals have recently shown, but that was their misfortune, not my fault. In the winter of 1860, I held two formal debates in Wigan, all of which were fully reported in the local journals; one with Mr. Hutchings, a respectable Nonconformist layman, and the other with the Rev. Woodville Woodman, a Swedenborgian divine.

Early in 1861 I visited Guernsey in consequence of an attempt made by the Law Courts of the Island to enforce the Blasphemy Laws against a Mr. Stephen Bendall, who had distributed some of my pamphlets to the Guernseyites, and had been condemned to imprisonment in default of finding sureties not to repeat the offence. Not daring to prosecute me, although challenged in writing, the authorities permitted drink and leave of absence to be given to soldiers in the garrison, on condition they should try to prevent the lecture; and the house in which I lectured was broken into by a drunken and pious mob, shouting "Kill the Infidel". My antagonists were, fortunately, as cowardly as they were intolerant, and I succeeded in quelling the riot, delivering my lecture in spite of all opposition, although considerable damage was done to the building.

Shortly after this I visited Plymouth, where the Young Men's Christian Association arranged to prosecute me. They were, however, a little too hasty, and had me arrested at an open air meeting when I had scarcely commenced my speech, having only uttered the words—"Friends, I am about to address you on the Bible". Having locked me up all night, and refused bail, it was found by their legal adviser that a blunder had been committed, and a charge of "exciting a breach of the peace, and assaulting the constable in the execution of his duty," was manufactured. It was tolerably amusing to see the number of dinners, suppers, and breakfasts, all accompanied with pots or cups of Devonshire cream, sent in to the Devonport Lock-up, where I was confined, by various friends who wanted to show their sympathy. The invented charge, though well sworn to, broke down after two days' hearing, under the severe cross-examination to which I subjected the witnesses. I defended myself; two lawyers appeared against me; and seven magistrates sat on the bench, predetermined to convict me. Finding that the evidence of the whole of the witnesses whom I wished to call was to be objected to because unbelievers in hell were then incompetent as witnesses according to English law, I am pleased to say that several Nonconformists, disgusted with the bigotry and pious perjury of my prosecutors, came forward. The result was a triumphant victory, and a certificate of dismissal which I wrung from the reluctant bench of great unpaid.

I was not yet satisfied; some of the magistrates had

tried to browbeat me, and I announced in court that I would deliver the lecture I had been prevented from delivering to an audience assembled in the borough, and that I should sue at law the Superintendent of Police who had arrested me. The first portion of my defiance was the most difficult to give effect to; not a hall could be hired in Devonport, and nearly all the convenient open land being under military jurisdiction, it was impossible to procure the tenancy of a field for an open-air meeting. I, however, fulfilled my promise, and, despite the police and military authorities combined, I delivered my lecture to an audience assembled in their very teeth. Devonport, Stonehouse, and Plymouth form one garrisoned and fortified town, divided by the River Tamar. All the water to the sea is under the separate jurisdiction of Saltash, some miles distant. I obtained a large boat on which a temporary platform was built, and this boat was quietly moored in the River Tamar on the Devonport side, about two fathoms from the shore. Placards were issued stating that, acting under legal advice, I should address the meeting and deliver the prevented lecture "near to the Devonport Park Gates." Overwhelming force was prepared by the Devonport authorities, and having already erred by too great haste, this time they determined to let me fairly commence my lecture before they arrested me. To their horror I quietly walked past the Park Gates where the crowd was waiting, and passing down a by-lane to the river-side, stepped into a little boat, was rowed to the large one, and then delivered my lecture, the audience who

had followed me standing on an open wharf, all within the jurisdiction of the Borough of Devonport, and I being about nine feet outside the borough. The face of the Mayor ready to read the riot act, the superintendent with twenty-eight picked policemen to make sure of my arrest, and a military force in readiness to overawe any popular demonstration—all these were sights to remember. I am afraid the Devonport Young Men's Christian Association did not limit themselves to prayers and blessings on that famous Sunday.

As I had promised, the authorities refusing any apology for the wrongful arrest, I commenced an action against Superintendent Edwards, by whom I had been taken into custody. The borough magistrates indemnified their officer and found funds to resist me. I fought with very little help save from one tried, though anonymous, friend, for Joseph Barker, my co-editor, but not co-worker, in our own paper discouraged any pecuniary support. The cause was made a special jury one, and came on for trial at Exeter Assizes. Unfortunately I was persuaded to brief counsel, and Sir Robert Collier, my leader, commenced his speech with an expression of sorrow for my opinions. This damaged me very much, although I won the case easily after a long trial. The jury, composed of Devonshire landowners, only gave me a farthing damages, and Mr. Baron Channell refused to certify for costs. I was determined not to let the matter rest here, and myself carried it to the Court *in banco*, where I argued it in person, for two whole days, before Lord Chief Justice Erle and a full bench of Judges.

Although I did not succeed in improving my own position, I raised public opinion in favor of free speech; and the enormous costs incurred by the borough authorities, and which they had to bear, have deterred them from ever again interfering either with my lectures or those of any other speaker; and I now have crowded audiences in the finest hall whenever I visit the three towns. These proceedings cost me several hundred pounds, and burthened me with a debt which took long clearing off.

In 1862 I held a four nights' discussion with a Dissenting clergyman, the Rev. W. Barker. My opponent was probably one of the most able and straightforward amongst my numerous antagonists. About this time a severe attack of acute rheumatism prostrated me; and having soon after to visit Italy, I, at first under medical advice, adopted the habit of drinking the light Continental wines; and although continuing an advocate of sobriety, I naturally ceased to take part in any teetotal gatherings.

In the struggle between the Northern and Southern States of America, my advocacy and sympathies went—with what I am glad to say was the feeling of the great mass of the English people—in favor of the North; and my esteemed friend and then contributor, W. E. Adams, furnished most valuable aid with his pen in the enlightenment of public opinion, at a time when many of our aristocracy were openly exulting in what they conceived to be the probable break-up of the United States Republic. During the Lancashire Cotton Famine I lectured several times in aid of the fund.

I began now also to assume a much more prominent position in the various English political movements, and especially to speak on the Irish Church and Irish Land questions. On the Irish question, I owe much to my late co-worker and contributor, poor Peter Fox André, a thoroughly honest and whole-souled man, whose pen was always on the side of struggling nationalities.

One of the disadvantages connected with a public career is, that every vile scoundrel who is too cowardly to face you openly can libel you anonymously. I have had, I think, my full share of this kind of annoyance. Most of the slanders I have treated with utter contempt, and if I had alone consulted my own feelings, I should probably never have pursued any other course. Twice, however, I have had recourse to the judgment of the law—once in the case of a clergyman of the Church of England, who indulged in a foul libel affecting my wife and children. This fellow I compelled to retract every word he had uttered, and to pay £100, which, after deducting the costs, was divided amongst various charitable institutions. The reverend libeller wrote me an abject letter, begging me not to ruin his prospects in the Church by publishing his name; I consented, and he has since repaid my mercy by losing no opportunity of being offensive. He is a prominent contributor to the *Rock*, and a fierce ultra-Protestant. He must have greater confidence in my honor than in his own, or fear of exposure would compel him to greater reticence. The other case arose during the election, and will be dealt with in its proper order.

It was my fortune to be associated with the Reform League from its earliest moments until its dissolution. It is hardly worth while to repeat here the almost stereotyped story of the successful struggle made by the League for Parliamentary Reform. E. Beales, Esq., was the President of the League, and I was one of its Vice-Presidents, and continued nearly the whole time of its existence a member of its executive. The whole of my services and journeys were given to the League without the slightest remuneration, and I repeatedly, and according to my means, contributed to its funds. When I resigned my position on the executive I received from Mr. George Howell, the Secretary, and from Mr. Beales, the President, the most touching and flattering letters as to what Mr. Beales was pleased to describe as the loyalty and utility of my services to the League. Mr. George Howell concluded a long letter as follows:—"Be pleased to accept my assurance of sincere regards for your manly courage, consistent and honorable conduct in our cause, and for your kindly consideration for myself as secretary of this great movement on all occasions". These letters have additional value from the fact that Mr. Beales, whom I sincerely respect, differs widely from me in matters of faith, and Mr. Howell is, unfortunately, far from having any friendly feelin towards me. It was while on the Executive of this League that I first became intimately acquainted with Mr. George Odger, and had reason to be pleased with the straightforward course he pursued, and the honest work he did as one of the Executive Committee. Mr.

John Baxter Langley and Mr. R. A. Cooper were also amongst my most prominent co-workers.

My sympathy with Ireland, and open advocacy of justice for the Irish, nearly brought me into serious trouble. Some who were afterwards indicted as the chiefs of the so-called Fenian movement, came to me for advice. So much I see others have written, and the rest of this portion of my autobiography I may write some day. At present there are men not out of danger whom careless words might imperil, and as regards myself I shall not be guilty of the folly of printing language which a Government might use against me. My pamphlet on the Irish question, published in 1866, won a voluntary letter of warm approval from Mr. Gladstone, the only friendly writing I ever received from him in my life.

At Huddersfield, the Philosophical Hall having been duly hired for my lectures, pious influence was brought to bear on the lessee to induce him to break his contract. Fortunately, what in law amounted to possession had been given, and on the doors being locked against me, I broke them open, and delivered my lecture to a crowded and most orderly audience. I was arrested, and an attempt was made to prosecute me before the Huddersfield magistrates; but I defended myself with success, and defeated with ease the Conservative solicitor, N. Learoyd, who had been specially retained to ensure my committal to gaol.

In 1868 I entered into a contest with the Conservative Government, which, having been continued by the Gladstone Government, finished in 1869 with a complete

victory for myself. According to the then law every newspaper was required to give sureties to the extent of £800 against blasphemous or seditious libel. I had never offered to give these sureties, as they would have probably been liable to forfeiture about once a month. In March 1868, the Disraeli Government insisted on my compliance with the law. I refused. The Government then required me to stop my paper. I printed on the next issue, "Printed in Defiance of Her Majesty's Government". I was then served with an Attorney-General's information, containing numerous counts, and seeking to recover enormous penalties. I determined to be my own barrister, and while availing myself in consultation of the best legal advice, I always argued my own case. The interlocutory hearings before the Judges in Chambers were numerous, for I took objection to nearly every step made by the Government, and I nearly always succeeded. I also brought the matter before Parliament, being specially backed in this by Mr. Milner Gibson, Mr. John Stuart Mill, and Mr. E. H. J. Craufurd. When the information was called on for trial in a crowded court before Mr. Baron Martin, the Government backed out, and declined to make a jury: so the prosecution fell to the ground. Strange to say, it was renewed by the Gladstone Government, who had the coolness to offer me, by the mouth of Attorney-General Collier, that they would not enforce any penalties if I would stop the paper and admit that I was in the wrong. This I declined, and the prosecution now came on for trial before Baron Bramwell and a special jury. Against

me were the Attorney-General, Sir R. Collier; the Solicitor-General, Sir J. D. Coleridge; and Mr. Crompton Hutton. I found that these legal worthies were blundering in their conduct of the trial, and at *nisi prius* I let them obtain a verdict, which, however, I reversed, on purely technical grounds, after a long argument, which I sustained before Lord Chief Baron Kelly and a full court sitting *in banco*. Having miserably failed to enforce the law against me, the Government repealed the statute, and I can boast that I got rid of the last shackle of the obnoxious English press laws. Mr. J. S. Mill wrote me: "You have gained a very honorable success in obtaining a repeal of the mischievous Act by your persevering resistance". The Government, although beaten, refused to reimburse me any portion of the large outlay incurred in fighting them.

It has always been my ambition to enter Parliament, and, at the General Election for 1868, I for the first time entered the arena as a candidate. I was beaten: but this is scarcely wonderful. I had all the journals in England except three against me. Every idle or virulent tale which folly could distort or calumny invent was used against me. Despite all, I polled nearly 1,100 votes, and I obtained, unasked, but not ungratefully listened to, the public acknowledgments from the Mayor of the borough, also from one of my competitors, Mr. Charles Gilpin, as to the loyal manner in which I had fought the contest through.

During the election struggle, libels rained from all sides. One by the late Mr. Capper, M.P., seeking re-election at Sandwich, was the monstrous story, that,

in the open square at Northampton, I had taken out my watch and defied God to show his power by striking me dead in five minutes. Challenged for his authority, Mr. Capper pretended to have heard the story from Mr. C. Gilpin, M.P., who indignantly denied being any party to the falsehood. I insisted on an apology from Mr. Capper, which being refused, I sued him, but he died soon after the writ was served. The story was not an original invention by Mr. Capper; it had been reported of Abner Kneeland thirty years before, and is still a favorite one with pious missionaries at street corners. A still more outrageous slander was inserted in the *Razor*, a pseudo-comic weekly. I compelled this journal to give a full apology, but not until after two years' litigation, and a new trial had been ordered. When obliged to recant, the Christian proprietor became insolvent, to avoid payment of the costs. Unfortunately, born poor, my life had been one continued struggle, and the burden of my indebtedness was sorely swollen in this and similar contests.

Probably the most severe, and to me certainly the most costly, struggle has been that on the oath question. Formerly it was a fatal objection against the competency of a witness that he did not believe in a Deity and in a future state of rewards and punishments. Several attempts had been made to alter the law, but they had all failed; and, indeed, Sir J. Trevelyan's measures only provided for affirmation, and did not even seek to abolish the incompetency. In a case in which I was

plaintiff in the Court of Common Pleas, my evidence was objected to, and I determined to fight the matter through every possible court, and to get the law changed if possible. I personally argued the case before Lord Chief Justice Bovill and a full Bench, in the Court of Common Pleas; and with the aid of the present Mr. Justice Denman and the late Lord Chancellor Hatherly, the law was twice altered in Parliament. Before victory was ultimately obtained I had to carry the case into the Court of Error, and I prepared and sent out at my own cost more than two hundred petitions to Parliament. Ultimately, the Evidence Amendment Act, 1869, and the Evidence Further Amendment Act, 1870, gave Freethinkers the right to enter the witness box, and I won my suit. The Christian defendant finished by becoming bankrupt, and I lost a terribly large sum in debt and costs. The original debt and interest were over £300, and the costs of the various proceedings were very heavy.

In the winter of 1870 the Mirfield Town Hall, which had been properly taken and paid for for two nights' lectures, was refused by the proprietors, who barricaded the hall and obtained a great force of police from the neighborhood. In order that the law might be clearly settled on this matter, I brought an action to try the question, and although the late Mr. Justice Willes expressed himself strongly in my favor, it was held by Mr. Justice Mellor at *nisi prius* that nothing, except a deed under seal or an actual demise, would avail. A mere agreement for a user of a hall was a license revo-

cable at will, even when for a valuable consideration. This convinced me that when hall proprietors break their contracts, I must myself enforce my rights as I did at Huddersfield and have done in other places.

During the Franco-Prussian struggle I remained neutral until the 4th of September. I was against Bismarck and his blood-and-iron theory, but I was also utterly against the Empire and the Emperor; so I took no part with either. I was lecturing at Plymouth the day the *déchéance* was proclaimed, and immediately after wrote my first article in favor of Republican France. I now set to work, and organised a series of meetings in London and the provinces, some of which were co-operated in by Dr. Congreve, Professor Beesly, and other prominent members of the Positivist party. These meetings exercised some little effect on the public opinion in this country, but unfortunately the collapse on the part of France was so complete, and the resources commanded by Bismarck and Moltke so vast, that except as expressing sympathy the results were barren. In October, 1870, without any previous communication from myself to them, I received from the Republican Government at Tours a long and flattering letter, signed by Léon Gambetta, Adolphe Cremieux, Al Glais Bizoin, and Admiral Fourichon, declaring that they, as members of the "Gouvernement de la Defense Nationale, réunis en délégation à Tours," "tiennent à honneur de vous remercier chalereusement du noble concours que vous apportez à la cause de la France." On the 2nd of February, 1871, M. Tissot, the Chargé

d'Affaires of France in England, wrote me: "Quant à moi, mon cher ami, je ne puis que constater ici, comme je l'ai déjà fait, comme je le ferai en toute occasion, la dette que nous avons contractée envers vous. Vous nous avez donné votre temps, votre activité, votre éloquence, votre âme, la meilleure partie de vous meme, en un mot; la France que vous avez été seule à defendre ne l'oubliera jamais." This is probably a too flattering estimate of my services to France, but coming from the official representative of the French Republic, I feel entitled to insert it. In September, 1871, Monsieur Emmanuel Arago, member of the Provisional Government of the 4th of September wrote the following words upon the letter which had been sent me, as above mentioned, in October, 1870, by the Delegate Government of Tours: "En lisant cette lettre, j'éprouve très vivement le regret de n'avoir pu, enfermé dans Paris, joindre ma signature à celles de mes collègues de la délégation de Tours. Mr. Bradlaugh est et sera tojours dans la République notre concitoyen."

During 1870, 1871, and 1872, I held several debates with the Rev. A. J. Harrison, formerly of Huddersfield. The first, at Newcastle, in the splendid Town Hall of that place, was attended by about 5,000 persons. The second debate at Bristol was notable from being presided over by Professor Newman. The third discussion was at Birmingham, and was an attempt at the Socratic method, and the last platform encounter was in the New Hall of Science, London. Of the Rev. Mr. Harrison it is enough I should say that, a few weeks

since, when rumor put my life in danger, he was one of the first to write a kindly and unaffected letter of sympathy to Mrs. Bradlaugh.

When the great cry of thanksgiving was raised for the recovery of the Prince of Wales, I could not let it pass without protest. While he lay dangerously ill I had ceased to make any attack on himself or family, but I made no pretence of a grief I did not feel. When the thanksgiving day was fixed, and tickets for St. Paul's were sent by the Lord Chamberlain to working men representatives, I felt it right to hold a meeting of protest, which was attended by a crowded audience in the New Hall of Science.

The "right of meeting" has given me three important occasions of measuring swords with the Government during the last few years, and each time defeat has attended the Government. The first was the Hyde Park meeting, where I acted in accord with Mr. Beales, to whom as chief, let the honor go of this conflict. The second was on the 31st July, 1871, under the following circumstances. A meeting had been held by Mr. G. Odger and some of his friends in Hyde Park, on Sunday the 30th of July, to protest against the grant to Prince Arthur; this meeting was adjourned until the following evening. Late on the Sunday afternoon, the adjourned meeting was forbidden by the Government. Early on Monday morning Mr. Odger applied to me to give the friends the benefit of my legal knowledge and personal influence. I consented, and the Government persevering, I took my share of the responsibility of the

gathering, and signed, with Mr. Odger, a new notice convening the meeting. The Home Office not only served us also with a written prohibition, but threatened and prepared to use force. I immediately gave Mr. Bruce notice that the force would be illegal, and that it would be resisted. At the last moment, and in fact only some half hour before the meeting commenced, the Government abandoned its prohibition, and an enormous meeting of a most orderly character was held in absolute defiance of the authorities.

The more recent case was in December, 1872, when, finding that Mr. Odger, Mr. Bailey, and others, had been prosecuted under some monstrous and ridiculous regulations invented by Mr. Ayrton, I, on my own responsibility, determined to throw down the gauntlet to the Government. I did this most successfully, and soon after the opening of Parliament the obnoxious regulations were annulled.

It is at present too early to speak of the Republican movement in England, which I have sought, and not entirely without success, to organise on a thoroughly legal basis. It is a fair matter for observation that my lectures on "The Impeachment of the House of Brunswick," have been delivered to crowded audiences assembled in some of the finest halls in England and Scotland, notably the Free Trade Hall, Manchester, the Town Hall, Birmingham, the Town Hall, Northampton, and the City Hall, Glasgow. It is, as far as I am aware, the first time any English citizen has, without tumult or disorder, and in buildings belonging to

various Municipalities, directly challenged the hereditary right of the reigning family.

In penning the foregoing sketch I had purposely to omit many facts connected with branches of Italian, Irish, and French politics. I have also entirely omitted my own struggles for existence. The political parts are left out because there are secrets which are not my own alone, and which may not bear full telling for many years to come. The second, because I hope that another year or two of hard work may enable me to free myself from the debt load which for some time has hung heavily round me.

ANNOUNCEMENTS.

There will shortly be published one or more volumes of

Mr. Bradlaugh's Contributions to the "National Reformer" on Freethought Subjects;

Including his papers entitled "DOUBTS IN DIALOGUE"; Open Letters to Clergymen and others on Religious Questions; and other critical and expository papers.

Materials are being compiled for a complete and authoritative

Life of Mr. Bradlaugh,

which it is hoped may be ready by next year.

Meantime the remaining copies of the authorised short biography by Mr. Adolphe Headingley are on sale at the reduced price of 1s. 6d.

ON SALE.

Price 5s.

Mr. Bradlaugh's Collected Speeches.

With fine Photograph.

HAS MAN A SOUL?

BY C. BRADLAUGH.

[This lecture was originally delivered to the Sheffield Secular Society, and was printed from the reporter's notes without efficient correction from myself, I, at that time, suffering under a severe attack of acute rheumatism. The lecture has since been often re-delivered; and three editions having been exhausted, I have again corrected and revised the present edition. It is not intended as an answer to the question which forms the title, but it is intended to provoke thought upon this important subject.]

—o—

What do you mean by soul? What is the soul? Is it I? Is it the body? Is it apart from the body? Is it an attribute of the body? Has it a separate and distinct existence from the body? What is the soul? If I ask one of those who claim to be considered orthodox men, they will tell me that the soul is a spirit—that the soul lives after the body is dead. They will tell me that the soul is immortal, and that the body is mortal; that the soul has nothing whatever in common with the body; that it has an existence entirely independent of the body. They will tell me that after the body has decayed—after the body has become re-absorbed in the universe, of which it is but a part, that the soul still exists. Is there any proof of the existence of the same individual soul apart from all material conditions? I have endeavoured to examine this subject, and, up to the present time, I have not found one iota of proof in support of the positions thus put forward. I have no idea of any existence except that of which I am part. I AM. Of my own existence I am certain. I think. I am. But what is it that thinks? Is it my soul? Is it "me," and yet distinct

1.20

from me? I am but a mode of existence. I am only part of the great universe. The elements of which I am composed are indissolubly connected with that great existence which is around me and within me, and which I help to make up. If men tell me I am a compound, and not a compound—a mixture, and not a mixture—a joining together, and not a joining together—of two entirely different existences, which they call "matter" and "spirit," I am compelled to doubt those men. The ability to think is but an attribute of a certain modification of existence. Intelligence is a word by which we express the sum of certain abilities, always attending a certain mode of existence. I find intelligence manifested so far as organisation is developed. I never find intelligence without animal organisation. I find intelligence manifested in degree, only so far as I find a higher or lower type of organisation—that is, I find man's intellectual faculties limited by his organisation But the orthodox tell me that my soul has an immaterial existence, independent of all organisation—independent of all climatic conditions—independent of all education. Is that so? When does the soul come into man? When does it go out of man? If the soul is immortal, why is it that standing here, in the prime of health and strength, if part of that roof should fall fracturing my skull, and pressing upon my brain—how is it, if my soul is not subject to material conditions, that it then ceases to act? Is the plaster roof more powerful than my immortal soul? Or is it that intelligence is the necessary result of a certain condition of existence, and that the moment you destroy that condition—the moment you destroy the organisation—the result ceases to be realisable? By the course of reasoning you adopt (says the orthodox objector) you reduce man to the same level as the beasts. And why not? I stand on the river's bank, I see there a man full grown, possessed of the physical figure of man, but an idiot—an idiot from his birth upward—one who could not, even if he would, think and act as other men. A little child is there playing on the bank, and the idiot, having large destructive propensities, has thrust the child into the water, and he stands there jabbering and gesticulating while the little child is drowning in the river. And see how half-vacantly, half-triumphantly, he points to the helpless child. A Newfoundland dog has come to the bank; it jumps in and brings the little child out and saves its life. Yet theologians tell me that the idiot has a soul, and that the Newfoundland

121

dog has not one. I cannot understand these nice distinctions, which make the man so superior to the beast in matters in which he is positively inferior. Man has doubtless an organisation on the whole far superior intellectually to that of any other animal, but he is only superior by virtue of his superior organisation and its consequent susceptibility for development or education. Many brutes can see more clearly than man; but they possess not the capability for the manufacture of telescopes to aid their vision. Many brutes can run more swiftly, but they manifest no capacity for the subjugation of a steam power which far outstrips their speed. But man himself, a well-organised, thoughtful, intelligent, well-educated man, by a fall from a horse, by a tile from a roof, may receive an injury to his nervous encephalic apparatus, and may be, even while a man in shape, as low as the brute in the imbecility of his reason, and inferior to the brute in physical strength. There is as much difference between different races of men, there is, in fact, more difference between a pure Caucasian and a Sahara negro, than between the Sahara negro and the infant chimpanzee.

When did the soul come into the body? Has it been waiting from all eternity to occupy each body the moment of birth? Is this the theory that is put forward to man—that there are many millions of souls still waiting, perhaps, in mid air, 'twixt heaven and earth, to occupy the still unborn babes? Is that the theory? Or do you allege that God specially creates souls for each little child at the moment it is born or conceived? Which is the theory put forward? Is it that the soul being immortal—being destined to exist for ever, has existed from all eternity? If not, how do you know that the soul is to exist for ever, when it only comes into existence with the child? May not that which has recently begun to be, soon cease to be? In what manner does the soul come into the child? Is it a baby's soul, and does it grow with the child? or, does it possess its full power the moment the child is born? When does it come into the child? Does it come in the moment the child begins to form, or is it the moment the child is born into the world? Whence is it this soul comes? Dr. Cooper, quoting Lawrence on the "Functions of the Brain," says:—"Sir Everard Home, with the assistance of Mr. Bauer and his microscope, has shown us a man eight days old from the time of conception, about as broad and a little longer than a pin's head. He satisfied himself that the brain of this

122

homunculus was discernible. Could the immaterial mind have been connected with it at this time? Or was the tenement too small even for so etherial a lodger? Even at the full period of uterogestation, it is still difficult to trace any vestiges of mind; and the believers in its separate existence have left us quite in the dark on the precise time when they suppose this union of soul and body to take place." Many of those who tell me that man has a soul, and that it is immortal—that man has a soul, and that the beast has not one—forget or ignore that at a very early stage in the first month of the formation of the brain, of the state of the brain, corresponds to that of the avertebrated animal, or animal that is without vertebra. If the brain had stopped in its first month's course of formation, would the child have had a soul? If it would have had a soul, then have avertebrated animals souls also? if you tell me it would not have had a soul, then I ask—How do you know it? and I ask you what ground you have for assuming that the soul did not begin to form with the formation of the brain? I ask you whether it was pre-existing, or at what stage it came? In the second month this brain corresponds then to the brain of an osseous fish. Supposing the development of the child had been then stopped, had it a soul at that time? If so, have fishes souls? Again, if you tell me that the child has not a soul, then, I ask, why not? How do you know it had not? What ground have you for alleging that the soul did not exist in the child? We go on still further, and in the third month we find that brain corresponds then to that of a turtle, and in the fourth to that of a bird; and in the fifth month, to an order termed *rodentia;* sixth, to that of the *ruminantia;* seventh, to that of the *digitigrada;* eighth, to that of the *quadrumana;* and not till the ninth month does the brain of the child attain a full human character. I, of course, here mean to allege no more than Dr. Fletcher, who says, in his "Rudiments of Physiology," quoted by the author of the "Vestiges of Creation"—"This is only an approximation to the truth; since neither is the brain of all osseous fishes, of all turtles, of all birds, nor of all the species of any of the above order of mammals, by any means precisely the same; nor does the brain of the human fœtus at any time precisely resemble, perhaps, that of any individual whatever among the lower animals. Nevertheless it may be said to represent, at each of the above-named periods, the aggregate, as it were, of the

brains of each of the tribes stated." Now, should a birth have taken place at any of the eight stages, would the child thus prematurely born have had a soul? That is the question I propose to you. You who affirm that man has a soul, it lies upon you, here, without charging me with blasphemy—without charging me with ignorance—without charging me with presumption—it lies upon you who affirm, to state the grounds for your belief. At which stage, if at any, did the soul come into the child? At the moment of the birth? Why when a child is born into the world it can scarcely see—it cannot speak—it cannot think—but after a short time I jingle my keys, and it begins to give faint smiles; and after a few weeks, it is pleased with the jingling of my keys. Is it the soul which is learning to appreciate the sound of the jingling keys, and pleased with them? Is it the immaterial and immortal soul amused and pleased with my bundle of keys? Where is the soul? How is it that the soul cannot speak the moment the child is born—cannot even think? How is it, that if I keep that child without telling it any thing of its soul until it become fourteen or fifteen years of age, it would then speak and think as I had taught it to speak and think; and if I kept it without the knowledge of a soul, it would have no knowledge of a soul at that age? How is that? Rajah Brooke, at a missionary meeting at Liverpool, told his hearers there, that the Dyaks, a people with whom he was connected, had no knowledge of a God, of a soul, or of any future state. How is it that the Dyaks have got this soul, and yet live knowing nothing whatever about it? And the Dyaks are by no means the only people who live and die knowing nothing of any immortal and immaterial soul. Again you tell me that this soul is immortal. Do you mean that it has eternally existed—has never been created? If so, you deny a God who is the creator of all things. If the soul began at some time to exist, where is the evidence that it will not also at some time cease to exist? If it came into existence with the body's birth, why not cease with the body's death? You say the soul is immaterial, do you mean that it is susceptible to material conditions, or do you not? If susceptible to material conditions, what do you mean by its being immortal and immaterial? If not susceptible to material conditions, then explain to me how it is that under good conditions it prospers and advances, and under bad conditions deteriorates and recedes. If a child is born in some

124

of the back streets of our city, and lives on bad food in a wretched cellar, it grows up a weak and puny pale-faced child. If allowed to crawl into existence on the edge of a gutter, imperfectly educated, in fact mis-educated, it steals—steals, perhaps, to live—and it becomes an outcast from society. Is this immortal soul affected by the bodily conditions? or is the soul originally naturally depraved? And if the soul is primarily naturally depraved, why is God so unjust as to give a naturally depraved soul to anybody? If not, how is it that this immortal soul, when the body is kept without food, permits the man without money to buy food, to steal to satisfy his hunger? You allege that the soul moves my body. You assert that matter is inert, unintelligent; that it is my active, intelligent soul that moves and impels my inert and non-intelligent body. Is my immortal soul hindered and controlled by the state of my body's general health? Does my soul feel hungry and compel my body to steal? Some theologians declare that my soul is immaterial—that there is no means by which I can take any cognisance whatever of it. What does that mean, except that they know nothing whatever about it? Sir W. Hamilton admits that we are entirely ignorant as to the connection between soul and body. Yet many who in so many words admit that they have no knowledge, but only faith in the soul's existence, are most presumptuous in affirming it, and in denouncing those who dispute their affirmation. It is an easy method to hide ignorance, by denouncing your opponent as an ignorant blasphemer.

Joseph Priestley in his book upon matter and spirit, quotes from Hallet's discourses, as follows:—"I see a man move and hear him speak for some years. From his speech I certainly infer that he thinks as I do. I then see that man is a being, who thinks and acts. After some time the man falls down in my sight, grows cold and stiff, and speaks and acts no more. Is it not then natural to conclude that he thinks no more; as the only reason I had to believe that he did think was his motion and his speech? And now that his motion and speech have ceased, I have lost the only way of proving that he had the power of thought. Upon this sudden death, one visible thing, the one man, has greatly changed. Whence could I infer also, the same being consisted of two parts, and that the inward part continues to live and think, and flies away from the body? When the outward part ceases to live and move, it looks as if the whole

1.25c

man was gone, and that he, with all his powers, ceases at the same time. His motion and thought both die together, as far as I can discern. The powers of thought, of speech and motion, equally depend upon the body, and run the same fate in case of declining old age. When a man dies through old age, I perceive his powers of speech, motion, and thought decay and die together, and by the same degrees. That moment he ceases to move and breathe, he appears to cease to think, too. When I am left to my reason, it seems to me that my power of thought depends as much upon the body as my sight and hearing. I could not think in infancy; my power of thought, of sight, and of feeling are equally liable to be obstructed by the body. A blow on the head has deprived a man of thought, who could yet see, and feel, and move; so naturally the power of thinking seems as much to belong to the body as any power of man whatsoever. Naturally there appears no more reason to suppose that a man can think out of the body than he can hear sounds and feel cold out of the body."

What do those mean who say that man is made up of two parts—matter and mind? I know of only one existence. I find that existence manifested variously, each mode having certain variations of attributes by which it is cognised. One of these attributes, or a collection of certain attributes, I find in, or with, certain modifications of that existence, that is, in or with animal life—this attribute, or these attributes, we call intelligence. In the same way that I find upon the blade of a knife brightness, consequent upon a certain state of the metal, so do I find in man, in the beast, different degrees, not of brightness, but of intelligence, according to their different states of organisation. I am told that the mind and the body are separate from one another. Are the brightness and steel of the knife separate? Is not brightness the quality attaching to a certain modification of existence—steel? Is not intelligence a quality attaching to a certain modification of existence—man? The word brightness has no meaning, except relating to some bright thing. The word intelligence, no meaning, except as relating to some intelligent thing. I take some water and drop it upon the steel, in due course the process of oxidation takes place and the brightness is gone. I drop into man's brain a bullet, the process of destruction of life takes place, and his intelligence is gone. By changing the state of the steel we destroy its brightness, and by disorganising the man destroy

126

his intelligence. Is mind an entity or a result? an existence or a condition? Surely it is but the result of organic activity, a phenomenon of animal life. Dr. Engledue says:—"In the same way as organism generally has the power of manifesting, when the necessary stimuli are applied, the phenomena which are designated life; so one individual portion—brain, having peculiar and distinct properties, manifests on the application of its appropriate stimuli a peculiar and distinct species of action. If the sum of all bodily function—life, be not an entity, how can the product of the action of one portion of the body—brain, be an entity? Feeling and intelligence are but fractional portions of life." I ask those who are here to prove that man has a soul, to do so apart from revelation. If the soul is a part of ourselves, we require no supernatural revelation to demonstrate its existence to us. D'Holbach says:—"The doctrine of spirituality, such as it now exists, affords nothing but vague ideas; it is rather a poisoner of all ideas. Let me draw your attention to this:—The advocates of spirituality do not tell you anything, but in fact prevent you from knowing anything. They say that spirit and matter have nothing in common, and that mortal man cannot take cognisance of immortality. An ignorant man may set himself up as an orator upon such a matter. He says you have a soul—an immortal soul. Take care you don't lose your soul. When you ask him what is my soul, he says he does not know—nobody knows—nobody can tell you. This is really that which they do. What is this doctrine of spirituality? What does it present to the mind? A substance unsubstantial that possesses nothing of which our senses enable us to take cognisance." Theologians urge that each of us has a soul superior to all material conditions, and yet a man who speaks cannot communicate by his speaking soul so freely with that man who is deaf and dumb; the conditions cramp that which is said to be uncontrolled by any conditions. If you cut out a man's tongue, the soul no longer speaks. If you put a gag in his mouth, and tie it with a handkerchief, so that he cannot get it out, his soul ceases to speak. The immaterial soul is conquered by a gag, it cannot utter itself, the gag is in the way. The orthodox say that the soul is made by God; and what do you know about God? Why just as much as we know about the soul. And what do you know about the soul? Nothing whatever. How is it that if the soul is immaterial, having nothing in

127

common with matter, that it only is manifest by material means? and how is it that it is encased and enclosed in my material frame? They affirm that my soul is a spirit—that I received the same spirit from God. How is it that my spirit is now by myself, and by my mortal body, denying its own existence? Is my mortal soul acting the hypocrite, or is it ignorant of its own existence, and cannot help itself to better knowledge? And if it cannot help itself, why not, if it is superior to the body? and if you think it a hypocrite, tell me why. What is meant by the declaration that man is a compound of matter and spirit?—things which the orthodox assert have nothing in common with one another. Of the existence of what you call matter you are certain, because you and I, material beings, are here. Are you equally certain of the existence of mind, as an existence independent and separate from matter? and if you are, tell me why. Have you ever found it apart from matter? If so, when and where? Have you found that the mind has a separate and distinct existence? if so, under what circumstances? and tell me—you who define matter as unintelligent, passive, inert, and motionless—who talk of the *vis inertiæ* of matter—tell me what you mean when you give these definitions to it? You find the universe, and this small portion of it on which we are, ceaselessly active. Why do you call it passive, except it be that you want courage to search for true knowledge, as to the vast capabilities of existence, and, therefore, invent such names as God and Soul to account for all difficulties, and to hide your ignorance? What do you mean by passive and inert matter? You tell me of this world—part of a system—that system part of another—that of another—and point out to me the innumerable planets, the countless millions of worlds, in the universe. You, who tell me of the vast forces of the universe; what do you mean by telling me that that is motionless? What do you mean by yet pointing to the unmeasurable universe and its incalculably mighty forces, and affirming that they are incapable of every perceptible effect? You, without one fact on which to base your theory, strive to call into existence another existence which must be more vast, and which you allege produces this existence and gives its powers to it. Sir Isaac Newton says:—"We are to admit no more causes of things than are sufficient to explain appearances." What effect is there which the forces of existence are incapable of producing?

Why do you come to the conclusion that the forces of the

128

universe are incapable of producing every effect of which I take cognisance? Why do you come to the conclusion that intelligence is not an attribute—why? What is there which enables you to convert it into a separate and distinct existence? Is there anything? Is it spirit? What is spirit? That of which the mortal man can know nothing, you tell me—that it is nothing which his senses can grasp—that is, no man, but one who disregards his senses, can believe in it, and that it is that which no man's senses can take cognisance of. If a man who uses his senses can never by their aid take cognisance of spirit, then as it is through the senses alone man knows that which is around him, you can know nothing about spirit until you go out of your senses. When I speak of the senses, I do not limit myself to what are ordinarily termed man's five senses—I include all man's sensitive faculties, and admit that I do not know the extent of, and am not prepared to set a limit to, the sensitive capabilities of man. I have had personal experience in connection with psycho-magnetic phenomena of faculties in man and woman not ordinarily recognised, and am inclined to the opinion that many men have been made converts to the theories of spiritualism, because their previous education had induced them to set certain arbitrary limits to the domains of the natural. When they have been startled by phenomena outside these conventional limitations, they at once ascribed them to supernatural influences, rather than reverse their previous rules of thinking.

Some urge that the soul is life. What is life? Is it not the word by which we express the aggregate normal functional activity of vegetable and animal organisms, necessarily differing in degree, if not in kind, with each different organisation? To talk of immortal life and yet to admit the decay and destruction of the organisation, is much the same as to talk of a square circle. You link together two words which contradict each other. The solution of the soul problem is not so difficult as many imagine. The greatest difficulty is, that we have been trained to use certain words as "God," "matter," "mind," "spirit," "soul," "intelligence," and we have been further trained to take these words as representatives of realities, which, in fact, they do not represent. We have to unlearn much of our school lore. We have specially to carefully examine the meaning of each word we use. The question lies in a small compass. Is there one existence or more? Of one existence I am conscious,

129

because I am a mode of it. I know of no other existence. I know of no existence but that existence of which I am a mode. I hold it to be capable of producing every effect. It is for the man who alleges that there is another, to prove it. I know of one existence. I do not endeavour to demonstrate to you my existence, it needs no demonstration—I am. My existence is undeniable. I am speaking to you. You are conscious of my existence. You and I are not separate entities, but modes of the same existence. We take cognisance of the existence which is around us and in us, and which is the existence of which we are modes. Of the one existence we are certain. It is for those who affirm that the universe is "matter," and who affirm that there also exists "spirit," to remember that they admit the one existence I seek to prove, and that the onus lies on them to demonstrate a second existence—in fact, to prove there is the other existence which they term spiritual. There cannot exist two different substances or existences having the same attributes or qualities. There cannot be two existences of the same essence, having different attributes, because it is by the attributes alone that we can distinguish the existences. We can only judge of the substance by its modes. We may find a variety of modes of the same substance, and we shall find points of union which help to identify them, the one with the other—the link which connects them with the great whole. We can only judge of the existence of which we are a part (in consequence of our peculiar organisation), under the form of a continuous chain of causes and effects—each effect a cause to the effect it precedes, each cause an effect of the causative influence which heralded its advent. The remote links of that line are concealed by the darkness of the far-off past. Nay, more than this, the mightiest effort of mind can never say—*This is the first cause.* Weakness and ignorance have said it—but why? To cloak their weakness, to hide their ignorance. Knaves have said it—but why? To give scope to their cunning, and to enable them to say to the credulous, "Thus far shalt thou go and no farther." The termination is in the as yet unknowable future; and I ask you, presumptuous men, who dare to tell me of God and soul, of matter and creation—when possessed you the power to sunder links of that great chain and write, "In the beginning?" I deny that by the mightiest effort of the strongest intellect man can ever say of any period, at this point substance began to be—before this existence was not.

150

Has man a soul? You who tell me he has a soul, a soul independent of material conditions, I ask you how it is that these immortal souls strive with one another to get mortal benefits? Has man a soul? If man's soul is not subject to material conditions, why do I find knavish souls?—Why slavish souls?—tyrannous souls? Your doctrine that man has a soul prevents him from rising. When you tell him that his soul is not improvable by material conditions, you prevent him from making himself better than he is. Man's intelligence is a consequence of his organisation. Organisation is improvable, the intelligence becomes more powerful as the organisation is fully developed, and the conditions which surround man are made more pure. And the man will become higher, truer, and better when he knows that his intelligence is an attribute, like other attributes, capable of development, susceptible of deterioration, he will strive to effect the first and to guard against the latter.

Look at a number of people putting power into the hands of one man, because he is a lord—surely they have no souls. See the mass cringing to a wretched idol—surely these have no souls. See men forming a pyramid of which the base is a crushed and worn-out people, and the apex a church, a throne, a priest, a king, and the frippery of a creed;—have those men souls? Society should not be such a pyramid, it should be one brotherly circle, in which men should be linked together by a consciousness that they are only happy so linked, conscious that when the chain is broken, then the society and her peace is destroyed. What we teach is not that man has a soul apart and independent of the body, but that he has an ability, an intelligence, an attribute of his body, capable of development, improvable, more useful, according as he elevates himself and his fellows. Give up blind adhesion to creeds and priests, strive to think and follow out in action the result of your thoughts. Each mental struggle is an enlargement of your mind, an addition to your brain power, an increase of your soul—the only soul you have.

PREFACE

TO

FIFTH AND AMERICAN EDITION.

THE kindly reception given to me personally throughout those portions of the United States it has yet been my good fortune to visit, tempts me to comply with the request of many friends, that I should issue here an edition of my impeachment of the reigning family in England. The matter contained in these pages has been delivered orally throughout Great Britain, and, with one exception, no reply has been offered to it. Abuse has been plentiful, and threats of prosecution not infrequent; but although at least one hundred and fifty thousand persons have listened to the lectures, and four editions of the pamphlet have been exhausted in England, only one attempt was made, in the *Gentleman's Magazine*, to advance any kind of reply. And even in this case, when a formal written discussion had been commenced, the editor of the *Gentleman's Magazine* refused to allow any rejoinder to his second paper.

It is sometimes alleged against me that the pamphlet is a too personal criticism; my answer is that in every case the points dealt with have affected our national honor, or augmented our national taxation.

This pamphlet is not a Republican one; it is only an indictment alleging the incapacity and viciousness of the House of Brunswick, and a statement of the legal right of the British people to dethrone the succession on a vacancy arising.

That I am a Republican is perfectly true; that I believe a Republican form of government to be possible, by peaceful means in England, is well-known to those who have heard my lectures; and, in issuing this essay to American readers, I desire to show that there are no reasons of personal loyalty, there is no plea of gratitude for personal service, which ought to be urged on behalf of George I. and his descendants.

English by birth, by hope and in ambition, I seek to win from the descendants of those who broke loose from the Brunswicks nearly a century ago, sympathy for those who work with me now to a like end. If I fail, the fault is in the weakness of my tongue and pen, and not from any defects in the cause I advocate.

The more than fair hearing given to my voice emboldens me to hope a patient investigation of the case my pen presents; and should a verdict be given on this great continent unfavorable to me, I feel confident the jury of my readers will patiently weigh my statements before delivering their judgment.

CHARLES BRADLAUGH.

IMPEACHMENT

OF THE

HOUSE OF BRUNSWICK.

CHAPTER I.

INTRODUCTORY.

By statutes of the 12 and 13 Will. III., and 6 Anne c. 11, Article 2, the British Parliament, limiting the monarchy to members of the Church of England, excluded the Stuarts, and from and after the death of King William and the Princess Anne without heirs, contrived that the Crown of this kingdom should devolve upon the Princess Sophia, Duchess Dowager of Hanover, and the heirs of her body, being Protestants. Heirs failing to Anne, although seventeen times pregnant, and Sophia dying about seven weeks before Anne, her son George succeeded under these Acts as George I. of England and Scotland.

It is said, and perhaps truly, that the German Protestant Guelph was an improvement on the Catholic Stuart, and the Whigs take credit for having effected this change in spite of the Tories. This credit they deserve; but it must not be forgotten that it was scarce half a century before that the entire aristocracy, including the patriotic Whigs, coalesced to restore to the throne the Stuarts, who had been got rid of under Cromwell. If this very aristocracy, of which the Whigs form part, had never assisted in calling back the Stuarts in the person of Charles II., there would have been no need to thank them for again turning that family out.

The object of the present essay is to submit reasons for the repeal of the Acts of Settlement and Union, so far as the succession to the throne is concerned, after the abdication or demise of the present monarch. It is of course assumed, as a point upon which all supporters of the present Royal Family will agree, that the right to deal with the throne is inalienably vested in the English people, to be exercised by them through their representatives in Parliament. The right of the members of the House of Brunswick to succeed to the throne is a right accruing only from the acts of Settlement and Union, it being clear that, except from this statute, they have no claim to the throne. It is therefore submitted, that should Parliament in its wisdom see fit to enact that after the death or abdication of her present Majesty, the throne shall no longer be filled by a member of the House of Brunswick, such an enactment would be perfectly within the competence of Parliament. It is further submitted that the Parliament has full and uncontrollable authority to make any enactment, and to repeal any enactment heretofore made, even if such new statute, or the repeal of any old statute, should in truth change the constitution of the Empire, or modify the character and powers of either Parliamentary Chamber. The Parliament of the English Commonwealth, which met on April 25th, 1660, gave the Crown to Charles II., and the Parliament of the British Monarchy has the undoubted right to withhold the Crown from Albert Edward, Prince of Wales. The Convention which assembled at Westminster on January 22d, 1688, took away the crown from James II., and passed over his son, the then Prince of Wales, as if he had been non-existent. This Convention was declared to have all the authority of Parliament — *ergo*, Parliament has admittedly the right to deprive a living King of his Crown,

and to treat a Prince of Wales as having no claim to the succession.

In point of fact two of the clauses of the Act of Settlement were repealed in the reign of Queen Anne, and a third clause was repealed early in the reign of George I., showing that this particular statute has never been considered immutable or irrepealable. It is right to add that the clauses repealed were only of consequence to the nation, and that their repeal was no injury to the Crown. The unbounded right of the supreme Legislature to enlarge its own powers was contended for and admitted in 1716, when the duration of Parliament was extended four years, a triennial Parliament declaring itself and all future Parliaments septennial. Furthermore, it has been held to be sedition to deny the complete authority of the Irish Parliament to put an end to its own existence.

It has been admitted to be within the jurisdiction of Parliament to give electoral privileges to citizens theretofore unenfranchised; Parliament claims the unquestioned right to disfranchise persons, hitherto electors, for misconduct in the exercise of electoral rights, and in its pleasure to remove and annul any electoral disability. The right of Parliament to decrease or increase the number of representatives for any borough has never been disputed, and its authority to decrease the number of Peers sitting and voting in the House of Lords was recognized in passing the Irish Church Disestablishment Bill, by which several Bishops were summarily ejected from amongst the Peers. It is now submitted that Parliament possesses no Legislative right but what it derives from the people, and that the people are under no irrevocable contract or obligation to continue any member of the House of Brnnswick on the throne. In order to show that this is not a solitary opinion, the following Parlimentary *dicta* are given: —

The Honorable Temple Luttrell, in a speech made in the House of Commons, on the 7th November, 1775, showed "that of thirty-three sovereigns since William the Conqueror, thirteen only have ascended the throne by divine hereditary right. . . . The will of the people, superseding any hereditary claim to succession, at the commencement of the twelfth century placed Henry I. on the throne," and this subject to conditions as to laws to be made by Henry. King John was compelled "solemnly to register an assurance of the ancient rights of the people in a formal manner;" and this necessary work was accomplished by the Congress at Runnymede, in the year 1115. "Sir, in the reign of Henry III. (about the year 1223), the barons, clergy and freeholders, understanding that the King, as Earl of Poictou, had landed some of his continental troops in the western ports of England, with a design to strengthen a most odious and arbitrary set of ministers, they assembled in a Convention or Congress, from whence they despatched deputies to King Henry, declaring that if he did not immediately send back those Poictouvians, and remove from his person and councils evil advisers, they would place upon the throne a Prince who should better observe the laws of the land. Sir, the King not only hearkened to that Congress, but shortly after complied with every article of their demand, and publicly notified his reformation. Now, Sir, what are we to call that assembly which dethroned Edward II. when the Archbishop of Canterbury preached a sermon on this Text, '*The voice of the people is the voice of God'?*" "A Prince of the house of Lancaster was invited over from banishment, and elected by the people to the throne" on the fall of Richard II. "I shall next proceed to the general Convention and Congress, which, in 1461, enthroned the Earl of March by the name of Edward IV., the Primate of all England collecting the suf-

frages of the people." "In 1659, a Convention or Congress restored legal Monarchy in the person of Charles II."

William Pitt, on the 16th December, 1788, being then Chancellor of the Exchequer, contended that "the right of providing for the deficiency of Royal authority rested with the two remaining branches of the Legislature;" and again, "on the disability of the Sovereign, where was the right to be found? It was to be found in the voice, in the sense of the people; with them it rested." On the 22d December, Mr. Pitt said that Mr. Fox had contended that "the two Houses of Parliament cannot proceed to legislate without a King." His (Mr. Pitt's) answer was: "The conduct of the Revolution had contradicted that assertion; they had acted legislatively, and, no King being present, they must, consequently, have acted without a King."

Mr. Hardinge, a barrister of great repute, and afterwards Solicitor-General and Judge, in the same debate, said: "The virtues of our ancestors and the genius of the Government accurately understood, a century ago, had prompted the Lords and Commons of the realm to pass a law without a King; and a law which, as he had always read it, had put upon living record this principle: 'That whenever the supreme executive hand shall have lost its power to act, the people of the land, fully and freely represented, can alone repair the defect.'"

On the 26th December, in the House of Lords, discussing the power to exclude a sitting Monarch from the throne, the Earl of Abingdon said: "Will a King exclude himself? No! no! my Lords, that exclusion appertains to us and to the other House of Parliament exclusively. It is to us it belongs; it is our duty. It is the business of the Lords and Commons of Great Britain, and of us alone, as the trustees and representatives of the nation." And following up this

argument, Lord Abingdon contended that in the contingency he was alluding to, "the right to new model or alter the succession vests in the Parliament of England without the King, in the Lords and Commons of Great Britain solely and exclusively."

Lord Stormont, in the same debate, pointed out that William III. "possessed no other right to the throne than that which he derived from the votes of the two Houses."

The Marquis of Lansdowne said: "One of the best constitutional writers we had was Mr. Justice Foster, who, in his book on the 'Principles of the Constitution,' denies the right even of hereditary succession, and says it is no right whatever, but merely a political expedient. . . . The Crown, Mr. Justice Foster said, was not merely a descendable property like a laystall, or a pigstye, but was put in trust for millions, and for the happiness of ages yet unborn, which Parliament has it always in its power to mould, to shape, to alter, to fashion, just as it shall think proper. And in speaking of Parliament," his Lordship said, "Mr. Justice Foster repeatedly spoke of the two Houses of Parliament only."

My object being to procure the repeal of the only title under which any member of the House of Brunswick could claim to succeed the present sovereign on the throne, or else to procure a special enactment which shall for the future exclude the Brunswicks, as the Stuarts were excluded in 1688 and 1701, the following grounds are submitted as justifying and requiring such repeal or new enactment: —

1st. That during the one hundred and fifty-seven years the Brunswick family have reigned over the British Empire, the policy and conduct of the majority of the members of that family, and especially of the various reigning members, always saving and excepting her present Majesty, have been hostile to the welfare of the mass of the people. This

will be sought to be proved at length by a sketch of the principal events in the reign of each monarch, from August 1st, 1714, to the present date.

2d. That during the same period of one hundred and fifty-seven years, fifteen-sixteenths of the entire National Debt have been created, and that this debt is in great part the result of wars arising from the mischievous and pro-Hanoverian policy of the Brunswick family.

3d. That in consequence of the incompetence or want of desire for governmental duty on the part of the various reigning members of the House of Brunswick, the governing power of the country has been practically limited to a few families, who have used government in the majority of instances as a system of machinery for securing place and pension for themselves and their associates; while it is submitted that government should be the best contrivance of national wisdom for the alleviation of national suffering and promotion of national happiness. Earl Grey even admits that "Our national annals, since the Revolution of 1688, present a sad picture of the selfishness, baseness and corruption of the great majority of the actors on the political stage."

4th. That a huge pension list has been created, the recipients of the largest pensions being in most cases persons who are already members of wealthy families, and who have done nothing whatever to justify their being kept in idleness at the national expense, while so many workers in the agricultural districts are in a state of semi-starvation; so many toilers in large works in Wales, Scotland, and some parts of England, are in constant debt and dependence; and while large numbers of the Irish peasantry — having for many generations been denied life at home — have until lately been driven to seek those means of

existence across the sea which their own fertile land should have amply provided for them.

5th. That the monarchs of the Brunswick family have been, except in a few cases of vicious interference, costly puppets, useful only to the governing aristocracy as a cloak to shield the real wrong doers from the just reproaches of the people.

6th. That the Brunswick family have shown themselves utterly incapable of initiating or encouraging wise legislation. That George I. was shut out practically from the government by his utter ignorance of the English language, his want of sympathy with British habits, and his frequent absences from this country. A volume of history, published by Messrs. Longmans in 1831, says that "George I. continued a German princeling on the British throne — surrounded still by his petty Hanoverian satellites, and so ignorant even of the language of his new subjects, that his English minister, who understood neither French nor German, could communicate with him only by an imperfect jargon of barbarous Latin." He "discarded his wife, and had two mistresses publicly installed in their Court rights and privileges." Earl Grey declares that "the highly beneficial practice of holding Cabinet Councils without the presence of the sovereign arose from George the First's not knowing English." Leslie describes George I. as altogether ignorant of our language, laws, customs and constitution. Madame de Maintenon writes of him as disgusted with his subjects. That George II. was utterly indifferent to English improvement, and was mostly away in Hanover. Lord Hervey's "Memoirs" portray him as caring for nothing but soldiers and women, and declare that his highest ambition was to combine the reputation of a great general with that of a successful libertine. That George III. was repeatedly insane, and that in his officially lucid moments

his sanity was more dangerous to England than his madness. Buckle says of him that he was "despotic as well as superstitious. . . . Every liberal sentiment, everything approaching to reform, nay, even the mere mention of inquiry, was an abomination in the eyes of that narrow and ignorant prince." Lord Grenville, his Prime Minister, said of him: "He had perhaps the narrowest mind of any man I ever knew." That George IV. was a dissipated, drunken debauchee, bad husband, unfaithful lover, untrustworthy friend, unnatural father, corrupt regent, and worse king. Buckle speaks of "the incredible baseness of that ignoble voluptuary." That William IV. was obstinate, but fortunately fearful of losing his crown, gave way to progress with a bad grace when chicanery was no longer possible, and continued resistance became dangerous.

7th. That under the Brunswick family, the national expenditure has increased to a frightful extent, while our best possessions in America have been lost, and our home possession, Ireland, rendered chronic in its discontent by the terrible misgovernment under the four Georges.

And 8th. That the ever increasing burden of the national taxation has been shifted from the land on to the shoulders of the middle and lower classes, the landed aristocracy having, until very lately, enjoyed the practical monopoly of tax-levying power.

CHAPTER II.

THE REIGN OF GEORGE I.

On August 1st, 1714, George Lewis, Elector of Hanover, and great-grandson of James I., of England, succeeded to the throne; but being apparently rather doubtful as to the

reception he would meet in this country, he delayed visiting his new dominions until the month of October. In April, 1714, there was so little disposition in favor of the newly-chosen dynasty, that the Earl of Oxford entreated George not to bring any of his family into this country without Queen Anne's express consent. It seems strange to read in the correspondence of Madame Elizabeth Charlotte, Duchesse d'Orleans, her hesitation "to rejoice at the accession of our Prince George, for she had no confidence in the English;" and her fears "that the inconstancy of the English will in the end produce some scheme which may be injurious to the French monarchy." She adds: "If the English were to be trusted, I should say that it is fortunate the Parliaments are in favor of George, but the more one reads the history of English revolutions, the more one is compelled to remark the eternal hatred which the people of that nation have had towards their kings, as well as their fickleness." To-day it is the English who charge the French with fickleness. Thackeray says of George I. that "he showed an uncommon prudence and coolness of behavior when he came into his kingdom, exhibiting no elation; reasonably doubtful whether he should not be turned out some day; looking upon himself only as a lodger, and making the most of his brief tenure of St. James's and Hampton Court, plundering, it is true, somewhat, and dividing amongst his German followers; but what could be expected of a sovereign who at home could sell his subjects at so many ducats per head, and make no scruple in so disposing of them?" At the accession of George I. the national debt of this country, exclusive of annuities, was about £36,000,000; after five Brunswicks have left us, it is £800,000,000 for Great Britain and Ireland, and much more than £110,000,000 for India. The average annual national expenditure under the rule of

George I. was £5,923,079 ; to-day it is more than £70,000,000, of which more than £20,000,000 have been added in the last twenty years. During the reign of George I. land paid very nearly one-fourth the whole of the taxes ; to-day it pays less than one-seventieth part ; and yet, while its proportion of the burden is so much lighter, its exaction from labor in rent is ten times heavier.

George I. came to England without his wife, the Princess of Zelle. Years before, he had arrested her and placed her in close confinement in Ahlden Castle, on account of her intrigue with Philip, Count Konigsmark, whom some say George I. suspected of being the actual father of the Electoral Prince George, afterwards George II. To use the language of a writer patronized by George, Prince of Wales, in 1808, "The coldness between George I. and his son and successor, George II., may be said to have been *almost coeval with the existence* of the latter." Our King, George I., described by Thackeray as a "cold, selfish libertine," had Konigsmark murdered in the palace of Heranhausen ; confined his wife, at twenty-eight years of age, in a dungeon, where she remained until she was sixty ; and when George Augustus, Electoral Prince of Hanover, tried to get access to his mother, George Lewis, then Elector of Hanover, arrested Prince George also, and it is said, would have put him to death if the Emperor of Germany had not protected him as a Prince of the German Empire. During the reign of George II., Frederick, Prince of Wales, whom his father denounced as a "changeling," published an account of how George I. had turned Frederick's father out of the palace. These Guelphs have been a loving family. The *Edinburgh Review* declares that "the terms on which the eldest sons of this family have always lived with their fathers have been those of distrust, opposition, and hostility." Even after George Lewis had ascended the throne of England,

his hatred to George Augustus was so bitter, that there was some proposition that James, Earl Berkeley and Lord High Admiral, should carry off the Prince to America and keep him there.

Thackeray says: "When George I. made his first visit to Hanover, his son was appointed regent during the Royal absence. But this honor was never again conferred on the Prince of Wales; he and his father fell out presently. On the occasion of the christening of his second son, a Royal row took place, and the Prince, shaking his fist in the Duke of Newcastle's face, called him a rogue, and provoked his august father. He and his wife were turned out of St. James's, and their princely children taken from them, by order of the Royal head of the family. Father and mother wept piteously at parting from their little ones. The young ones sent some cherries, with their love, to papa and mamma, the parents watered the fruit with their tears. They had no tears thirty-five years afterwards, when Prince Frederick died, their eldest son, their heir, their enemy."

A satirical ballad on the expulsion of Prince George from St. James's Palace, which was followed by the death of the newly-christened baby Prince, is droll enough to here repeat: —

The King then took his gray goose quill,
And dip't it o'er in gall;
And, by Master Vice Chamberlain,
He sent to him this scrawl:

"Take hence yourself, and eke your spouse,
Your maidens and your men;
Your trunks, and all your trumpery,
Except your chil-de-ren."

. . . . . .

The Prince secured with nimble haste
The Artillery Commission;
And with him trudged full many a maid,
But not one politician.

Up leapt Lepel, and frisked away,
As though she ran on wheels;
Miss Meadows made a woful face,
Miss Howe took to her heels.

But Belenden I needs must praise,
Who, as down stairs she jumps,
Sang "O'er the hills and far away,"
Despising doleful dumps.

Then up the street they took their way,
And knockt up good Lord Grant-ham;
Higgledy-piggledy they lay,
And all went *rantam scantam.*

Now sire and son had played their part,
What could befall beside?
Why, the poor babe took this to heart,
Kickt up its heels, and died.

Mahon, despite all his desire to make out the best for the Whig revolution and its consequences, occasionally makes some pregnant admissions: "The jealousy which George I. entertained for his son was no new feeling. It had existed even at Hanover, and had since been inflamed by an insidious motion of the Tories that out of the Civil List £100,000 should be allotted as a separate revenue for the Prince of Wales. This motion was overruled by the Ministerial party, and its rejection offended the Prince as much as its proposal had the King. . . . In fact it is remarkable . . . that since that family has reigned, the heirs-apparent have always been on ill terms with the sovereign. There have been four Princes of Wales since the death of Anne, and all four have gone into bitter opposition." "That family," said Lord Carteret one day in full Council, "always has quarrelled, and always will quarrel, from generation to generation."

"Through the whole of the reign of George I., and through nearly half of the reign of George II.," says Lord Macaulay, "a Tory was regarded as the enemy of the reigning house, and was excluded from all the favors of the Crown. Though most of the country gentlemen were Tories, none but Whigs were appointed deans and bishops. In every County, opulent and well-descended Tory squires complained that their names were left out of the Commission of the Peace, while men of small estate and of mean birth, who were for toleration and excise, septennial parliaments and standing armies, presided at Quarter Sessions, and became deputy-lieutenants."

In attacking the Whigs, my object is certainly not to write in favor of the Tories, but some such work is needful while so many persons labor under the delusion that the Whigs have always been friends to liberty and progress.

Although George I. brought with him no wife to England, he was accompanied by at least two of his mistresses, and our peerage roll was enriched by the addition of Madame Kielmansegge as Countess of Darlington, and Mademoiselle Erangard Melosine de Schulenberg as Duchess of Kendal and Munster, Baroness of Glastonbury, and Countess of Feversham. These peeresses were received with high favor by the Whig aristocracy, although the Tories refused to countenance them, and "they were often hooted by the mob as they passed through the streets." The *Edinburgh Review* described them as "two big blowsy German women." Here I have no room to deal fairly with Charlotte Sophia, Baroness of Brentford and Countess of Darlington; her title is extinct, and I can write nothing of any good or useful act to revive her memory. Lord Chesterfield says of George I.: "No woman came amiss to him, if she were only very willing and very fat." John Heneage Jesse, in his "Memoirs of the Court of England" — speak-

ing of the Duchess of Kendal, the Countess Platen (the co-partner in the murder of Konigsmark), afterwards Countess of Darlington, and many others less known to infamy — says that George I. "had the folly and wickedness to encumber himself with a seraglio of hideous German prostitutes." The Duchess of Kendal was for many years the chief mistress of George, and being tall and lean was caricatured as the Maypole or the Giraffe. She had a pension of £7,500 a year, the profits of the place of Master of the Horse, and other plunder. The Countess of Darlington's figure may be judged from the name of Elephant or Camel, popularly awarded to her. Horace Walpole says of her: "I remember as a boy being terrified at her enormous figure. The fierce black eyes, large and rolling, between two lofty-arched eyebrows, two acres of cheeks spread with crimson, an ocean of neck that overflowed, and was not distinguished from the lower part of her body, and no part restrained by stays. No wonder that a child dreaded such an ogress." She died 1724. Mahon says: "She was unwieldy in person, and rapacious in character."

Phillimore declares that "George I. brought with him from Hanover mistresses as rapacious, and satellites as ignoble, as those which drew down such deserved obloquy on Charles II., Bothman, Bernstoff, Robethon, and two Turks — Mustapha and Mahomet, — meddled more with public affairs, and were to the full as venal as Chiffin, Pepys and Smith." Mahon, who calls Robethon "a prying, impertinent, venomous creature," adds that "coming from a poor electorate, a flight of hungry Hanoverians, like so many famished vultures, fell with keen eyes and bended talons on the fruitful soil of England."

One of the earliest acts of the Whig aristocracy, in the reign of George I., was to pass a measure through Parliament, lengthening the existence of that very Parliament to

seven years, and giving to the King the power to continue all subsequent Parliaments to a like period. The Triennial Parliaments were thus lengthened by a corrupt majority. For the committal of the Septennial Bill there was a majority of 72 votes, and it is alleged by the *Westminster Review*, "that about 82 members of the honorable house had either fingered Walpole's gold, or pocketed the bank-notes which, by the purest accident, were left under their plates. . . . In the ten years which preceded the Septennial Act, the sum expended in Secret Service money was £337,960. In the ten years which followed the passing of the Septennial Act, the sum expended for Secret Service was £1,453,400." The same writer says: "The friends and framers of the Triennial Bill were for the most part Tories, and its opponents for the most part Whigs. The framers and friends of the Bill for long Parliaments were all Whigs, and its enemies all Tories." When the measure came before the Lords, we find Baron Bernstoff, on the King's behalf, actually canvassing Peers' wives, with promises of places for their relatives, in order to induce them to get their husbands to vote for the Bill. Another of the early infringements of public liberty by the Whig supporters of George I., was the passing (1 George I., c. 5) the Riot Act, which had not existed from the accession of James I. to the death of Queen Anne. Sir John Hinde Cotton, a few years afterwards, described this Act, which is still the law of England, as "An Act by which a little dirty justice of the peace, the meanest and vilest tool a minister can use, had it in his power to put twenty or thirty of the best subjects of England to immediate death, without any trial or form, but that of reading a proclamation." In order to facilitate the King's desire to spend most of his time in Hanover, the third section of the Act of Settlement was repealed.

Thackeray says: "Delightful as London city was, King

George I. liked to be out of it as much as ever he could, and when there, passed all his time with his Germans. It was with them as with Blucher one hundred years afterwards, when the bold old Reiter looked down from St. Paul's and sighed out, 'Was fur plunder!' The German women plundered, the German secretaries plundered, the German cooks and intendants plundered; even Mustapha and Mahomet, the German negroes, had a share of the booty. Take what you can get, was the old monarch's maxim."

There was considerable discontent expressed in the early years of George's reign. Hallam says: "Much of this disaffection was owing to the cold reserve of George I., ignorant of the language, alien to the prejudices of his people, and continually absent in his electoral dominions, to which he seemed to sacrifice the nation's interest. . . . The letters in Coxe's Memoirs of Walpole, abundantly show the German nationality, the impolicy and neglect of his duties, the rapacity and petty selfishness of George I. The Whigs were much dissatisfied, but the fear of losing their places made them his slaves." In order to add the duchies of Bremen and Verden to Hanover, in 1716, the King, as Elector, made a treaty with Denmark against Sweden, which treaty proved the source of those Continental wars, and the attendant system of subsidies to European powers, which have, in the main, created our enormous National Debt. Bremen and Verden being actually purchased for George I. as the Elector of Hanover, with English money, Great Britain in addition was pledged by George I. to guarantee Sleswick to Denmark. Sweden and Denmark quarrelling — and George I. as Elector of Hanover having, without the consent of the English Parliament, declared war against Sweden — an English fleet was sent into the Baltic to take up a quarrel with which we had no concern. In addition we were in-

volved in a quarrel with Russia, because that power had interfered to prevent Mecklenburg being added to George's Hanoverian estates. The chief mover in this matter was the notorious Baron Bernstoff, who held some village property in Mecklenburg. In all these complications, Hanover gained, England lost. If Hanover found troops, England paid for them, while the Electorate solely reaped the benefit. Every thoughtful writer admits that English interests were always betrayed to satisfy Hanoverian greed.

The King's fondness for Germany provoked some hostility, and amongst the various squibs issued, one in 1716, from the pen of Samuel Wesley, brother of John Wesley, is not without interest. It represents a conversation between George and the Duchess of Kendal: —

"As soon as the wind it came fairly about,
That kept the King in and his enemies out,
He determined no longer confinement to bear,
And thus to the Duchess his mind did declare:

"Quoth he, 'My dear Kenny, I've been tired a long while,
With living obscure in this poor little isle,
And now Spain and Pretender have no more mines to spring,
I'm resolved to go home and live like a King."

The Duchess approves of this, describes and laughs at all the persons nominated for the Council of Regency, and concludes: —

"On the whole, I'll be hanged if all over the realm
There are thirteen such fools to be put to the helm;
So for this time be easy, nor have jealous thought,
They ha'n't sense to sell you, nor are worth being bought."

"'Tis for that (quoth the King, in very bad French),
I chose them for my regents, and you for my wench,
And neither, I'm sure, will my trust e'er betray,
For the devil won't take you if I turn you away."

It was this same Duchess of Kendal who, as the King's mistress, was publicly accused of having received enormous sums of money from the South Sea Company for herself and the King, in order to shield from justice the principal persons connected with those terrible South Sea frauds, by which, in the year 1720, so many families were reduced to misery.

In 1717, Mr. Shippen, a member of the House of Commons, was committed to the Tower, for saying in his place in the House, that it was the "infelicity of his Majesty's reign that he is unacquainted with our language and constitution." Lord Macaulay tells us how Lord Carteret, afterwards Earl Granville, rose into favor. The King could speak no English; Carteret was the only one of the Ministry who could speak German. "All the communication that Walpole had with his master was in very bad Latin." The influence Carteret wielded over the King did not extend to every member of the Royal Family. The Princess of Wales afterwards described the Lords Carteret and Bolingbroke as two she had "long known to be two as worthless men of parts as any in the country, and who I have not only been often told are two of the greatest liars and knaves in any country, but whom my own observation and experience have found so."

Under George I. our standing army was nearly doubled by the Whig Ministry, and this when peace would rather have justified a reduction than an increase. The payments to Hanoverian troops commenced under this king, a payment which William Pitt afterwards earned the enmity of George II. by very sharply denouncing, and which payment was but a step in the system of continental subsidies which have helped to swell our national debt to its present enormous dimensions.

In this reign the enclosure of waste lands was practically

commenced, sixteen enclosure Acts being passed, and 17,660 acres of land enclosed. This example, once furnished, was followed in the next reign with increasing rapidity, 226 enclosure Acts being passed in the reign of George II., and 318,778 acres of land enclosed. As Mr. Fawcett states, up to 1845, more than 7,000,000 acres of land, over which the public possessed invaluable rights, have been gradually absorbed, and individuals wielding legislative influence have been enriched at the expense of the public and the poor.

Within six years from his accession, the King was about £600,000 in debt, and this sum was the first of a long list of debts discharged by the nation for these Brunswicks. When our ministers to-day talk of obligations on the part of the people to endow each additional member of the Royal Family, the memory of these shameful extravagances should have some effect. George I. had a civil list of £700,000 a year; he received £300,000 from the Royal Exchange Assurance Company, and £300,000 from the London Assurance Companies, and had one million voted to him in 1726 towards payment of his debts.

When the "South Sea Bill" was promoted in 1720, wholesale bribery was resorted to. Transfers of stock were proved to have been made to persons high in office. Two members of the Whig Ministry, Lord Sunderland and Mr. Aislabie, were so implicated that they had to resign their offices, and the last-named, who was Chancellor of the Exchequer, was ignominiously expelled the House of Commons. Royalty itself, or at least, the King's sultanas, and several of his German household, shared the spoil. £30,000 were traced to the King's mistresses, and a select committee of the House denounced the whole business as "a train of the deepest villany and fraud with which hell ever contrived to ruin a nation." Near the close of the reign, Lord

Macclesfied, Lord Chancellor and favorite and tool of the King, was impeached for extortion and abuse of trust in his office, and, being convicted, was sentenced to pay a fine of £30,000. In 1716, Mademoiselle Schulenberg, then Duchess of Munster, received £5,000 as a bribe for procuring the title of Viscount for Sir Henry St. John. In 1724, the same mistress, bribed by Lord Bolingbroke, successfully used her influence to pass an act through Parliament restoring him his forfeited estates. Mr. Chetwynd, says my Lady Cowper, in order to secure his position in the Board of Trade, paid to another of George's mistresses £500 down, agreed to allow her £200 a year as long as he held the place, and gave her also the fine, brilliant ear-rings she wore.

In 1724 there appeared in Dublin, the first of the famous "Drapier Letters," written by Jonathan Swift against Wood's coinage patent. A patent had been granted to a man named Wood for coining half-pence in Ireland. This grant was made under the influence of the Duchess of Kendal, the mistress of the King, and on the stipulation that she should receive a large share of the profits. These "Drapier Letters" were prosecuted by the Government, but Swift followed them with others; the grand juries refused to find true bills, and ultimately the patent was cancelled. Wood, or the Duchess, got as compensation a grant of a pension of £3,000 a year for eight years.

George died at Osnabruck, on his journey Hanover-wards, in June, 1727, having made a will by which he disposed of his money in some fashion displeasing to his son George II.; and as the *Edinburgh Review* tells us, the latter "evaded the old king's directions, and got his money by burning his will." In this, George II. only followed his royal father's example. When Sophia Dorothea died, she left a will bequeathing her property in a fashion displeasing

to George I., who, without scruple, destroyed the testament and appropriated the estate. George I. had also previously burned the will of his father-in-law, the Duke of Zell. At this time the destruction of a will was a capital felony in England.

In concluding this rough sketch of the reign of George I., it must not be forgotten that his accession meant the triumph of the Protestant caste in Ireland, and that under his rule much was done to render permanent the utter hatred manifested by the Irish people to their English conquerors, who had always preferred the policy of extermination to that of conciliation. Things were so sad in Ireland at the end of this reign, that Dean Swift, in bitter mockery, "wrote and published his 'Modest Proposal' for relieving the miseries of the people, by cooking and eating the children of the poor;" "a piece of the fiercest sarcasm," says Mitchell, "steeped in all the concentrated bitterness of his soul." Poor Ireland, she had, at any rate, nothing to endear to her the memory of George I.

CHAPTER III.

THE REIGN OF GEORGE II.

When George I. died there was so little interest or affection exhibited by his son and successor, that Sir Robert Walpole, on announcing to George II. that by the demise of his father he had succeeded to regal honors, was saluted with a volley of oaths, and "Dat is one big lie." No pretence even was made of sorrow. George Augustus had hated George Lewis during life, and at the first council, when the will of the late King was produced by the Archbishop of Canterbury, the new monarch simply took it up

and walked out of the room with the document, which was never seen again. Thackeray, who pictures George II. as "a dull, little man, of low tastes," says that he "made away with his father's will under the astonished nose of the Archbishop of Canterbury." A duplicate of this will having been deposited with the Duke of Brunswick, a large sum of money was paid to that Prince nominally as a subsidy by the English Government for the maintenance of troops, but really as a bribe for surrendering the document. A legacy having been left by this will to Lady Walsingham, threats were held out in 1733 by her then husband, Lord Chesterfield, and £20,000 was paid in compromise.

The eldest son of George II. was Frederick, born in 1706, and who up to 1728 resided permanently in Hanover. Lord Hervey tells us that the King hated his son Frederick, and that the Queen Caroline, his mother, abhorred him. To Lord Hervey the Queen says: "My dear Lord, I will give it you under my hand, if you are in any fear of my relapsing, that my dear first-born is the greatest ass, and the greatest liar, and the greatest *canaille*, and the greatest beast in the whole world; and that I most heartily wish he were out of it." This is a tolerably strong description of the father of George III. from the lips of his own mother. Along with this description of Frederick by the Queen, take Thackeray's character of George II.'s worthy father of worthy son: "Here was one who had neither dignity, learning, morals, nor wit—who tainted a great society by a bad example; who in youth, manhood, old age, was gross, low, and sensual."

In 1705, when only Electoral Prince of Hanover, George had married Caroline, daughter of the Margrave of Anspach, a woman of more than average ability. Thackeray describes Caroline in high terms of praise, but Lord Chesterfield says that "she valued herself upon her skill in

simulation and dissimulation. . . . Cunning and perfidy were the means she made use of in business." The Prince of Anspach is alleged by the *Whisperer* to have raised some difficulties as to the marriage, on account of George I. being disposed to deny the legitimacy of his son, and it is further pretended that George I. had actually to make distinct acknowledgment of his son to King William III. before the arrangements for the Act of Settlement were consented to by that King. It is quite clear from the diary of Lady Cowper, that the old King's feeling towards George II. was always one of the most bitter hatred.

The influence exercised by Queen Caroline over George II. was purely political; and Lord Hervey declares that "wherever the interest of Germany and the honor of the Empire were concerned, her thoughts and reasonings were as German and Imperial as if England had been out of the question."

A strange story is told of Sir Robert Walpole and Caroline. Sir Robert, when intriguing for office under George I., with Townshend, Devonshire, and others, objected to their plans being communicated to the Prince of Wales, saying, "The fat b——h, his wife, would betray the secret and spoil the project." This courtly speech being made known by some kind friend to the Princess Caroline, considerable hostility was naturally exhibited. Sir Robert Walpole, who held the doctrine that every person was purchasable, the only question being one of price, managed to purchase peace with Caroline when Queen. When the ministry suspended, "Walpole not fairly out, Compton not fairly in," Sir Robert assured the Queen that he would secure her an annuity of £100,000 in the event of the King's death, Sir Spencer Compton, who was then looked to as likely to be in power, having only offered £60,000. The Queen sent back word, "Tell Sir Robert the fat b——h has forgiven

him," and thenceforth they were political allies until the Queen's death in 1737.

The domestic relations of George II. were marvellous. We pass with little notice Lady Suffolk, lady-in-waiting to Queen and mistress to the King, who was sold by her husband for a pension of £12,000 a year, paid by the British tax-payers, and who was coarsely insulted by both their Majesties. It is needless to dwell on the confidential communications, in which "that strutting little sultan George II.," as Thackeray calls him, solicited favors from his wife for his mistress, the Countess of Walmoden; but to use the words of the cultured *Edinburgh Review*, the Queen's "actual intercession to secure for the King the favors of the Duchess of Modena precludes the idea that these sentiments were as revolting to the royal Philaminte as they would nowadays be to a scavenger's daughter. Nor was the Queen the only lady of the Royal Family who talked openly on these matters. When Lady Suffolk was waning at court, the Princess Royal could find nothing better to say than this: 'I wish with all my heart that he (*i. e.*, the King) would take somebody else, that Mamma might be relieved from the *ennui* of seeing him forever in her room.'"

Lady Cowper in her diary tells us that George II., when Prince of Wales, intrigued with Lady Walpole, not only with the knowledge of the Princess Caroline, but also with connivance of the Prime Minister himself. Lord Hervey adds that Caroline used to sneer at Sir Robert Walpole, asking how the poor man — "*avec ce gros corps, ces jambes enflées et ce villain ventre*" — could possibly believe that any woman could love him for himself. And that Sir Robert retaliated, when Caroline afterwards complained to him of the King's cross temper, by telling her very coolly that "it was impossible it could be otherwise, since the

King had tasted better things," and ended by advising her to bring pretty Lady Tankerville *en rapport* with the King.

In 1727 an Act was passed, directed against workmen in the woollen trade, rendering combination for the purpose of raising wages unlawful. Some years afterwards, this Act was extended to other trades, and the whole tendency of the Septennial Parliament legislation manifests a most unfortunate desire on the part of the Legislature to coerce and keep in subjection the artisan classes.

In February, 1728, the celebrated "Beggar's Opera," by Gay, was put on the stage at the Lincoln's Inn Fields Theatre, and, being supposed to contain some satirical reflections on court-corruption, provoked much displeasure on the part of Royalty. The Duchess of Queensborough, who patronized Gay, being forbidden to attend court, wrote thus: "The Duchess of Queensborough is surprised and well pleased that the King has given her so agreeable a command as forbidding her the court. . . . She hopes that, by so unprecedented an order as this, the King will see as few as she wishes at his court, particularly such as dare speak or think truth."

In 1729, £115,000 was voted by Parliament for the payment of the King's debts. This vote seems to have been obtained under false pretences, to benefit the King, whose "cardinal passion," says Phillimore, "was avarice."

The *Craftsman*, during the first decade of the reign, fiercely assailed the Whig ministry for "a wasteful expenditure of money in foreign subsidies and bribes;" and in his place in the House of Commons William Pitt, "the great Commoner," in the strongest language attacked the system of foreign bribery by which home corruption was supplemented.

The rapidly increasing expenditure needed every day increased taxation, and a caricature published in 1732 marks

the public feeling. A monster (Excise), in the form of a many-headed dragon, is drawing the minister (Sir Robert Walpole) in his coach, and pouring into his lap, in the shape of gold, what it has eaten up in the forms of mutton, hams, cups, glasses, mugs, pipes, etc.

"See this dragon Excise
Has ten thousand eyes,
And five thousand mouths to devour us;
A sting and sharp claws,
With wide gaping jaws,
And a belly as big as a store-house."

Beginning with wines and liquors,—

"Grant these, and the glutton
Will roar out for mutton,
Your beef, bread, and bacon to boot;
Your goose, pig, and pullet,
He'll thrust down his gullet,
Whilst the laborer munches a root."

In 1730 Mr. Sandys introduced a Bill to disable pensioners from sitting in Parliament. George II. vigorously opposed this measure, which was defeated. In the King's private notes to Lord Townshend, Mr. Sandys' proposed act is termed a "villanous measure," which should be "torn to pieces in every particular."

It was in 1732 that the Earl of Aylesford, a Tory peer, declared that standing armies in time of peace were "against the very words of the *Petition of Rights*," and that "all the confusions and disorders which have been brought upon this kingdom for many years, have been all brought upon it by means of standing armies." In 1733 Earl Strafford affirmed that "a standing army" was "always inconsistent with the liberties of the people;" and urged that "where the people have any regard for their

liberties, they ought never to keep up a greater number of regular forces than are absolutely necessary for the security of the Government." Sir John Barnard declared that the army ought not to be used on political questions. He said: "In a free country, if a tumult happens from a just cause of complaint, the people ought to be satisfied; their grievances ought to be redressed; they ought not surely to be immediately knocked on the head because they may happen to complain in an irregular way." Mr. Pulteney urged that a standing army is "a body of men distinct from the body of the people; they are governed by different laws; blind obedience and an entire submission to the orders of their commanding officer is their only principle. The nations around us are already enslaved by those very means; by means of their standing armies they have every one lost their liberties; it is indeed impossible that the liberties of the people can be preserved in a country where a numerous standing army is kept up."

In 1735 sixteen Scottish peers were elected to sit in the House of Lords, and in a petition to Parliament it was alleged, that the whole of this list of sixteen peers was elected by bribery and corruption. The petition positively asserted "that the list of sixteen peers for Scotland had been formed by persons high in trust under the crown, previous to the election itself. The peers were solicited to vote for this list without the liberty of making any alteration, and endeavors were used to engage peers to vote for this list by promise of pensions and offices, civil and military, to themselves and their relations, and by actual promise and offers of sums of money. Several had received money, and releases of debts owing to the crown were granted to those who voted for this list. To render this transaction more infamous, a battalion of troops occupied the Abbey Court of Edinburgh, and continued there dur-

ing the whole time of the election, while there was a considerable body lying within a mile of the city ready to advance on the signal." This petition, notwithstanding the gravity of its allegations, was quietly suppressed.

Lady Sundon, Woman of the Bedchamber and Mistress of the Robes to Queen Caroline, received from Lord Pomfret jewelry of £1,400 value, for obtaining him the appointment of Master of the Horse.

With a Civil List of £800,000 a year, George II. was continually in debt, but an obedient Ministry and a corrupt Parliament never hesitated to discharge his Majesty's obligations out of the pockets of the unrepresented people. Lord Carteret, in 1733, speaking of a Bill before the House for granting the King half a million out of the Sinking Fund, said: "This Fund, my Lords, has been clandestinely defrauded of several small sums at different times, which indeed together amount to a pretty large sum; but by this Bill it is to be openly and avowedly plundered of £500,000 at once."

On the 27th of April, 1736, Prince Frederick was married to the Princess Augusta, of Saxe Gotha, whom King George II. afterwards described as "*cette diablesse Madame la Princesse.*" In August of the same year, a sharp open quarrel took place between the Prince of Wales and his parents, which, after some resumptions of pretended friendliness, ended, on September 10, 1737, in the former being ordered by the King to quit St. James's palace, where he was residing. On the 22d of the preceding February, Pulteney had moved for an allowance of £100,000 a year to Prince Frederick. George II. refused to consent, on the ground that the responsibility to provide for the Prince of Wales rested with himself, and that "it would be highly indecorous to interfere between father and son." On the Prince of Wales taking up his residence at Norfolk House,

"the King issued an order that no persons who paid their court to the Prince and Princess should be admitted to his presence." An official intimation of this was given to foreign ambassadors.

On the 20th of November, 1737, Queen Caroline died, never having spoken to her son since the quarrel. "She was," says Walpole, "implacable in hatred even to her dying moments. She absolutely refused to pardon, or even to see, her son." The death-bed scene is thus spoken of by Thackeray: "There never was such a ghastly farce;" and as sketched by Lord Hervey, it is a monstrous mixture of religion, disgusting comedy, and brutishness. "We are shocked in the very chamber of death by the intrusion of egotism, vanity, buffoonery, and inhumanity. The King is at one moment dissolved in a mawkish tenderness, at another sunk into brutal apathy. He is at one moment all tears for the loss of one who united the softness and amiability of one sex to the courage and firmness of the other; at another all fury because the object of his regrets cannot swallow, or cannot change her posture, or cannot animate the glassy fixedness of her eyes; at one moment he begins an elaborate panegyric on her virtues, then breaks off into an enumeration of his own, by which he implies that her heart has been enthralled, and her intelligence awed. He then breaks off into a stupid story about a storm, for which his daughter laughs at him, and then while he is weeping over his consort's death-bed, she advises him to marry again; and we are — what the Queen was not — startled by the strange reply, '*Non, j'aurai des maîtresses*,' with the faintly moaned out rejoinder, '*Cela, n'empêche pas.*'" So does the Edinburgh reviewer, following Lord Hervey, paint the dying scene of the Queen of our second George.

After the death of the Queen, the influence of the King's

mistresses became supreme, and Sir R. Walpole, who, in losing Queen Caroline had lost his greatest hold over George, paid court to Lady Walmoden, in order to maintain his weakened influence. In the private letters of the Pelham family, who succeeded to power soon after Walpole's fall, we find frequent mention of the Countess of Yarmouth as a power to be gained, a person to stand well with. "I read," says Thackeray, "that Lady Yarmouth (my most religious and gracious King's favorite) sold a bishopric to a clergyman for £5,000. (He betted her £5,000 that he would not be made a bishop, and he lost, and paid her.) Was he the only prelate of his time led up by such hands for consecration? As I peep into George II.'s St. James's, I see crowds of cassocks rustling up the back-stairs of the ladies of the Court; stealthy clergy slipping purses into their laps; that godless old King yawning under his canopy in his Chapel Royal, as the chaplain before him is discoursing."

On the 23d of May, 1738, George William Frederick, son of Frederick, and afterwards George III., was born.

In 1739 Lady Walmoden, who had up to this year remained in Hanover, was brought to England, and formally installed at the English Court. In this year we bound ourselves by treaty to pay 250,000 dollars per annum for three years to the Danish Government. "The secret motive of this treaty," says Mahon, "as of too many others, was not English, but Hanoverian; and regarded the possession of a petty castle and lordship called Steinhorst. This castle had been bought from Holstein by George II. as Elector of Hanover, but the Danes claiming the sovereignty, a skirmish ensued. . . . The well-timed treaty of subsidy calmed their resentment, and obtained the cession of their claim." Many urged, as in truth it was, that Steinhorst was bought with British money, and Boling-

broke expressed his fear "that we shall throw the small remainder of our wealth where we have thrown so much already, into the German Gulf, which cries Give! Give! and is never satisfied."

On the 19th of May, 1739, in accordance with the wish of the King, war was declared with Spain, nominally on the question of the right of search, but when peace was declared at Aix-la-Chapelle, this subject was never mentioned. According to Dr. Colquhoun, this war cost the country, £46,418,680.

George II. was, despite the provisions of the Act of Settlement, continually in Hanover. From 1729 to 1731, again in 1735 and 1736, and eight times between 1740 and 1755. In 1745 he wished to go, but was not allowed.

On the 2d of October, 1741 (the Pelham family having managed to acquire power by dint, as Lord Macaulay puts it, of more than suspected treason to their leader and colleague), the Duke of Newcastle, then Prime Minister, wrote his brother, Henry Pelham, as follows: "I must freely own to you, that I think the King's unjustifiable partiality for Hanover, to which he makes all other views and considerations subservient, has manifested itself so much that no man can continue in the active part of the administration with honor." The Duke goes on to describe the King's policy as "both dishonorable and fatal;" and Henry Pelham, on the 8th of October, writes him back that "a partiality to Hanover is general, is what all men of business have found great obstructions from, ever since this family have been upon the throne." Yet these are amongst the most prominent of the public defenders of the House of Brunswick, and a family which reaped great place and profit from the connection.

Of the Duke of Newcastle, Lord Macaulay says: "No man was so unmercifully satirized. But in truth he was

himself a satire ready made. All that the art of the satirist does for other men, nature had done for him. Whatever was absurd about him stood out with grotesque prominence from the rest of the character. He was a living, moving, talking caricature. His gait was a shuffling trot, his utterance a rapid stutter; he was always in a hurry; he was never in time; he abounded in fulsome caresses and in hysterical tears. His oratory resembled that of Justice Shallow. It was nonsense, effervescent with animal spirits and impertinence. Of his ignorance many anecdotes remain, some well authenticated, some probably invented at coffee-houses, but all exquisitely characteristic. 'Oh, yes, yes, to be sure! Annapolis must be defended; troops must be sent to Annapolis. Pray, where is Annapolis?' 'Cape Breton an island! Wonderful! show it me in the map. So it is, sure enough. My dear sir, you always bring us good news. I must go and tell the King that Cape Breton is an island.' And this man was, during near thirty years, Secretary of State, and during near ten years First Lord of the Treasury! His large fortune, his strong hereditary connection, his great Parliamentary interest, will not alone explain this extraordinary fact. His success is a signal instance of what may be effected by a man who devotes his whole heart and soul without reserve to one object. He was eaten up by ambition. His love of influence and authority resembled the avarice of the old usurer in the 'Fortunes of Nigel.' It was so intense a passion that it supplied the place of talents, that it inspired even fatuity with cunning. 'Have no money dealings with my father,' says Martha to Lord Glenvarloch, 'for, dotard as he is, he will make an ass of you.' It was as dangerous to have any political connection with Newcastle as to buy and sell with old Trapbois. He was greedy after power with a greediness all his own. He was jealous of all colleagues, and

even of his own brother. Under the disguise of levity, he was false beyond all example of political falsehood. All the able men of his time ridiculed him as a dunce, a driveller, a child who never knew his own mind for an hour together; and he overreached them all round."

In 1742, under the opposition of Pulteney, the Tories called upon Paxton, the Solicitor to the Treasury, and Scrope, the Secretary to the Treasury, to account for the specific sum of £1,147,211, which it was proved they had received from the minister. No account was ever furnished. George Vaughan, a confidant of Sir Robert Walpole, was examined before the Commons as to a practice charged upon that minister, of obliging the possessor of a place or office to pay a certain sum out of the profits of it to some person or persons recommended by the minister. Vaughan, who does not appear to have ventured any direct denial, managed to avoid giving a categorical reply, and to get excused from answering on the ground that he might criminate himself. Agitation was commenced for the revival of Triennial Parliaments, for the renewal of the clause of the Act of Settlement, by which pensioners and placemen were excluded from the House of Commons, and for the abolition of standing armies in time of peace. The Whigs, however, successfully crushed out the whole of this agitation. Strong language was heard in the House of Commons, where Sir James Dashwood said that "it was no wonder that the people were then unwilling to support the Government, when a weak, narrow-minded prince occupied the throne."

A very amusing squib appeared in 1742, when Sir Robert Walpole's power was giving way, partly under the bold attacks of the Tories, led by Cotton and Shippen; partly before the malcontent Whigs under the guidance of Carteret and Pulteney; partly before the rising power of the

young England party led by William Pitt; and somewhat from the jealousy, if not treachery, of his colleague, the Duke of Newcastle. The squib pictures the King's embarrassment and anger at being forced to dismiss Walpole, and to Carteret whom he has charged to form a ministry: —

"Quoth the King: 'My good lord, perhaps you've been told
That I used to abuse you a little of old,
But now bring whom you will, and eke turn away,
Let but me and my money at Walmoden stay."

Lord Carteret, explaining to the King whom he shall keep of the old ministry, includes the Duke of Newcastle: —

"Though Newcastle's false, as he's silly I know,
By betraying old Robin to me long ago,
As well as all those who employed him before,
Yet I leave him in place, but I leave him no power.

"For granting his heart is as black as his hat,
With no more truth in this than there's sense beneath that,
Yet, as he's a coward, he'll shake when I frown;
You called him a rascal, I'll use him like one.

"For your foreign affairs, howe'er they turn out,
At least I'll take care you shall make a great rout;
Then cock your great hat, strut, bounce, and look bluff,
For, though kick'd and cuff'd here, you shall there kick and cuff.

"That Walpole did nothing they all used to say,
So I'll do enough, but I'll make the dogs pay;
Great fleets I'll provide, and great armies engage,
Whate'er debts we make, or whate'er wars we wage!

"With cordials like these the monarch's new guest
Reviv'd his sunk spirits, and gladdened his breast;
Till in rapture he cried, 'My dear Lord, you shall do
Whatever you will — give me troops to review.'"

In 1743, King George II. actually tried to engage this country, by a private agreement, to pay £300,000 a year to

the Queen of Hungary, "as long as war should continue, or the necessity of her affairs should require." The King, being in Hanover, sent over the treaty to England, with a warrant directing the Lords Justices to "ratify and confirm it," which, however, they refused to do. On hearing that the Lord Chancellor refused to sanction the arrangement, King George II. threatened, through Earl Granville, to affix the Great Seal with his own hand. Ultimately the £300,000 per annum was agreed to be paid so long as the war lasted, but this sum was in more than one instance exceeded.

Although George II. had induced the country to vote such large sums to Maria Therese, the Empress-Queen, he nevertheless abandoned her in a most cowardly manner when he thought his Hanoverian dominions in danger, and actually treated with France without the knowledge or consent of his ministry. A rhyming squib, in which the King is termed the "Balancing Captain," from which we present the following extracts, will serve to show the feeling widely manifested in England at that time: —

"I'll tell you a story as strange as 'tis new,
Which all who're concerned will allow to be true,
Of a Balancing Captain, well known hereabouts,
Returned home (God save him) a mere king of clouts.

"This Captain he takes in a *gold* ballasted ship,
Each summer to *terra damnosa* a trip,
For which he begs, borrows, scrapes all he can get,
And runs his poor *owners* most vilely in debt.

"The last time he set out for this blessed place,
He met them, and told them a most piteous case,
Of a sister of his, who, though bred up at court,
Was ready to perish for want of support.

"This *Hung'ry* sister he then did pretend,
Would be to his owners a notable friend,

If they would at that critical juncture supply her;
They did — but, alas! all the fat's in the fire!"

The ballad then suggests that the King, having got all the money possible, made a peace with the enemies of the Queen of Hungary, described in the ballad as the sister: —

"He then turns his sister adrift, and declares
Her most mortal foes were her father's right heirs:
'G—d z—ds!' cries the world, 'such a step was ne'er taken!'
'Oh, oh!' says Moll Bluff, 'I have saved my own bacon.

"'Let France damn the Germans, and undamn the Dutch,
And Spain on old England pish ever so much;
Let Russia bang Sweden, or Sweden bang that,
I care not, by *Robert, one kick of my hat!*

"'Or should my chous'd owners begin to look sour,
I'll trust to *mate Bob* to exert his old power,
Regit animos dictis, or *numis* with ease
So, spite of your growling, I'll act as I please!'"

The British Nation, described as the owners, are cautioned to look into the accounts of their Captain, who is bringing them to insolvency: —

"This secret, however, must out on the day
When he meets his poor owners to ask for his pay;
And I fear, when they come to adjust the account,
A zero for balance will prove their amount."

The final result of all these subsidy votes was to increase our national debt, up to the signing of the treaty of Aix-la-Chapelle, to £76,000,000; while the seven years' war, which came later, brought the debt to £133,000,000, not including in this the capitalized value of the terminable annuities.

On November 22d, 1743, a caricature was published, which had a wide sale, and which represented the King as

a fat Hanoverian white horse riding to death a nearly starved British lion.

In 1744, £200,000 was voted, which King George and Lord Carteret, who was called by William Pitt, his "Hanoverian troop minister," had agreed to give the King of Sardinia. £40,000 was also voted for a payment made by the King to the Duke of Arenberg. This payment was denounced by Mr. Lyttelton as a dangerous misapplication of public money.

The votes for foreign subsidies alone, in 1744, were £691,426, while the Hanoverian soldiers cost us £393,773. The King actually tried in addition, in the month of August, to get a further subsidy for his friend, the Elector of Saxony, and another for the King of Poland, and this when Englishmen and Irishmen were lacking bread. Nor was even a pretence made in some instances of earning the money. £150,000 was paid this year to keep Prince Charles in Alsace, and the moment Austria got the money, Prince Charles was withdrawn, and Henry Pelham, writing to the Duke of Newcastle, says, "The same will be the case with every sum of money we advance. The allies will take it, and then act as suits their convenience and security." In the four years from 1744 to 1747, both included, we paid £4,342,683 for foreign troops and subsidies, not including the Dutch and Hessians, whom we hired to put down the rebellion of 1745. In the case of the whole of this war, in which we subsidized all our allies except the Dutch, it is clear that the direct and sole blame rests upon the King, who cared nothing for English interests in the matter. When firmly remonstrated with by Lord Chancellor Hardwicke, his reply was what the Duke of Newcastle describes as "almost sullen silence."

For the rebellion of 1745 — which came so near being successful, and which would have thoroughly succeeded had

the Pretender's son possessed any sort of ability as a leader — there is little room to spare here. The attempt to suppress it in its early stages is thus described in a Jacobite ballad: —

"Horse, foot, and dragoons, from lost Flanders they call,
With Hessians and Danes, and the devil and all;
And hunters and rangers led by Oglethorpe;
And the Church, at the bum of the Bishop of York.
And pray, who so fit to lead forth this parade,
As the babe of Tangier, my old grandmother Wade?
Whose cunning's so quick, but whose motion's so slow,
That the rebels marched on, while he stuck in the snow."

The hideously disgusting cruelties and horrible excesses committed by the infamous Duke of Cumberland, and the Hessians and Hanoverians under his command, in suppressing the rebellion after the battle of Culloden, are, alas! too well known. Duncan Forbes, Lord President of the Court of Session, and a warm supporter of the Brunswicks, remonstrating with the Duke as to the latter's disregard of the laws of the country, his Royal Highness of Cumberland replied with an oath: "The laws of my country, my lord; I'll make a brigade give laws." Scotland has many reasons for loving the House of Brunswick. Lord Waldegrave, who strove hard to whitewash the Duke of Cumberland, says that "Frederick Prince of Wales gave too much credit to the most malignant and groundless accusations, by showing favor to every man who aspersed his brother's character."

In 1747, £456,733 was voted by Parliament for the payment of the King's debts.

In 1748, considerable difficulty arose in consequence of the King's intrigues to obtain, at the expense of England, the Bishopric of Osnaburg as a princely establishment for his favorite son, the Duke of Cumberland, that pious prince,

much esteemed in Scotland as "the butcher." The most open hostility subsisted between the Duke of Cumberland and Prince Frederick, and pamphleteering attacks on the former, for his brutality and excesses, were supposed to be encouraged by the Leicester House party.

Amongst the curious scandals of 1749, it is stated that the King — being present at a masked ball, at which Elizabeth Chudleigh, afterwards Duchess of Kingston, figured as "La Belle Sauvage" in a close-fitting dress of flesh-colored silk, requested permission to place his hand on Miss Chudleigh's breast. The latter replied that she would put the King's hand on a still softer place, and immediately raised it to his own royal forehead.

On the 20th March, 1751, Frederick, Prince of Wales, died. The King, who received the news while playing cards with his mistress, Lady Yarmouth, and who had not spoken to his son for years, merely said, "Freddy is dead." On this subject Thackeray preserves for us the following epitaph: —

"Here lies Fred,
Who was alive, and is dead.
Had it been his father,
I had much rather.
Had it been his brother,
Still better than another.
Had it been his sister,
No one would have missed her.
Had it been the whole generation,
Still better for the nation.
But since 'tis only Fred,
Who was alive, and is dead,
There's no more to be said."

In 1755 there was the second war, estimated to have cost £111,271,996. In this George II. pursued exactly the opposite course of policy to that taken by him in the pre-

vious one. The war during the years following 1739 was for the humiliation of the King of Prussia; the policy in the last war was to prevent his humiliation. Mr. Baxter estimates the debt (exclusive of annuities) at £133,000,000; Dr. Colquhoun, adding the value of the annuities, makes it £146,682,843 at the conclusion of this war.

Towards the close of the reign of George II., who died on October 25th, 1760, his Royal Highness the Duke of Cumberland, by an exhibition of great strategy, combined with much discretionary valor, succeeded in making peace on terms which ensured the repose of himself and his Hanoverian forces during the remainder of the war. At home his Royal Highness was much attacked, some venturing to describe his personal conduct as cowardly, and his generalship as contemptible. It is a sufficient refutation of such a calumny to say that the Duke of Cumberland was as brave a soldier and as able a general as our present Commander-in-Chief, his Royal Highness the Duke of Cambridge.

Lord Waldegrave, who wrote in favor of George II., admits that the King "is accused by his ministers of being hasty and passionate when any measure is proposed which he does not approve of." That "too great attention to money seems to be his capital failing." And that "his political courage seems somewhat problematical." Phillimore says: "In public life he was altogether indifferent to the welfare of England, except as it affected his Electorate's or his own. Always purchasing concubines, he was always governed by his wife. In private life he was a gross lover, an unreasonable master, a coarsely unfaithful husband, an unnatural parent, and a selfish man."

No more fitting conclusion can be found to this chapter than the following pregnant words from the pen of Lord Macaulay: "At the close of the reign of George II. the

feeling of aversion with which the House of Brunswick had long been regarded by half the nation had died away; but no feeling of affection to that house had yet sprung up. There was little, indeed, in the old King's character to inspire esteem or tenderness. He was not our countryman. He never set foot on our soil till he was more than thirty years old. His speech bewrayed his foreign origin and breeding. His love for his native land, though the most amiable part of his character, was not likely to endear him to his British subjects. He was never so happy as when he could exchange St. James's for Heranhausen. Year after year our fleets were employed to convoy him to the Continent, and the interests of his kingdom were as nothing to him when compared with the interests of his Electorate. As to the rest, he had neither the qualities which make dulness respectable, nor the qualities which make libertinism attractive. He had been a bad son and a worse father, an unfaithful husband and an ungraceful lover. Not one magnanimous or humane action is recorded of him; but many instances of meanness, and of a harshness which, but for the strong constitutional restraints under which he was placed, might have made the misery of his people."

CHAPTER IV.

THE REIGN OF GEORGE III.

When George II. died, his grandson and successor, George III., was twenty-two years of age. The Civil List of the new King was fixed at £800,000 a year, "a provision," says Phillimore, in his "History of England," "that soon became inadequate to the clandestine purposes of George III., and for the purchase of the mercenary depend-

ents, on the support of whom his unconstitutional proceedings obliged him to depend." The Civil List of George III. was not, however, really so large as that of her present Majesty. The Civil List disbursements included such items as Secret Service, now charged separately; pensions and annuities, now charged separately; diplomatic salaries, now forming distinct items; fees and salaries of ministers and judges, now forming no part of the charge against the Civil List. So that though £924,041 was the Civil List of George III. four years after he ascended the throne, in truth to-day the Royal Family alone get much more than all the great offices and machinery of State then cost. The Royal Family at the present time get from the country, avowedly and secretly, about one million sterling a year.

"At the accession of George III.," says Thackeray, "the Patricians were yet at the height of their good fortune. Society recognized their superiority, which they themselves pretty calmly took for granted. They inherited not only titles and estates, and seats in the House of Peers, but seats in the House of Commons. There were a multitude of Government places, and not merely these, but bribes of actual £500 notes, which members of the House took not much shame in assuming. Fox went into Parliament at twenty, Pitt was just of age, his father not much older. It was the good time for Patricians."

A change of political parties was imminent; Whig rule had lasted seventy years, and England had become tolerably disgusted with the consequences.

"Now that George II. was dead," says Macaulay, "a courtier might venture to ask why England was to become a party in a dispute between two German powers. What was it to her whether the House of Hapsburg or the House of Brandenburg ruled in Silesia? Why were the best English regiments fighting on the Maine? Why were the

Prussian battalions paid with English gold? The great minister seemed to think it beneath him to calculate the price of victory. As long as the Tower guns were fired, as the streets were illuminated, as French banners were carried in triumph through London, it was to him matter of indifference to what extent the public burdens were augmented. Nay, he seemed to glory in the magnitude of those sacrifices which the people, fascinated by his eloquence and success, had too readily made, and would long and bitterly regret. There was no check on waste or embezzlement. Our commissaries returned from the camp of Prince Ferdinand, to buy boroughs, to rear palaces, to rival the magnificence of the old aristocracy of the realm. Already had we borrowed, in four years of war, more than the most skilful and economical government would pay in forty years of peace."

The Church allied itself with the Tories, who assumed the reins of government, and thenceforth totally forgot the views of liberty they had maintained when in opposition. The policy of all their succeeding legislation was that of mischievous retrogression; they sought to excel the old Whigs in their efforts to consolidate the aristocracy at the expense of the people,

"This reactionary movement," says Buckle, "was greatly aided by the personal character of George III.; for he, being despotic as well as superstitious, was equally anxious to extend the prerogative, and strengthen the Church. Every liberal sentiment, everything approaching to reform, nay, even the mere mention of inquiry, was an abomination in the eyes of that narrow and ignorant Prince. Without knowledge, without taste, without even a glimpse of one of the sciences, or a feeling for one of the fine arts, education had done nothing to enlarge a mind which nature had more than usually contracted. Totally ignorant of the history

and resources of foreign countries, and barely knowing their geographical position, his information was scarcely more extensive respecting the people over whom he was called to rule. In that immense mass of evidence now extant, and which consists of every description of private correspondence, records of private conversation, and of public acts, there is not to be found the slightest proof that he knew any one of those numerous things which the governor of a country ought to know; or, indeed, that he was acquainted with a single duty of his position, except the mere mechanical routine of ordinary business, which might have been effected by the lowest clerk in the meanest office in his kingdom.

"He gathered round his throne that great party, who, clinging to the tradition of the past, have always made it their boast to check the progress of their age. During the sixty years of his reign, he, with the sole exception of Pitt, never willingly admitted to his councils a single man of great ability: not one whose name is associated with any measure of value, either in domestic or foreign policy. Even Pitt only maintained his position in the State by forgetting the lessons of his illustrious father, and abandoning those liberal principles in which he had been educated, and with which he entered public life. Because George III. hated the idea of reform, Pitt not only relinquished what he had before declared to be absolutely necessary, but did not hesitate to persecute to death the party with whom he had once associated in order to obtain it. Because George III. looked upon slavery as one of those good old customs which the wisdom of his ancestors had consecrated, Pitt did not dare to use his power for procuring its abolition, but left to his successors the glory of destroying that infamous trade, on the preservation of which his royal master had set his heart. Because George III. detested the French,

of whom he knew as much as he knew of the inhabitants of Kamschatka or Thibet, Pitt, contrary to his own judgment, engaged in a war with France, by which England was seriously imperilled, and the English people burdened with a debt that their remotest posterity will be unable to pay. But, notwithstanding all this, when Pitt, only a few years before his death, showed a determination to concede to the Irish a small share of their undoubted rights, the King dismissed him from office, and the King's friends, as they were called, expressed their indignation at the presumption of a minister who could oppose the wishes of so benign and gracious a master. And when, unhappily for his own fame, this great man determined to return to power, he could only recover office by conceding that very point for which he had relinquished it; thus setting the mischievous example of the minister of a free country sacrificing his own judgment to the personal prejudices of the reigning sovereign. As it was hardly possible to find other ministers who to equal abilities would add equal subservience, it is not surprising that the highest offices were constantly filled with men of notorious incapacity. Indeed, the King seemed to have an instinctive antipathy to everything great and noble. During the reign of George II. the elder Pitt had won for himself a reputation which covered the world, and had carried to an unprecedented height the glories of the English name. He, however, as the avowed friend of popular rights, strenuously opposed the despotic principles of the Court; and for this reason he was hated by George III. with a hatred that seemed barely compatible with a sane mind. Fox was one of the greatest statesmen of the 18th century, and was better acquainted than any other with the character and resources of those foreign nations with which our interests were intimately connected. To this rare and important knowledge he added a sweet-

ness and amenity of temper which extorted the praises even of his political opponents. But he, too, was the steady supporter of civil and religious liberty; and he, too, was so detested by George III., that the King, with his own hand, struck his name out of the list of Privy Councillors, and declared that he would rather abdicate the throne than admit him to a share in the government.

"While this unfavorable change was taking place in the sovereign and ministers of the country, a change equally unfavorable was being effected in the second branch of the imperial legislature. Until the reign of George III. the House of Lords was decidedly superior to the House of Commons in the liberality and general accomplishments of its members. It is true that in both Houses there prevailed a spirit which must be called narrow and superstitious if tried by the larger standard of the present age.

"The superiority of the Upper House over the Lower was, on the whole, steadily maintained during the reign of George II., the ministers not being anxious to strengthen the High Church party in the Lords, and the King himself so rarely suggesting fresh creations as to cause a belief that he particularly disliked increasing their numbers. It was reserved for George III., by an unsparing use of his prerogative, entirely to change the character of the Upper House, and thus lay the foundation for that disrepute into which, since then, the peers have been constantly falling. The creations he made were numerous beyond all precedent, their object evidently being to neutralize the liberal spirit hitherto prevailing, and thus turn the House of Lords into an engine for resisting the popular wishes, and stopping the progress of reform. How completely this plan succeeded is well known to the readers of our history; indeed, it was sure to be successful considering the character of the men who were promoted. They consisted almost entirely of

two classes: of country gentlemen, remarkable for nothing but their wealth, and the number of votes their wealth enabled them to control; and of mere lawyers, who had risen to judicial appointments partly from their professional learning, but chiefly from the zeal with which they repressed the popular liberties, and favored the royal prerogative.

"That this is no exaggerated description may be ascertained by any one who will consult the lists of the new peers made by George III.

"Here and there we find an eminent man, whose public services were so notorious that it was impossible to avoid rewarding them; but, putting aside those who were in a manner forced upon the sovereign, it would be idle to deny that the remainder, and of course the overwhelming majority, were marked by a narrowness and illiberality of sentiment which, more than anything else, brought the whole order into contempt. No great thinkers, no great writers, no great orators, no great statesmen, none of the true nobility of the land, were to be found among the spurious nobles created by George III."

In the early part of his reign, George III. (whom even the courtly Alison pictures as having "little education and no great acquired information") was very much under the influence of his mother, who had, previously to his being King, often spoken of her son with contempt. The Princess of Wales, in turn, was almost entirely guided by Lord Bute, represented by scandal, says Macaulay, as "her favored lover." "Of this attachment," says Dr. Doran, "the Prince of Wales himself is said to have had full knowledge, and did not object to Lord Bute taking solitary walks with the Princess, while *he* could do the same with Lady Middlesex." The most infamous stories were circulated in the *Whisperer*, and other journals of the time, as to the nature of the association between the Scotch Peer

and the King's mother, and its results. Phillimore regards the Princess of Wales as "before and after her husband's death the mistress of Lord Bute." The Princess Dowager seems to have been a hard woman. Walpole tells us how, when the Princess Dowager reproved one of her maids of honor for irregular habits, the latter replied, "*Madame, chacun a son But.*" "Seeing," says Thackeray, "the young Duke of Gloucester silent and unhappy once, she sharply asked him the cause of his silence. 'I am thinking,' said the poor child. 'Thinking, sir! and of what?'—'I am thinking if ever I have a son, I will not make him so unhappy as you make me.'"

John Stuart, Earl of Bute, shared with William Pitt and John Wilkes the bulk of popular attention during the first ten years of the King's reign. Bute had risen rapidly to favor, having attracted the attention of the Princess Dowager at some private theatricals, and he became by her influence Groom of the Stole. His poverty and ambition made him grasp at power, both against the great Commoner and the Pelham faction; and a lady observer described the great question of the day, in 1760, as being whether the King would burn in his chamber *Scotch* coal, *Newcastle* coal, or *Pitt* coal. Macaulay, who seems to have followed Lord Waldegrave's "Memoirs," says of Bute: "A handsome leg was among his chief qualifications for the stage. . . . His understanding was narrow, his manners cold and haughty." His qualifications for the part of a statesman were best described by Prince Frederick, who often indulged in the unprincely luxury of sneering at his dependents. "Bute," said his Royal Highness, "you are the very man to be envoy at some small proud German Court, where there is nothing to do." Phillimore speaks of Lord Bute as "a minion raised by Court favor to a post where

his ignorance, mean understanding, and disregard of English honor, became national calamities."

The King's speech on his accession is said to have been drawn up by Bute, who did not then belong to the Council, but the terms being vehemently objected to by Pitt, it was actually altered after delivery, and before it found its way to the printer.

Whatever were the relations between Lord Bute and the Princess Dowager, it is quite certain that on more than one occasion George III. condescended not only to prevaricate, but to lie as to the influence exercised by Lord Bute. It is certain, from the "Memoirs" of Earl Waldegrave, and other trustworthy sources, that the Scotch Earl, after being hissed out of office by the people, was still secretly consulted by the King, who, like a truly Royal Brunswick, did not hesitate to use falsehood on the subject even to his own ministers. Phillimore, in remarkably strong language, describes George III. as "an ignorant, dishonest, obstinate, narrow-minded boy, at that very moment the tool of an adulteress and her paramour." The Duke of Bedford has put upon record, in his correspondence, not only his conviction that the King behaved unfaithfully to his ministers, but asserts that he told him so to his face.

In 1759, George was married to Hannah Lightfoot, a Quakeress, in Curzon Street Chapel, May Fair, in the presence of his brother, Edward, Duke of York. Great doubt has, however, been cast on the legality of this marriage, as it would, if in all respects valid, have rendered null as a bigamous contract the subsequent marriage entered into by the King. Dr. Doran says that the Prince of Wales, afterwards George IV., when needing money in later years, used this Lightfoot marriage as a threat against his royal parents — that is, that he threatened to expose his mother's shame and his own illegitimacy if the Queen

would not use her influence with Pitt. Glorious family, these Brunswicks! Walpole affirms that early in his reign George III. admitted to his uncle, the Duke of Cumberland, "that it had not been common in their family to live well together."

On the 18th of September, 1761, George was married to the Princess Charlotte Sophia, of Mecklenburgh Strelitz, Hannah Lightfoot being still alive. Of the new Queen, Phillimore says: "If to watch over the education of her children and to promote their happiness be any part of a woman's duty, she has little claim to the praises that have been so lavishly bestowed on her as a model of domestic virtue. Her religion was displayed in the scrupulous observance of external forms. Repulsive in her aspect, grovelling in her instincts, sordid in her habits; steeped from the cradle in the stupid pride which was the atmosphere of her stolid and most insignificant race; inexorably severe to those who yielded to temptation from which she was protected, not more by her situation and the vigilance of those around her, than by the extreme homeliness of her person; bigoted, avaricious, unamiable to brutality, she added dulness and gloom even to the English court."

In 1761, the Duke of Bedford was Lord Lieutenant of Ireland; that unfortunate country, for centuries governed by men who tried to exterminate its natives, and which was used under the first three reigns of the House of Brunswick as a sponge out of which, regardless of much bloodshed and more misery, gold could be squeezed for the dependents and relatives of aristocrats in office. His reign of office in Ireland was brief. Walpole says that "the ill-humor of the country determined the Duke of Bedford to quit the Government, after having amply gratified his family and dependents with pensions." It was this Duke of Bedford who consented that the Princess of Hesse should have a

pension of £6,000 a year out of the Irish revenues, and who gave to his own relative, the Lady Betty Waldegrave, £800 a year from the same source. Shortly after this, Prince Charles, of Strelitz, the Queen's brother, received £30,000 towards the payment of the debts he owed in Germany. This £30,000 was nominally given by the King out of the Civil List, but was really paid by the nation when discharging the Civil List debts which it increased. On the motion of Lord Barrington, £400,000 subsidy was granted this year to the Landgrave of Hesse, under a secret treaty made by George II., without the knowledge or consent of Parliament, and £300,000 was also voted to the Chancery of Hanover for forage for Hanoverian, Prussian, and Hessian Cavalry.

On August 12th, 1762, George, Prince of Wales, was born; and in the same year, with the direct connivance of George III., the peace of Paris was made; a peace as disgraceful to England, under the circumstances, as can possibly be imagined. Lord Bute, who was roundly charged with receiving money from France for his services, and this with the knowledge of the mother of George III., most certainly communicated to the French minister "the most secret councils of the English Cabinet." This was done with the distinct concurrence of George III., who was himself bribed by the immediate evacuation of his Hanoverian dominions. In the debate in the Lords on the preliminaries of peace, Horace Walpole tells us that "the Duke of Grafton, with great weight and greater warmth, attacked them severely, and looking full on Lord Bute, imputed to him corruption and worse arts." Count Virri, the disreputable agent employed in this matter by the King and Lord Bute, was rewarded under the false name of George Charles with a pension of £1,000 a year out of the Irish revenues. Phillimore may well declare that Lord Bute was "a minion,

raised by court favor to a post where his ignorance, mean understanding, and disregard of English honor, became national calamities." To carry the approval of this peace of Paris through the Commons, Fox, afterwards Lord Holland, was purchased with a most lucrative appointment, although only shortly before he had published a print of George, with the following lines, referring to the Princess Dowager and Lord Bute, written under the likeness: —

"Son of a ———
I could say more."

To gain a majority in the House of Commons, Walpole tells us "that a shop was publicly opened at the pay office, whither the members flocked and received the wages of their venality in bank bills even to so low a sum as £200, for their votes on the treaty. £25,000 was thus issued in one morning." Lord Chesterfield speaks of the large sums disbursed by the King "for the hire of Parliament men."

As an illustration of the unblushing corruption of the age, the following letter from Lord Saye and Sele to Mr. Grenville, then Prime Minister of England, tells its own terrible tale: —

"November 26th, 1763.

"Honored Sir: — I am very much obliged to you for that freedom of converse you this morning indulged me in, which I prize more than the lucrative advantage I then received. To show the sincerity of my words (pardon, sir, the over-niceness of my disposition), I return enclosed the bill for £300 you favored me with, as good manners would not permit my refusal of it when tendered by you.

"Your most obliged and obedient servant,

"Saye and Sele.

"As a free horse needs no spur, so I stand in need of no

inducement or douceur to lend my small assistance to the King or his friends in the present Administration."

That this was part of the general practice of the Government under George III. may be seen by the following extract from an infamous letter written about fifteen years later by the Lord Lieutenant of Ireland: "No man can see the inconvenience of increasing the Peers more forcibly than myself, but the recommendation of many of those persons submitted to his Majesty for that honor, arose from the engagements taken up at the press of the moment to rescue questions upon which the English Government were very particularly anxious. My sentiments cannot but be the same with reference to the Privy Council and pensions, and I had not contracted any absolute engagements of recommendations either to peerage or pension, till difficulties arose which necessarily occasioned so much anxiety in his Majesty's Cabinet, that I must have been culpable in neglecting any possible means to secure a majority in the House of Commons."

A good story is told of the great Commoner Pitt's repartee to Fox (afterwards Lord Holland), in one of the debates of this period. "Pitt," says the *London Chronicle*, "in the heat of his declamation, proceeded so far as to attack the personal deformity of Fox; and represented his gloomy and lowering countenance, with the penthouse of his eyebrows, as Churchill phrases it, as a true introduction of his dark and double mind. Mr. Fox was nettled at this personal reflection, and the more so, perhaps, that it was as just as it was cutting. He therefore got up, and after inveighing bitterly against the indecency of his antagonist, in descending to remark on his bodily defects, observed that his figure was such as God Almighty had made it, and he could not look otherwise; and then, in a tone between

the plaintive and indignant, cried out, 'How, gentlemen, shall I *look?*' Most of the members, apprehending that Mr. Pitt had gone rather too far, were inclined to think that Mr. Fox had got the better of him. But Mr. Pitt started up, and with one of those happy turns, in which he so much excels, silenced his rival, and made him sit down with a countenance, if possible more abashed than formerly. '*Look!* Sir,' said he — '*look* as you *cannot* look, if you *would* — *look* as you *dare* not look, if you *could* — *look* like an *honest man.*'"

In the *London Chronicle* for March, 1763, we find bitter complaints that since 1760, "every obsolete, useless place has been revived, and every occasion of increasing salaries seized with eagerness," and that a great Whig leader "has just condescended to stipulate for an additional salary, without power, as the price of his support to the Tory Government."

In March, 1763, George III. gave four ships of war to the King of Sardinia at the national expense, and in August appears to have given a fifth vessel.

On the 23d of April, 1763, No. 45 of the *North Briton*, a journal which had been started in opposition to Lord Bute's paper, the *Briton*, was published, severely criticising the King's speech, and warmly attacking Lord Bute. This issue provoked the ministers to a course of the utmost illegality. A *general warrant* to seize all persons concerned in the publication of the *North Briton*, without specifying their names, was immediately issued by the Secretary of State, and a number of printers and publishers were placed in custody, some of whom were not at all concerned in the obnoxious publication. Late on the night of the 29th of April, the messengers entered the house of John Wilkes, M.P. for Aylesbury (the author of the article in question), and produced their warrant, with which he refused to com-

ply. On the following morning, however, he was carried before the Secretary of State, and committed a close prisoner to the Tower, his papers being previously seized and sealed, and all access to his person strictly prohibited. The warrant was clearly an illegal one, and had only been previously resorted to in one or two instances, and under very extraordinary circumstances, of which there were none in the present case. Wilkes's friends immediately obtained a writ of habeas corpus, which the ministers defeated by a mean subterfuge; and it was found necessary to obtain a second before they could bring the prisoner before the Court of King's Bench, by which he was set at liberty, on the ground of his privilege as a Member of Parliament. He then opened an angry correspondence, followed by actions at law, against the Secretaries of State, on the seizure of his papers, and for the wrongful arrest. These actions abated, although in the one for the seizure of the papers a verdict was given for £1,000 damages and costs. But in the mean time the Attorney-General had been directed to institute a prosecution against Wilkes, in the King's Bench, for libel, and the King had ordered him to be deprived of his commission as Colonel in the Buckinghamshire Militia. The King further exhibited his resentment by depriving Lord Temple of the Lord-Lieutenancy of the same county, and striking his name out of the Council-book, for an expression of personal sympathy which had fallen from him. Worse than all, this King George III. actually deprived General A'Court, M.P. for Heytesbury, of his commission as colonel of the 11th Dragoons, for having voted that the arrest of Wilkes was a breach of privilege. He also caused it to be intimated to General Conway, "that the King cannot trust his army in the hands of a man who votes in Parliament against him."

The House of Commons ordered the *North Briton* to be

burned by the common hangman; but when the authorities attempted to carry out the sentence, the people assembled, rescued the number, and burned instead a large jack-boot, the popular hieroglyphic for the unpopular minister.

Amongst the many rhymed squibs the following is worth repetition: —

> "Because the *North Briton* inflamed the whole nation,
> To flames they commit it to show detestation;
> But throughout old England how joy would have spread,
> Had the real North Briton been burnt in its stead!"

The North Briton of the last line is, of course, the Scotch Earl Bute.

As an illustration of the then disgraceful state of the English law, it is enougth to notice that Lord Halifax, the Secretary of State, by availing himself of his privileges as a peer, managed to delay John Wilkes in his action from June, 1763, to November, 1764; and then, Wilkes having been outlawed, the noble Earl appeared and pleaded the outlawry as a bar to further proceedings. Ultimately, after five years' delay, Wilkes annulled the outlawry, and recovered £4,000 damages against Lord Halifax. For a few months Wilkes was the popular idol, and, had he been a man of real earnestness and integrity, might have taken a permanently leading position in the State.

In August, 1763, Frederick, Duke of York, was born. He was created Prince Bishop of Osnaburg before he could speak. The King and Queen were much dissatisfied because the clergy of the diocese, who did not dispute the baby bishop's ability to attend to the souls of his flock, yet refused to entrust to him the irresponsible guardianship of the episcopal funds. This bishopric had actually been kept vacant by the King nearly three years, in order that he

might not give it to the Duke of York or Duke of Cumberland. The income was about £25,000 a year, and it was to secure this Prince Bishopric for the Duke of Cumberland that George II. burdened the country with several subsidies to petty European sovereigns.

The King's sister, Augusta, was, like the rest of the Brunswick family, on extremely bad terms with her mother, the Princess of Wales. The Princess Augusta was married on January 16th, 1764, to the hereditary Prince of Brunswick, who received £80,000, besides £8,000 a year for becoming the husband of one of our Royal Family. In addition to this, George III. and Queen Charlotte insulted the newly-married couple, who returned the insult with interest. Pleasant people, these Brunswicks!

In March, 1764, the first steps were taken in the endeavor to impose taxes on the American colonies, an endeavor which at length resulted in their famous rebellion. The commanders of our ships of war on the American coast were sworn in to act as revenue officers, the consequence of which was the frequently illegal seizures of ships and cargoes without any means of redress for the Americans in their own colony. As though to add to the rising disaffection, Mr. Grenville proposed a new stamp-tax. As soon as the Stamp Act reached Boston, the ships in the harbor hung their colors half-mast high, the bells were rung muffled, the Act of Parliament was reprinted with a death's head for title, and sold in the streets as the "Folly of England and Ruin of America." The Americans refused to use stamped paper. The Government distributors of stamps were either forced to return to England, or were obliged to renounce publicly and upon oath their official employment; and, when the matter was again brought before the English House of Commons, Pitt denied the right of Parliament to levy taxation on persons who had no right

to representation, and exclaimed: "I rejoice that America has resisted; three millions of people so dead to all feelings of liberty as voluntarily to submit to be slaves, would have been fit instruments to make slaves of all the rest." The supporters of the Government actually advanced the ridiculously absurd and most monstrous pretension that America was in law represented in Parliament as part of the manor of East Greenwich.

The Earl of Abercorn and Lord Harcourt appear to have been consulted by the Queen as to the effect of the previous marriage of George III. with Hannah Lightfoot, who seems to have been got rid of by some arrangement for a second marriage between her and a Mr. Axford, to whom a sum of money was paid. It is alleged that this was done without the knowledge of the King, who entreated Lord Chatham to discover where the Quakeress had gone. No fresh communication, however, took place between George III. and Hannah Lightfoot; and the King's first attack of insanity, which took place in 1764, is strongly suggested to have followed the more than doubts as to the legality of the second marriage and the legitimacy of the Royal Family. Hannah Lightfoot died in the winter of 1764, and in the early part of the year 1765, the King being then scarcely sane, a second ceremony of marriage with the Queen was privately performed by the Rev. Dr. Wilmot at Kew palace. Hannah Lightfoot left children by George III., but of these nothing is known.

In the winter of 1764, and spring of 1765, George III. was, in diplomatic language, laboring under an indisposition; in truth, he was mad. Her present Gracious Majesty often labors under an indisposition, but no loyal subject would suggest any sort of doubt as to her mental condition. A Bill was introduced in 1764 in the House of Lords, to provide for a Regency in case of the recurrence of any

similar attack. In the discussion on this Bill, a doubt arose as to who were to be regarded as the Royal Family; fortunately, the Law Lords limited it to the descendants of George II. If a similar definition prevailed to-day, we should, perhaps, not be obliged to pay the pensions to the Duke of Cambridge and Princess Mary, which they at present receive as members of the Royal Family.

On the 30th of October, 1765, William, Duke of Cumberland, the King's uncle, died. Dr. Doran says of him: "As he grew in manhood, his heart became hardened; he had no affection for his family, nor fondness for the army, for which he affected attachment. When his brother (Prince Frederick) died, pleasure, not pain, made his heart throb, as he sarcastically exclaimed, 'It's a great blow to the country, but I hope it will recover in time.' He was the author of what was called 'the bloody mutiny act.' 'He was dissolute and a gambler.' After the 'disgraceful surrender of Hanover and the infamous convention of Kloster-seven,' his father George II. said of him, 'Behold the son who has ruined me, and disgraced himself.'" His own nephew, George III., believed the Duke to be capable of murder. The Dukes of Cumberland in this Brunswick family have had a most unfortunate reputation.

In 1766, William Henry, Duke of Gloucester, brother of the King, married Maria, Countess-Dowager of Waldegrave. This marriage was at the time repudiated by the rest of the Royal Family.

In October of the same year Caroline Matilda, the King's sister, married Christian, King of Denmark, an unfeeling, dissolute brute. Our Princess, who lived very unhappily, was afterwards accused of adultery, and rescued from punishment by a British man-of-war.

In the autumn of 1766, in consequence of the high price of provisions and taxes, large gatherings took place in

many parts of the kingdom; these assemblages were dispersed with considerable loss of life, of course by the military, which the House of Brunswick was not slow to use in checking political manifestations. At Derby the people were charged by the cavalvy, at Colton eight were shot dead, in Gloucestershire many lives were lost; in fact, from Exeter to Berwick-on-Tweed there was one ferment of discontent and disaffection. The people were heavily taxed, the aristocracy corrupt and careless. As an instance of the madness of the governing classes, it is sufficient to point out that in 1767, while taxation was increasing, the landed gentry, who were rapidly appropriating common lands under Private Enclosure Acts, most audaciously reduced the land tax by one-fourth. During the first thirty-seven years of the reign of George III., there were no less than 1,532 Enclosure Acts passed, affecting in all 2,804,197 acres of land filched from the nation by a few families. Wealth took and poverty lost; riches got land without burden, and labor inherited burden in lieu of land. It is worth notice that in the early part of the reign of George III., land yielding about a sixth or seventh of its present rental, paid the same nominal tax that it does to-day, the actual amount paid at the present time being however smaller through redemption; and yet then the annual interest on the National Debt was under £4,500,000, while to-day it is over £26,000,000. Then the King's Civil List covered all the expenses of our State ministers and diplomatic representatives; to-day, an enormous additional sum is required, and a Prime Minister professing economy, and well versed in history, has actually the audacity to pretend that the country gains by its present Civil List arrangement.

In 1769 George III. announced to his faithful Commons he owed half a million. John Wilkes and a few others protested, but the money was voted.

In 1770 King George III. succeeded in making several buttons at Kew, and as this is, as far as I am aware, the most useful work of his life, I desire to give it full prominence. His son, afterwards George IV., made a shoebuckle. No other useful product has resulted directly from the efforts of any male of the family.

In 1770 Henry, Duke of Cumberland, the King's brother, was sued by Lord Grosvenor for crim. con., and had to pay £10,000 damages. This same Henry, in the following year, went through the form of marriage with a Mrs. Horton, which marriage, being repudiated by the Court, troubled him but little, and in the lifetime of the lady contracted a second alliance, which gave rise to the famous Olivia Serres legitimacy issue.

The Royal Marriage Act, a most infamous measure for ensuring the perpetuation of vice, and said to be the result of the Lightfoot experience, was introduced to Parliament by a message from George III., on the 20th February, 1772, twelve days after the death of the Princess-Dowager, of Wales. George III. wrote to Lord North on the 26th February: "I expect every nerve to be strained to carry the Bill. It is not a question relating to the Administration, but personally to myself, therefore I have a right to expect a hearty support from every one in my service, and I shall remember defaulters."

In May, 1773, the East India Company, having to come before Parliament for borrowing powers, a select committee was appointed, whose inquiries laid open cases of rapacity and treachery involving the highest personages, and a resolution was carried in the House of Commons affirming that Lord Clive had dishonorably possessed himself of £234,000 at the time of the deposition of Surajah Dowlah, and the establishment of Meer Jaffier. Besides this, it was proved that Lord Clive received several other large sums in suc-

ceeding years. Phillimore describes this transaction, in terrific language, as one of "disgusting and sordid turpitude," declaring that "individual members of the English Government were to be paid for their treachery by a hire, the amount of which is almost incredible." A few years after this exposure, Lord Clive committed suicide.

On the 18th of December, 1773, the celebrated cargoes of tea were thrown over in Boston Harbor. The tea duty was a trifling one, but was unfortunately insisted upon by the King's Government as an assertion of the right of the British Parliament to tax the unrepresented American colonies, a right the colonists strenuously and successfully denied.

The news of the firm attitude of the Bay State colonists arrived in England early in March, 1774, and Lord North's Government, urged by the King, first deprived Boston of her privileges as a port; secondly, took away from the State of Massachusetts the whole of the executive powers granted by the charter of William III., and vested the nomination of magistrates of every kind in the King, or royally-appointed Governor; and thirdly, carried an enactment authorizing persons accused of political offences committed in Boston to be sent home to England to be tried.

These monstrous statutes provoked the most decided resistance; all the other American colonists joined with Boston, and a solemn league and covenant was entered into for suspending all commercial incercourse with Great Britain until the obnoxious acts were repealed. On the 5th of Sept., 1774, a congress of fifty-one representatives from twelve old colonies assembled in Philadelphia. The instructions given to them disclaimed every idea of independence, recognized the constitutional authority of the mother country, and acknowledged the prerogatives of the crown; but unanimously declared that they would never give up the rights and liberties derived to them from their ancestors as

British subjects, and pronounced the late acts relative to the colony of Massachusetts Bay to be unconstitutional, oppressive and dangerous. The first public act of the congress was a resolution declarative of their favorable disposition towards the colony above mentioned; and, by subsequent resolutions, they formally approved the opposition it had given to the obnoxious acts, and declared that, if an attempt were made to carry them into execution by force, the colony should be supported by all America.

The following extract is from the "Address of the Twelve United Provinces to the Inhabitants of Great Britain," when force was actually used: — "We can retire beyond the reach of your navy, and, without any sensible diminution of the necessaries of life, enjoy a luxury, which from that period you will want — *the luxury of being free.*"

On the 16th of November, 1775, Edmund Burke proposed the renunciation on the part of Great Britain of the exercise of taxation in America, the repeal of the obnoxious duty on tea, and a general pardon for past political offenders. This was directly opposed by the King, who had lists brought to him of how the members spoke and voted, and was negatived in the House of Commons by 210 votes against 105. On the 20th November, after consultation with George III., Lord North introduced a Bill by which all trade and commerce with the thirteen United colonies were interdicted. It authorized the seizure, whether in harbor or on the high seas, of all vessels laden with American property, and by a cruel stretch of refined tyranny it rendered all persons taken on board American vessels liable to be entered as sailors on board British ships of war, and to serve (if required) against their own countrymen. About the same time, as we learn by a "secret" dispatch from Lord Dartmouth to General Howe, the King had been unmanly enough to apply to the Czarina of Rus-

sia for the loan of 20,000 Russian soldiers to enable him to crush his English subjects in the American colonies. As yet the Americans had made no claim for independence. They were only petitioners for justice.

In order to crush out the spirit of liberty in the American colonies, the Government of George III., in February, 1776, hired 17,000 men from the Landgrave and Hereditary Prince of Hesse Cassel, and from the Duke of Brunswick. Besides these, there were levies of troops out of George III.'s Hanoverian dominions, and that nothing might be wanting to our glory, the King's agents stirred up the Cherokee and Creek Indians to scalp, ravish, and plunder the disaffected colonists. Jesse says: "The newly arrived troops comprised several thousand kidnapped German soldiers, whom the cupidity of the Duke of Brunswick, of the Landgrave of Hesse Cassel, and other German Princes, had induced to let out for hire to the British Government. . . . Frederick of Prussia not only denounced the traffic as a most scandalous one, but wherever, it is said, the unfortunate hirelings had occasion to march through any part of his dominions, used to levy a toll upon them, as if they had been so many head of bullocks. . . . They had been sold, he said, as cattle, and therefore he was entitled to exact the toll."

The consequence of all this was, on the 4th of July, 1776, the famous declaration of the American Congress. "The history of the reigning sovereign, they said, was a history of repeated injuries and usurpations. So evidently was it his intention to establish an absolute despotism, that it had become their duty, as well as their right, to secure themselves against further aggressions. . . . In every stage of these oppressions," proceeds the Declaration, "we have petitioned for redress in the most humble terms. Our petitions have been answered only by repeated injuries.

A Prince, whose character is thus marked by every act which may define a tyrant, is unfit to be the ruler of a free people." And the United Colonies solemnly declare themselves to be "free and independent States."

In 1777, during this American war, Earl Chatham, in one of his grand speeches, after denouncing "the traffic and barter driven with every little pitiful German Prince that sells his subjects to the shambles of a foreign country," adds: "The mercenary aid on which you rely, irritates to an incurable resentment the minds of your enemies, whom you overrun with the sordid sons of rapine and of plunder, devoting them and their possessions to the rapacity of hireling cruelty! If I were an American, as I am an Englishman, while a foreign troop was landed in my country, I never would lay down my arms, never! never! never!" In reply to Lord Suffolk, who had said, in reference to employing the Indians, that "we were justified in using all the means which God and nature had put into our hands," "I am astonished," exclaimed Lord Chatham, as he rose, "shocked, to hear such principles confessed, to hear them avowed in this House, or in this country; principles equally unconstitutional, inhuman, and un-Christian. *That God and Nature put into our hands!* I know not what idea that Lord may entertain of God and Nature, but I know that such abominable principles are equally abhorrent to religion and humanity. What! attribute the sacred sanction of God and nature to the massacres of the Indian scalping-knife, to the cannibal savage, torturing, murdering, roasting, and eating; literally, my Lords, eating the mangled victims of his barbarous battles!"

And yet even after this we find George III. writing to Lord North, on the 22d of June, 1779: "I do not yet despair that, with Clinton's activity, and the Indians in their rear, the provinces will soon now submit."

Actually so late as the 27th of November, 1781, after the surrender of Cornwallis, we find George III. saying that "retaining a firm confidence in the wisdom and protection of Divine Providence," he should be able "by the valor of his fleets and armies to conquer America." Fox, in the House of Commons, denounced this speech of the King's as one "breathing vengeance, blood, misery, and rancor;" and "as containing the sentiments of some arbitrary, despotic, hard-hearted, and unfeeling monarch, who, having involved his subjects in a ruinous and unnatural war, to glut his feelings of revenge, was determined to persevere in it in spite of calamity." "Divest the speech," said he, "of its official forms, and what was its purport? 'Our losses in America have been most calamitous; the blood of my subjects has flowed in copious streams; the treasures of Great Britain have been wantonly lavished; the load of taxes imposed on an over-burthened country is become intolerable; my rage for conquest is unquenched; my revenge unsated; nor can anything except the total subjugation of my American subjects allay my animosity.'"

The following table shows what this disastrous war ultimately cost this country in mere money; no table can efficiently show its cost in blood and misery: —

Year.	Taxation.	Loans.
1775	£10,138,061	—
1776	10,265,405	£2,000,000
1777	10,604,013	5,500,000
1778	10,732,405	6,000,000
1779	11,192,141	7,000,000
1780	12,255,214	12,000,000
1781	12,454,936	12,000,000
1782	12,593,297	13,500,000
1783	11,962,718	12,000,000
1784	12,905,519	12,879,341
1785	14,871,520	10,990,651
Total	£129,975,229	£93,869,992

The American war terminated in 1783; but as the loans of the two following years were raised to wind up the expenses of that struggle, it is proper they should be included. The total expense of the American war will stand thus: —

Taxes	£129,975,229
Loans	93,869,992
Advances by the Bank of England	110,000
Advances by the East India Company	3,200,000
Increase in the Unfunded Debt	5,170,273
Total	232,325,494
Deduct expense of a peace establishment for eleven years, as it stood in 1774	113,142,403
Net cost of the American war	£119,183,091

In addition to this must be noted £1,340,000 voted as compensation to American loyalists in 1788, and £4,000 a year pension since, and even now, paid to the descendants of William Penn, amounting, with compound interest, to an enormous additional sum, even to the present date, without reckoning future liability. And this glorious colony parted from us in blood and shame, in consequence of a vain attempt to gratify the desire of the House of Brunswick to make New England contribute to their German greed as freely and as servilely as Old England had done.

Encouraged by the willingness with which his former debts had been discharged, George III., in 1777, sent a second message, but this time for the larger sum of £600,000, which was not only paid, but an additional allowance of £100,000 a year was voted to his Majesty, and £40,000 was given to the Landgrave of Hesse.

As an illustration of the barbarity of our laws, it is enough to say that, in 1777, Sarah Parker was burnt for counterfeiting silver coin. In June, 1786, Phœbe Harris was burnt for the same offence. And this in a reign when

persons in high position, accused of murder, forgery, perjury, and robbery, escaped almost scot free.

In April, 1778, £60,000 a year was settled on the six younger princes, and £30,000 a year on the five princesses. These pensions, however, were professedly paid out of the King's Civil List, not avowedly in addition to it, as they are to-day. The Duke of Buckingham stated that in 1778, and again in 1782, the King threatened to abdicate. This threat, which, unfortunately, was never carried out, arose from the King's obstinate persistence in the worse than insane policy against the American colonies.

In December, 1779, in consequence of England needing Irish soldiers to make war on America, Ireland was graciously permitted to export Irish woollen manufactures. The indulgences, however, to Ireland — even while the Ministers of George III. were trying to enlist Irishmen to kill the English, Scotch, and Irish in America — were made most grudgingly. Pious Protestant George III. would not consent that any Irish Catholic should own one foot of freehold land; and Edmund Burke, in a letter to an Irish peer, says that it was "pride, arrogance, and a spirit of domination" which kept up "these unjust legal disabilities."

On the 8th February, 1780, Sir G. Savile presented the famous Yorkshire petition, signed by 8,000 freeholders, praying the House of Commons to inquire into the management and expenditure of public money, to reduce all exorbitant emoluments, and to abolish all sinecure places and unmerited pensions. Three days later, Edmund Burke proposed a reduction of the national taxation (which was then only a sixth part of its amount to-day), and a diminution of the power of the Crown. Burke was defeated, but shortly after, on the motion of Mr. Dunning, the House of Commons declared, by a majority of 18 against the

Government, "That the influence of the Crown has increased, is increasing, and ought to be diminished."

On the 20th March, 1782, Lord North, in consequence of the impossibility of subduing the American colonies, determined to resign. The King opposed this to the last, declaring that no difficulties should induce him to consent to a peace acknowledging the Independence of America. "So distressing," says Jesse, "was the conflict which prevailed in the mind of George III., that he not only contemplated abandoning the Crown of England for the Electorate of Hanover, but orders had actually been issued to have the royal yacht in readiness for his flight." What a blessing to the country if he had really persevered in his resolution!

Charles James Fox, who now came into power for a brief space, had, says Jesse, "taught himself to look upon his sovereign as a mere dull, obstinate, half-crazed, and narrow-minded bigot; a Prince whose shallow understanding had never been improved by education, whose prejudices it was impossible to remove, and whose resentments it would be idle to endeavor to soften."

In 1784, George, Prince of Wales, was over head and ears in debt, and the King, who appears to have hated him, refusing any aid, he resorted to threats. Dr. Doran says: "A conversation is spoken of as having passed between the Queen and the Minister, in which he is reported as having said, 'I much fear, your Majesty, that the Prince, in his wild moments, may allow expressions to escape him that may be injurious to the Crown.' — 'There is little fear of that,' was the alleged reply of the Queen; 'he is too well aware of the consequences of such a course of conduct to himself. As regards that point, therefore, I can rely upon him.'"

Jesse says of the Prince of Wales, that between eighteen

and twenty, "to be carried home drunk, or to be taken into custody by the watch, were apparently no unfrequent episodes in the career of the Heir to the Throne. Under the auspices of his weak and frivolous uncle, the Duke of Cumberland, the Prince's conversation is said to have been a compound of the slang of grooms and the wanton vocabulary of a brothel." "When we hunt together," said the King to the Duke of Gloucester, "neither my son nor my brother speak to me; and lately, when the chase ended at a little village where there was but a single post-chaise to be hired, my son and brother got into it, and drove off, leaving me to go home in a cart, if I could find one." And this is the family Mr. Disraeli holds up for Englishmen to worship!

In July, 1782, Lord Shelburne came into office; but he "always complained that the King had tricked and deserted him," and had "secretly connived at his downfall." He resigned office on the 24th February, 1783. An attempt was made to form a Coalition Ministry, under the Duke of Portland. The King complained of being treated with personal incivility, and the attempt failed. On the 23d March, the Prince of Wales, at the Queen's Drawing-room, said: "The King had refused to accept the coalition, but by God he should be made to agree to it." Under the great excitement the King's health gave way. The Prince, says Jesse, was a member of Brooks's Club, where, as Walpole tells us, the members were not only "strangely licentious" in their talk about their sovereign, but in their zeal for the interests of the heartless young Prince "even wagered on the duration of the King's reign." The King repeated his threat of abandoning the Throne, and retiring to his Hanoverian dominions; and told the Lord-Advocate, Dundas, that he had obtained the consent of the Queen to his taking this extraordinary step. Young William Pitt refusing twice to accept the Premiership, Fox and Lord

North came again into power. £30,000 was voted for the Prince of Wales's debts, and a similar sum to enable him to furnish his house. The "unnatural" Coalition Ministry did not last long. Fox introduced his famous India Bill. The King, regarding it as a blow at the power of the Crown, caballed and canvassed the Peers against it. "The welfare of thirty millions of people was overlooked in the excitement produced by selfish interests, by party zeal, and officious loyalty." "Instantly," writes Lord Macaulay, "a troop of Lords of the Bedchamber, of Bishops who wished to be translated, and of Scotch peers who wished to be re-elected, made haste to change sides." The Bill had passed the Commons by large majorities. The King opposed it like a partisan, and when it was defeated in the Lords, cried, "Thank God! it is all over; the House has thrown out the Bill, so there is an end of Mr. Fox." The Ministers not resigning, as the King expected they would, his Majesty dismissed them at once, sending to Lord North in the middle of the night for his seals of office.

On the 19th December, 1783, William Pitt, then twenty-four years of age, became Prime Minister of England. The House of Commons passed a resolution, on the motion of Lord Surrey, remonstrating with the King for having permitted his sacred name to be unconstitutionally used in order to influence the deliberations of Parliament. More than once the Commons petitioned the King to dismiss Pitt from office. Pitt, with large majorities against him, wished to resign; but George III. said, "If you resign, Mr. Pitt, I must resign too," and he again threatened, in the event of defeat, to abandon England, and retire to his Hanoverian dominions. Now our monarch, if a king, would, have no Hanoverian dominions to retire to.

In 1784, £60,000 was voted by Parliament to defray the King's debts. In consequence of the large debts of the

Prince of Wales, an interview was arranged at Carlton House, on the 27th April, 1785, between the Prince and Lord Malmesbury. The King, the Prince said, had desired him to send in an exact statement of his debts; there was one item, however, of £25,000, on which the Prince of Wales would give no information. If it were a debt, argued the King, which his son was ashamed to explain, it was one which he ought not to defray. The Prince threatened to go abroad, saying, "I am ruined if I stay in England. I shall disgrace myself as a man; my father hates me, and has hated me since I was seven years old. . . . We are too wide asunder to ever meet. The King has deceived me; he has made me deceive others. I cannot trust him, and he will not believe me." And this is the Brunswick family to which the English nation are required to be blindly loyal!

In 1785, George, Prince of Wales, was married to a Roman Catholic lady, Mrs. Fitzherbert, a widow. It is of course known that the Prince treated the lady badly. This was not his first experience, the history of Mary Robinson forming but one amongst a long list of shabby *liaisons*. A question having arisen before the House of Commons, during a discussion on the debts owing by the Prince, Charles James Fox, on the written authority of the Prince, denied that any marriage, regular or irregular, had ever taken place, and termed it an invention. . . . destitute of the slightest foundation." Mr. Fox's denial was made on the distinct written authority of the Prince, who offered, through Fox, to give in the House of Lords the "fullest assurances of the utter falsehood" of the allegation; although not only does everybody know to-day that the denial was untrue, but in point of fact the fullest proofs of the denied marriage exist at this very moment in the custody of Messrs. Coutts, the bankers. Out of all the Brunswicks England has been cursed with, George I. is the only one against

whom there is no charge of wanton falsehood to his ministers or subjects, and it is fairly probable that his character for such truthfulness was preserved by his utter inability to lie in our language.

Not only did George, Prince of Wales, thus deny his marriage with Mrs. Fitzherbert, but repeated voluntarily the denial after he became King George IV. Despite this denial, the King's executors, the Duke of Wellington and Sir William Knighton, were compelled by Mrs. Fitzherbert to admit the proofs. The marriage took place on the 21st December, 1785, and Mrs. Fitzherbert being a Roman Catholic, the legal effect was to bar Prince George and prevent him ever becoming the lawful King of England. The documents above referred to as being at Coutts's include — 1. The marriage certificate. 2. A letter written by the Prince of Wales acknowledging the marriage. 3. A will, signed by him, also acknowledging it, and other documents. And yet George, our King, whom Mr. Disraeli praises, authorized Charles James Fox to declare the rumor of his marriage "a low, malicious falsehood;" and then the Prince went to Mrs. Fitzherbert, and, like a mean, lying hypocrite as he was, said, "O Maria, only conceive what Fox did yesterday; he went down to the House and denied that you and I were man and wife."

Although when George, Prince of Wales, had attained his majority, he had an allowance of £50,000 a year, £60,000 to furnish Carlton House, and an additional £40,000 for cash to start with, yet he was soon after deep in debt. In 1787, £160,000 was voted, and a portion of the Prince's debts was paid. £20,000 further was added as a vote for Carlton House. Thackeray says: "Lovers of long sums have added up the millions and millions which in the course of his brilliant existence this single Prince consumed. Besides his income of £50,000, £70,000, £100,000, £120,-

000 a year, we read of three applications to Parliament; debts to the amount of £160,000, of £650,000, besides mysterious foreign loans, whereof he pocketed the proceeds. What did he do for all this money? Why was he to have it? If he had been a manufacturing town, or a populous rural district, or an army of five thousand men, he would not have cost more. He, one solitary stout man, who did not toil, nor spin, nor fight — what had any mortal done that he should be pampered so?"

The proposed impeachment of Warren Hastings, which actually commenced on February 13th, 1788, and which did not conclude until eight years afterwards, excited considerable feeling, it being roundly alleged that Court protection had been purchased by the late Governor-General of India, by means of a large diamond presented to the King. The following rhymed squib tells its own story. It was sung about the streets to the tune of "Derry Down": —

"I'll sing you a song of a diamond so fine,
That soon in the crown of the monarch will shine;
Of its size and its value the whole country rings,
By Hastings bestowed on the best of all Kings.
Derry down, &c.

"From India this jewel was lately brought o'er,
Though sunk in the sea, it was found on the shore,
And just in the nick to St. James's it got,
Convey'd in a bag by the brave Major Scott.
Derry down, &c.

"Lord Sydney stepp'd forth, when the tidings were known —
It's his office to carry such news to the throne; —
Though quite out of breath, to the closet he ran,
And stammer'd with joy ere his tale he began.
Derry down, &c.

"'Here's a jewel, my liege, there's none such in the land;
Major Scott, with three bows, put it into my hand:

And he swore, when he gave it, the wise ones were bit,
For it never was shown to Dundas or to Pitt.'
Derry down, &c.

"'For Dundas,' cried our sovereign, 'unpolished and rough,
Give him a Scotch pebble, it's more than enough.
And jewels to Pitt, Hastings justly refuses,
For he has already more gifts than he uses.
Derry down, &c.

"'But run, Jenky, run!' adds the King in delight,
'Bring the Queen and Princesses here for a sight;
They never would pardon the negligence shown,
If we kept from their knowledge so glorious a stone.
Derry down, &c.

"'But guard the door, Jenky, no credit we'll win,
If the Prince in a frolic should chance to step in:
The boy to such secrets of State we'll ne'er call,
Let him wait till he gets our crown, income, and all.'
Derry down, &c.

"In the Princesses run, and surprised cry, 'O la!
'Tis big as the egg of a pigeon, papa!'—
'And a pigeon of plumage worth plucking is he,'
Replies our good monarch, 'who sent it to me.'
Derry down, &c.

"Madame Schwellenberg peep'd through the door at a chink,
And tipp'd on the diamond a sly German wink;
As much as to say, 'Can we ever be cruel
To him who has sent us so glorious a jewel?'
Derry down, &c.

"Now God save the Queen! while the people I teach,
How the King may grow rich while the Commons impeach;
Then let nabobs go plunder, and rob as they will,
And throw in their diamonds as grist to his mill.
Derry down, &c."

It was believed that the King had received not one diamond, but a large quantity, and that they were to be the

purchase-money of Hastings's acquittal. Caricatures on the subject were to be seen in the window of every print-shop. In one of these Hastings was represented wheeling away in a barrow the King, with his crown and sceptre, observing, "What a man buys, he may sell;" and, in another, the King was exhibited on his knees, with his mouth wide open, and Warren Hastings pitching diamonds into it. Many other prints, some of them bearing evidence of the style of the best caricaturists of the day, kept up the agitation on this subject. It happened that there was a quack in the town, who pretended to eat stones, and bills of his exhibition were placarded on the walls, headed, in large letters, "The great stone-eater!" The caricaturists took the hint, and drew the King with a diamond between his teeth, and a heap of others before him, with the inscription, "The greatest stone-eater!"

We borrow a few sentences from Lord Macaulay to enable our readers to judge, in brief space, the nature of Warren Hastings's position, standing impeached, as he did, on a long string of charges, some of them most terrible in their implication of violence, falsehood, fraud, and rapacity. Macaulay thus pictures the situation between the civilized Christian and his tributaries: "On one side was a band of English functionaries, daring, intelligent, eager to be rich. On the other side was a great native population, helpless, timid, and accustomed to crouch under oppression." When some new act of rapacity was resisted there came war; but "a war of Bengalees against Englishmen was like a war of sheep against wolves, of men against demons." There was a long period before any one dreamed that justice and morality should be features of English rule in India. "During the interval, the business of a servant of the Company was simply to wring out of the natives a hundred or two hundred thousand pounds as speedily as pos-

sible, that he might return home before his constitution had suffered from the heat, to marry a peer's daughter, to buy rotten boroughs in Cornwall, and to give balls in St. James's Square." Hastings was compelled to turn his attention to foreign affairs. The object of his diplomacy was at this time simply to get money. The finances of his government were in an embarrassed state, and this embarrassment he was determined to relieve by some means, fair or foul. The principle which directed all his dealings with his neighbors is fully expressed by the old motto of one of the great predatory families of Teviotdale: "Thou shalt want ere I want." He seems to have laid it down, as a fundamental proposition which could not be disputed, that, when he had not as many lacs of rupees as the public service required, he was to take them from anybody who had. One thing, indeed, is to be said in excuse for him. The pressure applied to him by his employers at home was such as only the highest virtue could have withstood, such as left him no choice except to commit great wrongs, or to resign his high post, and with that post all his hopes of fortune and distinction. Hastings was in need of funds to carry on the government of Bengal, and to send remittances to London; and Sujah Dowlah had an ample revenue. Sujah Dowlah was bent on subjugating the Rohillas; and Hastings had at his disposal the only force by which the Rohillas could be subjugated. It was agreed that an English army should be lent to Nabob Vizier, and that for the loan he should pay four hundred thousand pounds sterling, besides defraying all the charge of the troops while employed in his service. "I really cannot see," says Mr. Gleig, "upon what grounds, either of political or moral justice, this proposition deserves to be stigmatized as infamous." If we understand the meaning of words, it is infamous to commit a wicked action for hire, and it is

wicked to engage in war without provocation. In this particular war, scarcely one aggravating circumstance was wanting. The object of the Rohilla war was this, to deprive a large population, who had never done us the least harm, of a good government, and to place them, against their will, under an execrably bad one. . . . The horrors of Indian war were let loose on the fair valleys and cities of Rohilcund. The whole country was in a blaze. More than a hundred thousand people fled from their homes to pestilential jungles, preferring famine, and fever, and the haunts of tigers, to the tyranny of him to whom an English and a Christian government had, for shameful lucre, sold their substance, and their blood, and the honor of their wives and daughters. . . . Mr. Hastings had only to put down by main force the brave struggles of innocent men fighting for their liberty. Their military resistance crushed, his duties ended; and he had then only to fold his arms and look on, while their villages were burned, their children butchered, and their women violated. . . . We hasten to the end of this sad and disgraceful story. The war ceased. The finest population in India was subjected to a greedy, cowardly, cruel tyrant. Commerce and agriculture languished. The rich province which had tempted the cupidity of Sujah Dowlah became the most miserable part even of his miserable dominions. Yet is the injured nation not extinct. At long intervals gleams of its ancient spirit have flashed forth; and even at this day valor, and self-respect, and a chivalrous feeling rare among Asiatics, and a bitter remembrance of the great crime of England, distinguish that noble Afghan race."

Partly in consequence of the proposed legislation by Fox on the affairs of the East India Company, and partly from personal antagonism, members of the Indian Council hostile to Governor-General Hastings were sent out to India.

Amongst his most prominent antagonists was Francis, the reputed author of Junius's Letters. It was to Francis especially that the Maharajah Nuncomar of Bengal addressed himself. "He put into the hands of Francis, with great ceremony, a paper containing several charges of the most serious description. By this document Hastings was accused of putting offices up to sale, and of receiving bribes for suffering offenders to escape. In particular, it was alleged that Mahommed Reza Khan had been dismissed with impunity, in consideration of a great sum paid to the Governor-General. . . . He stated that Hastings had received a large sum for appointing Rajah Goordas treasurer of the Nabob's household, and for committing the care of his Highness's person to Munny Begum. He put in a letter purporting to bear the seal of the Munny Begum, for the purpose of establishing the truth of his story."

Much evidence was taken before the Indian Council, where there was considerable conflict between the friends and enemies of Hastings. "The majority, however, voted that the charge was made out; that Hastings had corruptly received between thirty and forty thousand pounds; and that he ought to be compelled to refund."

Now, however, comes an item darker and more disgraceful, if possible than what had preceded.

"On a sudden, Calcutta was astounded by the news that Nuncomar had been taken up on a charge of felony, committed, and thrown into the common jail. The crime imputed to him was, that six years before he had forged a bond. The ostensible prosecutor was a native. But it was then, and still is, the opinion of everybody, idiots and biographers excepted, that Hastings was the real mover in the business." The Chief-Justice Impey, one of Hastings's creatures, pushed on a mock trial; "a verdict of Guilty was returned, and the Chief-Justice pronounced sentence of death

on the prisoner. . . . Of Impey's conduct it is impossible to speak too severely. He acted unjustly in refusing to respite Nuncomar. No rational man can doubt that he took this course in order to gratify the Governor-General. If we had ever had any doubts on that point, they would have been dispelled by a letter which Mr. Gleig has published. Hastings, three or four years later, described Impey as the man 'to whose support he was at one time indebted for the safety of his fortune, honor, and reputation.' These strong words can refer only to the case of Nuncomar; and they must mean that Impey hanged Nuncomar in order to support Hastings. It is therefore our deliberate opinion that Impey, sitting as a judge, put a man unjustly to death in order to serve a political purpose."

Encouraged by success, a few years later, Hastings, upon the most unfair pretext, made war upon and plundered the Rajah of Benares, and a little later subjected the eunuchs of the Begums of Oude to physical torture, to make them confess where the royal treasure was hidden.

It is evident from Miss Burney's diary that the King and Queen warmly championed the cause of Warren Hastings, who, after a wearisome impeachment, was acquitted.

In 1788, the King's insanity assumed a more violent form than usual, and on a report from the Privy Council, the subject was brought before Parliament. In the Commons, Pitt and the Tory party contended that the right of providing for the government of the country in cases where the monarch was unable to perform his duties, belonged to the nation at large, to be exercised by its representatives in Parliament. Fox and the Whigs, on the other hand, maintained that the Prince of Wales possessed the inherent right to assume the government. Pitt, seizing this argument as it fell from Fox, said, at the moment, to the

member seated nearest to him, "I'll unwhig the gentleman for the rest of his life."

During the discussions on the Regency Bill, Lord Thurlow, who was then Lord Chancellor, acted the political rat, and coquetted with both parties. When the King's recovery was announced by the royal physicians, Thurlow, to cover his treachery, made an extravagant speech in defence of Pitt's views, and one laudatory of the King. After enumerating the rewards received from the King, he said, "and if I forget the monarch who has thus befriended me, may my great Creator forget me." John Wilkes, who was present in the House of Lords, said, in a stage aside, audible to many of the peers, "Forget you! he will see you damned first." Phillimore, describing Lord Chancellor Thurlow, says that he — "either from an instinctive delight in all that was brutal" (which did not prevent him from being a gross hypocrite), "or from a desire to please George III. — supported the Slave Trade, and the horrors of the Middle Passage, with the uncompromising ferocity of a Liverpool merchant or a Guinea captain."

It appears that the Prince of Wales and the Duke of York exhibited what was considered somewhat indecent eagerness to have the King declared irrecoverably insane, and on more than one occasion the Queen refused to allow either of these Royal Princes access to the King's person, on the ground that their violent conduct retarded his recovery. The Prince of Wales and Duke of York protested in writing against the Queen's hostility to them, and published the protest. Happy family, these Brunswicks! Dr. Doran declares: "There was assuredly no decency in the conduct of the Heir-apparent, or of his next brother. They were gaily flying from club to club, party to party, and did not take the trouble even to assume the sentiment which they could not feel. 'If we were together,' says Lord Granville,

in a letter inserted in his Memoirs, 'I would tell you some particulars of the Prince of Wales's behavior to the King and Queen, within these few days, that would make your blood run cold.' It was said that if the King could only recover and learn what had been said and done during his illness, he would hear enough to drive him again into insanity. The conduct of his eldest sons was marked by its savage inhumanity." Jesse says: "The fact is a painful one to relate, that on the 4th December — the day on which Parliament assembled, and when the King's malady was at its worst — the graceless youth (the Duke of York) not only held a meeting of the opposition at his own house, but afterwards proceeded to the House of Lords, in order to hear the depositions of the royal physicians read, and to listen to the painful details of his father's lunacy. Moreover the same evening we track both the brothers (the Prince of Wales and the Duke of York) to Brooks's, where in a circle of boon companions, as irreverent as themselves, they are said to have been in the habit of indulging in the most shocking indecencies, of which the King's derangement was the topic. On such occasions, we are told, not only did they turn their parents into ridicule, and blab the secrets of the chamber of sickness at Windsor, but the Prince even went to such unnatural lengths as to employ his talents for mimicry, in which he was surpassed by few of his contemporaries, in imitating the ravings and gestures of his stricken father. As for the Duke of York, we are assured that 'the brutality of the stupid sot disgusted even the most profligate of his associates.'" Even after the King's return to reason had been vouched by the physicians, William Grenville, writing to Lord Buckingham, says that the two princes "amused themselves with spreading the report that the King was still out of his mind." When the great thanksgiving for the King's recovery took place at

Saint Paul's, the conduct of the Prince of Wales and the Duke of York, in the Cathedral itself, is described "as having been in the highest degree irreverent, if not indecent." Sir William Young writes to Lord Buckingham, "The day will come when Englishmen will bring these Princes to their senses." Alas for England, the day has not yet come!

In 1789, a great outcry was raised against the Duke of York on account of his licentiousness. In 1790, the printer of the *Times* newspaper was fined £100 for libelling the Prince of Wales, and a second £100 for libelling the Duke of York. It was in this year that the Prince of Wales, and the Dukes of York and Clarence, issued joint and several bonds to an enormous amount — it is said, £1,000,000 sterling, and bearing 6 per cent. interest. These bonds were taken up chiefly abroad; and some Frenchmen who subscribed, being unable to obtain either principal or interest, applied to the Court of Chancery, in order to charge the revenues of the Duchy of Cornwall. Others of the foreign holders of bonds had recourse to other proceedings to enforce their claims. In nearly every case the claimants were arrested by the Secretary of State's order, and sent out of England under the Alien Act, and when landed in their own country were again arrested for treasonable communication with the enemy, and perished on the scaffold. MM. De Baume, Chaudot, Mette, Aubert, Vaucher, and others, all creditors of the Prince, were thus arrested under the Duke of Portland's warrant, and on their deportation re-arrested for treason, and guillotined. Thus were some of the debts of the Royal Family of Brunswick settled, if not paid. Honest family, these Brunswicks!

George, Prince of Wales, and the Duke of York were constant patrons of prize fights, races, and gambling tables, largely betting, and not always paying their wagers when

they lost. In the autumn of 1791 a charge was made against the Prince of Wales that he allowed his horse Escape to run badly on the 20th of October, and when heavily betted against caused the same horse to be ridden to win. A brother of Lord Lake, who was friendly to the Prince, and who managed some of his racing affairs, evidently believed there was foul play, and so did the Jockey Club, who declared that if the Prince permitted the same jockey, Samuel Chiffney, to ride again, no gentleman would start against him. A writer employed by George, Prince of Wales, to defend his character, says: "It may be asked, why did not the Prince of Wales declare upon his honor, that no foul play had been used with respect to Escape's first race? Such a declaration would at once have solved all difficulties, and put an end to all embarrassments. But was it proper for the Prince of Wales to have condescended to such a submission? Are there not sometimes suspicions of so disgraceful a nature afloat, and at the same time so improbable withal, that if the person, who is the object of them, condescends to reply to them, he degrades himself? Was it to be expected of the Prince of Wales that he should purge himself by oath, like his domestic? Or, was it to be looked for, that the first subject in the realm, the personage whose simple word should have commanded deference, respect, and belief, was to submit himself to the examination of the Jockey Club, and answer such questions as they might have thought proper to have proposed to him?"

This, coming from a family like the Brunswicks, and from one of four brothers who, like their highnesses of Wales, York, Kent, and Cumberland, had each in turn declared himself upon honor not guilty of some misdemeanor or felony, is worthy a note of admiration. George, Prince of Wales, declared himself not guilty of bigamy; the Duke

of York declared himself not guilty of selling promotion in the army. Both these Princes publicly declared themselves not guilty of the charge of trying to hinder their royal father's restoration to sanity. The Duke of Kent, the Queen's father, declared that he was no party to the subornation of witnesses against his own brother. The Duke of Cumberland pledged his oath that he had never been guilty of sodomy and murder.

In September, 1791, the Duke of York was married to the Princess Frederica, daughter of the King of Prussia, with whom he lived most unhappily for a few years. The only effect of this marriage on the nation was that £18,000 a year was voted as an extra allowance to his Royal Highness, the Duke of York. This was in addition to 100,000 crowns given out of the Civil List as a marriage portion to the Princess. Dr. Doran says of the Duchess of York: "For six years she bore with treatment from the 'Commander-in-Chief' such as no trooper under him would have inflicted on a wife equally deserving. At the end of that time the ill-matched pair separated." Kind husbands, these Brunswicks!

In a print published on the 24th May, 1792, entitled "Vices Overlooked in the New Proclamation," *Avarice* is represented by King George and Queen Charlotte, hugging their hoarded millions with extreme satisfaction, a book of interest tables lying at hand. This print is divided into four compartments, representing: 1. Avarice; 2. Drunkenness, exemplified in the person of the Prince of Wales; 3. Gambling, the favorite amusement of the Duke of York; and 4. Debauchery, the Duke of Clarence and Mrs. Jordan — as the four notable vices of the Royal family of Great Britain. If the print had to be re-issued to-day, it would require no very vivid imagination to provide materials from

the living members of the Royal Family to refill the four compartments.

Among various other remarkable trials occurring in 1792, those of Daniel Holt and William Winterbottom are here worthy of notice, as illustrating the fashion in which the rule of the Brunswick monarchy has trenched on our political liberties. The former, a printer of Nottingham, was convicted and sentenced to two years' imprisonment for re-publishing, verbatim, a political tract, originally circulated without prosecution by the Thatched House Tavern Association, of which Mr. Pitt and the Duke of Richmond had been members. The other, a dissenting minister at Plymouth, of virtuous and highly respectable character, was convicted of sedition, and sentenced to four years' imprisonment in the jail of Newgate, for two sermons preached in commemoration of the revolution of 1688. The indictment charged him with affirming, "That his Majesty was placed upon the throne on condition of keeping certain laws and rules, and if he does not observe them, he has no more right to the crown than the Stuarts had." All the Whigs in the kingdom might, doubtless, have been comprehended in a similar indictment. And if the doctrine affirmed by the Rev. Mr. Winterbottom be denied, the monstrous reverse of the proposition follows, that the King is bound by no conditions or laws; and that, though resistance to the tyranny of the Stuarts might be justifiable, resistance under the same circumstances to the House of Brunswick is not. This trial, for the cruelty and infamy attending it, has been justly compared to the celebrated one of Rosewell in the latter years of Charles II., to the events of which those of 1792 exhibit, in various respects, a striking and alarming parallel.

Before his election to the National Convention, Thomas Paine published the second part of his "Rights of Man,"

in which he boldly promulgated principles which, though fiercely condemned at the date of their issue, are now being gradually accepted by the great mass of the people. Paine's work was spread through the kingdom with extraordinary industry, and was greedily sought for by people of all classes. Despite the great risk of fine and imprisonment, some of the most effective parts were printed on pieces of paper, which were used by Republican tradesmen as wrappers for their commodities. Proceedings were immediately taken against Thomas Paine as author of the obnoxious book, which was treated as a libel against the government and constitution, and on trial Paine was found guilty. He was defended with great ability by Erskine, who, when he left the court, was cheered by a crowd of people who had collected without, some of whom took his horses from his carriage, and dragged him home to his house in Serjeant's Inn. The name and opinions of Thomas Pain were at this moment gaining influence, in spite of the exertions made to put them down. From this time for several years it is almost impossible to read a weekly journal without finding some instance of persecution for publishing Mr. Paine's political views.

The trial of Thomas Paine was the commencement of a series of State prosecutions, not for political offences, but for political designs. The name of Paine had caused much apprehension, but many even amongst the Conservatives dreaded the extension of the practice of making the publication of a man's abstract opinions criminal, when unaccompanied with any direct or open attempt to put them into effect. In the beginning of 1793 followed prosecutions in Edinburgh, where the ministerial influence was great, against men who had associated to do little more than call for reform in Parliament; and five persons, whose alleged crimes consisted chiefly in having read Paine's

"Rights of Man," and in having expressed either a partial approbation of his doctrines, or a strong declaration in favor of Parliamentary reform, were transported severally: Joseph Gerrald, William Skirving, and Thomas Muir for fourteen, and Thomas Fyshe Palmer and Maurice Margarot for seven years! These men had been active in the political societies, and it was imagined that, by an exemplary injustice of this kind, these societies would be intimidated. Such, however, was not the case, for, from this moment, the clubs in Edinburgh became more active than ever, and they certainly took a more dangerous character; so that, before the end of the year, there was actually a "British Convention" sitting in the Scottish capital. This was dissolved by force at the beginning of 1794, and two of its members were added to the convicts already destined for transportation. Their severe sentences provoked warm discussions in the English Parliament, but the ministers were inexorable in their resolution to put them in execution.

The extreme severity of the sentences passed on the Scottish political martyrs, even as judged by those admitting the legality and justice of their conviction, was so shameful as to rouse general interest. Barbarous as the law of Scotland appeared to be, it became a matter of doubt whether the Court of Justiciary had not exceeded its power, in substituting the punishment of transportation for that of banishment, imposed by the Act of Queen Anne, for the offence charged on those men.

In 1794, the debts of the Prince of Wales then amounting to about £650,000, not including the amounts due on the foreign bonds, a marriage was suggested in order to give an excuse for going to Parliament for a vote. This was at a time when the Prince was living with Mrs. Fitzherbert as his wife, and when Lady Jersey was his most

prominent mistress. The bride selected was Caroline of Brunswick. A poor woman for a wife, if Lord Malmesbury's picture is a true one, certainly in no sense a bad woman. But her husband our Prince! When she arrived in London, George was not sober. His first words, after greeting her, were to Lord Malmesbury, "Get me a glass of brandy." Tipsy this Brunswicker went to the altar on the 8th of April, 1794; so tipsy that he got up from his knees too soon, and the King had to whisper him down, the Archbishop having halted in amaze in the ceremony. Here there is no possibility of mistake. The two Dukes who were his best men at the wedding had their work to keep him from falling; and to one, the Duke of Bedford, he admitted that he had had several glasses of brandy before coming to the chapel.

Thackeray says, "What could be expected from a wedding which had such a beginning — from such a bridegroom and such a bride? Malmesbury gives us the beginning of the marriage story — how the prince reeled into chapel to be married; how he hiccupped out his vows of fidelity — you know how he kept them; how he pursued the woman whom he had married; to what a state he brought her; with what blows he struck her; with what malignity he pursued her; what his treatment of his daughter was; and what his own life. *He*, the first gentleman of Europe!"

The Parliament not only paid the Prince of Wales's debts, but gave him £28,000 for jewels and plate, and £26,000 for the furnishing of Carlton House.

On the 12th of May, Mr. Henry Dundas brought down on behalf of the government, a second message from the King, importing that seditious practices had been carried on by certain societies in London, in correspondence with other societies; that they had lately been pursued with increasing activity and boldness, and had been avowedly

directed to the assembling of a pretended National Convention, in contempt and defiance of the authority of Parliament, on principles subversive of the existing laws and the constitution, and tending to introduce that system of anarchy prevailing in France; that his Majesty had given orders for seizing the books and papers of those societies, which were to be laid before the House, to whom it was recommended to pursue measures necessary to counteract their pernicious tendency. A large collection of books and papers was, in consequence, brought down to the House; and, after an address had been voted, a resolution was agreed to, that those papers should be referred to a committee of secrecy. A few days after the King's message was delivered, the following persons were committed to the Tower on a charge of high treason: Mr. Thomas Hardy, a shoemaker in Piccadilly, who officiated as secretary to the London Corresponding Society; Mr. Daniel Adams, secretary to the Society for Constitutional Information; Mr. John Horne Tooke; Mr. Stewart Kyd; Mr. Jeremiah Joyce, preceptor to Lord Mahon, eldest son of the Earl of Stanhope; and Mr. John Thelwall, who had for some time delivered lectures on political subjects in London.

Under the influence of excitement resulting from the Government statement of the discovery of a plot to assassinate the King, and which plot never existed outside the brains of the Government spies, a Special Commission of Oyer and Terminer was issued on the 10th of September, 1794, for the trial of the State prisoners confined in the Tower on a charge of high treason. On the 2d of October, the Commission was opened at the Sessions House, Clerkenwell, by Lord Chief Justice Eyre, in an elaborate charge to the grand jury. Bills were then found against all who had been taken up in May, except Daniel Adams. Hardy was first put on his trial at the Old Bailey. The trial com-

menced on the 28th of October, and continued with short adjournments until the 5th of November. Mr. Erskine was counsel for Hardy, and employed his great talents and brilliant eloquence with the most complete success. After consulting together for three hours, the jury, who, though the avowed friends of the then administration, were men of impartiality, intelligence, and of highly respectable characters, returned a verdict of Not Guilty. There has seldom been a verdict given in a British court of justice which afforded more general satisfaction. It is doubtful whether there has been a verdict more important in its consequences to the liberties of the English people. On the 17th of November, John Horne Tooke was put on his trial. The Duke of Richmond, Earl Camden, Mr. Pitt, and Mr. Beaufoy, were subpœnaed by the prisoner; and the examination of William Pitt by Mr. Tooke and his counsel formed the most important feature in the trial, as the evidence of the Prime Minister tended to prove that, from the year 1780 to 1782, he himself had been actively engaged with Mr. Tooke and many others in measures of agitation to procure a Parliamentary reform, although he now not only deemed the attempt dangerous and improper, but sought to condemn it as treasonable, or at least as seditious. Mr. Erskine, who was counsel for Mr. Tooke also, in a most eloquent and powerful manner contended that the conduct of his client was directed only to the same object as that previously sought by Pitt himself, and that the measures resorted to, so far from being criminal, were perfectly constitutional. Mr. Pitt was extremely guarded in his replies, and professed very little recollection of what passed at the meetings which he attended. A letter he had written to Mr. Tooke at that time on the subject was handed to him, which he pretended he could scarcely recognize, and which the judge would not permit to be read. Mr. Sheridan, who

was likewise engaged in the agitation for political reform, and subpœnaed by Mr. Tooke, gave unqualified evidence in favor of Mr. Tooke respecting the proceedings at those meetings. The trial continued till the Saturday following, when the jury were out of court only six minutes, and returned a verdict of Not Guilty!

The opening of Parliament was looked forward to with great anxiety, on account of the extreme distress under which the country was laboring. As the time approached, popular meetings were held in the metropolis, and preparations were made for an imposing demonstration. During the morning of the 29th of October, the day on which the King was to open the session in person, crowds of men continued pouring into the town from the various open spaces outside, where simultaneous meetings had been called by placards and advertisements; and before the King left Buckingham House, on his way to St. James's, the number of people collected on the ground over which he had to pass is admitted in the papers of the day to have been not less than two hundred thousand. At first the state carriage was allowed to move on through this dense mass in sullen silence, no hats being taken off, nor any other mark of respect being shown. This was followed by a general outburst of hisses and groans, mingled with shouts of "Give us peace and bread!" "No war!" "No King!" "Down with him! down with George!" and the like; and this tumult continued unabated until the King reached the House of Lords, the Guards with much difficulty keeping the mob from closing on the carriage. As it passed through Margaret Street the populace seemed determined to attack it, and when opposite the Ordnance Office a stone passed through the glass of the carriage window. A verse published the following day says: —

"Folks say it was lucky the stone missed the head,
When lately at Cæsar 'twas thrown;
I think very different from thousands indeed,—
'Twas a lucky escape for the stone."

The demonstration was, if anything, more fierce on the King's return, and he had some difficulty in reaching St. James's Palace without injury; for the mob threw stones at the state carriage and damaged it considerably. After remaining a short time at St. James's, he proceeded in his private coach to Buckingham House, but the carriage was stopped in the Park by the populace, who pressed round it, shouting, "Bread, bread! Peace, peace!" until the King was rescued from this unpleasant situation by a strong body of the Guards.

Treason and sedition Acts were hurried through Parliament to repress the cries of the hungry for bread, whilst additional taxes were imposed to make the poor poorer.

That the terrible French war — of which it is impossible to give any account in the limits of this essay, a war which cost Great Britian at least £1,000,000,000 in hard cash, without reckoning the hundreds of thousands of killed, wounded, and pauperized, and which Buckle calls "the most hateful, the most unjust, and the most atrocious war England has ever waged against any country" — directly resulted from our government under the Brunswick family is a point on which it is impossible for any one who has examined the facts to have a serious doubt. Sir Archibald Alison tells us that, early in 1791, "The King of England took a vivid interest in the misfortunes of the Royal Family of France, promising, as Elector of Hanover, to concur in any measure which might be deemed necessary to extricate them from their embarrassments; and he sent Lord Elgin to Leopold, who was then travelling in Italy, to concert measures for the common object." It was as

Elector of Hanover also that his grandfather, George II., had sacrificed English honor and welfare to the personal interest and family connections of these wretched Brunswicks. It is certain too, that, after years of terrible war, on one of the occasions of negotiation for peace, hindrances arose because our Government insisted on describing George III., in the preliminaries, as "King of France." The French naturally said, first, your King George never has been King of any part of France at any time; and next, we, having just declared France a Republic, cannot in a solemn treaty recognize the continued existence of a claim to Monarchy over us.

The following table, which we insert at this stage to save the need for further reference, shows how the labor of the British nation was burdened for generations to come, by the insane affection of the House of Brunswick for the House of Bourbon: —

Years.	Taxes.	Loans.
1793	£17,656,418	£25,926,526
1794	17,170,400	——
1795	17,308,411	51,705,698
1796	17,858,454	56,945,566
1797	18,737,760	25,350,000
1798	20,654,650	35,624,250
1799	30,202,915	21,875,300
1800	35,229,968	29,045,000
1801	33,896,464	44,816,250
1802	35,415,296	41,489,438
1803	37,240,213	16,000,000
1804	37,677,063	18,200,000
1805	45,359,442	39,543,124
1806	49,659,281	29,880,000
1807	53,304,254	18,373,200
1808	58,390,255	13,693,254
1809	61,538,207	21,278,122
1810	63,405,294	19,811,108

Years.	Taxes.	Loans.
1811	66,681,366	29,244,711
1812	64,763,870	40,743,031
1813	63,169,845	54,780,324
1814	66,925,835	63,645,030
1815	69,684,192	70,888,402
Total	£981,929,853	£768,858,934

After making some deductions on account of the operations of the *loyalty loan*, and the transfer of annuities, the total debt contracted from 1793 to 1815 amounts to £762,537,445. If to this sum be added the increase in the unfunded debt during that period, and the additional sums raised by taxes in consequence of hostilities, we shall have the total expenditure, owing to the French war, as follows: —

Debt contracted from 1793 to 1815	£762,537,445
Increase in the Unfunded Debt	50,194,060
War Taxes	614,488,459
Total	1,427,219,964
Deduct sum paid to the Commissioners for reduction of the National Debt	173,309,383
Total cost of the French war	£1,253,910,581

Lord Fife, in the House of Lords, said that "in this horrid war had he first witnessed the blood and treasure of the nation expended in the extravagant folly of secret expeditions, which had invariably proved either abortive or unsuccessful. Grievous and heavy taxes had been laid on the people, and wasted in expensive embassies, and in subsidizing proud, treacherous, and useless foreign princes."

In 1795 King George and his advisers tried by statute to put a stop forever in this country to all political or religious discussion. No meeting was to be held, except on five

days' duly advertised notice, to be signed by householders; and if for lectures or debates, on special license by a magistrate. Power was given to any magistrate to put an end in his discretion to any meeting, and to use military force in the event of twelve persons remaining one hour after notice. If a man lent books, newspapers, or pamphlets without license, he might be fined twenty pounds for every offence. If he permitted lectures or debates on any subject whatever, he might be fined one hundred pounds a day. And yet people dare to tell us that we owe our liberties to these Brunswicks!

On the 1st of June, 1795, Gillray, in a caricature entitled "John Bull Ground Down," had represented Pitt grinding John Bull into money, which was flowing out in an immense stream beneath the mill. The Prince of Wales is drawing off a large portion, to pay the debts incurred by his extravagance; while Dundas, Burke, and Loughborough, as the representatives of ministerial pensioners, are scrambling for the rest. King George encourages Pitt to grind without mercy. Another caricature by Gillray, published on the 4th of June, represents Pitt as Death on the White Horse (the horse of Hanover), riding over a drove of pigs, the representatives of what Burke had termed the "swinish multitude."

On the 7th of January, 1796, the Princess Charlotte of Wales was born, and on the 30th of April, George, Prince of Wales, wrote to the Princess Caroline, stating that he did not intend to live with her any more. The Prince had some time previously sent by Lord Cholmondeley a verbal message to the same effect, which, however, the Princess had refused to accept. The mistress reigning over the Prince of Wales at this time was Lady Jersey.

No impeachment of the House of Brunswick would be even tolerably supported which did not contain some refer-

ence to the terrible misgovernment of Ireland under the rule of this obstinate and vicious family; and yet these few pages afford but little space in which to show how beneficent the authority of King George III. has proved to our Irish brethren.

During the war, when there were no troops in Ireland, and when, under Flood and Grattan, the volunteers were in arms, some concessions had been made to the Irish people. A few obnoxious laws had been repealed, and promises had been held out of some relaxation of the fearfully oppressive laws against the Catholics. From the correspondence of Earl Temple, it is clear that in 1782 not only was the King against any further concession whatever, but that his Majesty and Lord Shelburne actually manœuvred to render the steps already taken as fruitless as possible. We find W. W. Grenville admitting, on the 15th December, 1782, "that the [Irish] people are really miserable and oppressed to a degree I had not at all conceived." The Government acted dishonestly to Ireland. The consequence was, continued misery and disaffection; and I assert, without fear of contradiction, that this state of things is directly traceable to the King's wilfulness on Irish affairs. As an illustration of the character of the Government, it is worth notice that Lord Temple, when Lord Lieutenant of Ireland, wrote to his brother in cipher, because his letters were opened in the Post Office by Lord Shelburne. The Parliament of Ireland was in great part owned by absentee peers, and each change of Lord-Lieutenancy was marked by heavy addition to the Pension List. The continuance of the Catholic disabilities rendered permanent quiet impossible. Three-fourths of the nation were legally and socially almost outlawed. The national discontent was excited by the arbitrary conduct of the authorities, and hopes of successful revolution were

encouraged, after 1789, by the progress of the Revolution in France.

About 1790, the "United Irishmen" first began to be heard of. Their object was "a complete reform in the legislature, founded on the principles of civil, political and religious liberty." The clubs soon became secret associations, and were naturally soon betrayed. Prosecutions for sedition in 1793 were soon followed by military repression.

Lord Moira, in the House of Lords in 1797, in a powerful speech, which has remained without any refutation, described the Government of Ireland as "the most absurd, as well as the most disgusting, tyranny that any nation ever groaned under." He said: "If such a tyranny be persevered in, the consequence must inevitably be the deepest and most universal discontent, and even hatred to the English name. I have seen in that country a marked distinction made between the English and Irish. I have seen troops that have been sent full of this prejudice — that every inhabitant in that kingdom is a rebel to the British Government. I have seen the most wanton insults practised upon men of all ranks and conditions. I have seen the most grievous oppressions exercised, in consequence of a presumption that the person who was the unfortunate object of such oppression was in hostility to the Government; and yet that has been done in a part of the country as quiet and as free from disturbance as the city of London." His lordship then observed that, "from education and early habits, the *curfew* was ever considered by Britons as a badge of slavery and oppression. It was then practised in Ireland with brutal rigor. He had known instances where the master of a house had in vain pleaded to be allowed the use of a candle, to enable the mother to administer relief to her daughter struggling in convulsive fits. In former times, it had been the custom for English-

men to hold the infamous proceedings of the Inquisition in detestation. One of the greatest horrors with which it was attended was that the person, ignorant of the crime laid to his charge, or of his accuser, was torn from his family, immured in a prison, and kept in the most cruel uncertainty as to the period of his confinement, or the fate which awaited him. To this injustice, abhorred by Protestants in the practice of the Inquisition, were the people of Ireland exposed. All confidence, all security, were taken away. When a man was taken up on suspicion, he was put to the torture; nay, if he were merely accused of concealing the guilt of another. The rack, indeed, was not at hand; but the punishment of picqueting was in practice, which had been for some years abolished as too inhuman, even in the dragoon service. He had known a man, in order to extort a confession of a supposed crime, or of that of some of his neighbors, picqueted till he actually fainted — picqueted a second time till he fainted again, and as soon as he came to himself, picqueted a third time till he once more fainted; and all upon mere suspicion! Nor was this the only species of torture. Men had been taken and hung up till they were half dead, and then threatened with a repetition of the cruel treatment, unless they made confession of the imputed guilt. These were not particular acts of cruelty, exercised by men abusing the power committed to them, but they formed part of our system. They were notorious, and no person could say who would be the next victim of this oppression and cruelty, which he saw others endure. This, however, was not all: their lordships, no doubt, would recollect the famous proclamation issued by a military commander in Ireland, requiring the people to give up their arms. It never was denied that this proclamation was illegal, though defended on some supposed necessity; but it was not surprising that some reluctance

had been shown to comply with it by men who conceived the Constitution gave them a right to keep arms in their houses for their own defence; and they could not but feel indignation in being called upon to give up their right. In the execution of the order the greatest cruelties had been committed. If any one was suspected to have concealed weapons of defence, his house, his furniture, and all his property were burnt; but this was not all. If it were supposed that any district had not surrendered all the arms which it contained, a party was sent out to collect the number at which it was rated; and, in execution of this order, thirty houses were sometimes burnt down in a single night. Officers took upon themselves to decide discretionally the quantity of arms; and upon their opinions the fatal consequences followed. These facts were well-known in Ireland, but they could not be made public through the channel of the newspapers, for fear of that summary mode of punishment which had been practised towards the *Northern Star*, when a party of troops in open day, and in a town where the General's head-quarters were, went and destroyed all the offices and property belonging to that paper. It was thus authenticated accounts were suppressed."

Can any one wonder that the ineffectual attempt at revolution of 1798 followed such a state of things? And when, in the *London Chronicle* and *Cambridge Intelligencer*, and other journals by no means favorable to Ireland or its people, we read the horrid stories of women ravished, men tortured, and farms pillaged, all in the name of law and order, and this by King George's soldiers, not more than seventy years ago, can we feel astonishment that the Wexford peasants have grown up to hate the Saxon oppressor? And this we owe to a family of kings who used their pretended Protestantism as a cloak for the ill-treatment of our Catholic brethren in Ireland. In impeach

ing the Brunswicks, we remind the people of proclamations officially issued in the King's name, threatening to burn and devastate whole parishes, and we allege that the disaffection in Ireland at the present moment is the natural fruit of the utter regardlessness, on the part of these Guelphs, for human liberty, or happiness, or life. The grossest excesses were perpetrated in Ireland by King George III.'s foreign auxiliaries. The troops from Hesse Cassel, from Hesse Darmstadt, and from Hanover, earned an unenviable notoriety by their cruelty, rapacity, and licentiousness. And these we owe entirely to the Brunswicks.

A letter from the War Office, dated April 11th, 1798, shows how foreigners were specially selected for the regiments sent over to Ireland. Sir Ralph Abercromby publicly rebuked the King's army, of which he was the Commander-in-Chief, for their disgraceful irregularities and licentiousness. Even Lieutenant-General Lake admits that "the determination of the troops to destroy every one they think a rebel is beyond description, and needs correction."

In 1801, it was announced that King George III. was suffering from severe cold and sore throat, and could not therefore go out in public. His disease, however, was more mental than bodily. Her present Majesty has also suffered from severe cold and sore throat, but no allegation is ventured that her mental condition is such as to unfit her for her Royal duties.

On March 29, 1802, the sum of £990,053 was voted for payment of the King's debts.

In 1803, the Prince of Wales being again in debt, a further vote was passed of £60,000 a year for three years and a half. Endeavors were made to increase this grant, but, marvellous to relate, the House of Commons actually acted

as if it had some slight interest in the welfare of the people, and rejected a motion of Mr. Calcraft for a further vote of money to enable his Royal Highness to maintain his state and dignity. The real effect of the vote actually carried, was to provide for £800,649 of the Prince's debts, including the vote of 1794.

On July 21, 1763, £60,000 cash, and a pension of £16,000 a year, were voted to the Prince of Orange.

In 1804, King George was very mad, but Mr. Addington explained to Parliament, that there was nothing in his Majesty's indisposition to prevent his discharging the Royal functions. Mr. Gladstone also recently explained to Parliament, that there would be no delay in the prorogation of Parliament in consequence of her gracious Majesty's indisposition and absence.

In 1805, the House of Commons directed the criminal prosecution of Lord Melville, for corrupt conduct and embezzlement of public money, as first Lord of the Admiralty. For this, however, impeachment was substituted, and, on his trial before the House of Peers, he was acquitted, as out of 136 peers, only 59 said that they thought him guilty, although he had admitted the misapplication of £10,000.

On the 29th of March, 1806, a warrant was signed by King George III., directed to Lord Chancellor Erskine, to Lord Grenville, the Prime Minister, to Lord Ellenborough, then Lord Chief Justice of England, and to Earl Spencer, commanding them to inquire into the conduct of Her Royal Highness the Princess of Wales. Before these Lords, Charlotte Lady Douglas swore that she had visited the Princess, who confessed to having committed adultery, saying "that she got a bedfellow whenever she could, that nothing was more wholesome." Lady Douglas further swore to the Princess's pregnancy, and evidence was given to prove that she had been delivered of a male child. The

whole of this evidence was found to be perjury, and Lady Douglas was recommended for prosecution. The only person to be benefited was George Prince of Wales, who desired to be divorced from his wife, and it is alleged that he suborned these witnesses to commit perjury against her. At this time the Prince of Wales himself had just added Lady Hertfort to the almost interminable muster-roll of his loves, and was mixed up in a still more strange and disgraceful transaction, in which he used his personal influence to canvass Peers — sitting as the highest law court in the realm — in order to induce them to vote the guardianship of Miss Seymour, a niece of Lady Hertfort, to Mrs. Fitzherbert. Spencer Percival, who acted for the Princess of Wales, being about to publish the whole of the proceedings of the Royal Commissioners, with the evidence and their verdict, his book was quietly suppressed, and he received a reward — a post in the Cabinet. It is said that George III. directed the report of the Commissioners to be destroyed, and every trace of the whole affair to be buried in oblivion.

For some years rumors had been current of corruption in the administration of military promotion under the Duke of York, just as for some time past rumors have been current of abuse of patronage under his Royal Highness the present Duke of Cambridge. A Major Hogan, in 1808, published a declaration that he lost his promotion because he had refused to give the sum of £600 to the Duke of York's "Venus."

On the 27th January, 1809, Colonel Wardle — who is said to have been prompted to the course by his Royal Highness the Duke of Kent — rose in his place in the House of Commons, and formally charged his Royal Highness Frederick Duke of York with corruption in the administration of army patronage.

It is difficult to determine how far credit should be given to the statements of Mrs. Clarke, who positively alleges that she was bribed to betray the Duke of York by his brother, the Duke of Kent, the father of her present Majesty. It is quite certain that Major Dodd, the private secretary of the Duke of Kent, was most active in collecting and marshalling the evidence in support of the various charges made in the Commons against the Duke of York. The Duke of Kent, however, after the whole business was over, formally and officially denied that he was directly or indirectly mixed up in the business. It is clear that much bitter feeling had for some time existed between the Dukes of York and Kent. In a pamphlet published about that time, we find the following remarkable passages relating to the Duke of Kent's removal from his military command at Gibraltar: — "It is, however, certain that the creatures whom we could name, and who are most in his [the Duke of York's] confidence, were, to a man, instructed and industriously employed in traducing the character and well-merited fame of the Duke of Kent, by misrepresenting his conduct with all the baseness of well-trained sycophants. Moreover, we need not hesitate in saying that this efficient Commander-in-Chief, contrary to the real sentiments of his Majesty, made use of his truly dangerous and undue influence with the confidential servants of the Crown to got his brother recalled from the Government of Gibraltar, under a disingenous pretext, and at a risk of promoting sedition in the army."

In another pamphlet, dated 1808, apparently printed on behalf of the Duke of Kent, we find it suggested that the Duke of York had used Sir Hew Dalrymple as a spy on his brother the Duke of Kent at Gibraltar. Whether the Duke of York slandered the Duke of Kent, and whether the Queen's father revenged himself by getting up the case

for Colonel Wardle, others must decide. The following extracts from this gentleman's address to the House of Commons are sufficient to put the material points before our readers: —

"In the year 1803, his Royal Highness the Commander-in-Chief took a handsome house, set up a full retinue of servants and horses, and also a lady of the name of Clarke. Captain Tonyn, of the 48th Regiment, was introduced by Captain Sandon, of the Royal Wagon Train, to this Mrs. Clarke, and it was agreed that, upon his being promoted to the majority of the 31st Regiment, he should pay her £500. The £500 lodged with Mr. Donovan by Captain Sandon, was paid by him to Mrs. Clarke. The difference between a company and a majority is £1,100; this lady received only £500, while the half-pay fund lost the whole sum, for the purpose of putting £500 into the pocket of Mrs. Clarke. This £500 was paid by Mrs. Clarke to Mr. Perkins, a silversmith, in part payment for a service of plate; that the Commander-in-Chief made good the remainder, and that the goods were sent to his house in Gloucester Place. From this I infer, first, that Mrs. Clarke possesses the power of military promotion; secondly, that she received a pecuniary consideration for such promotion; and thirdly, that the Commander-in-Chief was a partaker in the benefit arising from such transactions. In this case, there are no less than five different persons as witnesses, viz., Major Tonyn, Mrs. Clarke, Mr. Donovan, Captain Sandon, and the executor of Mr. Perkins, the silversmith.

"The next instance is of Lieutenant Colebrook, of the 56th Regiment. It was agreed that Mrs. Clarke should receive £200 upon Lieutenant Colebrook's name appearing in the *Gazette*, for promotion. At that moment, this lady was anxious to go on an excursion into the country, and she stated to his Royal Highness that she had an

opportunity of getting £200 to defray the expenses of it, without applying to him. This was stated upon a Thursday, and on the Saturday following, this officer's name appeared in the *Gazette*, and he was accordingly promoted; upon which Mr. Tuck waited on the lady and paid her the money. To this transaction the witnesses are Lieutenant Colebrook, Mr. Tuck, and Mrs. Clarke."

After instancing further cases, Colonel Wardle stated that: —

"At this very hour there is a public office in the city where commissions are still offered at the reduced prices which Mrs. Clarke chooses to exact for them. The agents there have declared to me that they are now employed by the present favorite, Mrs. Carey. They have not only declared this as relative to military commissions, but they have carried it much farther; for, in addition to commissions in the army, places of all descriptions, both in Church and State, are transacted at their office; and these agents do not hesitate to give it under their own hands, that they are employed by many of the first officers in his Majesty's service."

On the examination of witnesses, and general inquiry, which lasted seven weeks, the evidence was overwhelming; but the Duke of York, having written a letter, pledged his honor as a Prince that he was innocent, was acquitted, although at least one hundred and twelve members of Parliament voted for a verdict of condemnation. In the course of the debate Lord Temple said that "he found the Duke of York deeply criminal in allowing this woman to interfere in his official duties. The evidence brought forward by accident furnished convincing proofs of this crime. It was evident in French's levy. It was evident in the case of Dr. O'Meara, this minister of purity, this mirror of virtue, who, professing a call from God, could so

far debase himself, so far abuse his sacred vocation, as to solicit a recommendation from such a person as Mrs. Clarke, by which, with an eye to a bishopric, he obtained an opportunity of preaching before the King. What could be said in justification of his Royal Highness for allowing this hypocrite to come down to Weymouth under a patronage, unbecoming his duty, rank, and situation?"

Mr. Tierney — in reply to a taunt of the Chancellor of the Exchequer, that Colonel Wardle had been tutored by "cooler heads" — said: "He would state that the Duke of York had got his letter drawn up by weaker heads; he would, indeed, add something worse, if it were not unparliamentary to express it. The Duke of York was, he was persuaded, too manly to subscribe that letter, if he were aware of the base, unworthy, and mean purposes to which it was to be applied. It was easy to conceive that his Royal Highness would have been prompt to declare his innocence upon a vital point; but why declare it upon the 'honor of a Prince,' for the thing had no meaning?"

Mr. Lyttleton declared that "if it were in the power of the House to send down to posterity the character of the Duke of York unsullied — if their proceedings did not extend beyond their journals, he should be almost inclined to concur in the vote of acquittal, even in opposition to his sense of duty. But though the House should acquit his Royal Highness, the proofs would still remain, and the public opinion would be guided by them, and not by the decision of the House. It was in the power of the House to save its own character, but not that of the Commander-in-Chief."

It is alleged that the Queen herself by no means stood with clean hands; that in connection with Lady Jersey and a Doctor Randolph, her Majesty realized an enormous sum by the sale of cadetships for the East Indies.

On the 31st May, 1810, London was startled by the narrative of a terrible tragedy. His Royal Highness Ernest Augustus, Duke of Cumberland, afterwards King of Hanover, and who, while King of Hanover, drew £24,000 a year from the pockets of English taxpayers, was wounded in his own room in the dead of night, by some man whom he did not see, although the room was lighted by a lamp, and although his Royal Highness saw "a letter" which lay on a night table, and which letter was "covered with blood." The wounds are said to have been sword wounds inflicted with an intent to assassinate, by Joseph Sellis, a valet of the Duke, who is also said to have immediately afterwards committed suicide by cutting his own throat. General Sir B. Stephenson, who saw the body of Sellis, but who was not examined at the inquest, swore that "the head was nearly severed from the body." Sellis's cravat had been cut through and taken off his neck. Sir Everard Home and Sir Henry Halford were the physicians present at St. James's Palace the day of this tragedy, and two surgeons were present at the inquest, but no medical or surgical evidence was taken as to whether or not the death of Sellis was the result of suicide or murder; but a cheesemonger was called to prove that twelve years before he had heard Sellis say, "Damn the King and the Royal Family;" and a maid servant was called to prove that fourteen years before Sellis had said, "Damn the Almighty." Despite this conclusive evidence, many horrible rumors were current, which, at the time, were left uncontradicted; but on the 17th April, 1832, his Royal Highness the Duke of Cumberland made an affidavit in which he swore that he had not murdered Sellis himself, and that "in case the said person named Sellis did not die by his own hands," then that he, the Duke, "was not any way, in any manner, privy or accessory to his death." His Royal Highness also swore

that "he never did commit, nor had any intention of committing, the detestable crime," which it had pretended Sellis had discovered the Duke in the act of committing. This of course entirely clears the Queen's uncle from all suspicion. Daniel O'Connell, indeed, described him as "the mighty great liar;" but with the general character for truthfulness of the family, it would be in the highest degree improper to suggest even the semblance of a doubt. It was proved upon the inquest that Sellis was a sober, quiet man, in the habit of daily shaving the Duke, and that he had never exhibited any suicidal or homicidal tendencies. It therefore appears that he tried to wound or kill his Royal Highness without any motive, and under circumstances in which he knew discovery was inevitable, and that he then killed himself with a razor, cutting his head almost off his body, severing it to the bone. When Matthew Henry Graslin first saw the body, he "told them all that Sellis had been murdered," and although he was called on the inquest he does not say one word as to the condition of Sellis's body, or as to whether or not he believes it to have been a suicide. Of all the persons who saw the body of Sellis, and they appear to be many, only one, a sergeant in the Coldstreams, gave the slightest evidence as to the state in which the body was found, and no description whatever was given, on the inquest, of the nature of the fearful wound which had nearly severed Sellis's head from his body; nor, although it was afterwards proved by sworn evidence that Sellis's cravat "was cut through the whole of the folds, and the inside fold was tinged with blood," was any evidence offered as to this on the inquest, although it shows that Sellis must have first tried to cut his throat through his cravat and that having partially but ineffectively cut his throat, he then took off his cravat and gave himself with tremendous force the gash which caused his

death. It is said that the razor with which Sellis killed himself was found two feet from the bed, and on the left-hand side; but although it was stated that Sellis was a left-handed man, no evidence was offered of this, and on the contrary, the bloody hand marks, said to have been made by Sellis on the doors, were all on the right hand. It is a great nuisance when people you are mixed up with commit suicide. Undoubtedly, Sellis must have killed himself. The journals tell us how Lord Graves killed himself long years afterward. The Duke of Cumberland and Lady Graves, the widow, rode out together very shortly after the suicide.

In the Rev. Erskine Neale's Life of the Duke of Kent it is stated that a surgeon of note, who saw Sellis after his death, declared that there were several wounds on the back of the neck which it was physically impossible Sellis could have self-inflicted. In a lecture to his pupils the surgeon repeated this in strong language, declaring that "no man can behead himself."

The madness of George III. having become too violent and too continual to permit it to be any longer hidden from the people, the Prince of Wales was, in 1811, declared Regent, with limited powers, and £70,000 a year additional was voted for the Regent's expenses, and a further £10,000 a year also granted to the Queen as custodian of her husband. The grant to the Queen was the more outrageous, as her great wealth and miserly conduct were well known. When the Regent was first appointed, he authorized the Chancellor of the Exchequer to declare officially to the House of Commons, that he would not add to the burdens of the nation; and yet, in 1812, the allowance voted was made retrospective, so as to include every hour of his office.

In the discussion in Parliament on the proposed Regency, it appeared that the people had been for a considerable

period utterly deceived on the subject of the King's illness; and that, although his Majesty had been for some time blind, deaf, and delirious, the Ministry, representing the King to be competent, had dared to carry on the Government whilst George III. was in every sense incapacitated. It is worthy of notice that the Right Honorable Benjamin Disraeli, the leader of the great Conservative party in this country, publicly declared on September 26th, 1871, that her present Majestry, Queen Victoria, was both "physically and morally" incapable of performing her regal functions. One advantage of having the telegraph wires in the hands of Government is shown by the fact that all the telegraphic summaries omitted the most momentous words of Mr. Disraeli's speech. During the debate in the session of 1811, it was shown that when the King was mad in the month of March, 1804, he had on the 4th been represented by Lord Eldon as if he had given his assent to a bill granting certain lands to the Duke of York, and on the 9th as if he had signed a commission.

Earl Grey stated that it was notorious that on two occasions the Great Seal had been employed as if by his Majesty's command, while he was insane. The noble earl also declared that, in 1801, the King was mad for some weeks, and yet during that time councils were held, members sworn to it, and acts done requiring the King's sanction. Sir Francis Burdett said, "that to have a person at the head of affairs who had long been incapable of signing his name to a document without some one to guide his hand; a person long incapable of receiving petitions, of even holding a levee, or discharging the most ordinary functions of his office, and now afflicted with this mental malady, was a most mischievous example to the people of this country, while it had a tendency to expose the Government to the contempt of foreign nations."

One of the earliest acts of the Prince Regent was to re-appoint his brother, the Duke of York, to the office of Commander-in-Chief. A motion was proposed by Lord Milton, in the House of Commons, declaring this appointment to be "highly improper and indecorous." The Ministry were, however, sufficiently powerful to negative this resolution by a large majority. Though His Royal Highness had resigned his high office when assailed with charges of the grossest corruption, he was permitted to resume the command of the army without even a protest, save from a minority of the House of Commons, and from a few of the unrepresented masses. The chief mistress of the Prince Regent at this time was the Marchioness of Hertford; and the *Courier*, then the ministerial journal, had the cool impudence to speak of her as "Britain's guardian angel,' because her influence had been used to hinder the carrying any measure for the relief of the Irish Catholics. Amongst the early measures under the Regency, was the issue in Ireland of a circular letter addressed to the Sheriffs and Lord Lieutenants of the counties, forbidding the meetings of Catholics, and threatening all Catholic committees with arrest and imprisonment. This, however, was so grossly illegal, that it had shortly after to be abandoned, a Protestant jury having refused to convict the first prisoners brought to trial. It is curious to read the arguments against Catholic Emancipation pleaded in the *Courier*, one being that during the whole of his reign, George III. "is known to have felt the most conscientious and irrevocable objections" to any such measure of justice to his unfortunate Irish subjects.

In 1812 we had much poverty in England; and though this was not dealt with by Parliament, £100,000 was granted to Lord Wellington, and £200,000 voted for Russian sufferers by the French war. We had a few months

previously voted £100,000 for the relief of the Portuguese against the French. On a message from the Prince Regent, annuities of £9,000 each were also granted to the four Princesses, exclusive of £4,000 from the Civil List. The message from the Prince Regent for the relief of the "Russian sufferers" was brought down on the 17th of December; and it is a curious fact that while Lord Castlereagh and Lord Liverpool were eulogizing the Russians for their "heroic patriotism" in burning Moscow, the Russians themselves were declaring in the *St. Petersburgh Gazette* that the deed was actually committed by "the impious French," on whose heads the *Gazette* invoked the vengeance of God.

In 1812, the Prince Regent gave a sinecure office, that of Paymaster of Widows' Pensions, to his "confidential servant," Colonel Macmahon. The nature of the sort of private services which had been for some years performed by this gallant colonel for this virtuous Prince may be better guessed than described. Mr. Henry Brougham declared the appointment to be an insult to Parliament. It was vigorously attacked indoors and out of doors, and, in obedience to the voice of popular opinion, the Commons voted the immediate abolition of the office. To recompense Colonel Macmahon for the loss of his place, he was immediately appointed Keeper of the Privy Purse and Private Secretary to the Prince Regent. This appointment was also severely criticised; and although the Government were sufficiently powerful to defeat the attack in the Commons, they were yet compelled, by the strong protest made by the public against such an improper appointment, to nominally transfer the salary to the Regent's privy purse. The transfer was not real, as, the Civil List being always in debt, the nation had in fact ultimately to pay the money.

In 1813, foreign subsidies to the amount of £11,000,000,

and 100,000 stand of arms, were voted by the English Parliament. Out of the above, Portugal received £2,000,000, Sicily, £400,000, Spain, £2,000,000, Sweden, £1,000,000, Russia and Prussia, £3,000,000, Austria, £1,000,000, besides stores sent to Germany to the amount of £2,000,000 more.

This year his Royal Highness the Prince Regent went to Ascot races, where he was publicly dunned by a Mr. Vauxhall Clarke for a betting debt incurred some years before, and left unpaid.

Great excitement was created in and out of Parliament by the complaint of the Princess of Wales that she was not allowed to see her daughter, the Princess Charlotte. The Prince Regent formally declared, through the Speaker of the House of Commons, that he would not meet, on any occasion, public or private, the Princess of Wales (whom it was urged that "he had been forced to marry"); while the Princess of Wales wrote a formal letter to Parliament complaining that her character had been "traduced by suborned perjury." Princess Charlotte refused to be presented at Court except by her mother, who was not allowed to go there. In the House of Commons, Mr. Whitbread charged the Lords Commissioners with unduly straining the evidence by leading questions; and Lord Ellenborough, in his place in the House of Peers, declared that the accusation was "as false as hell." Ultimately, it was admitted that the grave charges against the Princess of Wales were groundless, and £35,000 a year was voted to her, she agreeing to travel abroad. Mr. Bathurst, a sinecurist pensioner, pleading on behalf of the Prince Regent that the House of Commons ought not to interfere, urged that it was no unusual thing to have dissensions in the Royal Family, and that they had been frequent in the reigns of George I. and George II. Mr. Stuart Wortley, in the course of a severe speech in reply to Lord Castlereagh, de-

clared that "we had a Royal Family which took no warning from what was said or thought about them, and seemed to be the only persons in the country who were wholly regardless of their own welfare and respectability."

The Princess Charlotte of Wales was at this time residing in Warwick House, and some curiosity was aroused by the dismissal, by order of the Prince Regent, of all her servants. This was immediately followed by the flight of the Princess from the custody of her father to the residence of her mother, the Princess of Wales. Persuaded to return to the Prince Regent by her mother, Lord Eldon, and others, she appears to have been really detained as a sort of prisoner, for we find the Duke of Sussex soon after complaining in the House of Lords that he was unable to obtain access to the Princess, and asking by whose authority she was kept in durance. Happy family, these Brunswicks!

In 1814, £100,000 further was devoted to the Duke of Wellington, together with an annuity of £10,000 a year, to be at any time commuted for £300,000. The income of the Duke of Wellington, from places, pensions, and grants, amounted to an enormous sum. At present we pay his heir £4,000 a year for having inherited his father's riches.

During the year 1814, £118,857 was voted for payment of the Civil List debts.

The Emperor of Russia and King of Prussia, after the restoration of Louis XVIII., visited the Prince Regent in this country, when the following squib was published: —

"There be princes three,
Two of them come from a far countrie,
And for valor and prudence their names shall be
Enrolled in the annals of glorie.
The third is said at a bottle to be
More than a match for his whole armie,

And fonder of fur caps and fripperie
Than any recorded in storie.
Those from the North great warriors be,
And warriors have in their companie,
But he of the South must stare to see
Himself in such goodly companie.
For to say what his usual consorts be,
Would make but a pitiful storie."

On the 12th of August, 1814, the Princess of Wales quitted England, and it is alleged that, on the evening prior to her departure, the Prince Regent, having as usual drank much wine, proposed a toast, "To the Princess of Wales' damnation, and may she never return to England." Whether this story, which Dr. Doran repeats, be true or false, it is certain that the Prince Regent hated his wife with a thoroughly merciless hatred. When the death of Napoleon was known in Ennland, a gentleman, thinking to gain favor with George IV., said, "Your Majesty's bitterest enemy is dead." The "first gentleman of Europe" thought only of his wife, and replied, "Is she, by God!"

The highly esteemed and virtuous Duke of Cumberland was married at Berlin to the Princess of Salms, a widow who had been twice married, once betrothed, and once divorced. The lady was niece to the Queen of England, who refused to receive her publicly or privately. On this refusal being known, a letter was published in the newspapers, written and signed by the Queen herself, to her brother the Duke of Mecklenburgh-Strelitz, the father of the bride, in which letter the Queen gave assurances of a kind reception to the bride on her arrival in England. The Queen's friends replied that the Queen's letter was only written to be shown to the German Courts on the condition that the Duchess should not come to England. Curious

notions of truth and honor seem current among these Brunswicks!

On the 27th of June, the Lords, on a message from the Prince Regent, voted an additional allowance of £6,000 a year to the Duke of Cumberland in consequence of the marriage. In the House of Commons, after a series of very warm debates, in which Lord Castlereagh objected to answer "any interrogatories tending to vilify the Royal Family," the House ultimately refused to grant the allowance by 126 votes against 125.

One historian says: "The demeanor of the Duchess of Cumberland in this country has been, to say the least, unobtrusive and unimpeached; but it must be confessed that a disastrous fatality — something inauspicious and indescribable — attaches to the Prince, her husband.

This year £200,000 further was voted to the Duke of Wellington, for the purchase of an estate, although it appeared from one Member of Parliament's speech that the vote should rather have been to the Prince Regent. "Who," he asked, "had rendered the army efficient? The Prince Regent — by restoring the Duke of York to the Horse Guards. Who had gained the Battle of Waterloo? The Prince Regent — by giving the command of the army to the Duke of Wellington!!" The Prince Regent himself had even a stronger opinion on the matter. Thackeray says: "I believe it is certain about George IV. that he had heard so much of the war, knighted so many people, and worn such a prodigious quantity of marshal's uniforms, cocked hats, cocks' feathers, scarlet and bullion in general, that he actually fancied he had been present at some campaigns, and under the name of General Brock led a tremendous charge of the German legion at Waterloo."

In 1816, Prince Leopold of Coburg Saalfeld, a very petty German Prince, without estate or position, married the

Princess Charlotte of Wales, as if he were a Protestant, although he most certainly on other occasions acted as if he belonged to the Catholic Church. A grant of £60,000 a year was made to the royal couple; £60,000 was given for the wedding outfit, and £50,000 secured to Prince Leopold for life, in the event of his surviving the Princess. And although this was done, it was well known to the Prince Regent and the members of the Government, that on the 2d January of the previous year, a marriage ceremony, according to the rites of the Roman Catholic Church, had been performed, by which the Prince Leopold was united to the Countess of Cohaky. Bigamy appears to be a fashionable vice, and one to which these Brunswicks never raise any objection.

On the 9th December, the City of London presented an address to the Prince Regent, in which they complained of "immense subsidies to foreign powers to defend their own territories, or to commit aggressions on those of their neighbors," of an unconstitutional and unprecedented military force in time of peace, of the unexampled and increasing magnitude of the Civil List, of the enormous sums paid for unmerited pensions and sinecures, and of a long course of the most lavish and improvident expenditure of the public money throughout every branch of the Government." This address appears to have deeply wounded the Regent, and the expressions of stern rebuke he used in replying, coupled with a rude sulkiness of manner, were ungracious and unwarrantable. He emphasized his answer with pauses and frowns, and turned on his heel as soon as he had delivered it. And yet at this moment hundreds of thousands in England were starving. Kind monarchs these Brunswicks!

Early in 1817, the general distress experienced in all parts of England, and which had been for some time on the

increase, was of a most severe character. Meetings in London and the provinces grew frequent, and were most numerously attended, and on February 3d, in consequence of a message from the Prince Regent, Committees of Secrecy were appointed by the Lords and Commons, to inquire into the character of the various movements. The Government was weak and corrupt, but the people lacked large-minded leaders, and the wide-spread discontent of the masses of the population rendered some of their number easy victims to the police spies who manufactured political plots.

On the 6th of November, 1817, Princess Charlotte of Wales died. Complaints were raised that the Princess had not been fairly treated, and some excitement was created by the fact that Sir Richard Croft, the doctor who attended her, soon after committed suicide, and that the public and the reporters were not allowed to be present at the inquest. No notice whatever of the Princess's death was forwarded to her mother, the Princess of Wales. In a letter to the Duke of Buckingham, Mr. Wynn speaks of this as "the most brutal omission I ever remember, and one which would attach disgrace in private life." At this very time a large sum of money was being wasted in the employment of persons to watch the Princess of Wales on her foreign travels. In her correspondence we find the Princess complaining that her letters were opened and read, and that she was surrounded with spies. From the moment that George III. was declared incurable, and his death approaching, there seems little doubt that desperate means were resorted to to manufacture evidence against the Princess to warrant a divorce.

On July 13th, 1818, his Royal Highness the Duke of Clarence married Adelaide, Princess of Saxe Meiningen, and his Royal Highness the Duke of Kent married her

Serene Highness Victoria, Princess of Leiningen. The Duke of Clarence, of course, had voted to him an additional allowance of £6,000 a year on entering the married state, although he was already receiving from the country more than £21,000 a year in cash, and a house rent free. It is highly edifying to read that during the debates in Parliament, and when some objection was raised to the extra sums proposed to be voted to one of the Royal Dukes, Mr. Canning pleaded, as a reason for the payment, that his Royal Highness was not marrying "for his own private gratification, but because he had been advised to do so for the political purposes of providing succession to the throne." Pleasant this for the lady, and glorious for the country—Royal breeding machines! The Duke of Kent, who had the same additional vote, had about £25,000 a year, besides a grant of £20,000 towards the payment of his debts, and a loan of £6,000 advanced in 1806, of which up to the time of his marriage only £1,000 had been repaid.

Of Edward Augustus, Duke of Kent, father of her present Majesty, it is only necessary to say a few words. The fourth son of George III. was somewhat better than his brothers, and perhaps for this very reason he seems always to have been disliked, and kept at a distance by his father, mother, and brothers. Nor was the Duke of Kent less disliked amongst the army, which he afterwards commanded. Very few of the officers loved him, and the bulk of the privates seem to have regarded him with the most hostile feelings. Kept very short of money by his miserly father and mother, he had, even before his majority, incurred considerable debts; and coming to England in 1790, in order to try and induce the King to make him some sufficient allowance, he was ordered to quit England in ten days. While allowances were made to all the other sons of George, the Duke of Kent had no Parlimentary vote until he was

thirty-three years of age. In 1802 he was appointed Governor of Gibraltar, where a mutiny took place, and the Duke had a narrow escape of his life. The Duke of Kent's friends allege that this mutiny was encouraged by officers of the highest rank, secretly sustained by the Duke of York. The Duke of York's friends, on the contrary, maintain that the overbearing conduct of the Duke of Kent, his severity in details, and general harshness in command, alone produced the result. The Duke of Kent was recalled from the Government of Gibraltar, and for some months the pamphleteers were busy on behalf of the two Dukes, each seeking to prove that the royal brother of his royal client was a dishonorable man. Pleasant people, these Brunswicks! If either side wrote the truth, one of the Dukes was a rascal. If neither side wrote the truth, both were. The following extract from a pamphlet by Mary Anne Clarke, mistress of the Duke of York, will serve to show the nature of the publications I refer to: "I believe there is scarcely a military man in the kingdom who was at Gibraltar during the Duke of Kent's command of that fortress but is satisfied that the Duke of York's refusal of a court martial to his royal brother *afforded an incontestible proof* of his *regard* for the *military* character and honor of the Duke of Kent; for if a court martial had been granted to the Governor of Gibraltar, I always understood there was but *one* opinion as to what would have been the *result;* and *then* the Duke of Kent would have lost several thousands a year, and incurred such public reflections that would, most probably, have been painful to his *honorable* and *acute* feelings. It was, however, this *act of affection for* the Duke of Kent that laid the foundation of that *hatred* which has followed the Commander-in-Chief up to the present moment; and to this *unnatural feeling* he is solely indebted for all the misfortunes and disgrace to which he has been introduced. In one of

the many conversations which I had with Majors Dodd and Glennie, upon the meditated ruin of the Duke of York, they informed me that their royal friend had made every endeavor in his power to *poison* the *King's ear* against the Commander-in-Chief, but as Colonel Taylor was so much about the person of his Majesty, all his efforts had proved ineffectual; and to have *spoken his sentiments* before Colonel Taylor would have been very injudicious, as he would immediately have communicated them to the Commander-in-Chief, who, though he knew this time (said these *confidential* and *worthy* patriots) that the Duke of Kent was *supporting* persons to *write* against *him*, and that some parliamentary proceedings were upon the eve of bursting upon the public attention, yet deported himself towards his royal brother as if they lived but for each other's honor and happiness; and the Duke of Kent, to *keep up appearances*, was more particular in his attentions to the Duke of York than he had ever been before."

Despite the Duke of Kent's recall, he continued to receive salary and allowances as Governor. After the celebration of the marriage, he resided abroad, and was on such unfriendly terms with his family that when he returned from Amorbach to England, it was against the express orders of the Prince Regent, who, shortly after meeting his brother at the Spanish Ambassador's, took not the slightest notice of him.

On the 17th November, 1818, the Queen died, and the custody of the body of the mad, deaf, and blind monarch of England was nominally transferred to the Duke of York, who was voted an extra £10,000 a year for performing the duty of visiting his royal father twice a week. Objection was ineffectually raised that his Royal Highness had also his income as Commander-in-Chief and General Officer, and it might have also been added, his pensions and his

income as Prince Bishop of Osnaburg. Mr. Curwen said: "Considering how complete the revenue of his Royal Highness was from public emoluments, he could not consent to grant him one shilling upon the present occasion."

In 1819, the Duke of Kent tried to get up a lottery for the sale of his Castlebar estate, in order to pay his debts, which were then about £70,000, but the project, being opposed by the Prince Regent, fell to the ground.

On the 24th of May, 1819, her present Majesty was born; and on the 23d of January, 1820, the Duke of Kent, her father, died.

On the 29th of January, 1820, after a sixty years' reign — in which debt, dishonor, and disgrace accrued to the nation he reigned over — George III. died. The National Debt at the date of his accession to the throne was about £150,000,000; at his death it was about £900,000,000.

Phillimore asks: "Had it not been for the unlimited power of borrowing, how many unjust and capricious wars would have been avoided! How different would be our condition, and the condition of our posterity! If half the sum lavished to prevent any one bearing the name of Napoleon from residing in France, for replacing the Bourbons on the thrones of France and Naples, for giving Belgium to Holland, Norway to Sweden, Finland to Russia, Venice and Lombardy to Austria, had been employed by individual enterprise, what would now be the resources of England?"

An extract, giving Lord Brougham's summary of George III.'s life and character, may, we think, fairly serve to close this chapter: "Of a narrow understanding, which no culture had enlarged; of an obstinate disposition, which no education perhaps could have humanized; of strong feelings in ordinary things, and a resolute attachment to all his own opinions and predilections, George III. possessed

much of the firmness of purpose which, being exhibited by men of contracted mind without any discrimination, and as pertinaciously when they are in the wrong as when they are in the right, lends to their characters an appearance of inflexible consistency, which is often mistaken for greatness of mind, and not seldom received as a substitute for honesty. In all that related to his kingly office he was the slave of deep-rooted selfishness; and no feeling of a kindly nature ever was allowed access to his bosom whenever his power was concerned."

CHAPTER V.

THE REIGN OF GEORGE IV.

THE wretched reign of George IV. commenced on the 30th January, 1820. Mr. Buckle speaks of "the incredible baseness of that ignoble voluptuary who succeeded George III. on the throne." The coronation was delayed for a considerable period, partly in consequence of the hostility between the King and his unfortunate wife, and partly because of the cost. We find the Right Hon. Thomas Grenville writing of the coronation: "I think it probable that it will be put off, because the King will not like it unless it be expensive, and Vansittart knows not how to pay for it if it is." Generous monarchs, these Brunswicks! Thousands at that moment were in a state of starvation in England, Scotland, and Ireland. Lord Cassilis writes: "There seems nothing but chaos and desolation whatever way a man may turn himself . . . the lower orders existing only from the circumstance of the produce of the land being unmarketable. . . The weavers are certainly employed, but they cannot earn more than from six to eight

shillings a week. Such is our state." When the coronation did ultimately take place, some strange expenses crept in. Diamonds were charged for to the extent, it is said, of £80,000, which found their way to one of the King's favored mistresses. The crown itself was made up with hired jewels, which were kept for twenty-one months after the coronation, and for the hire of which alone the country paid £11,000. The charge for coronation robes was £24,000. It was in consequence of Sir Benjamin Bloomfield having to account for some of the diamonds purchased that he resigned his position in the King's household. Rather than be suspected of dishonesty, he preferred revealing that they had reached the hands of Lady Conyngham. Sir George Naylor, in an infamously servile publication, for which book alone the country paid £3,000, describes "the superb habiliments which his Majesty, not less regardful of the prosperity of the people than of the splendor of his throne, was pleased to enjoin should be worn upon the occasion of his Majesty's sacred coronation."

Sir William Knighton declares that on the news of the King's death reaching the Prince Regent, "the fatal tidings were received with a burst of grief that was very affecting." The King had been mad and blind and deaf for ten years, and the Queen, years before, had complained of the Prince's conduct as unfilial, if not inhuman. With the Prince Regent's known character, this sudden burst of grief is really "very affecting."

On the 23d of February, London was startled with the news of what since has been described as the Cato Street Conspiracy. The trial of Arthur Thistlewood and his misguided associates is valuable for one lesson. The man who found money for the secret conspirators, and who incited them to treason and murder, was one George Edwards. This Edwards was well described by one of the

journals of the period, "as neither more nor less than the confidential agent of the original conspirators, to hire for them the treasons they have a purpose in detecting." By original conspirators were meant Lord Castlereagh and Lord Sidmouth. In the House of Commons, Mr. Alderman Wood moved formally, "That George Edwards be brought to the bar of the House on a breach of privilege. He pledged himself, if he had this incendiary in his hands, to convict him of the crimes imputed; he hoped he had not been suffered to escape beyond seas; otherwise there were honorable gentlemen who were in possession of him, so that he might be produced" — meaning by this that he was kept out of the way by the Government. "He regarded him as the sole author and contriver of the Cato Street plot. It was strange how such a man should be going about from public house to public house, nay, from one private house to another, boldly and openly instigating to such plots; and, in the midst of this, should become, from abject poverty, suddenly flush with money, providing arms, and supplying all conspirators." Mr. Hume seconded the motion. "It appeared by the depositions, not of one person only, but of a great many persons, that the individual in question had gone about from house to house with hand-grenades, and, up to twenty-four hours only preceding the 23d of February, had been unceasingly urging persons to join with him in the atrocious plot to assassinate his Majesty's Ministers. All of a sudden he became quite rich, and was buying arms in every quarter, at every price, and of every description; still urging a variety of persons to unite with him. Now, it was very fitting for the interest of the country, that the country should know who the individuals were who supplied him with the money."

As a fair specimen of the disposition of the King in dealing with his Ministry, I give the following extract from

a memorandum of Lord Chancellor Eldon, dated April 26th, 1820: "Our royal master seems to have got into temper again, so far as I could judge from his conversation with me this morning. He has been pretty well disposed to part with us all, because we would not make additions to his revenue. This we thought conscientiously we could not do in the present state of the country, and of the distresses of the middle and lower orders of the people — to which we might add, too, that of the higher orders. My own individual opinion was such that I could not bring myself to oppress the country at present by additional taxation for that purpose."

On the 23d of March, Henry Hunt, John Knight, Joseph Johnson, Joseph Healey, and Samuel Bamford were, after six days' trial at York, found guilty of unlawfully assembling. Lord Grenville feared that, if acquitted, Peterloo might form a terrible bill of indictment against the Ministry. His Lordship writes on March 29th, to the Marquis of Buckingham: "It would have been a dreadful thing if it had been established by the result of that trial that the Manchester meeting was under all its circumstances a legal assembly." His Lordship knew that the magistrates and yeomanry cavalry might have been indicted for murder had the meeting been declared legal. Sir C. Wolseley and the Rev. J. Harrison were at this time being prosecuted for seditious speaking, and were ultimately found guilty on April 10th. In May the state of the country was terrible; even Baring, the Conservative banker, on May 7th, described the "state of England" to a full House of Commons, "in the most lamentable terms." On the 8th we find Mr. W. H. Fremantle saying of the King, "His language is only about the Coronation and Lady Conyngham [his then favorite sultana]; very little of the state of the country." Early in June, it being known that Queen

Caroline was about to return to England, and that she intended to be present at the Coronation, the King offered her £50,000 a year for life to remain on the Continent, and forbear from claiming the title of Queen of England. This Caroline indignantly refused. The Queen's name had, by an order in Council, and on the King's direction, been omitted from the Liturgy as that of a person unfit to be prayed for, and on the 6th of July a bill of pains and penalties was introduced by Lord Liverpool, alleging adultery between the Queen and one Bartolomeo Bergami. To wade through the mass of disgusting evidence offered by the advisers of the King in support of the bill is terrible work. It seems clear that many of the witnesses committed perjury. It is certain that the diplomatic force of England was used to prevent the Queen from obtaining witnesses on her behalf. Large sums of the taxpayers' money were shown to have been spent in surrounding the Princess of Wales with spies in Italy and Switzerland. Naturally the people took sides with the Queen. To use the language of William Cobbett: "The joy of the people, of all ranks, except nobility, clergy, and the army and the navy, who in fact were theirs, was boundless; and they expressed it in every possible way that people can express their joy. They had heard rumors about a lewd life, and about an adulterous intercourse. They could not but believe that there was some foundation for something of this kind; but they, in their justice, went back to the time when she was in fact turned out of her husband's house, with a child in her arms, without blame of any sort ever having been imputed to her. They compared what they had *heard* of the wife with what they had *seen* of the husband, and they came to their determination accordingly. As far as related to the question of guilt or innocence they cared not a straw; they took a large view of the matter;

they went over her whole history; they determined that she had been wronged, and they resolved to uphold her."

On the 6th of August, the Duchess of York died. Dr. Doran thus writes her epitaph: "Her married life had been unhappy, and every day of it was a disgrace to her profligate, unprincipled, and good-tempered husband."

In the month of September Lord Castlereagh was compelled to admit that the expenses incurred in obtaining evidence from abroad, against the Queen, had been defrayed out of the Secret Service money. The trial of Queen Caroline lasted from the 17th of August until the 10th of November, when, in a house of two hundred and seven peers, the Queen was found guilty by a majority of nine votes. On this, Lord Liverpool said that "as the public sentiment had been expressed so decidedly against the measure," he would withdraw the bill. Amongst those who voted against the Queen, the names appear of Frederick Duke of York and William Henry Duke of Clarence. They had been most active in attacking the Queen, and now were shameless enough to vote as her judges. While the trial was proceeding, the Duke of York's private conversation "was violent against the Queen." He ought surely, for very shame's sake, this Prince-Bishop, to have remembered the diamonds sent by the King his father to Princess Caroline Amelia Elizabeth, of Brunswick. Being the bearer of the jewels, his Royal Highness the Duke of York and Prince-Bishop of Osnaburg, stole them, and presented them to Mrs. Mary Anne Clarke. Mr. Denman, the Queen's Solicitor-General, was grandly audacious in his indictment of the King's brothers for their cowardly conduct. In the presence of the assembled Lords, he, without actually referring to him by name, denounced the Duke of Clarence as a calumniator. He called on the Duke to come forward openly, saying,

"Come forth, thou slanderer!" And this slanderer was afterwards our King! The Queen, in a protest against the bill, declared that "those who avowed themselves her prosecutors have presumed to sit in judgment upon the question between the Queen and themselves. Peers have given their voices against her, who had heard the whole evidence for the charge, and absented themselves during her defence. Others have come to the discussion from the Secret Committee with minds biased by a mass of slander, which her enemies have not dared to bring forward in the light." Lord Dacre, in presenting the protest to the assembled peers, added: "Her Majesty complained that the individuals who formed her prosecutors in this odious measure, sat in judgment against her. My Lords, I need not express an opinion upon this complaint; delicacy alone ought to have, in my opinion, prevented their becoming her accusers, and also her judges."

George IV. was guilty of the vindictive folly of stripping Brougham of his King's Counsel gown, as a punishment for his brilliant defence of the Queen.

While the trial of the Queen was going on, it might have been thought that the King would at any rate affect a decency of conduct. But these Brunswicks are shameless. Speaking of the cottage at Windsor, on August 11th, Mr. Fremantle says: "The principal object is of course the Lady Conyngham, who is here. The King and her always together, separated from the rest, they ride every day or go on the water, and in the evening sitting alone. . . . . The excess of his attentions and *enjouement* is beyond all belief." On December 17th, Mr. Fremantle finds the King ill and says: "The impression of my mind is that the complaint is in the head." Most of the Brunswicks have been affected in the head. Either George I. was insane, or George II. was not his son. George II. himself had cer-

tainly one or two delusions, if not more. George III.'s sanity is not affirmed by any one. It may be a question whether or not any allegation of hereditary affection is enough, however, to justify an appeal to Parliament for a rearrangement of the succession to the throne.

On the 9th of January, 1821, King George IV. wrote a private letter to Lord Chancellor Eldon, in the "double capacity as a friend and as a minister," in order to influence the proceedings then pending in the law courts "against vendors of treason and libellers."

On the 8th of June, on the motion of Lord Londonderry, and after an ineffectual opposition by Mr. Hume, £6,000 a year additional was voted to the Duke of Clarence. The vote was made retrospective, and thus gave the Duke £18,000 extra in cash. Besides this, we find a charge of £9,166 for fitting up the Duke's apartments.

On the 5th of July, Mr. Scarlett moved the court on behalf of Olivia Wilmot Serres, claiming to be the legitimate daughter of the Duke of Cumberland, who was brother of George III. Mr. Scarlett submitted that he had documents proving the accuracy of the statement, but on a technical point the matter was not gone into.

In August, 1821, King George IV. visited Ireland. Knowing his habits, and the customs of some other members of the family, it excites little surprise to read that, on the voyage to Dublin, "his Majesty partook most abundantly of goose pie and whiskey," and landed in Ireland "in the last stage of intoxication." And this was a king! This journey to Ireland cost the country £58,261. In a speech publicly made by the King in Ireland, within a few hours after receiving the news of Queen Caroline's death, the monarch said: "This is one of the happiest days of my life."

On the 7th of August Queen Caroline died. In Thel-

wall's *Champion* there is a full account of the disgraceful conduct of the King's Government with reference to the funeral. On the morning of the 14th, after a disgusting contest between her executors and the King's Government for the possession of her remains, they were removed from Brandenburgh House towards Harwich, on their way to interment at Brunswick. The ministers, to gratify personal feelings of unworthy rancor beyond the grave, gave orders that the funeral should take a circuit, to avoid manifestations of sympathy from the Corporation and the people along the direct route through London. At Kensington, the procession found every road but that of London barricaded by the people, and was constrained to take the forbidden route, with the intention of passing through Hyde Park into the northern road. The Park gate was closed and barricaded, but was forced by the military. The upper gate was also barricaded. Here a conflict took place between the military and the people, and two persons were shot by the soldiers. The procession moved on, the conflict was renewed, the people triumphed, and the corpse was borne through the city. Sir Robert Wilson remonstrated with some soldiers and an officer on duty; but his humane interference caused his removal from the army. In return, a large sum was subscribed by the public to compensate Sir Robert Wilson for his loss. The directing civil magistrate present, for having consulted his humanity in preference to his orders, and to prevent bloodshed yielded to the wishes of the multitude, was also deprived of his commission. On the inquest on the body of one of the men shot, the coroner's jury, vindicating the rights of the people, returned a verdict of "Wilful murder" against the Life Guardsman who fired.

While the King was in Ireland he paraded his connection with the Marchioness of Conyngham in the most glar-

ing manner. Fremantle says: "I never in my life heard of anything to equal the King's infatuation and conduct towards Lady Conyngham. She lived exclusively with him during the whole time he was in Ireland, at the Phœnix Park. When he went to Slane, she received him dressed out as for a drawing-room. He saluted her, and they then retired alone to her apartments."

If it be objected that I am making too great a feature of the Marchioness of Conyngham's connection with the King, I plead my justification in Henry W. Wynn's declaration of "her folly and rapacity," affirming that this folly and rapacity have left their clear traces on the conduct of affairs, and in the increase of the national burdens. Her husband, as a reward for her virtue, was made an English peer in 1821. Lord Mount Charles, his eldest son, was made Master of the Robes, Groom of his Majesty's Bedchamber, and ultimately became a member of the Government. On this, Bulwer said: "He may prove himself an admirable statesman, but there is no reason to suppose it."

In order that the student of history may fairly judge the account of the rapturous reception given to the King in Ireland, it is needful to add that political discontent was manifest on all sides. Poverty and misery prevailed in Limerick, Mayo, Cavan, and Tipperary, which counties were proclaimed, and occupied by a large military force. Executions, imprisonments, and tumults filled the pages of the daily journals.

In the autumn of 1821, King George IV. visited Hanover, and if the Duke of Buckingham's correspondence be reliable, "Lord Liverpool put a final stop to the visit by declaring that no more drafts could be honored, except for the direct return home."

On the 12th of August, 1822, Castlereagh, the most noble the Marquis of Londonderry, sent himself to heaven, from

North Cray Farm, Bexley, at the age of fifty-three. He was buried in Westminster Abbey. Meaner clay would have been got rid of at some cross roads.

"The death," says Wallace, "of a public man in England—especially a death so sudden and lamentable—greatly assuages the political resentments against him in his life; and there was a reaction in aristocratic circles in favor of Lord Londonderry when he ceased to live. His servile complaisance to despots abroad, his predilection for the worst engines of government at home, were for a moment forgotten. But the honest hatred of the populace, deep-rooted, sincere, and savage, remained untouched, and spoke in a fearful yell of triumphant execration over his remains whilst his coffin was descending into the grave in Westminster Abbey."

No language could do fitting justice to Robert Stewart, Marquis of Londonderry. Words would be too weak to describe Castlereagh's cruelty and baseness towards his own countrymen, or his infernal conduct in connection with the Government of England. All that can be fittingly said is, that he was pre-eminently suited to be Minister of State under a Brunswick.

In 1823 the thanks of Parliament were presented to George IV. for "having munificently presented to the nation a library formed by George III." Unfortunately, the thanks were undeserved. George IV. was discreditable enough to accept thanks for a donation he had never made. The truth is, says the *Daily News*, "that the King being, as was his wont, in urgent need of money, entertained a proposal to sell his father's library to the Emperor of Russia for a good round sum. The books were actually packed up, and the cases directed in due form, when representations were made to Lord Sidmouth, then Home Secretary, on the subject. The minister resolved, if possible, to hinder

the iniquity from being perpetrated. Accordingly, he represented his view of the matter to the King. George IV. graciously consented, after a good deal of solicitation, to present the library to the nation, conditionally on his receiving in return the same sum as he would have received had the sale of it to the Emperor of Russia been completed. What the nation did was, firstly, to pay the money; secondly, to erect a room for the library at the cost of £140,000; and thirdly, to return fulsome thanks to the sovereign for his unparalleled munificence."

On the 25th of April, 1825, the Duke of York spoke in the House of Lords against Catholic Emancipation. His speech was made, if not by the direction, most certainly with the consent, of the King. George IV.'s reluctance to Catholic Emancipation was deep-rooted and violent. The bare mention of the subject exasperated him. He was known to say, and only in his milder mood, "I wish those Catholics were damned or emancipated." The angered despotism of this alternative still afforded the hope that his intolerance might be overcome by his selfish love of ease. The Duke of York's address to his brother peers closed with the declaration that he would, to the last moment of his life, whatever his situation, resist the emancipation of the Catholics, "so help him God!" All tyrants think themselves immortal; the Catholics and their cause outlived the Duke of York, and triumphed. His speech, however, coming from the presumptive heir to the Crown, had a great share in deciding the majority of the Lords against the measure; and acted with great effect upon the congenial mass of brute ignorance and bigotry which is found ready to deny civil rights to all outside the pale of their own church.

On the 5th of January, 1827, the Duke of York died. Wallace, in his "Life of George IV.," says: "Standing in the

relation of heir-presumptive to the throne; obstinately and obtusely fortified against all concession to the Catholics; serving as a ready and authorative medium of Toryism and intolerance to reach, unobserved, the royal ear — his death had a great influence upon the state of parties, and was especially favorable to the ascendancy of Mr. Canning. He, some weeks only before he died, and when his illness had commenced, strenuously urged the King to render the Government uniform and anti-Catholic; in other words, to dismiss Mr. Canning; and, had he recovered, Mr. Canning must have ceased to be Foreign Minister, or the Duke to be Commander-in-chief. The Duke of York was not without personal good qualities, which scarcely deserved the name of private virtues, and were overclouded by his private vices. He was constant in his friendships: but who were his friends and associates? Were they persons distinguished in the State, in literature, in science, in arts, or even in his own profession of arms? Were they not the companions and sharers of his dissipations and prodigalities? He did not exact from his associates subserviency or form; but it was notorious that, from the meanness of his capacity, or the vulgarity of his tastes, he descended very low before he found himself at his own social level. His services to the army as Commander-in-chief were beyond all measure overrated. Easy access, diligence, a mechanical regularity of system, which seldom yielded to solicitation, and never discerned merit; an unenvying, perhaps unscrupulous, willingness to act upon the advice and appropriate the measures of others more able and informed than himself, — these were his chief merits at the Horse Guards. But, it will be said, he had un uncompromising, conscientious fidelity to his public principles; this amounts to no more than that his bigotry was honest and unenlightened. His death, perhaps, was opportune; his non-accession fortunate for the peace of the country

and the stability of his family on the Throne. Alike incapable of fear and foresight, he would have risked the integrity of the United Kingdom rather than concede the Catholic claims; and the whole Monarchy rather than sanction Reform. It would be easy to suggest a parallel, and not always to his advantage, between the constitution of his mind and that of James, Duke of York, afterwards James II., whose obstinate bigotry forced the nation to choose between their liberties and his deposition from the Throne."

In 1827, the Duke of Clarence obtained, after much opposition, a further vote of £8,000 a year to himself, besides £6,000 a year to the Duchess. The Duke of Clarence also had £3,000 a year further, consequent on the death of the Duke of York, making his allowance £43,000 a year.

In April, 1829, the infamous Duke of Cumberland had stated, that if the King gave his assent to the Catholic Emancipation Bill, he (the Duke) would quit England never to return to it. The Right Honorable Thomas Grenville says, in a letter dated April 9th: "There is some fear that a declaration to that effect may produce a very general cheer even in the dignified assembly of the House of Lords." How loved these Brunswicks have been even by their fellow-peers!

On the 10th of April, the Roman Catholic Emancipation Bill passed the House of Lords, the Duke of Wellington confessing that civil war was imminent, if the relief afforded by the measure was longer delayed.

On June 26th, 1830, the royal physicians issued a bulletin, stating that "it has pleased Almighty God to take from this world the King's most excellent majesty." Most excellent majesty!! A son who threatened his mother to make public the invalidity of her marriage; a lover utterly regardless of the well-being of any of his mistresses; a bigamous husband, who behaved most basely to his first

wife, and acted the part of a dishonorable scoundrel to the second; a brother at utter enmity with the Duke of Kent; a son who sought to aggravate the madness of his royal father; a cheat in gaming and racing. He dies because lust and luxury have, through his lazy life, done their work on his bloated carcass, and England sorrows for the King's "most excellent majesty!"

George IV. was a great King. Mrs. J. R. Greer, in her work on "Quakerism," says that he once went to a woman's meeting in Quaker dress. "His dress was all right; a gray silk gown, a brown cloth shawl, a little white silk handkerchief with hemmed edge round his neck, and a very well-poked Friend's bonnet, with the neatly-crimped border of his clear muslin cap tied under the chin, completed his disguise." Royal George was detected, but we are told that the Quakers, who recognized their visitor, were careful to treat him with courtesy and deference!

In the ten years' reign, the official expenditure for George IV. and his Royal Family was at the very least £16,000,000 sterling. Windsor Castle cost £894,500, the Pavilion at Brighton is said to have cost a million, and another half-million is alleged to have been expended on the famous "Cottage." After the King's death his old clothes realized £15,000.

Thackeray says of him that he "never resisted any temptation; never had a desire but he coddled it and pampered it; if he ever had any nerve, he frittered it away among cooks, and tailors, and barbers, and furniture-mongers, and opera-dancers. . . . all fiddling, and flowers, and feasting, and flattery, and folly. . . . a monstrous image of pride, vanity, and weakness."

Wallace says: "Monarchy, doubtless, has its advantages; but it is a matter of serious reflection that under a government called free, among a people called civilized,

the claims of millions, and the contingent horrors of a civil war, should be thus dependent upon the distempered humors and paramount will of a single unit of the species."

CHAPTER VI.

THE REIGN OF WILLIAM IV.

William Henry, Duke of Clarence, Admiral of the Fleet, and third son of George III., born August 21st, 1765, succeeded his brother George IV. as King of England, on the 26th of June, 1830. The new King was then 65 years of age, and had been married, July 11th, 1818, to Adelaide Amelia Louisa Teresa Caroline, Princess of Saxe-Meiningen. Mrs. Dorothy Jordan, with whom William had lived, and who had borne him ten children, had fled to France to avoid her creditors, and had there died, neglected by the world, deserted by William, and in the greatest poverty. This Mrs. Jordan was sold to William by one Richard Ford, her former lover, who, amongst other rewards of virtue, was created a Knight, and made Police Magistrate at Bow Street. Mrs. Jordan's children bore the name of "Fitzclarence," and great dissatisfaction was expressed against the King, who, too mean to maintain them out of his large income, contrived to find them all posts at the public cost. At the date of William IV.'s accession, the imperial taxation was about £47,000,000; to-day it has increased at least £25,000,000.

The annual allowances to the junior branches of the Royal Family in 1830, formerly included in the Civil List, and now paid separately, were as follows:—

The Duke of Cumberland £21,000. He had no increase on his marriage; the House of Commons rejected a motion

to that effect; but an allowance of £6,000 a year for his son, Prince George, had been issued to him since he became a resident in this country. This is the Duke of Cumberland, who so loved his brother, William IV., that he intrigued with the Orangemen to force William's abdication, and to get made King in his stead.

The Duke of Sussex received £21,000.

The Duke of Cambridge, father of the present Duke, had £27,000. He obtained an increase on his marriage of £6,000 a year. This Prince was charged with the government of the family territory, the kingdom of Hanover, and consequently resided but little in England.

Princess Augusta, £13,000.

The Princess Elizabeth of Hesse Homburg, £13,000.

Princess Sophia, £13,000.

The Duchess of Kent, including the allowance granted in 1831, for her daughter, the Princess Victoria, heir-presumptive to the Throne, £22,000.

The Duke of Gloucester, including £13,000 which he received as the husband of the Princess Mary, £27,000.

The Princess Sophia of Gloucester, his sister, £7,000.

Queen Adelaide had £100,000 a year, and the residence at Bushey granted to her for life.

Mrs. Fitzherbert, as the widow of George IV., was in receipt of £6,000 a year, and the ten Fitzclarences also enjoyed places and pensions.

The Duke of Wellington and Sir Robert Peel were the King's Ministers; and, although there was some personal hostility between William and the Iron Duke, they were at first his willing coadjutors in opposing either reduction of expenditure, or any kind of political or social reform. The quarrel between William as Duke of Clarence and the Duke of Wellington had arisen when William was Lord High Admiral. William had given improper orders to a

military officer, named Cockburn, which the latter had refused to obey. The Duke of Wellington refused to sacrifice Cockburn, and ultimately the Duke of Clarence resigned his office as Lord High Admiral, for which, says the Rev. Mr. Molesworth, "he was ill-qualified, and in which he was doing great mischief."

In November, 1830, Earl Grey, Lord Brougham, Lord Melbourne, and Lord Althorp came into office as leaders of the Whig party. With slight exception, in 1806, the Whigs had not been before in office during the present century, and very little indeed since 1762. The Whigs encouraged the Radical Reformers so far as to insure their own accession to power; but it is evident that the Whig Cabinet only considered how little they could grant, and yet retain office. In finance, as well as reform, they were disloyal to the mass of the people who pushed them into power.

The Duke of Wellington and his Ministry resigned office in November, 1830, because the House of Commons wished to appoint a Select Committee to examine the Civil List. King William IV., according to the words of a letter written by him to Earl Grey, on December 1st, 1830, felt considerable "alarm and uneasiness" because Joseph Hume and other Radical members wished to put some check on the growing and already extravagant royal expenditure. He objects "most strenuously," and says, referring in this especially to the Duchy of Lancaster: "Earl Grey cannot be surprised that the King should view with jealousy any idea of Parliamentary interference with the only remaining pittance of an independent possession, which has been enjoyed by his ancestors, during many centuries, as their *private* and *independent estate*, and has now, as such, lawfully devolved upon him in right of succession. That he should feel that any successful attempt to deprive the Sovereign of this independent posses-

sion will be to lower and degrade him into the state and condition of absolute and entire dependence, as a pensioner of the House of Commons; to place him in the condition of an individual violating or surrendering a trust which had been held sacred by his ancestors, and which he is bound to transmit to his successors. The King cannot indeed conceive upon what plea such a national invasion of the *private* rights, and such a seizure of the private estates, of the Sovereign could be justified."

William IV. reminds Earl Grey, that the Chancellor of the Duchy is sworn to do all things "for the weal and profit of the King's Highness. And his Majesty has fair reason to expect that a pledge so solemnly taken will be fulfilled, and that he will be supported in his assertion of these *private* rights, not only of himself, but of his heirs and successors, as they have devolved upon him, *separate* from all other of his possessions *jure coronæ*, and consequently, as his separate personal and private estate, vested in his Majesty, by descent from Henry VII. in his body *natural*, and not in his body *politic* as King."

Earl Grey naturally promised to prevent Radical financial reformers from becoming too annoying to Royalty. The Whigs love to talk of economy out of office, and to avoid it when in place.

Daniel O'Connell appears to have much troubled the King. Directly after the Dublin meeting in December, 1830, Sir Henry Taylor says: "The King observed, that he would have been better pleased if this assembly of people had not dispersed quietly *at his bidding*, as the control which he has successfully exercised upon various occasions in this way, appears to his Majesty the most striking proof of the influence he has acquired over a portion of the lower classes in Ireland."

It is pretended in the *Cabinet Register* for 1831, and was

stated by Lord Althorp in Parliament, that his Majesty most nobly and patriotically declined to add to the burdens of his people by accepting an outfit for his royal consort, though £54,000 had been granted by Parliament to the Queen of George III., as an outfit to purchase jewels, etc." This is so little true, that it appears from the correspondence between the King and Earl Grey, that a grant for the Queen's outfit had been agreed to by the outgoing Tories, and would have been proposed by the new Whig Government, had not one of the Cabinet (probably Lord Brougham) decidedly objected, on the ground "that proposing a grant for this purpose would have a bad effect on the House of Commons, and on public opinion;" and by a letter dated February 4th, 1831, from the King, it is clear that he only abandoned the claim when he found he could not get it. There is not a word about "the burdens of the people," although many at that time were in a starving condition. On the contrary, the secretary of the King says on the 6th of February, that "the disinclination shown in the House of Commons" to grant the outfit had "produced a very painful impression on his Majesty."

The King, afraid of the spread of Reform opinions, says that he "trusts that the Lord-Lieutenants and Deputy-Lieutenants of counties will be cautioned to scrutinize the ballots for the militia as far as possible, so as to endeavor to exclude from its ranks men of dangerous and designing character, whose influence might prove very pernicious upon newly-established corps, and before they shall have acquired habits of discipline and subordination." And to show his desire for Reform, he urges the Ministers to check the public gatherings, saying, "I am ignorant to what extent it may be in contemplation to increase the military means, either by calling out the militia partially, or by any addition to the regular force; but I am convinced that the latter

would be not only the most efficient, but the cheapest; and it would have the advantage of being applicable to all purposes."

The Reformer King — for this pretence has been made — in another letter says: "His Majesty is satisfied that he may rely upon Earl Grey's strenuous support in his determination to resist all attempts which may be made to sap the established rights of the Crown, and to destroy those institutions under which this country has so long prospered, while others have been suffering so severely from the effects of revolutionary projects, and from the admission of what are called Radical remedies . . . He is induced thus pointedly to notice the proposal of introducing *Election by Ballot*, in order to declare that nothing should ever induce him to yield to it, or to sanction a practice which would, in his opinion, be a protection to concealment, would abolish the influence of fear and shame, and would be inconsistent with the manly spirit and the free avowal of opinion which distinguish the people of England. His Majesty need scarcely add that his opposition to the introduction of another, yet more objectionable, proposal, the adoption of *Universal Suffrage*, one of the wild projects which have sprung from revolutionary speculation, would have been still more decided."

How William IV. could ever have been suspected of being favorable to Reform is difficult to comprehend. As Duke of Clarence he had spoken in favor of the Slave Trade, and had declared that "its abolition should meet with his most serious and most unqualified opposition." When the Reform Bill actually became law, although William IV. did not dare to veto it, he refused to give the royal assent in person.

In this chapter there is not space enough to go through the history of the Reform agitation of 1832. In Molesworth's "History of the Reform Bill," and Roebuck's ac-

count of the "Whig Ministry," the reader will find the story fully told. It is not enough to say here that the King not only hindered Reform until Revolution was imminent, and the flames of burning castles and mansions were rising in different parts of England, but it may be stated that he condescended to deceive his Ministers; that he allowed his children to canvass peers against the bill, and would have resorted to force to crush the Birmingham Political Union, if he could have thrown the responsibility of this tyranny upon the Cabinet. In the King's eyes the people were "the rabble." We find him "impatient" for the return of the Tories to power, and bitterly discontented when the orderly character of popular demonstrations rendered the employment of the military impossible.

The Earl of Munster, one of the King's ten children by Mrs. Jordan, and who was Governor of Windsor Castle, Colonel in the Army, Aide-de-Camp to the King, Lieutenant of the Tower, Tory and State prisoner, being charged with having "unhandsomely intrigued against Earl Grey's Government," made the curious defence "that for six months before and for twenty-four hours after the resignation" of the Grey Government, "it was from certain circumstances out of his power to act in the matter imputed to him."

It is worthy of notice, as against Mr. Frederic Harrison's opinion, that no English monarch could now really interfere with the course of government in Great Britain, that in April, 1832, William IV. gave written directions to Earl Grey, "that no instructions should be sent" to foreign ambassadors until they had "obtained his previous concurrence." And it is clear, from a letter of the King's private secretary, that William gave these orders because he was afraid there was a "disposition . . . to unite with France in support of the introduction of liberal opinions and measures agreeably to the spirit of the times." Although the

newspapers praised William, he does not seem to have been very grateful in private. In 1832, he declared to his confidential secretary that he had "long ceased to consider the press (the newspaper family) in any other light than as the vehicle of all that is false and infamous."

In January, 1833, in a speech, not written for him, but made extemporaneously after dinner, William IV. said, to compliment the American Ambassador, "that it had always been a matter of serious regret to him that he had not been born a free, independent American." We regret that the whole family have not long since naturalized themselves as American citizens. But such a sentiment from the son of George III., from one who in his youth had used the most extravagant phraseology in denunciation of the American rebels!!

The family insanity, shown in the case of George II. by his persistence in wearing his Dettingen old clothes; more notorious and less possible of concealment in that of George III.; well known to all but the people as to George IV., who actually tried to persuade the Duke of Wellington that he (George) had led a regiment at Waterloo, was also marked in William IV. In April, 1832, the King's own secretary admits "distressing symptoms" and "nervous excitement," but says that the attack "is now subsiding." Raikes, a Tory, and also a king-worshipper, in his "Diary," under date May the 27th, 1834, says, after speaking of the King's "excitement" and "rather extraordinary" conduct, that "at the levée a considerable sensation was created the other day by his insisting that an unfortunate wooden-legged lieutenant should kneel down." On June 11th, visiting the Royal Academy, the President showed the King, amongst others, the portrait of Admiral Napier, and was astonished to hear his Majesty at once cry out: "Captain Napier may be

damned, sir, and you may be damned, sir; and if the Queen was not here, sir, I would kick you downstairs, sir." The King's brother, his Royal Highness the Duke of Gloucester, died November 20th, 1834. Raikes says of him: "He was not a man of talent, as may be inferred from his nickname of Silly Billy." This is the Royal Family, the head of which, according to Mr. Disraeli, was "physically and mentally incapable of performing the regal functions," and which yet, according to the brilliant statesman, so fitly represents the intelligence and honor of Great Britain!

In 1836, Sir William Knighton died. He had been made private secretary to the late King, and had made his fortune by means of some papers which Colonel Macmahon, confidant of George IV., had when dying, and which came into Knighton's hands as medical attendant of the dying man. Sir W. Knighton was made a "Grand Cross," not for his bravery in war, or intelligence in the State, but for his adroit manipulation of secrets relating to Lady Jersey, Mrs. Fitzherbert, and the Marchioness of Conyngham. Sir William Knighton and the latter lady were supposed to have made free with £300,000; but great larcenies win honor, and Sir W. Knighton died respected.

In August, 1836, William — hearing that the Duke of Bedford had helped O'Connell with money — ordered the Duke's bust, then in the Gallery at Windsor, to be taken down, and thrown in the lime-kilns.

On June 20th, 1837, William IV. died. Ernest, Duke of Cumberland, by William's death, became King of Hanover, and was on the same day publicly hissed in the Green Park. Naturally, in this loving family there was considerable disagreement for some time previous to the King's death between his Majesty and the Duchess of Kent.

The *Edinburgh Review*, soon after the King's death,

while admitting that "his understanding may not have been of as high an order as his good nature," says: "We have learned to forget the faults of the Duke of Clarence in the merits of William IV." Where were these merits shown? Was it in "brooding" — (to use the expression of his own private secretary) — over questions of whether he could, during the commencement of his reign, personally appropriate sums of money outside the Civil List votes? Was it in desiring that Colonel Napier might be "struck off the half-pay list," for having made a speech at Devizes in favor of Parliamentary Reform? Was it when he tried to persuade Earl Grey to make Parliament pay Rundell and Bridge's bill for plate — and this when the masses were in a starving condition? Was it when he declared that he was by "no means dissatisfied" that a proposed meeting was likely to be so "violent, and in other respects so objectionable," as it would afford the excuse for suppressing by force the orderly meetings which, says his secretary, "the King orders me to say he cannot too often describe as being, in his opinion, far more mischievous and dangerous" than those of "a more avowed and violent character"?

CHAPTER VII.

THE PRESENT REIGN.

Her present Majesty, Alexandrina Victoria, was born May 24th, 1819, and ascended the throne June 20th, 1837, as representing her father, the Duke of Kent, fourth son of George III. On February 10th, 1840, it being the general etiquette for the Brunswick family to intermarry amongst themselves, she was married to her cousin, Prince Albert

of Saxe Coburg, who received an allowance from the nation of £30,000, to compensate him for becoming the husband of his wife. The Queen, more sensible than others of the arduous position of a Prince Consort, wished her loyal husband to have £100,000 a year. The Government reduced this to £50,000; Joseph Hume and the Radicals reduced it still further to £30,000. For this annual payment the Prince undertook to submit to naturalization, to be the first subject in England, to reside rent free in the Royal Palaces repaired at the cost of the nation. He also, on his own account, and for his own profit, attended to various building speculations at the West End of London, and died very rich. He is known as Prince Albert the Good. His goodness is marked — not by parks given to the people, as in the case of Sir Francis Crossley; not by improved dwellings for the people, as in the case of George Peabody; not by a large and costly market place, freely given, as in the case of Miss Burdett Coutts — Peeress without her patent of Baroness; — but by statues erected in his honor in many cities and boroughs by a loyal people. As an employer of labor, the Prince's reputation for generosity is marked solely by these statues. As a Prince, he felt in his lifetime how much and how truly he was loved by his people; and at a dinner given to the Guards, Prince Albert, in a speech probably not revised beforehand, told the household troops how he relied on them to protect the throne against any assaults. The memory of the Prince is dear to the people; he has left us nine children to keep out of the taxpayers' pockets, his own large private accumulations of wealth being inapplicable to their maintenance.

When her Majesty ascended the throne, poor rates averaged 5s. 4½d. per head per annum; to-day they exceed 7s. During the last fifteen years alone there has been an in-

crease of more than 250,000 paupers in England and Wales, and one person out of every twenty-two is in receipt of workhouse relief. Everybody, however, agrees that the country is prosperous and happy. In Scotland there has been an increase of 9,048 paupers in the last ten years. Two out of every fifty-three Scotchmen are at this moment paupers. In Ireland in the last ten years the out-door paupers have increased 19,504. As, however, we have, during the reign of her present most gracious Majesty, driven away the bulk of the Irish population, there are considerably fewer paupers in Ireland than there are in Scotland. The average Imperial taxation during the first ten years of her Majesty's reign was under £50,000,000 a year. The average taxation at the present day is over £72,000,000 a year. Pauperism and local and Imperial taxation are all on the increase, and, despite agricultural laborers' outcries and workmen's strikes, it is agreed that her Majesty's reign has brought us many blessings.

On March 20th, 1842, the Earl of Munster, eldest son of William IV., and who had been made Constable of Windsor Castle by her Majesty, committed suicide. Although the eldest son of the late King, his position as a natural child excluded him from heaven, according to the Bible, and from all right to the Throne, according to our law.

Her Majesty's eldest daughter, the Princess Royal, Victoria Adelaide Mary Louisa, is married to the Prince Imperial, Frederick William, of Germany, and, as it would have been manifestly unreasonable to expect either the Queen or the Prince Consort, out of their large private fortunes, to provide a dowry for their daughter, the English nation pays £8,000 a year to the Princess.

Her Majesty's eldest son, Albert Edward, Prince of Wales, Duke of Saxony, Cornwall, and Rothesay, and Earl of Dublin, has earned already so wide a fame that

notice here is almost needless. As a writer, his letters — a few of which have been published by the kind permission of Sir Charles Mordaunt — illustrate the grasp of mind peculiar to the family, and mark in strong relief the nobility of character of the Royal author. As a military chieftain, the Autumn Manœuvres of 1871 demonstrated the tact and speed he could display in a strategic movement of masterly retreat. As an investigator of social problems, he has surpassed the Lords Townshend and Shaftesbury, and at Mabille and in London has, by experience, entitled himself to speak with authority. As a pigeon-shooter, he can only be judged by comparison with the respectable ex-bush-ranger now claiming the Tichborne estates. Here, it is true, the latter is a man of more weight. The Prince of Wales receives £40,000 a year, and we give his wife £10,000 a year as a slight acknowledgment for the position she has to occupy as Princess of Wales. With the history of the wives of the two last Princes of Wales to guide them, it is almost wonderful that the advisers of the Princess did not insist on a much higher premium against the risks of the position. When his Royal Highness came of age, he found accumulations of the Duchy of Cornwall approaching a million sterling, which, invested in Consols, would bring him in at least a further £40,000 per annum. His Royal Highness also has the income of the Duchy of Cornwall, amounting net to about £75,000 a year. In addition to this, the Prince of Wales is entitled to military salary as Colonel of the Rifle Brigade and 10th Hussars. Last year — conscious that it is unfair to expect a Prince to live upon £153,000 a year — £7,600 were voted by Parliament for the repair of the house in which he sometimes resides when in London.

A few years ago his Royal Highness was in Paris, and certain scurrilous foreign prints pretended that on the

Boulevard des Italiens, in the face of France, he had forgotten that one day he would seek to be King of England. It is written, "*In vino veritas*," and if the proverb hold, the Prince is more than half his time a man remarkable for his truthfulness. Some time later, the *Royal Leamington Chronicle*, which, in his mercy, the Prince of Wales never prosecuted, coupled his reputation with infamy. Later, his Royal Highness was ill, and the nation wept. Then came recovery and Thanksgiving at St. Paul's.

"So when the devil was sick,
The devil a saint would be;
When the devil got well again,
The devil a saint was he."

The Prince of Wales has since been to Paris, and, according to *La Liberté*, has honored Mabille with his Royal presence.

Her Majesty's second son is Alfred Ernest, Duke of Edinburgh. His Royal Highness, when serving on board the Galatea, had leave to go on shore at Marseilles. Journeying to Paris, he overstayed his leave, refused to return when summoned, and stayed there, so Paris journals said, till his debts were thousands. Any other officer in the navy would have been cashiered; his Royal Highness has since been promoted. The Duke of Edinburgh visited our Colonies, and the nation voted about £3,500 for presents made by the Prince. The presents the Prince received were, of course, his own, and the vote enabled the Duke to do justice to the generous sentiments of his family. The Colonists pretended at the time that some of the presents were not paid for by the Duke of Edinburgh; nay, they went so far as to allege that some of the Duke's debts had to be discharged by the Colonist Reception Committee. Representing the honor of England, his Royal Highness earned himself a fame and a name by the associates he chose. In

visiting India, a special sum of, we believe, £10,000 was taken from the Indian revenues and handed to the Duke, so that an English Prince might be liberal in his gifts to Indians at their own cost. The Duke of Edinburgh has £25,000 a year. Five years ago he borrowed £450 from the pay-chest of the Galatea. I have no means of knowing whether it has since been paid back; all I can affirm is, that the country made up the deficient sum in the pay-chest without a word from any M. P. Had the borrower been a pay-sergeant, he would have been sent to a District Military Prison; if a commissioned officer, other than a Royal one, he would have been dismissed the service. The difference between the Prince of Wales and the Duke of Edinburgh is this: in the first case, the virtues of the Prince equal his intelligence; in the second case, the intelligence of the Duke is more developed than are his virtues.

In the case of Broadwood *vs.* the Duke of St. Albans, both the Royal brothers were permitted to guard a pleasant incognito. The Judge who allowed this concealment was soon afterwards created a Peer of the Realm.

Our army and navy, without reckoning the Indian Establishment, cost more to-day, by about £9,000,000 a year, than when her Majesty ascended the throne. Her Majesty's cousin, George William Frederick, Duke of Cambridge, is Commander-in-Chief of the Army, and for this service receives £4,432 per annum. His Royal Highness also receives the sum of £12,000 in consequence of his being a cousin of the Queen. His Royal Highness is also Field-Marshal, and Colonel of four distinct regiments, for which he gets more than £5,000 annually. Naturally, in the Duke is found embodied the whole military talent of the Royal Family. His great-uncle, the Duke of Cumberland, carved "Klosterseven" on the Brunswick monuments. Frederick Duke of York, the uncle of the Duke of Cam-

bridge, recalled from the field of battle, that he might wear in peace at home the laurels he had won abroad, added "Clarke" and "Tonyn" as names to vie with Cressy or Waterloo. The present Duke of Cambridge was, when Prince George, stationed in Yorkshire, in the famous "plug plot" times, and his valiancy then threatened most lustily what he would do against the factory "turnouts," poor starved wretches clamoring for bread. In the army, the normal schoolmasters can tell how this brave Brunswicker rendered education difficult, and drove out, one by one, many of the best teachers. Soldiers who think too much, make bad machines. It was the father of the present Duke of Cambridge who publicly expressed his disbelief, in 1844 — 5, of the failure of the potato crop in Ireland, "because he had always found the potatoes at his own table very good!"

For many years her Majesty's most constant attendant has been a Scotsman, John Brown. This person so seldom leaves her Majesty that it is said that some years since the Queen insisted on his presence when diplomatic communications were made to her Majesty; and that, when escorting the Queen to Camden House, on a visit to the ex-Emperor Napoleon, Mr. Brown offered her his arm from the carriage to the door. Afterwards, when an idiotic small boy — armed with a broken pistol, loaded with red flannel, and without gunpowder — made a sham attack on her Majesty, Mr. Brown courageously rushed to the Queen's aid, and has since received a medal to mark his valor.

For many years her Majesty has taken but little part in the show ceremonials of State. Parliament is usually opened and closed by commission — a robe on an empty throne, and a speech read by deputy, satisfying the Sovereign's loyal subjects. It is, however, the fact that in real State policy her interference has been most mischievous, and this

especially where it affected her Prusso-German relatives. In the case of Denmark attacked by Prussia and Austria, and in the case of the Franco-Prussian War, English Court influences have most indecently affected our foreign relations.

Her Majesty is now enormously rich, and — as she is like her Royal grandmother — grows richer daily. She is also generous, Parliament annually voting her moneys to enable her to be so without touching her own purse.

It is charged against me that I have unfairly touched private character. In no instance have I done so, except as I have found the conduct of the individuals attacked affecting the honor and welfare of the nation. My sayings and writings are denounced in many of the journals, and in the House of Lords, as seditious, and even treasonable. My answer is, that, fortunately, Hardy, Tooke, and Thelwall heard "Not Guilty" given as the shield against a criticism which dared to experiment on persecution. In case of need, I rely on a like deliverance. I do not pretend here to have pleaded for Republicanism; I have only pleaded against the White Horse of Hanover. I admire the German intellect, training the world to think. I loathe these small German breast-bestarred wanderers, whose only merit is their loving hatred of one another. In their own land they vegetate and wither unnoticed; here we pay them highly to marry and perpetuate a pauper prince-race. If they do nothing, they are "good." If they do ill, loyalty gilds the vice till it looks like virtue.

Bradlaugh, Charles
The impeachment of the
House of Brunswick

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. PREFACE.

It is an unusual and unsatisfactory circumstance for a discussion to be divided up into two parts between two separate towns. The reader will naturally be curious to know, not only how the discussion came about, but also how it came to assume this extraordinary and inconvenient shape, from which, however, with the whole discussion in his hands, he will not be a sufferer. His curiosity cannot be more effectually gratified than by placing before him the correspondence which led to the holding of it. It is as follows:

64, Belgrave Road, Birmingham,
18*th February*, 1876.

Mr. Charles Bradlaugh. Dear Sir.—You may be aware that the desirability of a meeting in debate between yourself and me has been for a considerable time urged by many persons who know us both. I believe the matter was verbally mentioned to you some months ago by Mr. Arthur Andrew, of London; and you were good enough to express your willingness to hold the proposed meeting.

I now write for the purpose of putting the proposal into formal shape. I will undertake, for six nights—spread over two weeks—three successive nights in each week, to affirm that the Scriptures are the authentic and genuine records of Divine revelation. I leave you to choose whether the debate shall be by ordinary speeches, or by the Socratic mode, or a mixture of both, merely expressing my opinion that the latter is, perhaps, on the whole, best calculated to put the matter in debate to a thorough test.

As to the place where the debate should take place, the majority of my friends are in favour of Birmingham. I presume Birmingham will not be unacceptable to you. We should, probably, have a larger audience there than anywhere else.

As to the date, it will probably suit the state of your engagements, as it will mine, if I name a somewhat distant day, say the autumn of the present year; by which time, the Town Hall, Birmingham, will be re-opened after alterations and repairs. The disposal of the surplus, if any, after the payment of expenses, I would leave to your proposal, subject to mutual agreement.

If these proposals are agreeable to you, you could, probably, name a local committee for the execution of arrangements in detail. Respectfully yours,

ROBERT ROBERTS.

"The National Reformer," 29, Turner Street, Commercial Road, London, E.,
21*st February*, 1876.

Dear Sir,—I have handed your letter to Mr. W. H. Holyoak, Belgrave Gate, Leicester, who will write you, and who has my full authority to arrange. Yours respectfully,

C. BRADLAUGH.

Robert Roberts, Esq., 64, Belgrave Road, Birmingham.

45, Humberstone Gate, Leicester,
February 25th, 1876.

To Robert Roberts, Esq. Dear Sir,—I write on behalf of Mr. Charles Bradlaugh. He has left to me the arrangement of the debate between you and him.

Please consider that it is settled to come off. The time we prefer is during the month of April or the beginning of May.

Digitized by Google

The place, Leicester Temperance Hall, for, say three nights. Mr. B. will not object to three nights in Birmingham as well if you wish. The mode of debate: we assent with you to the mixed, viz., question and answer and ordinary speeches.

We trust you will see your way to this earlier date; for the date you name appears to us so remote, that a thousand events may occur between now and then to prevent its ever taking place. Trusting, however, that you will see your way, and waiting your reply, I am, Sir, yours sincerely,

WILLIAM HENRY HOLYOAK.

64, BELGRAVE ROAD, BIRMINGHAM,

26th February, 1876.

MR. HOLYOAK. DEAR SIR.—Thanks for yours of the 25th inst., according to Mr. Bradlaugh's promise to me.

Your proposals, however, are not quite acceptable in some details. The date is too early. It is a matter of impossibility for me to take part much sooner than the time I mentioned to Mr. Bradlaugh. Mr. Collyer, your townsman, will be able to inform you of one reason, sufficient of itself. I admit my time is somewhat remote; but this need not be a disadvantage. As for the uncertainties, they would apply with nearly equal force to an earlier date, and must be submissively encountered.

As to the place, I presume Mr. Bradlaugh can have no personal choice, as his friends will be as numerous in Birmingham as in Leicester; therefore, I must ask your consent to Birmingham. It would be a great disappointment to the majority of my friends if it were not to take place there, and would, to some extent, frustrate the object I have in view in consenting to encounter a man of Mr. Bradlaugh's calibre and reputation. I can understand your preference for Leicester, and do not quarrel with it. To have the debate there would also be in accordance with the wishes of many in that town whom I should greatly desire to gratify. Nevertheless, the preponderance of reasons from my point of view, is sufficiently in favour of Birmingham to justify me in pressing for it. If you feel it would be conceding an advantage to me, you have also to remember that you can well afford to concede any advantage to one who will figure so small in collision with so popular a man and a cause.

Three nights is an utterly inadequate time for the argument I have to submit. Twelve nights would not be too long. It will be necessary for you to consent to six nights, and these must, of course, be in one place; for it would place both speakers in an awkward position to have a new audience for the second half of the debate

Regretting my inability to return a simple affirmative to your proposals, and looking for your reply, respectfully yours,

ROBERT ROBERTS.

45, HUMBERSTONE GATE,

Feb. 28th, 1876.

TO ROBERT ROBERTS, Esq. DEAR SIR.—Yours of the 26th inst, I have forwarded to Mr. Bradlaugh, along with a copy of what follows; not seeing what I can have to do with arranging for a debate to come off in Birmingham.

I should have been pleased to be instrumental in bringing it about in Leicester; but in Birmingham, the Birmingham friends had better be consulted. It seems to me they are the parties to move in the matter, and not I. You will please reply, advising me of your opinion. I am, dear sir, yours truly,

WILLIAM HENRY HOLYOAK.

45, HUMBERSTONE GATE,

TO ROBERT ROBERTS, Esq. DEAR SIR.—Mr. Bradlaugh writes me as follows:—

"DEAR SIR.—As the challenge was given by Mr. Roberts's friends in Leicester, and as the Leicester friends first asked me to meet Mr. Roberts there, a debate in Leicester must take precedence of any other debate with Mr. Roberts; therefore, I return you his letter, and you had better send a copy of mine to you. I do not mean this as an objection to meet Mr. Roberts

in Birmingham; but I do mean that I think it would be a slight on the Leicester Secular Society if I passed that town over. I nevertheless leave myself entirely in the hands of the Leicester friends. Yours truly,

C. BRADLAUGH."

I might say that we in Leicester quite concur with the view Mr. B. takes.

I am, Sir, yours respectfully, WILLIAM HENRY HOLYOAK.

64, BELGRAVE ROAD, BIRMINGHAM.

2nd March, 1876.

Mr. HOLYOAK. DEAR SIR.—I am in receipt of yours, without date, but presumably of to-day.

Mr. Bradlaugh leaves himself entirely in your hands. I cannot quite comprehend why a man of his independence should do this instead of dealing directly with me, and shaping his own course. Nevertheless, he having done so, with you will rest the responsibility of preventing the discussion, if you insist upon a condition needless on your side, and on my side inconsistent with the object of the discussion.

I cannot recognise the claim, or at least the ground of the claim put forward on behalf of Leicester. It is not true that the "challenge" was given by my friends in Leicester. The "challenge" has been given by me, at the instigation of friends in Birmingham, London, Leicester, and other places; and therefore Leicester has nothing to do with fixing the place. Mr. Bradlaugh may have heard of it first at Leicester; but this does not confer the right in question I named Birmingham in my first letter, pressed for it in my second, and you will pardon me if I insist upon it in my third.

If a second debate should seem desirable to all parties, I promise it shall be in Leicester, so far as I am concerned; but the first encounter must take place in the metropolis of the Midlands.

Mr. Bradlaugh says he has no objection to meet me in Birmingham, and although he says in the beginning of his letter, that Leicester must take the precedence, by the last sentence he leaves the decision with you. To you, therefore, I appeal, to waive the objection and to allow the arrangements for the discussion to proceed. Respectfully yours,

ROBERT ROBERTS.

45, HUMBERSTONE GATE, LEICESTER,

3rd March 1876.

ROBERT ROBERTS, Esq. DEAR SIR.—Yours of yesterday is to hand. Mr. Bradlaugh has left the arrangement of bringing about a debate with you in my hands. With the reason why I imagine we are not concerned. I take it that what we have to do with is the fact. And the responsibility you name, I accept. You say, "It is not true that the challenge was given by my friends in Leicester." That, sir, is a positive statement. Let us see upon what basis it rests, and whether that little word *not* is not a mistake on your part. The date of your first to Mr. Bradlaugh is February the 18th, 1876, but on January the 30th, 1876, a gentleman made a statement in the Lecture Hall of the Temperance Hall, Leicester, before a large audience, to the effect that Mr. Roberts *was* prepared to meet either Mr. Holmes or Mr. Bradlaugh in public debate on the question—"Is the Bible true?" I see no reason why I should not give the gentleman's name; it was Mr. Vicars Collyer, who, I believe, is a friend of yours; and with the view of testing that statement, I waited upon him during the week, and on February 4th, I advised Mr. Bradlaugh of the statement publicly made by Mr. V. C.; and Mr. B. replied by saying that he only knew Mr. Roberts as a Christadelphian; that he knew nothing against him, and wished to be informed of the terms of the challenge, and whether he had a respectable committee in Leicester, saying, I shall, probably, be governed by my friends there. How, sir, you can reconcile this by saying "It is not true," I do not see. On that point, I beg to differ from you in thinking that Leicester has nothing to do with it.

To second promises I cannot attend until the first statement be verified. It is with that I have to do, and to that I confine myself. I am, Sir, yours respectfully,

WILLIAM HENRY HOLYOAK.

Digitized by Google

64, Belgrave Road, Birmingham,
4th March, 1876.

Mr. Holyoak. Dear Sir.—The circumstance you mention, which had escaped my memory, explains your view and Mr. Bradlaugh's as to the origin of the challenge. I cannot admit, however, that it gives the real foundation for the facts as they stand.

Mr, Collyer's intimation of my willingness to debate, (which he made of his own motion in response to some challenge from the platform), was merely the declaration of a privately-known fact, and not a challenge in the sense of carrying with it the local obligations now sought to be deduced from it. I was not aware of the incident till after it happened, and it made so little impression on me that I had forgot it. I admit it is open to the construction you and Mr. Bradlaugh have put upon it, and that, therefore, you are free from the imputation you seem to see in my denial; but you must be too experienced in such matters, to confound an unofficial intimation of willingness to debate with the formal thing implied in a "challenge."

The "challenge" is contained in my letter of the 18th ult., and with that as such, my Leicester friends had nothing to do. That challenge, as I said in my last, is the result of the expressed wishes of friends in divers places.

To free the matter from the complications arising from the intervention of third parties, I hereby renew the challenge, to meet Mr. Bradlaugh in Birmingham for six nights, for the discussion of the subject proposed in my first letter. Yours respectfully,

ROBERT ROBERTS.

45, Humberstone Gate, Leicester,
6th March, 1876.

To Robert Roberts, Esq. Dear Sir.—Your acknowledgment of your memory having been refreshed as to the origin of this correspondence, and the contemplated debate between yourself and Mr. C. Bradlaugh, is very honourable to you. And although you cannot admit that we in Leicester have the strongest claim for the debate to take place here, it is satisfactory to know that you do not deny that we in Leicester were the first movers in this matter.

The facts I named in my last I repeat. Mr. V. Collyer said you were prepared to debate, and I with a view of testing that statement, waited upon him to accept and arrange. Ever since I have been trying to bring you and Mr. B. together; but now I begin to fear that my efforts will be fruitless.

I should have been glad if it could have been arranged, but you seem to stick fast to Birmingham, for what reason I cannot tell, but I can tell I have nothing to do with Birmingham, and am not interested in any way of its taking place there.

The facts are very simple: you were either prepared or you were not.

The statement was plain, as plain could be, and now I think we in Leicester cannot be charged with neglecting it; and besides according to your letters you will not be prepared until towards the end of the year. If so, it appears to me that there can be no use in talking about it so very long before-hand. It will be soon enough in September to re-open the correspondence. I am Sir, yours respectfully,

WILLIAM HENRY HOLYOAK.

Sea Side,
10th March, 1876.

Mr. Holyoak. Dear Sir.—Your letter of the 6th inst. has been forwarded to me from Birmingham, and as it is calculated to create an artificial version of the facts, I cannot refrain from making the following remarks.

1.—I have not acknowledged that "my memory has been refreshed as to the origin of this correspondence, and the contemplated debate." The refreshment of my memory related to an incident which explained how you could take such a view of the origin of the debate as you did; but which had nothing to do with its real origin. The origin of the correspondence, is my own letter to Mr. Bradlaugh of the 18th ult. The origin of that letter was of many

Digitized by Google

months' previous date, in conversations at different places. The letter itself contains evidence of this. The second sentence refers to the matter having been mentioned months before, by Mr. A. Andrew of London. I have merely been waiting for such prospects of health as would justify me in venturing upon the strain of a debate with Mr. Bradlaugh.

Please, therefore, to understand that my acknowledgment of refreshment of memory refers to the origin of your misconception, and not to the origin of the proposed debate; also that I do deny that you in Leicester were the first movers in the matter. I am the first mover in the matter, as the result of the suggestions spread over a considerable antecedent period. You have come to consider yourselves as the first movers, by an incident which I have admitted excuses you; but which I deny constitutes the origin of the matter.

2.—It strikes me as somewhat absurd, for you to talk of ineffectual attempts to bring Mr. Bradlaugh and me together, seeing that I have offered to meet Mr. Bradlaugh in Birmingham, and that Mr. Bradlaugh has left it with you to decide whether the meeting shall be there or not. You have simply to decide to bring us together in Birmingham, and the thing is done. Your saying you have nothing to do with Birmingham, does not dispose of the fact that Mr. Bradlaugh has left the decision in your hands.

3.—The facts are, as you say, exceedingly simple. I am prepared to meet Mr. Bradlaugh in Birmingham and have sent him a proposal to that effect. Mr. Bradlaugh says he leaves it with you, and you interpose yourself as an obstacle. If I could be sure you are in this acting by Mr. Bradlaugh's instructions, I should be tempted to doubt Mr. Bradlaugh's reputation for courage; but having no evidence that it is so, I refrain from drawing a conclusion.

4.—The lateness of the date proposed by me, is no reason for deferring the decision. That lateness is a necessity, apart from the condition of my health. My engagements are generally filled-up six months in advance; and if we don't arrange now, it will be difficult for me to arrange at the time you mention. Another consideration is, that the Birmingham Town Hall is so well occupied that we should stand a poor chance of engaging it, unless we did so several months ahead.

But you say you "have nothing to do with Birmingham." Consequently, early or late, we could have no object in re-opening the correspondence with reference to a discussion to take place in that town. I must, therefore, appeal direct to Mr. Bradlaugh, which I do by this post.

Respectfully yours,

ROBERT ROBERTS.

SEA SIDE,

10th March, 1876.

MR. BRADLAUGH. DEAR SIR.—In a final letter forwarded from Birmingham, Mr. Holyoak writes me that he has nothing to do with Birmingham, and no interest in the discussion taking place there. This compels me to appeal direct to yourself in the matter.

My proposal for the debate with you had reference to Birmingham, and I must ask you to nominate some gentleman in that place who will be interested in forwarding arrangements on your behalf; unless you would prefer to communicate directly with me yourself, which would be more satisfactory. Yours respectfully,

ROBERT ROBERTS.

HUMBERSTONE GATE, LEICESTER,

19th March, 1876.

ROBERT ROBERTS, Esq. DEAR SIR.—Mr. Bradlaugh has forwarded me your letter of the 10th inst. And lest you should deem me wanting in courtesy, I acknowledge yours of the 10th inst to myself, and in doing so, take the opportunity of reviewing the case as it stands, or as it appears to me.

I was anxious, upon hearing it announced publicly before a large audience here "that you were prepared to meet Mr. Bradlaugh in public debate, upon the question, 'Is the Bible true?'" to bring about such debate if possible, and I waited upon the gentleman who made the announcement, for that purpose. This, sir, I take to be the first action in this matter. This was in January, and on the 31st Mr. B. communicated to me his consent.

Digitized by Google

Your first letter upon the subject bears date February 18th, in which you state in reference to the place where the debate should take place, "the majority of my friends would prefer Birmingham: I presume this would not be objectionable to you, but in this you will speak your mind." Mr. Bradlaugh has spoken his mind—and having left the matter in my hands, I—being the first who communicated with him upon the subject, do most decidedly object to your presumption in fixing upon Birmingham.

I acknowledge that I may—and I think rightly—be an "obstacle" in the way of the debate taking place in any town, until we have had the satisfaction or opportunity of hearing it in the town where the announcement was made. If anything can be done towards this end, I will willingly work. If not I will have nothing to do with it, and can only conclude that you were not prepared. But if you say "I shall be prepared between now and the end of the year to meet Mr. Bradlaugh in Leicester," I will consider it settled, and shall be glad to be informed thereof. I am, Sir, yours respectfully,

WILLIAM HENRY HOLYOAK.

SEA SIDE,

24th March, 1876.

Mr. HOLYOAK, DEAR SIR.—Yours is forwarded to me. I have already expressed my mind on the contents of your note. Having nothing to add, our correspondence must now close.

I address Mr. Bradlaugh direct by this post. Respectfully yours,

ROBERT ROBERTS.

64, BELGRAVE ROAD, BIRMINGHAM,

25th March, 1876.

Mr. BRADLAUGH. DEAR SIR.—I pray you to pardon me for troubling you again, but it seems necessary.

My correspondence with Mr. Holyoak has become inextricably complicated by the unofficial action of one of my friends having associated Leicester with my proposal of debate with you. I have, therefore, closed the correspondence, and begin *de novo*, by placing directly before you the proposal I make, which I beg the favour of your accepting or declining directly to myself as the laws of courtesy require.

I offer to meet you in Birmingham for six nights, in support of the affirmation that the Bible is the authentic and reliable record of Divine revelation.

Until you accept the proposal in this general form, I need not say more, but remain, Yours respectfully,

ROBERT ROBERTS.

P.S.—I am at the sea-side, at this writing, but head my letter with my permanent address, which will always find me.

To this letter no answer was received.

The following note meanwhile appeared on the cover of the *Christadelphian*. It is re-published here as presenting Mr. Roberts' reason for pressing for Birmingham.

"N.—The discussion with Bradlaugh seems likely to fall through owing to that gentleman's refusal, by his agent, Mr. Holyoak, to hold the discussion in Birmingham. He insists on Leicester, where his friends are numerous. This interposes a barrier on our part, since one principal object in consenting to challenge Bradlaugh was to make a discussion with him useful in delivering the truth from the imputation of infidelity, in a town where the truth is better known than in any other, as the result of many years' proclamation, but in which nevertheless, it has that prejudice to encounter. A discussion with Bradlaugh would be a great effort for our peculiar physical liabilities; and we should not feel justified in venturing upon it without some commensurate object such as we have mentioned. In any other town but Birmingham, unless it be London, we should fail to realise sufficient incentive; for we have no hope of benefiting the class of minds who have embraced Secularism. Our aim would be to serve the truth. Having to serve it in many ways we cannot afford to incur the physical risk of an encounter with Bradlaugh without

Digitized by Google

tangible prospect of good service. Hence our proposal for Birmingham, which Mr. Holyoak declines. If the proposal fall through, we may publish the correspondence."

The following note appeared in the *National Reformer*, of March 26th, among "Answers to Correspondents."

"R. Roberts, Birmingham.—Having in consequence of the action of your own friend placed the matter in the hands of the Leicester Secular Society, we decline to withdraw our authority. Our health does not permit us to engage personally in a lengthy correspondence."

To this, the following answer was sent:—

64, BELGRAVE ROAD, BIRMINGHAM,
6th April, 1876.

MR. BRADLAUGH. DEAR SIR.—I have only seen for the first time to-day your note in the *National Reformer*, in answer to my letter. I am not a reader of the *Reformer*, but a friend has handed me the issue of March 26th, containing the note in question.

I write to say that I do not propose a correspondence, lengthy or otherwise. I wish you merely to say "Yes" or "No:" will you meet me for a six nights' debate in Birmingham or London on the subject named? Your friends in Birmingham can arrange the details. Awaiting your answer, respectfully yours,

ROBERT ROBERTS.

To this letter, Mr. Bradlaugh sent no reply, but inserted the following note in the *Reformer*.—"R. Roberts, Birmingham.—We really cannot take the matter out of the hands of the Leicester Secular Society."

Mr. Bradlaugh was advertised to lecture in Birmingham on Sunday, April 9th. On that date, Mr. F. Hodgkinson of Peterboro', visiting Birmingham, and observing the fact, expressed a curiosity to see and hear Mr. Bradlaugh. This led to conversation which resulted in a proposal, accepted by Mr. Hodgkinson, that he should attend Mr. Bradlaugh's meeting, and if an opportunity offered, propose a six nights' discussion in Birmingham. Mr. Hodgkinson did so, and at the close of the meeting, being invited to the platform, he read the following written authority:

64, BELGRAVE ROAD, BIRMINGHAM,
9th April, 1876.

I hereby authorise Mr. Frank Hodgkinson, the bearer of this note, to state in Mr. Bradlaugh's meeting this afternoon, that I am willing to meet Mr. Bradlaugh in Birmingham for six night's debate on the subject:

"Are the Scriptures the Authentic and Reliable Records of Divine Revelation?"

ROBERT ROBERTS.

Mr. Bradlaugh said the challenge having first been delivered in Leicester, he was in duty bound not to disappoint the people there; but he was willing to make this compromise - to have two nights in Leicester and four nights in Birmingham. After the meeting, Mr. Hodgkinson communicated with Mr. Roberts, and sent the following letter to Mr. Bradlaugh, having it placed, by a messenger, in the hands of the chairman of Mr. Bradlaugh's evening meeting, the same day.

64, BELGRAVE ROAD, BIRMINGHAM,
9th April, 1876.

C. BRADLAUGH, Esq. DEAR SIR.—Mr. Roberts accepts your compromise, but with regret that you insist upon a division. Will you inform Mr. Holyoak, and also appoint someone here with whom the arrangements in detail can be made for the two nights in Leicester and four nights in Birmingham? Mr. Roberts accedes to this plan reluctantly, but submits rather than the discussion should fall through. Please reply to me at "Norman Cross, Peterborough."

Yours truly,
FRANK HODGKINSON.

Digitized by Google

"THE NATIONAL REFORMER," 29, TURNER STREET, COMMERCIAL ROAD, LONDON, E.

10th April, 1876.

FRANK HODGKINSON, Esq. DEAR SIR.—Mine is not a compromise; it is an insistance of right. I did not challenge at Leicester; I was challanged there. Mr. W. H. Holyoak will arrange for the two nights' debate at Leicester, and when the dates for these are fixed, Mr. C. C. Cattell, 29, Snow Hill, Birmingham, will be authorised by me to arrange for four further nights at Birmingham. One thing tell Mr. Roberts, that I cannot have a long date. I am ready to debate in May, June, or July. If Mr. Roberts is engaged for these months let him renew his challenge later. I always make lectures give way to debates, but I will not fix a far off date as I might find it bind me inconveniently.

Any further correspondence please address to W. H. Holyoak, as I have not the leisure to make any personal arrangements. Yours sincerely,

C. BRADLAUGH.

Forwarded by W. H. Holyoak, 45, Humberstone Gate, Leicester.

On the receipt of this letter, Mr. Hodgkinson and Mr. Bradlaugh's agents went to work, and arrangements were finally made for the holding of the discussion, in the Temperance Halls of Leicester and Birmingham, on June 13th, 14th, 15th; 20th, 21st and 22nd.

The discussion was largely attended throughout. The report is from the notes of short-hand writers who were engaged for the discussion—revised by the speakers.

Towards the close of the discussion Mr. Bradlaugh sold his interest in the report to Mr. Hodgkinson, who now publishes the same, in conjunction with Mr. Roberts, who avails himself of the opportunity thus secured, of adding a review of the discussion, for the notice of some things in Mr. Bradlaugh's speeches there was no time to notice during the discussion, and for the supply of some things on the affirmative side, he was obliged from the same cause to omit. That the cause of impartiality may not suffer, Mr. Roberts will offer Mr. Bradlaugh the opportunity of writing a rejoinder to his review, for publication in the same pamphlet.

Readers will be in a better position to judge of the debate than hearers. Mr. Bradlaugh's loud voice and animated delivery, made an impression which it may be found his arguments fail to sustain On the other hand, the arguments on behalf of the Bible may be found to have more weight than they seemed to have in the heat of controversy.

The issue debated is the most important of the questions that engage public attention. The discussion is published, not as an exhaustive, or even a moderately thorough canvass of the subject, but merely as a passing contribution to its consideration, which may help to draw to the subject some of the attention which it ought to receive at the hands of rational men.

Birmingham, 27*th June*, 1876. ROBERT ROBERTS.

Digitized by Google

SIX NIGHTS' DISCUSSION.

First Night,

TUESDAY, 13th JUNE, 1876,

IN THE TEMPERANCE HALL, LEICESTER.

THE CHAIR WAS OCCUPIED BY MR. W. STANYON OF LEICESTER.

THE CHAIRMAN having stated the order of proceedings, and asked the meeting to restrain the manifestation of their feelings, he called upon Mr. Roberts to open the Debate.

Mr. ROBERTS: Mr. Chairman, Ladies, and Gentlemen,—I would not have been so bold as to encounter a man of Mr. Bradlaugh's ability had it not been for two things—a persuasion of the invulnerable strength of the cause which I have to maintain this evening, and a deep sense of the unspeakable consequence of the matter to be debated; and perhaps I ought to add a third—a conception of the duty that rests upon everybody holding the convictions which I represent, to avail themselves of every opportunity of impressing those convictions upon others. With regard to the first of these points, there may, probably, be a great many here present who will not agree with me; with regard to the second, I should scarcely think there can be present one who will say that it is unimportant whether or no there be a hope of a better life for mankind than they have now, whether there is or is not ever to be a better state of things upon the earth than there is at the present time. I will not waste much time in discussing that point: all will agree that the question is one of vital moment, and, if my side of the question be the right one, then we have a good matter to realise—a matter so good as to justify the rapturous exclamation which we find in the Scriptures, "How beautiful are the feet of them that preach the gospel of peace!" while, if the position represented by Mr. Bradlaugh be the right one, the skull, cross-bones, coffins, dust, corruption, despair, brood over the entire prospects of every man who has ever lived upon earth, or ever will live. The real question to which I have to address myself is the first one—the question as to whether or no the position I represent, be of the invulnerable strength which I assert it to be; and upon that I feel no quailing. There is no test that can be applied to the Scriptures but will yield the one result which I shall seek to make manifest to your understanding, whether we regard it in the light of the circumstances that ought to exist in the world if the Bible be true; or with respect to the historic harmony that ought to subsist between this book, if it be true, and the records of mankind; or in the light of its intrinsic character; whether we consider the character of its histories; whether we consider the nature of its prophecies in relation to the accomplished history of man; whether we consider it with regard to the sentiment that animates it from begining to end, we cannot fail, by a logical construction of the facts of the case, to arrive at the conclusion that the Bible is no human production. Upon all these points I have every confidence in being able to make manifest the justice of my contention—that is, that these Scriptures are the authentic and the reliable records of Divine revelation.

Digitized by Google

But we must proceed by stages. I have but one fear—and perhaps before the discussion is concluded you will see how well-founded that fear is—that I shall be unable to crowd into a six nights' debate the host of arguments, the mass of evidence, which I can adduce in support of the proposition which I stand here to affirm. I must be content to do what is possible, and, in a hurried, condensed, and sketchy way, to rehearse before you the reasons, which I am convinced must be regarded as conclusive in favour of my affirmation by any logical mind acquainted with all the facts, and taking time enough, under a sense of the importance characterising the subject, to consider those facts. I shall divide the argument into six sections, corresponding with the six nights during which we shall be together. I shall contend to-night that the state of affairs now existing in the world is in harmony with the view that the Bible is the Word of God, and inconsistent with the notion that it is the production of ignorant and fanatical men. Further, to-night I will try to show that, if there is a book circulating among men whose authenticity can be demonstrated, it is this entire volume. I confine not my remarks to the writings of the apostles. I apply it also to the writings of the prophets and Moses himself, notwithstanding all the perverse erudition that has been brought to bear in our age to try to displace Moses from the confidence of the people. But I will say, and perhaps ought to say, before proceeding, that while entertaining that strong view, there is some pity to be entertained for men in Mr. Bradlaugh's position, because there are circumstances that justify, or appear upon the surface to justify, the conclusion to which they have come. There is a dark, a corrupt, an inhuman, a degraded, a dreadful, history to look back upon during the past eighteen centuries, and, if you make the Bible responsible for that history, you have a good argument against it; but it will not require a very extensive argument to show that there is no connection between the corruptions of Papal domination in Europe and these holy oracles. There is also extant in the world, and established under many circumstances of influence and importance, a set of docrines which, if true—which, if the teaching of the Bible, I grant would also constitute a difficulty in receiving them, and might justify the unbelievers in the position which they have assumed. I will then, on the second night—which will be to-morrow night—contend that the unquestionable facts connected with the establishment of Christianity in the world in the first century, including the history and the character of Christ, are incapable of being explained on any rational principle, if Christ did not rise from the dead, and if the apostles were impostors. On the third night I will contend that the single case of the apostle Paul, when all the facts of his unimpeachable history are distinctly realised and logically construed, is sufficient of itself to prove the divinity of Christ, and, therefore, of the whole of the Scriptures of which the record of his case constitutes a part. On the fourth night I will contend that the literary and moral peculiarities of the Bible, the character of its sentiments, so entirely alien to the universal tendencies of human nature, Jew and Gentile; its clear, chaste, vigorous, and concise diction; its agreement one part with another throughout, notwithstanding the great intervals of time at which its different parts were composed; its perfectly artless candour in the record of facts, irrespective of the bearing of those facts for or against its main contention, are totally at variance with the supposition that the book is the production of ignorant and designing men, and proves that its production is due to that divine guidance and initiative in the writers to which both Paul and Peter, and others as well, attribute it. On the fifth night I will contend that the history of the Jewish race, particularly as involving the character and career of Moses, cannot be explained on the Freethinker's hypothesis of the Bible; but, on the contrary, is an irrefragable proof of its Divine character and authorship. On the last night I will contend that the prophecies of the Bible—so explicit, so sober, so useful in their character, being in this respect so unlike the vague, incoherent, irrational predictions of the Greek augurs and other contemporary pretenders—are an evidence of the divinity of the authorship of the Bible, an evidence which becomes simply overwhelming when we consider their fulfilment in the accomplished history of mankind.

I am not about to deny that there are difficulties; I will not deny that there are obscurities; but I do contend that those difficulties, and those obscurities, are not

Digitized by Google

inconsistent with the main conclusion deducible from those extensive premisses which I have indicated in that synopsis of the argument for this six nights' debate. I contend that those are rather in the nature of the apparent inconsistencies which arise in all cases, and in every matter, for there is no argument, there is no question, there is no character, there is no book, there is no case, in connection with which a hostile ingenuity is not able to create apparent discrepancies, and to lay hold of, perhaps, real discrepancies on the surface, and to make an apparently successful use of them in an antagonistic sense; but I will admit this, that in all true cases the apparent anomalies, and contradictions, and discrepancies, ought to be capable of reconciliation with the main drift of the proof. In fact, this is the sort of test in every case that comes before a court of law. There are always two sides to every case, and, when argued by capable men, the argument on each side is so plausible as to bewilder the jury and disqualify them for coming to a confident conclusion; but a judicial analysis of the evidence, is able to point out that the positive proof points one way, and that the other, which points in the opposite way, can be explained in harmony with the positive evidence, though it may appear to be in contradiction to it; whereas, the other side of the question, when sifted in the same judicial and impartial manner by the judge, cannot be so explained or reconciled in harmony with the bulk of the evidence. And that is the nature of the case to-night, and throughout this entire debate, that the positive evidence is all one way. There are points of difficulty and there are obscurities, but there are no points of difficulty, there are no obscurities, which I am afraid to face. There are things which appear to be difficulties, but which, nevertheless, disappear upon a thorough examination.

I will begin the argument to-night, that is to say, at the point at which we now stand—1876. If the Bible is true, there ought to be Jews; if the Bible is true, there ought to be a corrupt Christianity as the basis of the political system of Europe. If Mr. Bradlaugh should afterwards ask me to prove these two propositions, I will; but, meanwhile, I will take them for granted: they are so self-evident to those who know the Scriptures; and, therefore, I will simply ask, Are there Jews? Is there a political Christianity in the world? With regard to the first item, at all events, no one will hesitate in the answer; the Jews exist everywhere throughout the world, in all civilised countries. You will see the importance of that point if you consider with what pointed effect Mr. Bradlaugh might have asked this question; had there been no Jews, he might have said: "In the prophecies of Jeremiah it is said, God will never make an end of the Jewish nation;" and he might have said, Where are the Jews?" The Bible does say that, and there the Jews are. So far, therefore, I contend that the state of facts is in harmony with the hypothesis that the Bible is true. And I will also contend that the continued existence of the Jewish race under the terrible circumstances which have characterised their history during the past 1,800 years was a greatly improbable thing; that a race without national organisation, without a capital, and scattered among every nation under heaven, should have continued to retain its racial identity, what a highly improbable thing! The existence of corrupt Christianity, foretold in the Scriptures, is the great fact in the European system of the present day, for what is the most conspicuous feature of that system but the one against which Mr. Bradlaugh, and many others in this country, are now directing their energies—the union of Church and State? They are aiming to procure the separation of Church and State. Why, that very endeavour is evidence of the correspondence between the theory of the Bible's truth and the existing state of facts, in so far as the Bible's prophecies require such a system to exist in the present day. We may at a later stage of the discussion, have to look at this matter a little more closely; but meanwhile, it is sufficient as a starting point to show that the existing state of things in the world is such as it ought to be on the hypothesis of the Bible being the Word of God.

Let us now go backwards, and ask whether there is evidence of the authenticity of these books; and I will take the last part of the Bible in the first part of the argument, because, if I establish the argument with regard to the last part, I establish it with regard to the first, though I will argue the first also upon its separate merits. The writings of the apostles: are they the writings of the apostles? I do not know exactly what position Mr. Bradlaugh will take upon this question; and, therefore, so far as he is concerned, I must argue somewhat in the

Digitized by Google

dark; but nevertheless, with regard to the main question, there need be no difficulty; and there is none. The evidence is so extensive upon the point, that it is difficult to condense it into the few sentences that remain of my half-hour. Nevertheless, it is capable of being condensed in a forcible manner. I will not waste time in arguing that the Bible was not produced last century, or a thousand years ago. Mr. Bradlaugh—or, at all events, the party he represents—have abandoned their first theory of the question, that is to say they now no longer contend that the Bible is a monkish production of the fourth and fifth centuries, for literary labours have exhumed book after book, document after document, and the investigation of them has been conducted with such complete effect as to dissipate the possibility of such a theory being sustained, and to prove that the second part of the Bible was produced in the beginning of the Christian era, and the first part in the ages antecedent to that, at the several times at which it professes to have been produced. Let me give you a specimen of the kind of evidence I am referring to. There are the writings of Tertullian, a writer of the second century. In the middle of the second century, he takes cognisance of the fact that these books were in circulation at that time, under the several names which they now bear, and among the people to whom they purport to have been originally addressed. He says:

"Come now, thou who desirest better to exercise thy curiosity in that which relates to thy salvation. Go through the apostolic churches, in which the chairs of the apostles preside in their places, in which their authentic letters are recited, resounding the voice and representing the face of each one. Is Achaia near thee? thou hast Corinth. If thou art not far from Macedonia, thou hast Philippi, thou hast Thessalonica. If thou canst direct thy course into Asia, thou hast Ephesus. But if thou art near Italy, thou hast Rome, whence authority is ready at hand for us also."

Now, that takes you back to the middle of the second century—that is to say, if you credit Tertullian, as I presume you will, for I do not suppose that Mr. Bradlaugh will call in question the authenticity of that deliverance of Tertullian written in the second century; I say that it takes us back to that period of time from which we look back to an even earlier time, when it was a matter of common notoriety that there were present at Philippi, Corinth, and other cities, where they were then in circulation, letters of Paul which were at that time recognised as having been written by Paul. But we can go further back than that, for there is a genuine letter extant of one Clement of Rome, who is claimed by the Roman Catholic Church to have been the first Pope; we need not consider that, because Clement did not consider himself a Pope, and he was not one. But he wrote a letter to the Corinthian Church. These were troublous times for those who professed the faith of Christ; it subjected them to all the evils to which men can possibly be subjected; and the Corinthians, suffering also from disagreements amongst themselves, wrote to Clement of Rome, the Clement referred to by Paul in his letter to the Romans, asking his advice how they should do. Now, in his letter—which I have with me here, if it be at all doubted, and I think the date of this letter of Clement's is somewhere about the end of the first century; I do not remember the year exactly, but it was before the century was out—he says to the Corinthians, "Ye have Paul's letter; ye know what he says there," and he also makes a quotation from the letter to the Romans, which Paul addressed to that community. That is to say, within forty years of the time that Paul is alleged to have written the letters, these documents are, by the evidence I am now adducing, proved to have been in circulation amongst those to whom they profess to have been written, and to have been owned by them as the production of the apostle Paul. Now, the force of that argument will be very apparent to those who are acquainted with the nature of the epistle to the Corinthians particularly, for it is a document in which Paul does not speak very complimentarily about them. In it, he tells them they are carnal and walking as men.—(1 Cor. iii. 3.) He says to them in 1st Corinthians xi. 22: "What? have ye not houses to eat and to drink in? or despise ye the Church of God, and shame them that have not? What shall I say to you? shall I praise you in this? I praise you not." And in his second epistle to the same Church he speaks to them in the same terms of disagreeable admonition: "Have I committed an offence in abasing myself that ye [Corinthians] might be exalted, because I have preached to you the gospel of God freely? I robbed other churches, taking wages of them, to do

Digitized by Google

you service. And when I was present with you, and wanted, I was chargeable to no man; for that which was lacking to me the brethren which came from Macedonia supplied; and in all things I have kept myself from being burdensome unto you, and so will I keep myself."—(2 Corinthians xi. 7-9.) Now, the fact that a letter to a community that is condemned in it is still owned by that community as an authentic document, written to them by the alleged writer, is the strongest proof that it is authentic. Imagine a parallel case: suppose Mr. Bradlaugh writes a letter to some Secularist Society, blowing them up for some course they are taking, and they treasure this letter amongst their archives as a thing precious to be preserved, and forty years afterwards it is found in their hands, every member of them consenting to the proposition that that was Mr. Bradlaugh's letter; would that not be evidence of the fact that Mr. Bradlaugh had written it? This is the kind of evidence that exists in this particular case, as applicable not only to this letter to the Corinthians, but to the other letters of the apostles. The authenticity of the Four Gospels is proved in the same way. I think it is Justin Martyr, in a book addressed to the Roman Emperor of the day, in his *Apology* for Christianity, that alludes to them in a form of speech, which clearly identifies the Four Gospels as being that to which he is alluding. Origen, I think, also alludes to the Four Gospels. There are other contemporary allusions of the same description, which I refer to merely to show this—that the gospels have a sufficient contemporary recognition to commend them to our confidence, so far as such recognition can do so; for when we come to the merits of the thing itself, when we come to look into the constitution of the New Testament, we do not require any outside evidence whatever. I require it not for my own individual conviction, but nevertheless people are generally more susceptible to impression from these foreign sources than from the nature of the thing itself. The allusions I am now referring to are evidence that in the beginning of the Christian era the letters of Paul and the Four Gospels were in circulation amongst those who knew whether or no they were authentic documents.

Mr. BRADLAUGH: The proposition which Mr. Roberts has undertaken to prove in this debate is, that "the Scriptures are the authentic and reliable records of Divine revelation;" and, so far as this debate is concerned, you have nothing whatever to do with what persons of Mr. Bradlaugh's class may have urged at some other time, the more especially as there would be probably great difference of opinion as to who were the proper people to put in under that designation, and we should only be entering into a collateral debate, which would have nothing to do with the real question at issue. I will ask Mr. Roberts to be kind enough, in every text he quotes, to give me chapter and verse, because it will be convenient both to myself and to the audience. We have only had one loose reference to Jeremiah, and I have been wandering a little through the book, finding some things, perhaps, Mr Roberts won't think applicable, but which I shall have to use, if they suit me, in the course of this debate. Then I ask him also, if he quotes an author outside the Bible, to be good enough not to say "abont" the time he lived, because on that we shall have great difference of opinion, but to state the time he thinks he did live, and the authorities upon which he bases that statement, because it is for him to produce his witnesses, and for him to verify them. Next I will ask him when he says Justin Martyr says this, or Origen says that, to be kind enough to refer me to the particular work, to the particular book, to the particular chapter, and, if it have sections, to the particular section; and, if it be a book that don't happen to be translated in English, to the particular version, because there will be a misfortune about some of his witnesses, that they don't always say the same things in different versions and languages; and, if he is right in his representation of Justin Martyr, I am most unfortunate, because no edition of Justin Martyr I have ever read has got a solitary word capable of the construction he has put upon it. Of course, it is possible that Mr. Roberts may quote to me some particular book of Justin Martyr's that I have overlooked, and it would be my duty to look it up in such a case; but if he simply uses round words, without giving express statements, I must say that his witnesses are too general even to be touched; and, when he talks of "contemporary writers," will he permit me to suggest that Clement of Rome, Origen, and Justin Martyr are very awkward instances of contemporary authors? Now, these are only little points; but still, if we understand what we mean about them as we go along, it will very

Digitized by Google

much clear the way. Now the burden of the proof lies upon Mr. Roberts. He has not told us—although what he has undertaken to prove is that the Scriptures are the authentic and reliable records of Divine revelation—even what he means by the Scriptures. I shall assume, for the purposes of this debate, that he means the ordinary authorised English version, beginning with the Book of Genesis, and ending with the Book of Revelation; and supposing that should not happen to be right—because it may turn out to be wrong—then I will ask my antagonist, Mr. Roberts, to kindly explain to us what else he means; and, if he means anything else but this, why he means something else, and why we are to reject this version, and why we should take something else. I heard him say something about "perverse erudition," but as I make no pretensions to special learning, I shall, therefore, try to confine myself as nearly as I can to authors that are entirely within the reach of all of us; but I ask Mr. Roberts not to refrain, on account of my ignorance, from going to any learned author he likes. It is my duty to be prepared to examine every witness he offers. Then having assumed that those (pointing to the English Bible) are the Scriptures, I will ask what is meant—because he did not tell us—by the words "Divine Revelation," and I may say at once that I have never contended, that I do not contend, and I do not know any decently-educated man who does contend, that the whole of this Bible is the work either of "ignorant and fanatical" men, or, to use his other phrase, of "ignorant and designing" men. On the contrary, the contention that I should submit to you would be that the Bible, like many other books, is a collection of the works of different men in different ages, many of the earlier books in it being simply collections of, or collections founded on the works of still earlier writers, differing with the ages out of which they grew and with the men whose ideas more or less accurately we get in some of them; added to, curtailed, interlined, abbreviated, augmented, according to the fashions and whims and myths and superstitions of the different ages through which they have come down to us; and I do not pretend that at any particular date some class of ignorant and designing men forged a whole book, which they called the Bible, for the purpose of deceiving the people; such would simply be an absurd contention. If Mr. Roberts will address himself to the proving what lies on him, and not to the answering of what I do not urge, it will save a great deal of time. Now, the question assumes the existence of a Deity capable of making a revelation; and if I were not content, for the purpose of this debate, to assume this, I should not be here; but, as I happen to be an Atheist—although for the purposes of this debate I am quite content to assume a divinity capable of making a revelation—it is necessary I should be told what attributes are claimed for that Deity. Now, Mr. Roberts has refrained from saying a word on that subject. While he alleges that it is Divine revelation, he has not told us what he means by "Divinity," and clearly all people do not agree on that; the Mahomedans and Buddhists have a different view from Mr. Roberts. It is not simply myself, but out of the fourteen hundred millions of people in the world, probably thirteen hundred millions, and some ninety-nine millions and a few odd thousands, would have a different view from that put forward by Mr. Roberts, so that it is necessary that he should tell us what attributes he attributes to the Deity; and I shall, for the purpose of this debate, attribute to the Deity the following attributes; and if Mr. Roberts objects to any of them, he is perfectly entitled to strike any of them out if he will kindly say why, and give you the attributes he prefers—omnipotence, all-goodness, omnipresence, omniscience, including in this foreknowledge, immutability, infinity, eternity, personality. Now, if any of those attributes are objectionable, I shall be glad to hear Mr. Roberts strike out those he thinks wrong. I should not have ventured to state them at all if Mr. Roberts had fulfilled his duty at the commencement. And then I say, that that book cannot be a divine revelation which in any of its contents contradicts any one of those attributes. I say, if I find within the four corners of this book anything contradicting specifically any one of those attributes, I say that then the book as a whole—because it is as a whole that we are dealing with it—ceases to be capable of proof by Mr. Roberts as the divine revelation he pretends. I am not using the word "pretend" in any unfair sense, but simply as meaning the contention he is bound to maintain. Then I say that a divine revelation ought not to be self-contradictory, and if in addition, or if, having failed in showing that it contradicts the attributes, I show that the book is in any

Digitized by Google

portion of it self-contradictory, I say that then I destroy its claim to be considered a divine revelation. Now, on this, it is possible that the contention Mr. Roberts foreshadowed may arise. He says he will admit, if I understood him rightly, that hostile ingenuity may perhaps lay hold of real contradictions on the surface. Well, now, I should submit to you that, *primâ facie*, that book cannot be a revelation from God to man, from which hostile ingenuity to a simple mind may show what would be by that hostile ingenuity sufficient contradiction to compel the simple mind to reject it; I say that it ought not to need the acute brain of a gentleman like Mr. Roberts to explain God's revelation; that God Himself ought to have made it quite clear if He intended its reception, and that there ought not to be any contradictions either on the surface or anywhere else. Well, then, I submit to you that contradiction on the surface is a contradiction, and that adding the words "on the surface" do not make it any less a contradiction; and, then, if I should be told that that simply means that it is a contradiction on the surface of the English, but if you go to some other language it is to be explained away, then I will ask Mr. Roberts whether any sort of penalty attaches in his mind to the reception or rejection of divine revelation, and, if so, in what language the penalty is going to be inflicted? because it is extremely awkward; take it that there are are in the world some eighty millions of people, in round numbers, speaking English; supposing it requires a knowledge of some other language instead of English to comprehend the revelation, and to get rid of the inconsistencies, it is extremely awkward for those who have been born to speak English, and that would of itself seem a fatal objection against the possibility of the book being a revelation; that God should have sent it in one language, while He requires it to be believed in another. And I will ask Mr. Roberts also to tell us—because he has, although telling us to-night he should deal with the present time, he has gone 1,600 or 1,700 years back in a jump—I will ask him to tell us, for my guidance, what he considers to be the original language of each of the books; the date at which he considers each of the books respectively to have been revealed, and to whom, and the evidence in support of each of those propositions. Then I will urge to you, supposing we get over those little points, that a Divine revelation ought not to be inconsistent with itself, and ought not to be inconsistent with science, and that such inconsistencies exist will be the case that I shall try to make out. Now, in the speech which we have just listened to, there are one or two points, not of argument, because it appears to me that my friend had overlooked, so far as the opening speech was concerned, what was the subject of debate. He addressed some few words, which might have been appropriate (supposing they had been substantiated) to the question. Did the Four Gospels and the writings of the apostles exist in the second century? But I heard nothing that was appropriate to anything else, and that would only be a very limited stage of the inquiry. He said something about "If Mr. Bradlaugh's views be correct, skull, crossbones, and corruption brood over everybody." Well, now, that solemn absurdity scarcely frightened me. At first I did not know which of my views Mr. Roberts was referring to, for I have expressed views on a great many subjects. I have some views on politics, I have some views on political economy, and it did occur to me that what we were to debate was, not what are Mr. Bradlaugh's views in general, but the proposition: "Are the Scriptures the Authentic and Reliable Records of Divine Revelation?" So that although the skull, and crossbones, and corruption, may have some remote reference to Mr. Bradlaugh's views when they are under debate, I will submit to you the only views of Mr. Bradlaugh that Mr. Roberts has a right to deal with in this discussion, are those I put forward on this platform, and no others. Mr. Roberts has been good enough to state, and I thank him for the frankness of the admission, that there should be historic harmony, if the Bible be true, between records purporting to be historic in this book, and the records, so far as we can get them, of humanity; and I shall ask Mr. Roberts to show that there is such harmony especially in relation to the records of the Egyptians; and I will ask him whether it is not admitted, by nearly every person with a pretence to scholarship, that the Hebrew chronology is so sadly deficient that it does not make allowance within many centuries for the period necessary for verified Egyptian civilization. This is one point to which I will ask Mr. Roberts to direct his attention. Then Mr. Roberts appeals to the sentiment which, he says, animates the book from

Digitized by Google

beginning to end. Will he kindly tell me what that sentiment is, for I avow I do not know. I am ready to show that there are, at least, fifty contradictory sentiments. I will show you a sentiment of mercy, a sentiment of cruelty, a sentiment of love, a sentiment of hatred, a sentiment of freedom, a sentiment of slavery, a sentiment in favour of monarchy, and a sentiment against it; and I ask, therefore, for some kind of clue to what Mr. Roberts means. I do not pretend that he has not got a clear meaning in his own mind; I only want to know what it is, so that I may fairly reply to it. Mr. Roberts says that his reasons are such as ought to convince any logical mind. Well, that is a great comfort, because there are certainly some logical minds in the audience, and when we hear the reasons, you will be able to judge them. And then he occupied some time about what he was going to do during the six nights. I shall confine myself to that alone to-night, because it will save us a considerable waste of time; and what he undertook to prove to-night was that the state of affairs now existing in the world is consistent with the view that the Bible is a revelation from God, and not the work of ignorant and fanatical men. Now, I do not contend it is the work of ignorant and fanatical men. And, next I contend that the whole of the rest is utterly irrelevant until Mr. Roberts has explained to us what he means by divine revelation, and all about it. Then Mr. Roberts says there is some pity to be felt for me in my position. Well, now that is very kind. I always like a nice feeling to exist with anybody with whom I come in contact. It is the first time I have met with Mr. Roberts. Pity is akin to love, and no one knows but what the extension of the feeling of pity may so influence him that he may become a member of the National Secular Society. But an ounce of evidence is worth two tons of pity, and we have not yet had the ounce. And then he says that certain things are not explicable on the Freethinker's hypothesis. It will be time enough for Mr. Roberts to take the Freethinker's hypothesis from me in this debate, and not manufacture a man of straw for the purpose of killing it; it will save a great waste of time. Then he urges that there are difficulties and obscurities which may exist. "Difficulties and obscurities" in God's revelation to human kind! Could God have prevented those difficulties and obscurities, and made them clearer, or could He not? And, then, I will also ask him, so that I may not be misled, chapter and verse, to kindly give me a list of the difficulties and obscurities. I will then not need to press upon them at all. I am sure, with that frankness which characterises every one who wants to believe in the Bible as a Divine revelation, now that Mr. Roberts has told you there are difficulties and obscurities, he will have no hesitation in giving a list of them. Then I will ask him, when he has given that list, to tell us in each case whether he could have made it more clear. If he cannot, then I will ask him whether that is not a fatal difficulty at once; and if he says "Yes," I will ask him how he holds that an All-wise and Omnipotent God has given us an obscure revelation, which he (Mr. Roberts) could have made clearer. Then he says that the positive evidence is all one way; with that I am quite agreed; the only difficulty is, we are disagreed as to on which side that evidence is to be found. And then there is another difficulty, that we do not understand the word "evidence" in the same way. Mr. Roberts, having to prove something about the state of affairs now existing, quotes, with extreme looseness, Tertullian, and Clement of Rome, and Justin Martyr. Well, that may be some evidence when we get to what it is. But if he were to confine himself to-night to the state of affairs now existing, I don't know what relation it bears to the matter. Then, he says, the Jews exist, and Jeremiah says something about them; Jeremiah says a good many things about them; he says something about the prophets prophesying falsely and telling lies. In the 23rd of Jeremiah you will find a great deal about the prophets lying. Will my friend tell me how much of the prophecies are lies, and how I am to distinguish the lies from the truth, and separate them? Well, then, I want to know why the Jews existing should be more evidence to the truth of the Bible, than the Mahomedans existing to the truth of the Koran, or the Brahmins existing for their sacred books, or the Buddhists for theirs. I do not say that the argument is utterly irrelevant, but fail to appreciate its relevancy for the moment. Well, then, he says, if the Bible be true, there ought to be corrupt Christians. Well, I shall be obliged if he will give me the exact chapter and verse on which he relies, show me the exact date at which he thinks that

Digitized by Google

chapter and verse came out, and then leave me to deal with them. And then he talks about the writings of the apostles? and says "Are they the writings of the apostles? and says Mr. Bradlaugh's class have abandoned their first contention, that the book is a monkish production of the fourth and fifth centuries. Well, I never made that contention yet. I will tell you what I have said: that, as far as the Hebrew Bible is concerned, the whole work of the Massorah, which gives the Bible its meaning in that language to-day, cannot be carried back to a date earlier than about that period. But that is a very different thing from saying that the whole Bible is a monkish production of the fourth and fifth centuries; and I have never abandoned that, and scholarship has never refuted it, and I am ready to prove it. But there is a great deal to be done before we get to that; Mr. Roberts has got to make out some revelation to be challenged, and he has not yet presented any at all. Then he has vaguely referred you to Tertullian. Now I object to vague references, because I am prepared to show you, from the writings of Origen, which have been quoted in the same loose fashion, that, if Origen be true, the Scriptures cannot be true, for that Origen makes statements with reference to Bible facts which are not to be found in any page of the Bible at all. I did not dream that we were to have the apostolic fathers to-night; but I may also say that we have not had them, for the references have been so funny, that I have been puzzled as to what was meant. For example, the letter of Clement of Rome has been put to you. Why, Mr. Roberts well knows that the whole of the writings attributed to Clement of Rome, whether his first epistle or second, have all been challenged; that, instead of being able to identify the author of what is called the first epistle of Clement with the person who is claimed to have been the Bishop of Rome, that there is the utmost uncertainty about it; and that in an edition of the Nicene Fathers published in the present day, that very statement is made by the editors of it. Now, I tell Mr. Roberts that I have at least taken the pains to learn the A B C of this argument; therefore, I ask him to give the chapter and verse of every author he quotes. I do not know that there is contemporary evidence of the existence of the four gospels in the alleged writings of the apostle Paul; and I say that, if there were ever so much evidence, you would not be one step nearer proving the question, "Are these Scriptures the authentic record of the Divine revelation?" You would not be near it at all; it is with the contents you have got to deal, the contents of which you have got to examine their teachings. But I urge to you that the whole of the times between the date of the alleged appearance of the writings attributed to Clement and the writings attributed to Origen are simply filled up with hosts of forgeries, are filled up with hosts of frauds, the bulk of which have had to be abandoned; and I say that state of things could not possibly have existed had there been the real and true evidence which Mr. Roberts would like to have to quote. Now, I will give him just one or two texts, and I will ask him whether, referring to Ex. xxxii. 7-14, I am to find there a fair representation of the character of Deity. The historian there states that God, having chosen Aaron as His priest, while God was choosing him, Aaron made another god for the Jews to worship; that God became angry about it, said to Moses, "Let me alone, that my wrath may wax hot against them, and that I may destroy this people;" that Moses remonstrated with God, and argued Him out of it, and then God plagued the people for making the calf that Aaron had made (verse 35). And I say again, look at chap. xxviii., verses 1, 2 and 3, and tell me whether I am to take that as a fair representation of the character of Deity; and, then, at Numb. xxiii. 19, at Sam. xv. 29, at Mal. iii. 6, which represents that God cannot repent and cannot change; and then I will draw his attention to 2 Kings xx. 1; 2 Sam. xxiv. 15, 16; Gen. vi. 6; 1 Sam. xv. 11, which show that God did repeatedly repent and change. Now, the chairman warns me that I have just got to the end of my time, and I submit to you, in concluding, that, up to the present moment, there has not been a particle of evidence of any kind advanced by Mr. Roberts in support of his proposition, nor has he given us such an explanation of it as will enable us to understand what he meant by it.

The CHAIRMAN: Ladies and gentlemen, I have now great pleasure in calling upon Mr. Roberts to occupy a quarter of an hour, adopting, if he likes, the Socratic method, and putting questions to Mr. Bradlaugh, and Mr. Bradlaugh at once to reply.

Digitized by Google

MR. ROBERTS QUESTIONS MR. BRADLAUGH.

Mr. Bradlaugh, do you believe that there ever existed such a man as Jesus Christ?—I do not believe that there ever existed such a man as Jesus Christ, with the history recorded of him in the Four Gospels. It is quite possible that a man named Jesus, not having such history, may have existed.

Then, do I understand you to say that the Christ, who is the subject of the Four Gospels and of Paul's letters, is a historical myth?—I say that that which is represented as the history of Jesus in the Four Gospels and the Epistles is not the history of a real man.

Then I return to my question: do you believe that the man spoken of by Paul, for instance, who says he saw him and laid down his life for him, never existed?—Will you refer me to the exact chapter and verse?

1st Cor. xv. 8, "Last of all he was seen of me also."—I have no means of judging whether Paul wrote that or not; therefore cannot answer as to Paul.

That is the chapter and verse you asked for?—You ask me as to Paul's evidence. My answer is, that I have no means of judging whether Paul wrote that or not.

Then, do you say that the Christ Paul spoke about is a historical myth?—I don't know that I have any evidence that Paul spoke of any Christ at all. If you will refer to Corinthians, and, instead of saying Paul, say the writer of the epistle to the Corinthians, I will answer your question.

Do you believe in the authenticity of the history written by Eusebius?—I believe that Eusebius did live and write, and wrote a great many falsehoods.

Do you admit that he was the writer of the history we now have as the history of Eusebius?—Are you speaking of the volume known as Eusebius's *Ecclesiastical History?*"

I speak of his works.—Then I will ask you to specify particularly which of the works.

For my question it is not necessary to speak of any work in particular.—Then I decline to answer a general question. I will answer specifically as to each work of Eusebius I am asked about; my reason for refusing to answer generally is, that in the whole of those centuries, forged writings abounded, and I must confine my answer to the evidence that is presented.

Mr. Bradlaugh, you have admitted that Eusebius wrote?—I never denied it; it is not a question of admitting it: I believe Eusebius did live and did write.

That is my question and the answer to it. Please define to me in a sentence the principle upon which you are persuaded that Eusebius ever lived and ever wrote?—Only that in examining ordinary events, my confidence is given to the best experience of the best men, and that in the case of Eusebius I have no reason to doubt from their investigation that a man named Eusebius did live and did write, and that, in addition, he often forged.

Then I wish to ask whether the reason which you deem sufficient to justify you in believing in Eusebius and his writings does not exist as strongly, and more strongly, in the case of Paul?—No.

Do you mean to say that there is less contemporary evidence to the fact that Paul's writings were received as a literary production?—Which do you call Paul's writings?

I am now speaking of the portion of his epistles included in our common Bible?—I will ask you, then, to specify them by name.

Then I will take the first of Corinthians, for example, and I ask whether there is not the same evidence, and more evidence, in proof of the fact that Paul wrote the 1st of Corinthians than there is in proof that Eusebius wrote his "History?"—No.

What evidence have you that Eusebius wrote his "History?"—I am not here to prove that Eusebius wrote his "History;" if I were, I should be prepared to prove it.

You have admitted that you believe it; I ask you the reason of your belief?—I have told you that on all ordinary matters I am in the habit of placing my confidence in the best experience of the best men capable of judging of those occurrences, and that I have done so in the case of Eusebius.

Do you mean to say that there are no men capable of judging the same question

Digitized by Google

with regard to Paul?—That is a very loose question. Do you mean men now or men then?

Men now and men then?—Men then I knew nothing about, and men now I refuse to accept as infallible judges.

Then whose judgment do you accept in the case of Eusebius?—I accept a fairly unbroken line of reference in writers era by era, from the time of Eusebius down to the present time for the opinion I have expressed; but my duty is not to prove that Eusebius wrote, and, therefore, I do not pretend that that which is sufficient now for my belief is sufficient testimony for other people's.

Is there not a fairly unbroken line of references to Paul from the very age of his writing?—No; there are plenty of forgeries from the earlier times which have had to be abandoned.

Will you please say what you mean by a fairly unbroken line of references?—I cannot make it any clearer.

You do not, of course, mean a reference every day?—I did not say so.

Every year?—If I had meant "every year" I should have said so. When I said "fairly unbroken," I meant allowing for the fact that, in some ages, men wrote very little, especially when Christianity was triumphant.

Then you would accept an occasional—and, comparatively speaking, remote—reference in that case?—I have not said so.

You have said that you accept Eusebius on that line of evidence; that there were intervals during which there was little writing, and yet you accept it, and, therefore, you must admit that you accept occasional references in some cases?—Of course it means occasional references.

Then say "Yes."—I am not going to say "Yes" to words you put into my mouth which I do not utter.

It describes what I mean.—But it does not describe what I mean.

You have denied that there is a fairly unbroken line of reference to the apostle Paul?—Oh no; I have denied that there is a fairly unbroken line of reference to the writings which you say are Paul's.

Then do I understand from that answer that you believe that possibly Paul wrote some other writings than these?—I do not know that my belief as to what Paul may possibly have done elsewhere has anything to do with the question.

Your belief is what I am testing.—You have a right to test my belief so far as it affects the question, and not a bit outside it.

Precisely; and that is just what I am doing; and I ask whether, in your opinion, possibly Paul wrote other writings which are not here?—I have not an opinion on the matter.

Do you mean to say that you have come to so grave a conclusion that these are not Paul's writings without forming an opinion on such a point as that?—I have not even advanced that conclusion, I think. The burden of proof lies on you. I have only to deny. I deny that you have advanced any evidence of it.

Then I ask whether you believe or deny that the 1st epistle to the Corinthians was written by the apostle Paul?—I have no evidence connecting the person whom you call the apostle Paul with that epistle.

Have you a conviction on the subject one way or other?—As a mere matter of conviction, there were so many forgeries that I am inclined to believe he had nothing to do with it; but I do not want to deny that which I have not sufficient evidence to entitle me to deny. What I do deny is, that you can bring the epistle you call the Epistle to the Corinthians within one hundred years of the date at which you say Paul lived.

Then do you mean to say that possibly we are right in believing this to have been written by Paul?—I do not know what evidence you believe it upon.

That is not my question?—I have nothing to do with the possibilities of your being right or not. What you have to do here is to prove your case.

My question is this: Is your conviction with regard to the subject of so loose a character, or are your convictions so indefinite, that possibly we may be right in believing that these are the writings of Paul?—On the contrary, my conviction is that you are entirely wrong.

Then do you deny that this was written by the apostle Paul?—I deny that I have yet

Digitized by Google

seen any evidence to warrant me in coming to the conclusion that the person you call the apostle Paul had anything to do with it.

Have you a definite opinion on it?—If that is not definite enough I do not know the meaning of the English language.

"Yes" or "No" would be definite, and I ask yes or no, do you believe that Paul wrote the 1st epistle to the Corinthians?—No, I do not, as a mere matter of belief.

Are you in doubt about it?—No.

You have said that you are not aware of any allusion to the apostle Paul's 1st epistle to the Corinthians by any writer within a hundred years of Paul's day. I will now read you an allusion, and ask your opinion upon it. I quote from the first letter of Clement, which all competent critics admit to be genuine, though abandoning his second epistle.—I utterly deny that all competent critics admit it to be a genuine letter, and I refuse to answer a question to which that is introduced, because it is utterly untrue.

Well, it is not essential to my question; so I will not repeat it. I will read you this from a letter that is admitted by competent critics to have been written by Clement of Rome.—I beg your pardon; in my speech I positively did deny that. I said not only that there was no evidence of its having been written by Clement of Rome, but that that was practically admitted by the editors of the Ante-Nicene Fathers.

Then I read from this Letter, written, I think, about the year 83.—Will you give me the evidence that it was written about 83? I decline to answer a question which involves a date for which I have no evidence.

Then it comes to this: Mr. Bradlaugh asks me to produce an unbroken line, and when I produce it, he asks me to prove each link. Are you prepared to do that with regard to—?—With regard to everything I advance.

The allusion by Clement in the year 83 to the 1st epistle of Corinthians is as follows: "Why, then, do we rend and tear in pieces the body of Christ, and raise seditions against our own body? Your schism has perverted many; it has discouraged many; it caused diffidence in many and grief in us all, and yet the sedition continues still. *Take the epistle of the blessed Paul the apostle into your hands;* what did he first write to you in the beginning of the gospel? The truth he wrote to you by the Spirit, concerning himself and Cephas, and Apollos, because that even then ye had made divisions among yourselves." That is a correct description of the epistle as we have it.—And I deny that that is admitted by competent critics; I say part of the two epistles attributed to Clement only exist in one manuscript; that the second is abandoned by nearly all competent critics as a forgery, and that the existing evidence is the same for both.

MR. BRADLAUGH QUESTIONS MR. ROBERTS.

Do you mean by "the Scriptures," or by "these Scriptures," the authorised English version of the Bible, commencing with Genesis, and ending with Revelations?—Yes.

Do you agree that the attributes I stated in my speech for Deity are fair attributes?—Not as to one item, with the construction you put upon it.

Which is that?—All-goodness.

You think Deity is not all-good.—In the sense contended for by you, I think He is not.

Will you tell me the sense, if any, in which you would use the word "all-good?"—That His designs, judged by the long run of the thing, are "all-good," but that in the realisation of those all-good designs, there may be many measures of extremity and severity.

Do you mean for "goodness" as applied to God the same as "goodness" as applied to man?—If you will define goodness as applied to man, I will be in a position to answer.

I mean by goodness applied to man that that is good which tends to the greatest happiness of mankind, with the least injury to any of mankind.—I do not admit that definition as applicable to God.

Digitized by Google

What definition of the word "good" will you give me, then, that is applicable to God?—The development ultimately of the highest good, He only being the judge of what that is.

Do you know what is meant by good?—I have some slight conception; but I don't govern God by my slight conceptions.

Will you give me your slight conception of it?—That He will ultimately upon the earth develop complete well-being for every person that will finally be alive, on the basis of complete obedience to and honour of Him.

Do you think He could have done that before now?—Not upon the principle He has been pleased to adopt in the development of it, which is a principle requiring the free agency of man.

On any principle could God have done that which you define as "good" before now? Yes or no? on any principle?—It is not for me to say what God could do or could not do; I merely contend for what He has done.

Do you hold that He is all-powerful?—I do.

Do you hold that He is all-wise?—I do.

Do you hold that He knew how to do what was good?—I do.

Do you hold that He could have done what was good?—I won't answer that, because it implies a case that I don't recognise.

Will you kindly give me one of the points which you consider a surface contradiction in the Bible?—Well, Solomon in the Proverbs says: "Answer not a fool according to his folly, lest thou be like unto him;" and adds immediately: "Answer a fool according to his folly, lest he be wise in his own conceit."

Will you kindly give me the evidence to connect the person you call Solomon with the book you call Proverbs?—Yes; I produce Josephus.

Which of Josephus's works are you quoting—his "*Antiquities*" or his "*Wars?*"—Both.

Do you know that Josephus, in his references to Bible matters, states many facts which are not in our Bible at all?—In matters of detail, that is correct.

Do you consider Josephus trustworthy or not?—Where he is a personal witness I consider he is.

Do you think he was a personal witness to Solomon writing the Proverbs?—He was a personal witness to the evidence which proved Solomon to have been the writer.

Will you give me a statement of the evidence which Josephus personally witnessed?—He is a witness to the fact that the book constituting the Scriptures—

That is not the question.—You don't know till I have completed my answer.

My question is: what is the evidence of which Josephus was a personal witness in relation to Solomon and the Proverbs?—My answer is: the evidence of a nation's history, of which he was a personal witness, being himself an official person in that nation before its nationality was broken up.

Are you prepared with the evidence from Josephus which verifies that he is a personal witness of any such evidence?—If you deny it, I will perhaps prove it.

Will you undertake to produce that in your first speech to-morrow night?—It may interfere with my argument.

Will you to-morrow night—Yes or no?—Oh! I have my evidence here; I do not need to wait till to-morrow night.

Will you produce it now, then?—Yes.

Then I will ask you to refer to book and section. Mind, my question is not to show that the Jews accepted the Book of Proverbs, but the evidence which you say he was a personal witness of, to justify him in making that statement.—In *Josephus against Apion*, 1st bk., 8th section, he says:—"We have not an innumerable multitude of books amongst us, disagreeing from and contradicting one another, as the Greeks have, but only twenty-two books, which contain the records of all the past times, which are justly believed to be divine, and of them, five belong to Moses, which contain his laws and the tradition of the origin of mankind till his death. This interval of time was little short of 3,000 years; but as to the time from the death of Moses to the reign of Artaxerxes, King of Persia, who reigned after Xerxes, the prophets who were after Moses wrote down what was done in their times in thirteen books. The remaining four books contain hymns to God and precepts for the conduct of human life" (including, of course, Proverbs.) "It is true our history

Digitized by Google

hath been written since Artaxerxes very particularly, but hath not been esteemed of the like authority with the former by our forefathers, because there hath not been an exact succession of prophets since that time; and how firmly we have given credit to those books of our own nation is evident by what we do, for *during so many ages that have already past, no one has been so bold as either to add anything to them, or take anything from them, or to make any change in them.*"

Will you kindly give me that for a moment? Now, will you find me a word there which says, first, that Solomon wrote Proverbs? and next, the evidence on which Josephus makes the statement?—Solomon's name is not there, the word Proverbs is not there, but the book is there.

Now, I ask you whether you did not tell me that you had the evidence there that Josephus said that Solomon wrote Proverbs, and that Josephus was a personal witness of the evidence?—I did not say so; I said Josephus was a witness of the evidence on which that fact stands.

Then I will ask you to find from Josephus the fact that Solomon wrote Proverbs?—I produce that evidence in what I have read.

It is not in what you have read?—I will show it you. I have admitted that the name of Solomon and Proverbs is not there.

Then do you mean when a man does not mention another man, it is evidence that he thinks he wrote something?—No, I do not. The Book of Proverbs is included there.

What I have denied and what you have said was there, are two things. First, you said that Josephus was witness that Solomon wrote Proverbs: that I did not care about; next, you said that Josephus was a witness on evidence of which he had personal witness. I ask you to prove both those statements, and you prove neither. Do you abandon them or confirm them?—No, indeed, I do not abandon them; I do not affirm what you have put in my mouth.

Do you think that, although neither Proverbs nor Solomon are named in the extract, there is positive evidence, in what you have read from *Apion*, of what you said?—Yes.

That is your sort of positive evidence. Well, will you kindly now give me another instance of a contradiction which you consider a contradiction on the surface?—I did not come prepared with a list of these.

Then may I ask you whether you know anything at all of Egyptian chronology?—I know a little about it, not so much as I know about the Bible.

Do you know that the contention of Bunsen, in his *Egypt's Place in the History of the World*, and of Lepsius, and of Champollion Figeac, is that the Hebrew chronology, as contained in the authorised version, does not allow sufficient time for the proved civilisation of Egypt?—I am aware that this is the contention of those writers.

Do you know that Professor Rawlinson, lecturer for the Christian Evidence Society, has admitted that the Hebrew chronology does not allow sufficient time for civilisation?—I am not aware of it, but I am disposed to accept it on your declaration.

Is it your opinion that the Hebrew chronology does or does not allow sufficient time?—I think it allows sufficient time in view of a circumstance which has not been taken sufficiently into account by those authorities you refer to, and that is, the far greater capacities of men in these ages, as evidenced by the erection of the Pyramids, and sundry other things, to turn to account the forces of nature, steam excepted. In view of that, I think there is ample time allowed in the Hebrew chronology for the civilisation of Egypt.

Do you know that Sir J. Gardner Wilkinson carries the era of Menes in Egypt to within twenty-eight years of the Deluge?—I do not know that as a fact, but if you declare it to be so, I accept it.

Do you know that he says that he hesitates to carry the date farther back for fear of interfering with the deluge of Noah?—As his opinion does not bear on the question, I do not concern myself with it one way or another.

But do you know that he says so?—I am not aware of the fact.

Do you deny that that is so?—I prefer dealing with the first records, the first evidences.

Digitized by Google

Tell me what book you should consider the best authority for me to take against you as an authority on Egyptian chronology?—I am not prepared to give you an opinion.

Do you know a book which is a good authority on Egyptian chronology?—Generally, I do

Which one?—Particularly, I do not.

Give me a general one?—I am simply aware of the existence of such books and of the general tenor of their arguments, but I am not familiar in that particular way which your question wishes to commit me to.

But name me some one of them whom you have read and think I may fairly take?—My attention has been devoted to the first authorities, and not to the secondary.

But give me a first authority.—I am prepared to debate the question on the first principles of the thing.

Give me what you consider a first authority upon Egyptian chronology.—Egyptian chronology is presented to my mind in a sufficiently satisfactory form in the Hebrew Scriptures.

The CHAIRMAN: Ladies and Gentlemen.—Mr. Roberts will now have a quarter of an hour in which to address you.

Mr. ROBERTS: Mr. Bradlaugh's opening remarks, in his speech in reply to mine, addressed themselves to a matter which afforded me a little surprise, though perhaps I need not have been surprised, and that is his challenging me to the production of the particular authorities upon which I rested those general statements concerning the evidence upon which the authenticity of the New Testament is based. I thought that those matters were so well known to, and accepted by, all educated men that it would only be a waste of time to resort to the technicalities into which he sought to draw me. But, nevertheless, I am not unprepared to give the references which he has demanded. I have given one reference, or was in the act of giving one reference, when my turn for questioning came to a close; and that is the 1st epistle of Clement, the 20th chapter, the 20th and 21st verses. He says he was unaware of any expression of Justin Martyr's which made mention of the Four Gospels. I will read him an extract from Justin Martyr's "*Apology of the Emperor*," in which he will find that the expression occurs which he denied. This is Justin Martyr's description of Christian worship in the second century, in his "Apology."

Mr. BRADLAUGH: Will you kindly quote book, section, and page?

Mr. ROBERTS: I am not prepared with a reference to the section, but I will get it if you desire it.

Mr. BRADLAUGH: In this debate we shall never end if we don't, because, in the case of Justin Martyr, the only place in which the phrase translated "Acts of the Apostles" occurs, it is challenged as a forgery, and therefore it is necessary that any quotations should be specifically made.

Mr. ROBERTS: I will supply the references afterwards.

Mr. BRADLAUGH: I object to any quotations from Justin Martyr. We have six nights, and it can be supplied when my friend is ready.

The CHAIRMAN: I think it will be as well, and perfectly more in order, if Mr Roberts is allowed to occupy his fifteen minutes, and then for Mr. Bradlaugh, have his fifteen minutes, just to say what he likes. I think it best for each to occupy their position—one the speaker, the other to sit and listen.

Mr. BRADLAUGH: On the question of order, Mr. Chairman, I ask leave to address you.

The CHAIRMAN: According to my judgment, it will be a deal better for Mr. Roberts to take his fifteen minutes.

Mr. BRADLAUGH: But you have not heard my point of order. On a question of order, I ask your leave to address you.

The CHAIRMAN: If I have my way, I think it advisable, without any question being put by Mr. Bradlaugh, that Mr. Roberts should occupy his fifteen minutes. I think it will be better; that is my judgment.

Mr. BRADLAUGH: You don't allow me, then, to state my point of order?

Digitized by Google

The CHAIRMAN: Not while Mr. Roberts is speaking.

Mr. ROBERTS: This is an extract from the writings of Justin Martyr, and if Mr. Bradlaugh denies the correctness of it, I will supply him with the exact reference; and if he finds out that the reference does not justify what I now allege, it will be a damaging thing to me for him to supply that to the meeting afterwards. In his first "Apology," addressed to the Emperor Antoninus Pius, and written in the second century, he describes the worship of the Christians, and after having mentioned what he says, was "written by the apostles in *the memorials which they have made*, WHICH ARE CALLED GOSPELS," he says: "On the day called Sunday, there is an assembly in one place of all who dwell in the cities or in the countries, and memorials of the apostles or the writings of the prophets, are read as time may permit. Afterwards, when he who reads has ended, he who presides admonishes and exhorts by word to imitate these good things." I will not read the whole of the extract, because it proceeds to deal with matters that have no immediate and direct reference to the particular point for which I cite the quotation—the object of the citation of the quotation being to show that there was an allusion by Justin Martyr to the fact that at the meetings of Christians in the second century, there were books that were read that passed current under the general designation of *Memorials of the Apostles*—that is to say, the writings of histories; and here we have such writings which have been received from that day down to ours; and if these be not those writings, is Mr. Bradlaugh prepared to show what they are to which Justin Martyr here makes reference?

But I will now finish the part of the argument which I was obliged to break off in my opening address, and that was an undertaking, on my part, to prove also the authenticity of the books that constitute the Old Testament. The nature of the evidence upon that point is this. Some may say: "What evidence have we that there existed before the days of Christ a compilation of works such as that which now constitutes that part of the Bible called the Old Testament?" That evidence I produce first from the New Testament; and the evidence here is exceedingly extensive, far more extensive than I shall be justified, in the limited time at my disposal, in placing before you; but I will refer to such general features as this: we have it recorded in the Acts of the Apostles, the 17th chapter, that "Paul, as his manner was, went into the synagogue, and reasoned with them out of *the Scriptures*," the writings. If we ask what writings, we find the question answered in the last chapter of the Acts of the Apostles, the 23rd verse: When they (the Jews) had appointed him a day, there came many to him into his lodging, to whom he expounded and testified the kingdom of God, persuading them concerning Jesus, both *out of the law of Moses, and out of the Prophets*, from morning till evening." Therefore, in Paul's day the law of Moses was known as a standard of reference accepted among the Jews, and also the writings of the prophets. Then I will bring the testimony of Christ, concerning whom I hope to have much to say upon another evening, and whose case is far removed from the mythical region to which Mr. Bradlaugh's contention compels him to relegate him. Indeed, it is the fact that the more educated class of unbelievers have now one and all abandoned the theory of a mythical invention, and admit that Jesus Christ was a historic personage, who actually appeared among the Jews, and the record of whose life as recorded by the apostles, is in the main historic. I say, when we come to consider Christ, we see in his life evidence of the prior existence of a compilation of writings accepted amongst the Jews as a standard of reference and knowledge in divine things; for consider that touching incident connected with the events that happened on the third day after his crucifixion, when the women went to the tomb and found it empty, and when that same day, two of his disciples were going on a distant errand, and were sad concerning the circumstances that had just transpired, and were ignorant of the fact that he had arisen; and Christ drew near to them and said, "What manner of communications are these that ye have one to another as ye walk and are sad?" And they said, "Art thou only a stranger in Jerusalem, and hast not known the things which are come to pass there in these days?" And he said unto them, "What things?" And they sai him, "Concerning Jesus of Nazareth, a prophet mighty in deed and word God and all the people"—in the 24th chapter of Luke you will find it, Mr. Bra

Digitized by Google

—and they expressed their great bewilderment with regard to the fact of his crucifixion, and Christ said: "O fools, and slow of heart to believe all that the prophets have spoken: Ought not Christ to have suffered these things, and to enter into his glory? And beginning at *Moses and all the prophets*, he expounded unto them *in all the Scriptures* the things concerning himself."

I have given a specimen of the kind of evidence that proves that the New Testament was in circulation throughout the Christian community towards the close of the first century, and I shall have more to say about that to-morrow night in a different connection. But observe that, if that argument be established, then the authenticity, or at all events the prior existence of Moses and the prophets as a national accepted standard of reference is also proved, and is proved in even a more conclusive manner than that, though not more conclusive in a logical sense, perhaps, but more conclusive as regards the common conceptions of people. I refer to what I have read, for instance, from the writings of Josephus, whose writings cannot be inpugned, whose book was written, before the first century was over, by an eye-witness of the destruction of Jerusalem; and he in the words I have read this evening, in answer to a question by Mr. Bradlaugh, gives you the testimony of an official Jew of these writings having been in circulation among the Jews for ages, and accepted by them all; and Josephus's declaration on that point is collaterally confirmed by a circumstance of the most specific and decisive character. What is that? Ptolemy Philadelphus, a literary King of Egypt—one of the distinguishing features of whose reign was that he made a collection of all the books that he could collect in the wide-world—finally decided to obtain a copy of a book he was *told was in* circulation among the Jews; and he communicated with the high priest *of Jerusalem*—at that time, I think, Jonathan, the brother of Judas Maccabæus—and requested him to send these books in the proper custody, that they might be translated into the Greek language, so as to be open to the reference of the world in general in the library that he established; and they did it, and we have that translation of theirs existing and current in the present day, and accepted and recognised by all educated men. I refer to the Septuagint, which is the Greek translation of the Hebrew Scriptures effected about 300 years before Christ; and, therefore, in that, we have a demonstration of the sort which I undertook to produce, namely that not only were the writings of the New Testament current among all the Christian community throughout the world—for, mind you, it is not one part of the world: there is Clement of Alexandria, Irenæus in France, Clement at Rome, three widely separated parts of the world in these comparatively barbarous ages. At all these places the same New Testament Scriptures were in circulation, and were quoted as commonly by the writers in those days, as the New Testament is quoted by ministers in the present day. I say that, having proved the circulation of the New Testament at that early period, I have upon the foundation of that proof also proved that the books of the Old Testament existed for at least three centuries previously, indeed more than that; for what was it that incited Ptolemy Philadelphus to obtain that translation? Was it not the wide-spread knowledge that there was, and had been for ages, in the hands of the Jews this volume? Therefore the resolution of Ptolemy Philadelphus to obtain that translation is of itself evidence of the previous existence of those documents for a good while before at least; and we can carry the argument much further back than that by a process which will, perhaps, be better exemplified on some of the other evenings, when we come to substantiate some of the other propositions. The Chairman calling my attention to the time, has broken the line of my argument, and therefore I will leave Mr. Bradlaugh to take his turn.

Mr. BRADLAUGH: First, the evidence as to the Septuagint is exactly the opposite of the statement Mr. Roberts has made, and it shows, therefore, the misfortune in conducting this debate without giving authorities as we go on. Mr. Roberts—and I am quite sure that he means to tell you, at least I think so, what he believes to be true—Mr. Roberts must be utterly unacquainted with all the criticism on the subject, or he would know, when he says that it is accepted and recognised by all educated men, that one of the very latest amongst orthodox writers, the Rev. Dr. Irons, one of the officials of St. Paul's at the present moment, in his book, entitled *The Bible and its Interpreters*, says no man knows when the Septuagint was translated, who translated it, where the

Digitized by Google

version was made, or how it was made; and I will undertake to prove to you that the balance of criticism is utterly against your view; so that it shows that, in these kind of statements, you want to know the evidence on which your antagonists rely. I do not want to be in the painful position of telling Mr. Roberts each time, Your statement is not true. I want him to give me the evidence on which he relies, and then I will show him where the supposed evidence is no evidence at all; but if he simply makes general statements, and tells you that it is accepted and recognised by all educated men, when a statement of that kind simply means that he has not read what educated men have written about it; and when he tells you that it is the Greek translation of our Hebrew text, that is very funny, because in the mere matter of chronology alone, one version differs about 900 years; and in another version the difference is over 1,200 years from the Hebrew, and, therefore, cannot possibly be a translation of it. Mr. Roberts has got to prove his case, and I must ask him to state his evidence on which he relies for the Septuagint translation, and then I will reply to it. Evidently, Mr. Roberts and I differ as to what is evidence. He said he was going to prove from Justin Martyr the existence of the Four Gospels, and he read to you something about Memorials of the Apostles, but what on earth there is to identify those with the Four Gospels, in the books, as we have got them, I do not know, and it requires a mind like Mr. Roberts's to get the evidence out of it. That passage says nothing of any gospels, and would be as good evidence for forty gospels as for four; and I will show you that in the time of Justin Martyr, forty gospels and writings of apostles existed, at least; and I will tell Mr. Roberts where he can get a list of them—in the Rev. Jeremiah Jones's *Canon of the New Testament*. Jeremiah Jones has made an index of what he calls the Apocryphal Books and Gospels. Then he says that he read from Josephus's testimony. Well now, there again we differ as to the meaning of words. He was to prove from Josephus that Solomon wrote the Proverbs, and that Josephus had knowledge of the evidence which entitled him to say that Solomon wrote the Proverbs; and when he read it, there was not a word about Solomon, not a single word about the Proverbs. Well, if that is evidence, the sooner we leave off this debate the better. Then again, he quoted Clement of Rome, and he did not quote; and here is another difficulty: if my friend brought here the works themselves to quote from, I should be able to say, if he told me which edition it was, "turn to the preface, and you will find my arguments against it there, in the handwritings of your own men;" but when he simply quotes loose statements from other writers, there is no sort of reply to that kind possible. And when he says, "Oh! if Mr. Bradlaugh disputes, I will prove," that is not the question: his business is to prove as he goes on, and not to make loose statements, which require proof at some later time. Now, he says something about the women who went to the tomb, and he gave me chapter and verse, as he saw I was looking at the Bible; but he did not know what I was referring to. I want to know whether God revealed that, according to Matt. xxviii., two women went; or, according to John xx. 1, that one woman went; or, according to Luke xxiv., that several women went; and I want to know whether Mary went by herself, or whether several went with her; and I want to know whether that is one of the surface contradictions which Mr. Roberts had forgotten, and which he said he would look up for me. Then Mr. Roberts is good enough to say that he will refer you to Acts xxviii. 23. But what does that prove? Simply that there were current in the alleged time of Jesus, works which were called the law of Moses and the prophets. I have never denied that. But you have got first to identify those with the Bible as we have them, and then to prove that this is divine revelation. A loose statement of that kind is no sort of evidence at all. It is only evidence of the existence of something called the "law of Moses;" and I will defy Mr. Roberts to identify the Pentateuch with those words, because I will show you from the Bible itself plenty of places in which the word "law" is used, which cannot possibly mean the whole of the contents of the Pentateuch. And do not forget that Mr. Roberts has not said one word about the texts to which I called his attention: these texts affecting the goodness, omnipotence and immutability of Deity. Those are passed over; and then he tells you that all educated men have abandoned the mythical theory regarding the Christ Well, now, that is really a little too strong. I do not know that it would amount to anything if it were proved; but it is not even, in the

Digitized by Google

remotest degree proved. What most men are prepared to concede is what I conceded in the answer to Mr. Roberts. The name which is rendered "Jesus," is only a form of the Hebrew word "Joshua." It is quite possible there was a real man on whom the myth has been centred; but there is not an educated man who admits a real Jesus, who was born without a father; whose husband's mother had two fathers; who lived at the same time in Judea and Egypt; who was known by John, and not known by him at the same moment of time; who was crucified, and in the grave three days and three nights, between late on Friday evening and the period which elapsed before Saturday night was quite over. Now, if Mr. Roberts should tell me those statements are not in the Bible, he will have an opportunity of asking me for texts, and he will find that I can quote him chapter and verse for every one of them. Now, I will ask him to take another illustration: whether Genesis xviii. 20, 21, where God is represented as saying that the story has reached Him about Sodom and Gomorrah, and that He is going to inquire, and will know—whether that is consistent with the omniscience of Deity, and whether what follows is consistent with the goodness of the Deity? And don't forget here that I hold exactly the doctrine put forward by John Stuart Mill: I hold that you have not the right to apply the word "goodness" in one sense in reference to man, and in some other sense in reference to God, and then tell me you cannot explain what that second sense is. I hold it is an entire abandonment of the whole of the debate to make any such contention as that. If Mr. Roberts does not know what goodness means, he ought not to be here; if he does, he ought to tell us. He ought not to tell us that goodness *for God may* not mean the same thing now as it may a thousand years hence, or *as it did* a thousand years since. A book which represents as an all-good God, guilty of evil acts, cannot be a Divine revelation. Then I will ask him as to Deut. viii. 2, and 2 Chron. xxxii. 31, whether these are consistent with God's omniscience? I will ask him whether the whole story of the Fall, omitting its absurdities, is not one of the most monstrous stories as a picture of the character of the Deity? whether it does not picture God making the Garden of Eden a damnation-trap in which to catch the whole of the human race, so that he may punish them; I will ask him whether the whole story of the Deluge, admitting its monstrous improbabilities and impossibilities, does not picture God as a cruel Deity, who would delight rather in punishing than reforming, and who slaughtered all living beings, the innocent with the guilty; I will ask him whether the case of Jacob and Esau, referred to in Mal. i. 2, does not show that God either loved the man because he was a rascal, or in spite of it; because he was a liar, or in spite of it; because he helped to rob his uncle; or in spite of it; because he cheated his brother, or in spite of it; and whether it does not show that He hated Esau, because he had the misfortune to be cheated, and the virtue to be forgiving, or in spite of it. I submit that on either contention it is utterly inexplicable with the contention that the Bible is the revelation of God. And then I will take him to 1st Kings xi. 33, 34, 38; xiv. 8, where it says David never did anything but good; did only that which was right in the sight of God; I will ask him whether David was not a thief, a liar, a murderer, a perjurer, an adulterer, a traitor, a scoundrel, all through, who did not even repent when he died? how could such a man have obeyed all God's statutes and commandments? And I will point out to him that, very curiously, he is wasting all his learned evidence on people who are certainly very remote from the time of Moses, and he does it in the funniest way, for he quotes you Clement of Alexandria, Irenæus, Clement of Rome; and he talks of "those days," as if they all lived at that time. Would you talk of a man who lived in 1745, and another who lived in 1845, as living in "those days?" Now, I ask my friend not to assume that I am ignorant of all these things. I do not assume to be a learned man, but there is not an author he can quote in relation to this subject that I will not, when he has quoted him, tell him what can be said for or against him.

The CHAIRMAN: Mr. Roberts will now occupy six minutes out of the twelve remaining, and then Mr. Bradlaugh will reply till ten o'clock.

Mr. ROBERTS: Ladies and gentlemen; if Mr. Bradlaugh would strictly confine himself to accuracy in his representations of what I say, my arguments would not suffer in his hands. I have not represented that those authorities I have quoted were

Digitized by Google

contemporary. I have given, in each case, the year in which they wrote.

Mr. BRADLAUGH: No.

Mr. ROBERTS: I have. I stated that Clement wrote A.D. 83, and that Tertullian wrote in the middle of the second century. I gave those general indications, and certainly never committed myself to the absurdity of supposing that men living in the first century and the second could, by any construction, be said to be contemporary. He has given me a great many passages to explain. I wish he would give me them as questions. I will undertake to answer every one of them if they are put to me in the colloquial style of the Socratic method; but how can I, in six minutes, explain twenty or thirty alleged discrepancies, which discrepancies I am persuaded, do not exist. I have read through a list of 144 so-called contradictions, issued by a Secular Society in America; and with the exception of some five or six, there is not even the shadow of a difficulty to contend with, and every one of them in the process of question and answer, I would undertake to explain, and I would do so in a speech, were the speech of sufficient dimensions to admit of it. With regard to the Septuagint, I did not speak at random in saying what I said; I gave the evidence on which my statement rests. There is the Septuagint; there is such a book; it is substantially a transcript of the Hebrew Scriptures, though I grant there are discrepancies of the sort he mentioned; that is to say, the chronology does not agree; there has been tampering somewhere, undoubtedly, but there is the fact; here is a literary monument, which, apart from all discrepancies, certainly proves what I quoted it to prove: and that is, that the Hebrew Scriptures existed as a literary compilation, at least in the reign of Ptolemy Philadelphus, and I do not produce it to prove anything more than that. The simplest mind is capable of receiving that argument; for where does the Septuagint come from, if there were not Hebrew Scriptures from which to make a translation? What is the account of it? Josephus here gives us an account of it. We have both the book, and an account of how the book came into existence. The only thing Mr. Bradlaugh can do is to say, "How do I know that Josephus is speaking the truth?" He tells us he believes in Eusebius because there is an unbroken line of reference; and then, as I proceed to unfold my references in regard to Paul, he says, "How do I know that he wrote that letter you are referring to?" On the principle that Mr. Bradlaugh is contending for to-night, I deny that he can possibly prove that there ever existed such a person as Eusebius, or that he ever wrote the books that bear his name; indeed, he cannot prove the existence of Shakspere on the same principle, for he never saw him, and he has no certain evidence that he wrote the book—that is to say upon his principle. *I* admit that there is evidence in regard to Shakspere, and in regard to Eusebius, and in regard to Paul; and there would never have been any objection to the evidence in regard to Paul if his case had not involved evidence of Christ's resurrection. I produce, then, this statement of Josephus in reference to the Septuagint.—(*Josephus's Antiquities;* book xii., sections 1 and 4.) Those two sections contain a sufficiency of evidence on the point. I will read one or two extracts, though I am afraid the time will scarcely admit of it to-night. Of course, I am well aware that critics have written against it; but, nevertheless, my remark, in its general form, is unimpeachable, and that is, that critical, judicial, clear, unbiassed minds there are that receive the Septuagint as the translation made in the reign of Ptolemy Philadelphus.

Mr. BRADLAUGH: Your statement was that the Septuagint was accepted and recognised by all educated men; you made no exception whatever. You have curiously forgotten that I said that you classed together Clement of Rome, Clement of Alexandria, and Irenæus, as "of those days;" and you said you gave the date of Tertullian. I did not say a word about Tertullian, and I say that you did not give the dates of the others; and it would be a great deal better if you would attend to exactly what I say, and not answer what I do not say. It is perfectly true that in six minutes you could not answer all the contradictions, but you might have answered one. Instead of that you have referred to an American society that has issued 144 contradictions; and you have said that I cannot prove the existence of Shakspere. Supposing I cannot, that would not show that the Bible is a divine revelation. On matters of ordinary occurrence, I accept the best experience of the best men as I find it fairly recorded, and upon that canon of evidence I can prove all reasonable historic events. It is only when you give me an extraordinary occurrence—of men

Digitized by Google

who have no fathers; who are in the grave when they are out of it; and who are seen by one woman, who is two women, who are more than three women; it is then that the experience does not apply; and, surely, in six minutes you might have taken one illustration. If you would devote yourself to doing that, then we should have this matter cleared up very much. Now, I submit that, though we have got nearly to the end of our first night's debate, there has not been an attempt to state the attributes of Deity on the other side. There is an admission now that there is the variation I said in the chronology between the Septuagint and the Hebrew, which in one case is 900 years, and in the other, 1,200 years; and those are called trifling differences; but are we to be damned or saved by them? And you say there have been tamperings. Is it by God's consent or against it? And then you say, Oh! you quote the Septuagint to prove that the Hebrew books existed in the time of Ptolemy; but you have got to prove that your Septuagint translation was made in the time of Ptolemy. A statement of Josephus will not prove it, because you have got to go back to something behind it; and I will, to-morrow, give you the whole of the evidence for and against the Septuagint. I will quote every author about it. You ought to do it; but if you will not, I must do the work that you ought to do, unless you abandon the evidence. Now, I ask, that through this debate, when an author is quoted, that we shall have the author and his express words, and the date when he is supposed to have written, and not general statements that all educated men have accepted it. I submit that, up to the present moment, not one atom of evidence has been advanced in support of the proposition that Mr. Roberts has undertaken to prove.

Second Night,

WEDNESDAY, 14th JUNE, 1876,

IN THE TEMPERANCE HALL, LEICESTER.

THE CHAIR WAS OCCUPIED BY MR. W. STANYON OF LEICESTER.

The CHAIRMAN having asked the meeting to refrain from the expression of their feelings, called upon Mr. Roberts to resume the debate.

Mr. ROBERTS: Mr. Chairman, Ladies and Gentlemen, in commencing my remarks this evening, I will comply with the request made by Mr. Bradlaugh last night, and define what I mean by the proposition that the Scriptures are the authentic and reliable records of divine revelation. By the Scriptures, I mean that compilation of writings that passes current in English society under the name of the Bible. By the proposition that these writings are authentic, I mean that they were really written by the persons by whom they profess to have been written, and at the time at which they profess to have been written; and, that, therefore, they are authentic; and, that, besides being authentic, they are reliable; that is, we can put our trust in them as an accurate record of the various matters which they profess to set forth. Those matters are, in my contention, the records of divine revelation, or rather the record involves the setting forth of divine revelation. By that I mean a communication of knowledge concerning God, which we could not otherwise have attained; and by God I mean the primal energy, force, wisdom, power, strength, or whatever other term you choose to employ to define the first creative energy from which things have had their development or their outcome, thinking it necessary only to add that in my belief, the view of that power presented in the Scriptures is the right one, viz., that in its totality, so to speak, that power is a person, having in their highest degree, all the attributes which go to constitute personality, consciousness, perception, volition, &c. Beyond this, I will not occupy time in presenting any abstract view of God, for we might occupy the whole six nights in discussing the thing in a metaphysical way without arriving at anything like a tangible result. In this connection I will remind Mr. Bradlaugh and his friends, that even upon their hypothesis, there is inscrutable mystery at the basis of things as they are. I can call no better witness to that fact than Professor Tyndall, a man great in the particular school to which these friends belong. He—in an inaugural address at the meeting of the British Association, at Manchester—says: "Science does not in any degree lessen the wonder with which we look at the material universe. At best it only marshals the phenomena of nature under the head of all its sequences, which are called law; but the great ocean of the unknown simply recedes as we advance, and all the researches that science may make to the end of time will never abridge by one hairsbreadth the infinite expanse of mystery across that boundless ocean. The curiosity of the intellect will always sail towards an ever-vanishing horizon. The region of mystery lies not merely in the distance, but also at our very feet." He says when he has looked at the spring-tide, at the sprouting leaves, and grass, and flowers; when he has seen the general joy of opening life, he has asked himself, "Can it be that there is no being or thing in nature that knows more about these matters than I do? Can it be that I, in my ignorance, represent the highest knowledge existing of these things in the universe?" And his answer is: "The man who puts that question to himself, if he be not a shallow man; if he be capable of being penetrated by a profound thought, will never answer it by professing that creed of Atheism which has been so lightly attributed to me."

Digitized by Google

Therefore, I think that, in view of the fact that even upon the hypothesis of an insentient nature, so to speak, being the author of what we see, we land ourselves at last against a dead wall of mystery, it would be bootless for me to attempt to define, in a philosophical sense, what I mean by the word *God*, or the phrase *primal energy*. Suffice it to say that there is a primal energy in that particular phase in which He or *it*—if Mr. Bradlaugh prefers that pronoun—is presented in these records which constitute the ancient archives of the Jews. The truth, then, of the proposition I seek to maintain, not by hair-splitting, or far-fetched or misty arguments, but by submitting a plain, broad, common sense argument in matters of world-wide notoriety, which the meanest intellect can apprehend when brought to bear.

My contention last night was that, taking the Bible in our hands with the idea of believing it, we should be compelled, on the hypothesis of its being true, to expect to find existing at the present day the nation of the Jews and a corrupt political Christianity; and I pointed to the fact that these are in existence. Further, I produced evidence of the other fact, which ought to be capable of some degree of demonstration, that these writings existed at the time, and were in current circulation amongst the believers of it at the time they were produced. To-night I will take one step further, a more important step, and introduce a more interesting topic, perhaps—though the topic of last night was not uninteresting, and certainly not unimportant, for it constituted a necessary preliminary and a foundation for what is to follow. But the matter I am to speak of to-night appeals more directly to the common cognitions of men. I refer to the uprise in the world of the system bearing the name of Christianity. That system must have a history. Christianity did not spring up out of the ground; it did not come mysteriously out of the atmosphere; it is traceable back to certain circumstances that planted it in the world; and it is to those circumstances that I now call your attention, as furnishing the most palpable evidence of the truth of the proposition for which I am contending. And, first, let me say, there are not only Christians to-day, but there were Christians in the first century, and widely multiplied. It is necessary for me to prove that, as a step in the argument, by way of making it invincible; and I prove it by two citations, which, I think Mr. Bradlaugh will not call in question, and to which, probably, he has the scholastic access, without calling on me to produce a technical reference, though I will do that if he asks it. I refer to the testimony of Tacitus, the Roman historian, who lived at the close of the first century, and I refer to the letter written by Pliny the Younger to the Emperor Trajan in the year 112, asking the Emperor's advice as to how he was to deal with this rising sect of Christians, if they were to be murdered wholesale, as had been the custom. I will quote his very words, merely to show that there was a great multitude of believers in Christ in that age, as a preliminary to enquiring how came that multitude to be brought into the conviction they were entertaining—convictions which brought them nothing but evil as regards this world—for which they suffered death by martyrdom. I find Pliny's letter at the close of the works of Josephus, although, I believe, it is also extant in the writings of Jerome, and also in a book bearing Pliny's name, *The Epistles of Pliny*. This is the letter: "Sir.—It is my constant method to apply myself to you for the resolution of all my doubts." Now, please, transport yourselves back in imagination to A.D. 112; let the mind act telescopically to-night; let us remember that there have been centuries before our time; let us try to detach our consciousness from the immediate connection of present circumstances, and realise the facts that have gone before. Pliny the Younger, writing to the Emperor Trajan at Rome, says: "I have never been present at the execution of the Christians (by others), on which account I am unacquainted with what used to be inquired into, and what and how far they are to be punished. Nor are my doubts small whether there be not a distinction to be made between the ages (of the accused), and whether tender youth ought to have the same punishment with strong men; whether there be not room for pardon upon repentance, and whether it may not be an advantage to one that had been a Christian that he has forsaken Christianity; whether the bare name, without any crimes besides, or the crime of adhering to the name is to be punished? In the meantime, I have taken this course about those who have been brought before me as Christians. I asked them whether they were Christians or not. If they confessed that they were Christians, I asked them again

Digitized by Google

and a third time, intervening threatenings with the questions. If they persevered in their confessions, I ordered them to be executed; for I did not doubt, but let their confessions be of any sort whatsoever, this positiveness and inflexible obstinacy deserve to be punished. There have been some of this mad sect whom I took notice of in particular as Roman citizens, that they might be sent to the city. After some time, as is usual in such circumstances, the crime spread itself, and many more cases came before me. . . . Hereupon, I have put off any further examinations, and have recourse to you, for the affair seems to be well worth consultation, *especially on account of the number of those that are in danger;* for there are many of every age, of every rank, and of both sexes, who are now and hereafter likely to be called to account and to be in danger; for this superstition *is spread like a contagion, not only into cities and towns, but into country villages also*, which yet there is reason to hope may be stopped and corrected. To be sure, temples *which were almost forsaken*, begin already to be frequented, and the holy solemnities, *which were long intermitted*, begin to be revived. The sacrifices begin to sell well everywhere, of which very few purchasers had of late appeared. Whereby it is easy to suppose how *great a multitude* of men may be amended if place for repentance be admitted."

Now, observe this testimony in A.D. 112, points back a long way into the first century, in saying that for a long time the worship of the idols *had been given up* on account of what he calls "this Christian superstition." The testimony of Tacitus, for the knowledge of which the world, for a long time, was solely indebted to the extracts given by Josephus in his *Antiquities*, is as follows: "Nero," says Tacitus, "in order to stifle the rumour (that he had himself set Rome on fire) ascribed it to those people who were hated for their wicked practices, and called by the vulgar Christian. These he, Nero, punished exquisitely. The author of the same was Christ, who, in the reign of Tiberius, was brought to punishment by Pontius Pilate, the Procurator not only over Judea, whence this mischief first sprang, but in the City of Rome also." That is sufficient for my present purpose: and by that testimony I have proved the existence, in the first century, of a vast multitude throughout the Roman Empire believing in Christ, and suffering all manner of disadvantages and evils in consequence of that belief; and I have to ask, What was the sacrifice for? I mean what did they sacrifice all these advantages for? Was it for the sake of a religious opinion? Was it for a mere belief in what somebody else had said? If it was, I grant that the argument would only go to show their sincerity; it would not necessarily show that the opinion which they sincerely entertained was a correct one. But I am now to call your attention to the fact that it was not a matter of opinion for which they suffered, but a matter of fact, of which the leading members of their body were personal witnesses. To that fact I wish now to call your attention, and I also particularly invite your consideration to the question of whether there was a possibility of any mistake about the matter. Pliny could not tell the cause of the multiplication of this people; Tacitus could not give the Emperor to understand what was the secret of the obstinacy of this "vulgar Christian sect" in the maintenance of their convictions unto death. We must, therefore, go to the writings which I showed last night, and which I am prepared to show much more extensively than I did then, were in extensive circulation amongst this multitude of persecuted people; we must go to those writings to find out the secret of that confidence.

Now I first call as evidence a Roman Governor—not one of themselves—Festus, I think, who had arraigned before him Paul, the ringleader of the sect of the Nazarenes, and the most effective instrument in the diffusion of the faith of Christ. He heard him himself, and afterwards held a joint hearing with Agrippa. Festus thus states the cause to the King: "There is a certain man left in bonds by Felix, about whom, when I was at Jerusalem, the chief priests and the elders of the Jews informed me, desiring to have judgment against him, to whom I answered, It is not the manner of the Romans to deliver any man to die before that he which is accused have the accusers face to face, and have license to answer for himself concerning the crime laid against him. Therefore, when they were come thither, without any delay on the morrow, I sat on the judgment-seat, and commanded the man to be brought forth; against whom, when the accusers stood up, they brought none accusation of such things as I supposed, but had certain questions against him of

Digitized by Google

their own superstition, and of *one Jesus, who was dead*, WHOM PAUL AFFIRMED TO BE ALIVE." That is Festus's definition of the question that was at issue between Paul and his accusers; was it a correct definition by Festus? In answer to that, I invite your attention to a number of statements by the apostles themselves, which go to show that that was the matter involved in their public testimony. In the first chapter of Acts, at a meeting of the apostles after the ascension of Christ, and before the Day of Pentecost, when the question of the vacancy created by the apostasy of Judas came to be considered, this counsel was given one to another: "Wherefore of these men who have companied with us all the time that the Lord Jesus went in and out among us, beginning from the baptism of John unto that same day that he was taken up from us, must one be ordained to be *a witness with us of* HIS RESURRECTION." In the second chapter of the Acts, at the 32nd verse, Peter, in making a speech to a great congregation of Jews, who had been brought together by the great marvel which we shall have to consider at a later stage of the evening, viz., a number of men speaking languages they had never learnt, says: "*This Jesus hath God raised up*, WHEREOF WE ALL ARE WITNESSES." *Witnesses!* In Acts iii. 14, we have a speech delivered before the Jewish authorities, who tried to suppress this testimony: "Ye denied the Holy One and the Just, and desired a murderer to be granted unto you; and killed the Prince of Life, *whom God hath raised from the dead;* WHEREOF WE ARE WITNESSES." "Whereof we are *witnesses.*" Acts iv. 10: "Be it known unto you all"—this is another speech on another occasion—"and to all the people of Israel, that by the name of Jesus Christ of Nazareth, whom ye crucified, *whom God raised from the dead*, even by him doth this man stand here before you whole. This is the stone which was set at nought of you builders, which is become the head of the corner. Neither is there salvation in any other; for there is none other name under heaven given among men whereby we must be saved." Acts v. 29: "Peter and the other apostles answered and said"—again addressing themselves to the magistrates on the bench, who were telling them on no account to persist in this preaching of theirs, as they were filling Jerusalem with sedition, and that it would be at the peril of their liberty and life if they did; their answer is, "We ought to obey God rather than men. The God of our fathers *raised up Jesus*, whom ye slew and hanged on a tree. Him hath God exalted with His right hand to be a Prince and a Saviour, for to give repentance to Israel and forgiveness of sins unto Israel. And WE ARE HIS WITNESSES OF THESE THINGS, and so is also the Holy Spirit whom God hath given to them that obey Him,"—the full pith of which latter statement we shall have to consider upon a subsequent occasion

There are other statements of the same sort, but these are sufficient for the present purpose, and, therefore, I will leave it there, and ask, Was their witness true? What did they allege as the basis of their convictions upon the point? Acts iv. 19: "Peter and John answered and said unto them"—on another occasion before magistrates again—"Whether it be right, in the sight of God, to hearken unto you more than unto God, judge ye. For *we cannot but speak the* THINGS WHICH WE HAVE SEEN AND HEARD." Acts i. 3: "To whom"—that is to the disciples—"he (Christ) showed himself alive after his passion by many infallible proofs, *being seen of them* forty days"—nearly six weeks—"speaking of the things pertaining to the kingdom of God." In Acts x. 39, in the house of Cornelius, Peter declares: "WE ARE WITNESSES OF ALL THINGS WHICH HE DID both in the land of the Jews and in Jerusalem, whom they slew and hanged on a tree: *him God raised up the third day*, and showed him openly; not unto all the people, but unto witnesses chosen before of God, even *to us who did eat and drink with him after he rose from the dead.*" Therefore, observe, they were not put to death for entertaining a certain religious opinion; they were not put to death because they believed on the testimony of somebody else that Christ rose. Their testimony was: "We who were with him during his life in the flesh—we who saw him crucified, have seen him alive and have spent six weeks in his company, and he parted with us upon a certain occasion, with a promise to return." And now comes the question, What led them to make that statement? Did they get anything by it? Why! they just got all the things that all men everywhere, in every country and in every age, seek to avoid; they got poverty, they got insult, they got imprisonment, they got death. Everyone of the apostles lost their lives for it; perhaps I ought to qualify that statement; some of them, I believe, according to

Digitized by Google

ecclesiastical tradition, came to a peaceful end; but, nevertheless, a great proportion of them suffered death for their testimony. Therefore, their sincerity cannot be impugned; for there is never a lie told by an impostor but what it is to get some good to himself by it; and as soon as the good does not come, and as soon as the bad begins to come, you will see him flinch and turn round.

This is no case of imposture; therefore, the question is, were they mistaken? In considering that, let us regard the circumstances: whether those circumstances were of such a character as to admit the possibility of mistake. In the first place, they did not expect Christ to die; in Luke xviii. 31, we read: "Christ took unto him the Twelve, and said unto them, Behold, we go up to Jerusalem, and all things that are written by the prophets concerning the Son of Man shall be accomplished. For he shall be delivered unto the Gentiles, and shall be mocked, and spitefully entreated, and spitted on; and they shall scourge him and put him to death; and the third day he shall rise again. And *they understood none of these things: and this saying was hid from them*, neither knew they the things which were spoken." In the 24th chapter of Luke you have the case to which I called attention last night; verse 44 is a further amplification of it. He said to them—this is after his resurrection—"These are the words which I spake unto you, while I was yet with you, that all things must be fulfilled which were written in the law of Moses, and in the Prophets, and in the Psalms, concerning me. Then opened he their understandings, that they might understand the Scriptures, and said unto them, Thus it is written, and thus it behoved Christ to suffer, and to rise from the dead the third day."

Mr. BRADLAUGH: Mr. Chairman.—It is very evident that either my memory has utterly deceived me, or that Mr. Roberts's memory has utterly deceived him. He said he had given you evidence, last night, that the writings were in current circulation at the time they were produced. Now I never heard him say when any one of the books was produced; I never heard him fix a date or an author in the New Testament, except the Corinthians, which he attributed to Paul; I never heard him fix a date or an author in the Old, except for the Book of Proverbs, on which he turned out to be utterly incorrect, attributing it to Solomon on the authority of Josephus, and then not fixing any date at all for its currency; I never heard him pretend to give you any kind of clue as to whom he supposed to be the several authors, or when he supposed anyone of the particular books to be issued; and I cannot help thinking that his memory must have entirely misled him, and that he never did, during his speech last night supply us with any one of those facts; and I will ask him not to imagine that something relating to the existence of Christians, which I do not dispute, is evidence of the authenticity and truth of every book in the Bible. I do not dispute the existence of the Mahomedans, but I should be very sorry to accept that as a proof of the authenticity and divinity of the Koran; I do not dispute the existence of the Buddhists, but I should be very sorry to accept the fact of their existence as clear and irrevocable evidence of the truth of any books they may put forward as sacred. And I must ask Mr. Roberts to begin by specifying with the first book of the Bible—the Book of Genesis—who it is that he says professes to be the author of it, when it is that he says it was issued, amongst whom he says it was issued, and to give some evidence from contemporary writers of its having been in current circulation at the time of its being issued. I say there is not a particle of such evidence to be found. But when he has done this with the Book of Genesis, I will take him through every other book in the Bible in the same way. And now I will ask him to be kind enough to just look at what he imagines to be evidence. He says, "I will quote to you a Roman Governor, Festus," and he coolly quotes the book of Acts to me. But he has got to prove the book of Acts before he is entitled to quote it here. If you are to demonstrate that that Bible is reliable from beginning to end simply because it says something there, well, then there is entirely an end to all discussion. Let him find this account of Agrippa and Festus in Roman history, with any record of these books, then I will grant there may be something in it; but the question we have got to discuss is not, "Did some man named Paul live?" the question we have got to discuss is not, "Did some man named Jesus live?" because both those facts might be true, and yet this book not be the authentic record of divine

Digitized by Google

revelation. We must just please put the dots on the *i*, so that we may know what we are talking about. Well, Mr. Roberts stated that between the time of Christ's resurrection and ascension to heaven, Christ was on the earth six weeks, and he was good enough to refer me—not for that, but for another point—to the 24th chapter of Luke. I will ask him whether he can make anything like six weeks, or even one week, out of the period which is put in that chapter for the ascension of Jesus to heaven. I will grant that Mr. Roberts may be right, and that Christ may have been six weeks on earth; then I will ask him, if Luke says that was not so, on his own statement Luke must be stating something not true, and the book of Luke cannot be a divine revelation. If Acts is right, Luke is wrong; if Luke is right, Acts is wrong; and, in any case, Mr. Roberts is wrong, because he has got to make both books right. Now, we will pass by the whole of the quotation from Professor Tyndall. I have a great respect for him; but Professor Tyndall's opinions on Atheism, or natural processes, have not the smallest relation to the question we have to discuss. I will pass by every reference, at present, to Tacitus or Pliny, because it does not corroborate a single portion of the statement Mr. Roberts has to make out, which is, "That the Scriptures are the Authentic and Reliable Records of Divine Revelation." There is nothing to prove that proposition in Tacitus, and there is nothing in Pliny. If there were ten times there what Mr. Roberts imagines exists there, it would not go one step to prove his position. Now, I will ask him to follow me a little in what I shall submit. I gave Mr. Roberts a large number of texts last night. He said six minutes was not sufficient to answer them; but he has had thirty minutes to-night, and he might have answered some of them. If he could not have dealt with the whole, he might, at least, have commenced. Quoting Pliny will not prove that the story of the Fall in Genesis is one consistent with God's loving-kindness and mercy; quoting Festus, or Pliny, or Tacitus, or anybody else, will not get rid of any of the texts as to God being angry when He should not have been angry, and repenting when He should not have repented, and changing when He should not have changed. All those texts I read to Mr. Roberts last night remain untouched. I suppose it will be fair to say that they have slipped his memory since, because he thought them of importance at the time. The reason he gave for not answering them was that six minutes was not long enough, and it was a very proper reason; but he has had thirty minutes to-night, and he has quoted Professor Tyndall instead of explaining the Bible. Now, if you please, I will press Mr. Roberts a little further upon the position he has now taken. He says that by "authentic" he means that the books were really written by the persons by whom they are professed to be written, and at the times they are professed to have been written. Now, so far as I am aware, the only sort of profession of authorship for any of the early books in the Bible is the heading in the English Bible to the first five books—the First Book of Moses, the Second Book of Moses, the Third Book of Moses, the Fourth Book of Moses, and the Fifth Book of Moses. I am not aware that Moses—supposing him to have lived—ever made any profession on the subject at all; but I will assume that Mr. Roberts means that *authentic* means that these five books were written by Moses. Well, then, I will trouble him to give me some proof of that; I will trouble him to give me some proof of the time that Moses wrote them; I will trouble him to give me some proof from some other author of the existence of the books about that time, because he says they were in current circulation. Then I will ask him who it is who professes to have written the Book of Judges, because I do not see any profession of authorship; I should like him to tell me the date at which he thinks that book was issued, and to show me some evidence of its being in current circulation at the time he says it was issued, and then from that I will lead him through every one of the books of the Bible, and ask him whether, instead of all that being true, there is not very tolerable evidence, from some of the authors whom he has already used in this discussion, that the whole of the sacred books of the Jews were destroyed during their captivity, and had to be re-written. If he will tell us that that is so, then it would dispose of the whole of the position he has put to you; and I will press him still farther, that even when he has shown, which he never will, that each one of the books of the Old Testament was written by some individual, was published at a particular time, and was current from that time forward, he will not have gone one step forward then to prove they are a divine revelation; because no one doubts that the Koran has been current from the time of Mahomed, but it does not prove it to be

Digitized by Google

a divine revelation, although Mahomed pretended it to be one, and a very large number of people believe it to be one. Then we have to do what I suggested last night—examine the book, and see whether the contents of it are consistent with the character which, under any fair definition of Deity, is to be attributed to Deity; whether the internal statements agree with themselves, and whether they agree with science. And I put some very flat contradictions last night to Mr. Roberts, not one of which he has touched to-night. Why did he not, when he was dealing with the resurrection of Jesus, say whether he believed it was one woman who went first to the tomb, according to one Gospel, or two, according to another, or more than two, according to another? and why did he not give us his reasons for accepting one and disbelieving the rest. He relies on the resurrection; but if the story be full of contradictions, how can it be God's divine revelation? Mr. Roberts has neglected all this, and made some speeches about matters entirely unconnected with it. Now, if you please, I will draw your attention to the New Testament, because it shows the utter recklessness of the language Mr. Roberts uses. He talks of this book (the Bible) representing the archives of the Jews. Now, evidently, he could not refer to the New Testament, because the Jews do not acknowledge a single page of it. Then I will say that, when you come to the New Testament, that of the Gospels attributed to Matthew, to Mark, to Luke, and to John, there is not a particle of evidence, not an iota of evidence, to connect any of the persons named Matthew, Mark, Luke, or John, with any one of those Gospels; and until something is done of this kind, I say the Four Gospels cannot be shown to have been in existence at all before the year A.D. 150, that is 120 years at least after the alleged date of the death of Jesus; and until something of this kind is done, the authenticity question ought to be given up. And, then, even supposing this were done, Mr. Roberts has the whole mass of contradictions in the history of Jesus; and until they are cleared away, it is no use talking of outside testimony; you have got to get the inside of the book; let him explain the contradiction about the the forty days, let him explain the contradiction about the woman who went to the tomb; let him explain the contradictions that I have pointed out as to the parentage of Jesus; let him deal with all these things step by step, and not say, "I have only six minutes," and then, when he has the time, to leave it undone. Now, if you please, what is the case we are to take? As far as evidence goes, for to-night, a reiteration of two statements—one that there are Jews, and another that there are corrupt Christians. But, really, if that is to make any kind of evidence, the same kind of evidence can be pleaded in favour of every religious book of every people in the world, and you must do something much more definite than anything of this kind. I will tell you why I submit to you that the Bible is not a revelation from God, by God meaning—in the sense in which I gave it last night, a sense which has not been corrected—an omnipotent, an omnipresent, omniscient, an infinite, an eternal, an all-good, person. When Mr. Roberts says that he means a primal creative energy, clearly the Bible reveals either something much clearer than that, or nothing at all; it reveals a God who could be seen, and who could not be seen; it reveals a God who knew everything, and did not know some things; a God unchangeable, continually changing; a God all-wise, repenting and grieving at the unanticipated failure of His plans; it reveals a God who was everywhere, but who lived somewhere above, and who came down occasionally. This is, I submit to you, the revelation of the Deity in this book, and it is no use making statements outside that until these are dealt with. I gave Mr. Roberts, last night, a mass of texts not one of which has been answered, and I will now give you several additional texts which seem to show to me that the Bible cannot possibly be a revelation from an all-good God. And I will take you first to the 21st chapter of Exodus. Last night I confined myself to matters of fact; now I am coming to matters of legislation. Mr. Roberts says the existence of the Jews is a fact in his favour. Now, here are the laws supposed to be given in a divine revelation for those Jews: "If thou buy an Hebrew servant, six years he shall serve, and in the seventh he shall go out free for nothing"—this is in Exodus the 21st chapter and the 2nd verse—"If he came in by himself, he shall go out by himself: if he were married, then his wife shall go out with him. If his master have given him a wife, and she have borne him sons or daughters, the wife and her children shall be her master's and he shall go out by himself. And if the servant shall plainly say, I love my master, my wife, and my children, I will not go out free; then his master shall bring him unto the judges; he shall also bring him to the door, or unto the door-

Digitized by Google

post, and his master shall bore his ear through with an awl, and he shall serve him for ever." Now, I say that there is nothing divine in that, and I say it is not even human. The tendency of modern legislation and civilisation is to introduce a state of society exactly the opposite of that. I say that any half dozen men who were to pass such a law as that in any civilised community would be condemned as inhuman, would be execrated by the voice of to-day; and you cannot suppose that, in any age, that came from an all-good God which to-day's civilisation would reject. You say, "If a master gives his slave a wife," why! that presumes that a master has a right to have a slave wife! a woman from whom he may breed a race of slaves, and that if the servant insists on his own freedom at the end of the time, that he is to go, and leave the wife and the children in the custody of the master; and that if he loves his wife and children enough to stay with them, the reward he is to get for that, according to this book, is that he is to lose his liberty for ever. Now, I will give you next Leviticus, chapter xxvi, verses 44 to 46, because, while Exdous shows you how this legislation deals with the Jews, Leviticus shows you how the laws deal with the heathen. That runs in this way: "Both thy bondmen and thy bondmaids which thou shalt have, shall be of the heathen that are round about you; of them shall ye buy bondmen and bondmaids. Moreover, of the children of the strangers that do sojourn among you, of them shall ye buy, and of their families that are with us, which they begat in your land: and they shall be your possession. And ye shall take them as an inheritance for your children after you, to inherit them for a possession; they shall be your bondmen for ever." That is the law as to the heathen; then it goes on to say that, "over your brethren the children of Israel ye shall not rule with rigour." And you have two distinct laws here, one affecting the Jews, from Exodus, another affecting the heathen: and God, according, to Mr. Roberts, approves of slavery, thinks that people may buy and sell slaves, breed and get slaves, and keep slaves for ever. And I say, instead of that being divine, it is most inhuman; I say that doctrine made the most horrible slavery persistent in America; I say the consequence of texts existing like this was, that when William Lloyd Garrison wanted a Christian Church, to preach in, in Boston, on slavery, it was denied him, and he was obliged to have the only Infidel hall in Boston, because there was no other platform admitted to him. Samuel James May, a religious man, tells you how he was not allowed to preach in any of the churches where he had been formerly allowed to preach when he became secretary to the Abolition Society; and in Whittier's works you will find in one of his grandest poems a denunciation of the South Carolina clergy, where they held a demonstration in all their churches in favour of slavery. I say this slavery is a horrible doctrine, a wicked and damnable doctrine, which has cursed human-kind, and you can only defend it here to-night by telling me that this book came out in the childhood and infancy of the world, when people did not understand what freedom was. Its brutal and barbarous legislation has grown out of the character of its authors. It belongs to the far-off past. Now I will come to the question of legislation on difference of religious opinions. And I will take you now to Deuteronomy, chapter xiii. verse 6: 'If thy brother, the son of thy mother, or thy son, or thy daughter, or the wife of thy bosom, or thy friend, which is as thine own soul, entice thee secretly, saying, Let us go and serve other gods, which thou hast not known, thou, nor thy fathers; namely, of the gods of the people which are round about you, nigh unto thee, or far off from thee, from the one end of the earth even unto the other end of the earth, thou shalt not consent unto him, nor hearken unto him; neither shalt thine eyes pity him, neither shalt thou spare, neither shalt thou conceal him: But thou shalt surely kill him; thine hand shall be first upon him to put him to death, and afterwards the hand of all the people. And thou shalt stone him with stones, that he die." Now I say that is a doctrine which an all-wise and all-good and all-merciful God would never preach to human-kind; it shows a bigotry, it show a weakness, it shows an indisposition to listen to reason. Why! what would even be the doctrine Mr. Roberts would advocate, as evinced by his opposition to me here? When he meets an Infidel, instead of his hand being upon him to stone him to death, he challenges him to debate, to persuade him out of the opinion he thinks erroneous, while, according to the authentic revelation, what he ought to have done was to have killed me. His humanity rebels against that, and he will have nothing whatever to do with it. Now, if that is so, is it not evidence that he cannot think that book an evidence of divine revelation? Then I will refer

Digitized by Google

you to Numbers xxxi. 17, as illustrating the sort of doctrine that God thought fit to recommend in cases of war. I hold the doctrine that all offensive war is bad. That war except in defence of liberty is never justifiable. I do not know how far anyone who believes in the Bible would agree with that. I suppose those who believe in the Bible would think that war is good, because war is so strongly recommended in the early part or it. Killing the people you quarrel with, destroying all their cities, butchering their men, wives, and mothers, only sparing the women, who would be the subjects of your lusts: I say that all that is provided for here. I will not read to you, as I might, but simply refer you to Numbers xxxi. 17, and if it be challenged, I will read you thirty or forty texts worse than that. I say, while you find texts like that in the book, it is no use telling me something that Festus said, or something that somebody else ought to have said. Deal with the book itself, and clear its blemishes away. I will have to draw my friend's attention to the point raised by him last night on the question of chronology. He quoted, as evidence for the Bible, the Septuagint; he referred to some passage in Josephus, but did not read it. I have not looked at the passage in Josephus recently. If my memory serves me rightly—and I am not quite sure it does—Josephus vouches nothing more than a translation of the Pentateuch; and I do not deny that the rolls of the Pentateuch have been in existence for a very long period prior to the Christian era. I should be simply a madman to attempt to deny anything of the kind; but what I do deny is, that you can identify the Pentateuch we have here with the rolls of the Pentateuch that did exist prior to the Christian era. I say that there is no Pentateuch roll which can be carried back earlier than the famous Darghestan roll; and I say that that comes nearly 600 years on this side of the Christian era by the contention of its best men—580 odd years; and I urge to you that the very matter in dispute between Mr. Roberts and myself turns on this. I do not pretend the Bible to be a forgery—I have not pretended it in any fashion; but I do pretend it to be, like every other religious book, an outgrowth of different ages, of different men, of different peoples, bundled together without one reason for bundling it together, and which cannot be contended to be a complete, coherent book under any circumstances whatever. I do not contend that, from the time of Solomon forward, it may not be possible that every king recorded in the Bible may possibly have ruled; but that will not make out one iota of evidence against me. You have got to prove the facts that I challenge, and to explain the difficulties I submit to be explained; you have got to prove that the theories I impeach fit into your doctrine of divine revelation, or you do nothing at all. Now we have got to the second night of this debate, and I submit to you that we have not got the shadow of a scintilla of evidence, because all that has been sought to be done is to show you that some people called Christians are in existence, which I do not dispute. Then we were told that all the Apostles lost their lives, and then Mr. Roberts thought some of them did not. Now, I will ask him to find a reliable account of the martyrdom of any one of them, and I will ask him even then how far he has advanced his proof, because there have been people martyred for every religion in the world. There have been martyrs for every heresy. Martyrdom is no voucher of the divinity of the book. I will show you that, when Jesus was in danger, his disciples ran away, and his most trusty disciple denied him over and over again. And I ask you, if Peter, who knew from heaven itself that Jesus was from heaven, denied him, how can you expect me to believe the Bible on Peter's authority—that authority even unvouched? I will not weary you at present with any examination of the New Testament, because, if we begin the subject, let us begin it at the beginning; and I will ask whether it is not true that each of the accounts of the Creation in the first and second chapters of Genesis contradicts the other? And I say the book is anonymous—you do not know when, or where, or by whom, it was written—and that you cannot prove that the Hebrew language existed at the time Moses lived; and, until you have done that, it is no use telling me the writings were in current circulation at the time they were supposed to be written and issued. Let us have the book of Genesis proved first, and my objections to the Books of the Pentateuch first. Then we will go on step by step, and get a little further. Has there been any attempt here to-night to show you that the objections I stated last night from the Bible are not fairly taken? I say, Not one. I will give you again the texts: Exodus xxxii. 7-14, comparing that with Exodus xxviii. 1, xxxii. 28, 35; Numbers xxiii. 19; 1 Samuel xv. 29; Malachi iii. 6;

Digitized by Google

2 Kings xx. 1-11; 2 Samuel xxiv. 15, 16; Genesis vi. 6; 1 Samuel xv. 11; Genesis xviii. 20, 21; Deuteronomy viii. 2; 2 Chronicles xxi. 15. I commented on the horrible story of the God-invented Fall, I impeached the history of the humanity-destroying Flood, and not one of those points has been touched from the other side. (Time called.)

MR. ROBERTS QUESTIONS MR. BRADLAUGH.

Mr. Bradlaugh, you have admitted the reliability of the evidence of Tacitus and of Pliny to the fact that there existed a large Christian community at the end of the first century, and that they were the subjects of persecution?—I have not admitted the reliability of the quotation from Tacitus. I am inclined to think that the quotation from Tacitus is liable to impeachment. I think the letter of Pliny is a fairly historic document.

You admit the existence of a Christian community at the end of the first century?—I do not admit the existence of a Christian community at the end of the first century only; I think I can show the existence of what you call a Christian community prior to Christ.

But at all events after Christ?—And I say that the same community I think I can show before.

That is another point. It is sufficient for my present question that you admit the existence of a Christian community at the end of the first century?—I admit the continued existence of a community traceable back prior to the alleged birth of Christ.

My question does not relate——My answer relates to my opinion on the subject.

You must hear my question before you answer it. Do you deny that there existed at the end of the first century a Christian community?—I admit that the sect sometimes called Therapeutæ, sometimes called Essenes or Essean, sometimes called by other names, is found prior to the time of Christ, as evidenced by Philo, and that that same sect, sometimes called Christians, and sometimes by other names, may be traced afterwards.

Then it did exist at the close of the first century?—And prior to the first century.

Did it exist at the close of the first century—yes or no?—I can give no further answer.

You cannot say yes?—I must answer in my own way.

Why are you afraid to say yes? Having admitted there were Christians at the close of the first century, were there writings in circulation amongst them?—I have not the slightest evidence of any identifiable writings in circulation amongst the Christians to whom Pliny refers.

I did not say "identifiable writings;" I said "writings?"—I cannot speak of writings that cannot be identified, for I know nothing of them.

Yes; you might know of the existence of writings that you cannot identify, and I ask whether or not you believe there did exist writings in circulation among them?—If you will describe the writings I will answer you.

I purposely do not describe them?—Then I refuse to answer.

Then you refuse to say whether or not, in your opinion, there were any writings in circulation amongst them?—I refuse to give an answer which will not be of the slightest value.

Then you refuse to answer the question I put?—Give me something that I can identify in my mind, and I will tell you whether I have any evidence of the existence of that or not. I cannot answer on the vague word "writings," because I believe that ever since written language has been used, the people amongst whom the use of written language obtained have had writings.

Did written language obtain amongst the Christians?—Yes.

Did they have among them writings setting forth the facts of their religion?—I do not know.

In your reply to the Bishop of Lincoln you say: "In the early ages of the Christian Church, forgeries of Apostolic writings were common." I want to know if there were genuine Apostolic writings?—I never saw any.

Digitized by Google

Do you believe there were forged ones?—I believe that there was a huge multitude of forged writings, and that nearly nine-tenths at least have been abandoned by the Christians themselves.

Does that not prove the existence of genuine ones somewhere?—I do not know that it does; I do not know that the existence of an imitation dragon proves a real one.

Do you mean to say that there can be a counterfeit coin without a genuine one?—Oh yes, if you will travel on the Continent, you will find a good many of them.

Do you mean to say that the idea of genuine coin does not precede the fact of counterfeit?—I do not know.

You do not know?—No.

I will be content with that answer.—What I do know is, that people who want to be dishonest will avail themselves of any means which they think will give effect to their scheme of dishonesty, and that is all I know.

Do you think the Apostles were dishonest men?—I don't know even that they existed; so I cannot call them "dishonest men."

Then what do you mean by forgeries of Apostolic writings?—I mean that there were writings which pretended to be writings of Apostles, when they were only forged writings by people who were not Apostles.

Were there such men as Apostles?—Of every faith; yes.

Of Jesus of Nazareth?—When?

In the first century?—I do not know.

May there have been?—Oh yes, and there may not.

Is it probable or not that they wrote?—I don't know. You say they were ignorant men; and they may not have known how to write.

One of them was not ignorant.—Which?

Paul?—I don't know anything about Paul.

I have in my hands a book—a compilation of Epistles, each of which begins with an introduction similar to this: "Paul, an Apostle of Jesus Christ, through the will of God unto the Church of God, which is at Corinth, to them that are sanctified in Christ Jesus, called to be saints." How do you disprove that Epistle?—It is not my business to disprove it; it is yours to prove it.

I have read a letter supposed to be addressed by Jesus to a king. It is not my business to disprove those things: it is yours to prove them.

You have admitted that Eusebius is a historian who lived, and whose writings are to be trusted?—No; I have not. On the contrary, I have said that Eusebius lived and wrote; and I also said that he was a party to the issue of many forgeries.

Do you believe that he lived in the beginning of the fourth century?—Yes.

Do you believe that, living at that time, he had materials—better materials than either you or I have—of judging whether these were genuine writings or not?—I am quite sure that he *made* materials; and if you give me, as you have it, his "Ecclesiastical History," I will give you instances of several that he made or circulated unjustifiably.

I refer my question to a particular point, to which I wish to call your attention. He lived 1500 years ago or thereabouts. My question is, whether or not you admit that at that time it was easier to judge—by reason of the great number of books then existing which have since perished—upon the question of whether these were authentic or not?—I don't suppose so many books existed in the fourth century as now.

Then, do you deny he was in a better position than you to judge?—I don't suppose that he was in so good a position, because I believe he invented some times. If you give me the writings of Eusebius you refer to, I will give you the evidence of my statement. I am not producing Eusebius; you are.

I am producing Eusebius in order to show that in his judgment these Epistles were written by the Apostle Paul, and the Gospels written by those whose names they bear.—And I say that the statements in Eusebius will not prove that the Gospels were written by the persons whose names they bear; but, on the contrary, will, at least in one case, prove exactly the opposite, and, if you will lend me Eusebius, I will show you.

No, I will be content with your answer, Mr. Bradlaugh—content, ironically, of course, you understand. Do you think it probable that a community, or a movement which has given a religion to all the civilised nations of Europe, should have existed and

Digitized by Google

effected that revolution without authentic writings?—Up to the year A.D. 1000 the Christian religion had not given itself to Europe. The bulk of Europe up to that time did not accept it.

I am speaking of the present fact, the present day—1876.—Then the present day proves no more than Utah, being full of Mormons, proves that Mormonism is true.

I am speaking of the existence of the book.—I do not deny the existence of the book to-day; it is sold at 4d. a copy.

A book is *primâ facie* evidence of itself until it is disproved.—Then the book of Mormon is proof of itself until it is disproved.

And I shall be prepared to disprove it.—Do it.

One thing at a time. I ask you how you disprove that the 1st Epistle to the Corinthians was written by Paul?—That is not my business: It is your business to prove that it was written by him.

It is *primâ facie* evidence of itself?—No; but it is not until you, by external evidence, have proved the authenticity of the book from which you quote; you have not the slightest right to read its contents as evidence against me.

Then you cannot get rid of this *primâ facie* evidence?—It is not *primâ facie* evidence. We disagree as to the meaning of the words.

The 1st Epistle of Paul to the Corinthians exists with a profession on the face of it that it was written by Paul: can you disprove that profession?—Then Mahomedanism is true, and the evidence is this: the Koran exists. Can you disprove the evidence of the Koran?

Yes.—Do it.

This is not the time. Can you disprove that? (Paul's 1st Epistle to the Corinthians.)—I have disproved the reliability of the Bible by quoting an abundance of contradictory texts from it.

The 1st Epistle to the Corinthians: that is my question.—I have no other answer to give to that.

Then you cannot disprove it?—My business is not to disprove every statement you make without evidence.

Here is the book; it is *primâ facie* evidence of itself until it is disproved?—No, it is not. The book stating that a devil went into the pigs is not evidence until it is proved. You have got to show the evidence outside the books.

Then Mr. Bradlaugh fails in dislodging the basis of my argument to-night; he confesses his inability to disprove the 1st Epistle to the Corinthians as the production of Paul.—I have only said it is not my business. The moment you give any evidence of it I will answer that evidence.

Will it not destroy my argument if you disprove it?---But there is nothing to disprove: you have called no witness.

I have called the 1st Epistle to the Corinthians.---You have not proved it in the smallest degree.

It is proved by the unanimous consent of a hundred generations.---So is the Koran proved by the unanimous consent of a hundred generations, and many a falsehood in the world by an equal number of generations.

And if they were not capable of being disproved, we should be bound to receive them; but they can be disproved. Can you disprove the 1st Epistle to the Corinthians?---Generally, on the Bible, I have tried to, and you have not answered one of the texts I have given.

You say it is not your business?---On the contrary, I say that the Book of Genesis contradicts itself, and that the Gospels contradict themselves; and until you answer that, your case is disproved.

MR. BRADLAUGH QUESTIONS MR. ROBERTS.

Did I understand you last night to say that the chronology in the Septuagint differed from the chronologies in the authorised English version?---Yes.

Which chronology is true?---The Hebrew.

How do you know that the Hebrew chronology is more true than that in the

Digitized by Google

Septuagint?---By a process of argument which would be too extensive to rehearse to-night.

I would like to have it.---I cannot do it in the time.

When will you?---In a lecture.

But now?---I have not time.

Do you mean that during the whole of the debate you will have no time to explain why you accept the Hebrew chronology, and reject the Septuagint?---With the immense argument I have to unfold, I do say I have not time.

Then, as you say that the Hebrew chronology is true, and the Septuagint chronology is not true, how do you account for a book, which you say was translated from a divine revelation, having an incorrect translation, at least as far as the chronology is concerned?---Because the translation was out of the custody of its safe and divinely-appointed keepers.

Who were the "safe and divinely-appointed keepers" of the original revelation?---I answer by quoting the Apostle Paul in the third chapter of Romans: "What advantage, then, hath the Jew? . . . chiefly because that *unto them were committed the oracles of God.*"

Will you be kind enough to show me any evidence prior to the time of Ptolemy Philadelphus, when you say the Septuagint translation was made, that the "original revelation was in the custody of" its safe and divinely-appointed keepers? Who do you say were the custodians of these writings? Tell me where kept, the town they were kept in, and the people who, you say, had the custody of them?—That is rather an extensive question; break it up.

Well, name the town where they were kept, first?---Shiloh, first.

When were they kept in Shiloh? from what date to what date?---Just after Joshua's conquest of Canaan by the tribes of Israel.

Where shall I find any evidence of that?---In the Book of Joshua.

Will you kindly quote me chapter and verse for that?—Yes, I will (after turning over a Bible for some time): Judges xviii. 31.

Do you rely on that text?---Wait a moment; let me give you my answer.

Don't you know there is not a word about any of the books being kept in Shiloh in that text?---Yes; that is only a part of my answer.

But where have you any evidence that at, or about, the time of Joshua any books were kept in Shiloh?---This is the first part of my answer. My answer is not complete. I prove here that the house of God was at Shiloh. I will next prove that the house of God contained the ark, and that the ark contained the books of Moses.

I am content to accept any evidence. Give me some.---I will give you the evidence (referring to the Bible).

I say that there is not a particle of evidence of the existence of any books about the time of Joshua in Shiloh.---Then I will prove it.

That is what I want you to do.---Deuteronomy xxxi. 24: "It came to pass when Moses had made an end of writing the words of this law in a book, until they were finished, that Moses commanded the Levites, which bare the ark of the covenant of the Lord, saying, Take this book of the law, and put it in the side of the ark of the covenant of the Lord your God, that it may be there for a witness against thee."

Where does that show that the five books you call the books of Moses were kept in Shiloh after the time of Joshua?---It shows that Moses commanded the Levites to put it there, and I must next prove that the Levites put it there. I ought to have begun by quoting the command of God to Moses.

I must ask you not to make speeches, but to give me the evidence. Please identify the book of the law with the five books?---I am dealing with the evidence to which I am alluding. In Exodus xxv. 16, we have the command that I ought to have quoted first---the command of God to Moses: "Thou shalt put into the ark the testimony which I shall give thee."

Exodus xxv. 16: I will read it: "Thou shalt put into the ark the testimony which I shall give thee." Will you show me how I am to make that prove that the first five books, which you call the Books of Moses, were kept in Shiloh at the time of Joshua?—And in Numbers iii. 31 we have the duty of the priests to take charge of the ark and its contents.

Numbers iii. 31: "Their charge shall be in the ark, and the table, and the candlestick

Digitized by Google

and the altars, and the vessels of the sanctuary wherewith they minister, and the hanging, and all the service thereof." How does that prove that the first five books were in Shiloh after the time of Joshua?—It establishes a line of evidence, which a critical mind ought to be able to see.

Oh! does it?—Yes. Well, I think I need not attempt at present to continue this.

Do you mean you have given all the evidence you can?—No. I will undertake, when I have time, to do it.

When will you undertake to do it? On which night of the debate? Choose your own night.—I had better promise generally—before the discussion is out.

But "generally" means no time at all?—I don't like to commit myself to anything I am not sure of doing.

Do you mean to say that you cannot do it?—I am quite sure of my ability to do it.

What date do you say was the date of Joshua?—As a man?

You have spoken of "Joshua."—Do you mean Joshua as a man or a book?

I mean it in the sense you have used it.—I have used it in both senses.

When you said the five books were in Shiloh about the time of Joshua, I want to know in years, *Anno Mundi*, what time you meant?—Well, I suppose it would be in round numbers, somewhere about 1,500 years before Christ.

"Somewhere about 1,500 years" before the Christian era. Is there a particle of evidence outside the Bible of the existence of Hebrew as a written language at that date?—The Bible is sufficient evidence.

Just answer my question: Is there a particle of evidence outside the Bible of the existence of Hebrew as a written language at that date?—Yes, there is.

Give it me?—I cannot—not now.

Will you undertake to give me that evidence any night during this debate?—You are putting on me rather too much work, Mr. Bradlaugh.

Oh! I will put on you more than that; that is only a trifle. Will you undertake on any night during this debate to give that evidence—yes or no?—The Bible is such good evidence that I undertake to produce no other, although I believe there is.

Why do you believe there is any other evidence?—From scattered information I have gleaned in general reading.

Where?—General reading.

Where?—Everywhere.

Name an author?—All authors who have written on the subject with whom I have come in contact.

Name one that you have come in contact with?—The question is so frivolous I refuse to answer.

Then under those circumstances I decline to put any more questions.

The CHAIRMAN: Mr. Roberts will now have a quarter of an hour's speech.

Mr. ROBERTS: Mr. Bradlaugh occupied a considerable portion of his half hour's speech in reminding me of what he considered my failures. I have to remind him of what is a much greater failure on his part, and that is to deal with the positive argument in so far as I have unfolded it. I grant I have not yet conducted it very far; but, so far as I have carried it, Mr. Bradlaugh has not attempted to deal with it. Some of his difficulties I will deal with. At none of them am I frightened. In fact, I could like nothing better than a public test on this point in such a form as would admit of a thorough investigation. It is impossible, in the limit of six nights, conducted in this way, to go into the thing in that thorough, exhaustive, and critical manner that would be necessary for the full illustration of the whole of the bearings of the case. I am, therefore, obliged to content myself with a wise way of dealing with the question in a limited time—viz., the plan of seizing hold of those positive, unquestionable facts which Mr. Bradlaugh himself dare not deny, and which, when logically construed, yield the general conclusions for which I am contending, notwithstanding all those little bits of exceptions which he was taking, and discrepancies which he was urging, as regards the general contents of the Bible. I will undertake, in a thorough legal investigation, in the presence of a judge—so to speak—in which Mr. B. shall question me for so long, and make a speech on my answers, and I question him, and make a speech on his answers, and so forth—I would undertake, under those circumstances, to deal with

Digitized by Google

every single item that he can produce in the way of general discrepancy; and, under such circumstances, I would undertake that every single difficulty that could be brought forward would melt away in the process. But, meanwhile, it would be most unwise in me to go grappling with the difficulties before I have marshalled the general evidence before you. It is my business to present these evidences, and it is Mr. Bradlaugh's business to deal with my general demonstration of the positive case, instead of trying to drown my argument with little points, that are not in reality inconsistent with it.

Now, pursuing the general argument, I resume the thread which I was obliged to break, or to drop, at the close of my first half-hour's speech. I was then showing that the apostles did not expect Christ to die. I will now show that, being dead, they did not expect him to rise. In John xx. 9: "As yet they knew not the Scripture, that he must rise again from the dead." I will next show that, when he did rise, they did not believe it in the first case—all of which goes to show that there was no predisposition in their minds to entertain any fantasy on the subject, and that, therefore, the theory of hallucination relied on by those who deny the certainty of Christ's resurrection is inconsistent with the facts. The evidence on that point is to be found, amongst other places, in Luke xxiv. 10, 11: "It was Mary Magdalene, and Joanna, and Mary, the mother of James, and other women that were with them, which told these things unto the apostles. And their words seemed to them as idle tales, and they believed them not." Then in Mark xvi. 14 we have this statement: "Afterwards he (Jesus) appeared unto the eleven as they sat at meat, and upbraided them with their unbelief and hardness of heart, because they believed not them which had seen him after he was risen." How came they, then, not expecting him to rise, and not believing the testimony of those who had seen him rise; how came they to believe in the fact of his having risen, and to give their lives and their well-being for the sake of their testimony to that fact? The answer is to be found in testimony which I have partly quoted in the earlier part of the argument. Peter says—speaking of himself and the other apostles—"We did eat and drink with him after he rose from the dead."—(Acts x. 41). One case in particular illustrates the scepticism of the apostolic band as regarded the first report of his resurrection, and also illustrates the means by which that scepticism was dissipated, and a firm faith lodged in its place; and we shall see that it is a faith placed upon actual personal witness, and not at all upon any fantasy, such as might be supposed to be nursed in a heated imagination. In John xx. 24, it is stated: "Thomas, one of the twelve, called Didymus, was not with them when Jesus came"—that is, the time of his first interview with the ten disciples—"the other disciples, therefore, said unto him, We have seen the Lord; but he said unto them, Except I shall see in his hands the print of the nails, and put my fingers into the print of the nails, and thrust my hand into his side, I will not believe. And after eight days again his disciples were within, and Thomas with them. Then came Jesus, the doors being shut, and stood in their midst, and said, Peace be unto you! Then said he to Thomas, Reach hither thy finger, and behold my hands, and reach hither thy hand, and thrust it into my side, and be not faithless, but believing. And Thomas answered and said unto him, My Lord and my God! Jesus saith unto him, Thomas, because thou hast seen me thou hast believed: blessed are they who have not seen, and yet have believed." In Luke xxiv. we find the whole of the apostolic band assembled together at an early period of the day of Christ's resurrection; and they are eagerly discussing the flying rumours they are hearing—first, the report of the women, afterwards, the report of Peter, to whom Christ had separately appeared, then the report of two of the disciples who went on a journey to Emmaus, and to whom Jesus made himself known. We are told in Luke xxiv. 33: "The eleven were gathered together, and them that were with them, saying, The Lord is risen indeed, and hath appeared to Simon! And they (the two who went to Emmaus) told what things were done in the way, and how he was known of them in breaking of bread. And as they thus spake, Jesus himself stood in the midst of them, and said unto them, Peace be unto you! But they were terrified and affrighted." Observe that, if this was a concocted story intended to create the notion—the false notion in that case—that Christ had risen, when he had not, you would not have found all these statements about the disciples not believing, and about them being terrified, and so on. They supposed they had seen a spirit or phantom; they supposed it was not the real Christ. "And he said unto them, why are ye troubled? and why do thoughts arise in your hearts? Behold my hands and my feet, that it is I myself;

Digitized by Google

handle me and see: for a spirit"—a phantom—"hath not flesh and bones, as ye see me have. And when he had thus spoken, he showed them his hands and his feet. And while they yet believed not for joy, and wondered, he said unto them, Have ye here any meat? And they gave him a piece of a broiled fish, and of an honey-comb; and he took it, and did eat before them."—(Verses 38-43).

Realise the facts, please, for they constitute an explanation of the great bravery of the apostles in their testimony afterwards, for which they gave their lives.

The Pharisees (Matt. xxvii. 63), remembered that Christ had said that he would rise again after his death, and they asked Pilate to set a watch over his grave after his death, that there might be no doubt as to the fact of death having taken him and kept him, and, therefore, as to the fact of his being an impostor. What story have the Jews now as to the fact, which both Jew and Gentile admit, that the body of Christ was never found, but that the grave was empty? for all the people in Jerusalem at the time were witnesses to that. They say "his disciples stole him while the watch slept." Do you believe that story, that the disciples stole the body of Christ? What object could they have in stealing away a dead body? How could they steal a body with a numerous guard assembled round the sepulchre? They were a scattered and demoralised band. Yet afterwards they appeared in Jerusalem, and declared Christ had risen.

Thousands believed their testimony. Why? Was it because these men, in a fervid and an earnest manner proclaimed their belief in what might have been an illusion? No; the personal witness of the apostles was only one element in the evidence that persuaded thousands of Jews and Gentiles throughout the whole of the Roman Empire that Jesus of Nazareth, crucified by Pontius Pilate, had risen. The New Testament account is that God confirmed the testimony of the apostles by granting signs and wonders to be done by their hands; and I call upon Mr. Bradlaugh to account for the wide-spread reception of their testimony, if that account or explanation of it is not the correct one. Not only were the apostles personal witnesses of the fact of Christ's resurrection, but Christ endowed them with power to do things that constitute the confirmation of their testimony. God invited men to believe in the resurrection of His Son, but He did not unreasonably ask them to believe without evidence. He gave evidence; He placed the seal of His confirmation upon their testimony by fulfilling the promise Christ left them before his ascension. What promise was that? Before Christ parted from them he commanded them, we are told in Acts i. 4, that they should "not depart from Jerusalem, but wait for the promise of the Father, which said he, ye have heard of me." What promise? Here is the promise: John xiv. 26; xv. 26: "The Comforter, who is the Holy Spirit, whom the Father will send in my name, he shall teach you all things, and bring all things to your remembrance, whatsoever I have said unto you. . . . When the Comforter is come, whom I will send unto you from the Father, even the Spirit of Truth, which proceedeth from the Father, he shall testify of me: and ye also shall bear witness, because ye have been with me from the beginning."

Mr. BRADLAUGH: I understand Mr. Roberts now to say that it is impossible for him to prove his case in six nights. Then he ought not to have challenged me to this debate. He says he could do it before a judge and jury. He selected his own tribunal—a public audience. He says that all the points I have taken would melt away to nothing when investigated one by one. Why does he not do it then, one by one? He has not touched one. He says he can do it, and yet he does not do it; and if he can do it, and does not do it, then he is guilty of not being loyal to the cause he is here to defend. Then he has referred to the texts, and still avoided the points; he actually referred to the twenty-fourth chapter of Luke again, and did not say a word about my challenge as to the six weeks of Christ's alleged appearance after the resurrection. He referred to the tenth verse, about the woman, and did not say a word about that text contradicting the texts in other gospels as to the number of those women. It is not debating to do that; reading a number of texts of Scripture without giving any evidence of them The question to be debated is, "Are the Scriptures the authentic and reliable records of divine revelation?" and Mr. Roberts said that by "authentic" he really meant written by the persons by whom they professed to have been written, and at the times they professed to have been written; and when questioned as to books supposed to have been in existence 1500 B.C., he

Digitized by Google

says that involves matter he is not prepared to give, when it is the very point he ought to have been prepared to state. You cannot say that when questioning him I did not wait with the utmost patience: I waited two minutes by the clock for one portion, three minutes for another, and two minutes and a quarter for another: I did not say one word; and he only said, when pressed for the evidence of his statement, that he was not prepared to give it. Asked for some evidence, he answers that I am pressing him too hardly. Pressed as to the authenticity of the first five books he does nothing. If he has not come to prove that, he came to prove nothing, and yet he has to confess, in answer to my questions, that on that point he is not prepared to answer. Well, then, he tells you that Gentiles and Jews admit that the body of Christ could not be found. Well, that is about as wild a saying as it is possible to give, and I dare him to produce me the writings of any Jewish Rabbi of any note at all containing any such admission. I do not pretend to be well read in Rabbinical writings; I have gone through a few volumes relating to them—not many, but I have not yet found a trace of an allegation of any such admission. I think I have read nearly every Christian evidence writing, and I have never seen a quotation from any Jewish Rabbi about anything of the kind, and I say it is utterly reckless—I do not mean it any way unfairly, but only showing that there is an utter looseness and carelessness in this debate about the meaning of words. Mr. Roberts seems to think if he reads statements out of the Bible, he has proved those statements to be true, and then he asks me to explain the wide-spread acceptance of it. But the wide-spread acceptance of a doctrine does not prove it to be true. Buddhism and Brahminism are widely accepted, but that is no proof that they are true. As to Christianity, the "wide-spreading" of it was done by the sabre, by the rack, by the prison, by the fagot, not by the internal evidences of the book. I could quote you from Christian history, going from about the fifth century to the thirteenth, and show you that the people were induced to profess to believe this simply by killing them if they did not believe it. Every religion that has a large number of converts is wide-spread, and if that is evidence of the truth of it, the verdict goes by the majority, and as it is only the minority that believe Christianity, then Christianity is wrong. Well, now, let us, if you please, just see what we have really got; we have had in the last speech—I think I should be within bounds in saying—two-thirds of the quarter of an hour occupied in reading portions of the Bible, and not one reference during that time to the contradictions I had drawn attention to; although on the very question of the resurrection I had pointed out that there were contradictions as to the three days and three nights; although as to the women who went to the sepulchre, I pointed out a distinct contradiction there; although as to the period Christ is stated to have been on the earth after his resurrection, I pointed out a distinct contradiction. All he tells you is what he could do in some other place and circumstances. But if he could not do it here, he should not have been here. Now, if you please, just see the position we are in; not one date alleged for the Book of Genesis, not one author tried to be proved for it; not one date alleged for the Book of Exodus, not one author tried to be proved for it; not one date alleged for the Book of Leviticus, not one author tried to be proved for it; not one date alleged for the Book of Numbers, not one author tried to be proved for it; not one date alleged for the Book of Deuteronomy, not one author tried to be proved for it; a statement, for which there is no foundation whatever, was made that in the time of Joshua these five books were kept in a place called Shiloh. When we have got some statement of that kind, of which there is not a particle of evidence here, then I shall want some proof of the place called Shiloh, and I think Mr. Roberts will find he has got his work to do there. And I shall want proof of any evidence in the world that there were manuscripts existing at that time; and I will show you, from the size of the ark, and the only fashion of record common to the country where the Jews were in the alleged time of Moses, that it would be simply impossible that you could have had anything of the kind. I said to Mr. Roberts, "Give some *prima facie* evidence," and he said, "O! I will do it some night in the debate; I am not quite sure I shall do it at all;" and I am sure you cannot do it at all. But that is what he ought to have done in his first speech. He has jumped over the whole of the Old Testament, and thinks that by reading from the gospels and the Acts of the Apostles, that he proves the authenticity of the

Digitized by Google

whole of the Bible. Why! reading the Lord's Prayer will not prove the truth of the rest of the Book. Reading some story—and what have we had? a curious story; a story of Jesus appearing to two disciples going to Emmaus; while they could see him they did not know him, and directly they could not see him, knew him; and that is the best evidence he can give you. Why! if it were submitted to sane people as an event of to-day, only one verdict could be come to. How is this debate to go on? I am asked about the "widespread." Shall I deal with the "wide-spread," step by step? If you appeal to the wide-spread, I must take it as I find it; and what do I find this Church to be? I find it, in its earlier ages, to be a Church that made its way by fraud, by forgery, by assassination, and by perjury; I find it described by its own ministers as full of licentiousness and corruption; find that as it grew it incited wars all through Europe; took the side of king against people, and enslaving the people; I find it crushing out the possibility of education, and so destroying philosophy that it is only to the Moors we owe the preservation of great thought. If you want the spread, take the spread as it was through the centuries of gloom and ignorance, and the only gleam of light you will find in it is during the eleventh, twelfth, and thirteenth centuries, when the bloody Crusades, and the ruined cities, and the burnt homes showed in bright relief the humanity of your Christianity. If you want the spread, take it in the early part of the fourteenth and fifteenth centuries; take it under John of Burgundy and Charles the Bold, and under Charles and Louis of France. Take it when the Church aided to destroy the toiling burghers of Dinant. Take it when the priests of this book cursed the city, when they stood by while the duke and king razed every house to the ground! You talk of divine revelation! In the names of the murdered women of Dinant I impeach the faith founded on it. I say the whole history of it has been a history of cruelty, of fraud and of crime, until civilisation, struggling out, despite the whole hindrances of your superstition, has purified your religion despite itself. I should have been content, if anything like evidence had been given, to answer that evidence; I should have been content, if texts had been examined, to go through text by text. I am told I have piled up a bundle of texts. Yes; and I could have made it tenfold. Instead of any answer, I am referred to the "wide-spread" of it! "Wide-spread" of it! Where will you take it to-day? Which is it? Rome, England, Nonconformists, Unitarians, Trinitarians? Do not tell me about the "wide-spread," when there are a hundred sects cursing and damning one another, and at the present moment preparing for war against one another right through Europe! "Wide-spread" of it! Why, if you want any proof that it is not authentic, it is that it has failed to dominate mankind in the interest of humanity; if you want any proof of it, it is that the clergy are obliged to admit that belief in this book is disappearing as education increases; if you want any proof that it is not a Divine revelation, it is that while this version is urged to you as God's only message to man, a committee are now sittng to make out a new one! Friends, I will not intrude any longer on your attention, because I have exhausted, within a minute or two, the time alloted to me, but I must ask you to bear with me while I point out what my opponent ought to have done, and what he ought not to have done, because, practically, in the quarter of an hour to come, it will be divided into two short speeches. According to my friend's own contention he should have given you some evidence of the authenticity of the book. He has given you none. He should have been prepared to defend the morality of the book; but he has not answered what I said about slavery and murder, and the contradictions in the character of God; he has only read to you about Jesus being dead, and eating broiled fish and honey-comb when he was dead, and he apparently thinks that this passes in lieu of proof. And then he says it is impossible to do it in six nights. Then cease the debate at once; do not take six nights, and do not waste time in the unavailing attempt to do it. He says he can do it before a judge and jury, instead of which he is bound to do it before the tribunal he himself has chosen, a sensible and intelligent audience of Leicester men, who are able to form an opinion, and who will only have one verdict to give. [A pause.]

Mr. ROBERTS: I was only asking the chairman that I might have a quarter of an hour for the conclusion of my argument, but it seems we are pledged to close at 10

Digitized by Google

o'clock, and, therefore, I must submit to the partition of the remaining time. I have, therefore, to say that Mr. Bradlaugh has either misunderstood or deliberately misrepresented my argument about the wide-spread reception. I did not refer to the wide-spread reception of the Christian tradition in the 19th century: I alluded to the wide-spread belief engendered in the mind of the Roman public in the first century. according to his own admission, in the face of all manner of pains and penalties, And what I ask him to do is to reconcile that undoubted historic phenomenon with any notion of Christ's not having risen from the dead, and of the disciples expressly declaring what they believed to be—what they knew to be—not true I will suppose a parallel case: I will suppose that the people of Leicester were to succeed in some way or another—not possible under our constitution, I admit—in apprehending Mr. Bradlaugh, and hanging him, and his dead body delivered up under official attestation, and buried, and all the Secularists disheartened and squandered; and the Leicester Secularists are found a few weeks after holding public meetings in the Temperance Hall, Leicester, and saying, "Mr. Bradlaugh has risen from the dead;" and the magistrates say, "If you say that, you shall go to prison;" and they say, "Well, we shall go to prison; but we declare that to be true, for we have seen him; we are not speaking of a mere opinion of our own; we rest our declaration on personal experience." And suppose that, in spite of their imprisonment, in spite of their fining, in spite of the assassination of their leading members, these same Secularists go up and down the country, and proclaim that Mr. Bradlaugh has risen from the dead, and that thousands in this enlightened country believe their testimony, notwithstanding pains and penalties that Parliament should decree against the reception of their testimony; then I say that, in that case, you would afterwards have a great historical problem to solve upon some rational principle; and if the facts of the case were equal to the facts in this other case, there would be no rational explanation, apart from the fact that Mr. Bradlaugh had really risen. In fact, the case could not occur apart from the fact that Mr. Bradlaugh had really risen from the dead, and that his followers had seen and conversed with him for a sufficiently long time to make it quite sure that they were not labouring under some hallucination of the senses. And these are the undoubted facts of this case; for Mr. Bradlaugh has admitted the existence of this wide-spread community in the first century, in days when they were persecuted, and attempted to be destroyed by all manner of evil agencies; the central feature of whose contention was that Christ had risen from the dead. I quoted from their authenticated writings, and my argument is not completed, and I am not able to complete it within the six or seven minutes that fall to my lot. Mr. Bradlaugh says I am away from the subject. Surely Mr. Bradlaugh will admit that if I prove Christ's resurrection, I prove him divine.

Mr. BRADLAUGH: Yes.

Mr. ROBERTS: And if I prove him divine, I prove that his endorsement of Moses and the prophets is, in itself, a conclusive evidence of the divinity of these documents, apart from all abstruse and difficult questions connected with localities in remote times in which it is difficult almost to identify any place, particularly in profane records, and particularly as affecting other nations. With regard to the Jewish nation, with regard to Jewish localities, with regard to Jewish events, there is more abundant identification, and more definite and circumstantial evidence, than in the case of any nation under heaven.

Mr. BRADLAUGH: No.

Mr. ROBERTS: Well, of course, Mr. Bradlaugh thinks not; but I declare that to be a fact, which even Sir Isaac Newton alleged to be a fact, as the result of his acquaintance with general literature, that no book of similar antiquity, and no event in history, are so well authenticated, in accordance with all the rules of evidence, as the New Testament and the resurrection of Christ. Mr. Bradlaugh has attempted to represent that I am speaking irrelevantly to the issue, whereas, if the facts I am contending for—which I contended for last night, which I have been contending for to-night, and which I shall contend for in the nights to come—if these are all established, which I am sure they can be, then my case for the Bible is proved, and all Mr. Bradlaugh's objections will be seen in the light of trifling minor and obscure issues, which fall in with and are governed by the incontestible body of evidence that proves the Scriptures to be "the authentic and reliable records of divine revelation."

Digitized by Google

Mr. BRADLAUGH: I have not admitted, and I carefully guarded my answer to prevent the possibility of such an admission, that there was a body of Christians in the first century believing in the story of Jesus as recorded in the gospels; for I pointed out that the people called Christians were people whom I thought that I identified as existing before Christ, who, therefore, could not have held any such belief; and it is not fair, therefore, to say I admitted it. Hence, I say there is not a particle of evidence given to us, because the reading of the gospels is no evidence until it is shown who wrote the gospels, when they were written, where they were written, and that they did circulate, as Mr. Roberts said he would prove, at the time of the events to which they relate. Now, Mr. Roberts says it is difficult to identify Jewish places. I did not ask him to identify them; he mentioned them, and he should not have mentioned a place he could not identify. Mr. Roberts says something of Sir Isaac Newton; but however good Sir Isaac Newton may be on some subjects, he is no good authority on Egyptian chronology or anything of the kind; because, during the last forty years, Bunsen has opened a field of inquiry of which Sir Isaac Newton and those who preceded him, were necessarily utterly ignorant. Then he says, if I were put to death to-day, and you folks went about saying you had seen me, would not that be conclusive? Well, but there is no evidence of anything of the kind having happened with regard to Jesus. Reading the gospels does not prove it. Reading the other day in the *Daily Telegraph* the story of the Sea Serpent, does not prove that the serpent stretched out thirty feet to bite a mast, more than twice the distance from the surface of the sea, and no sane person would pretend it does. You have got to verify the story before the story can be of the slightest value as to the facts it relates. Then, how do we stand now? Why, nothing whatever has been done. Mr. Roberts in his last speech says they conversed with Jesus for a sufficiently long period to make it clear. But the very period I have challenged as being contradicted in the gospels he quotes, and how can he pretend to keep repeating his statement until he has reconciled that? To say that every little thing can be cleared away, and not doing it, is simply to waste time with a mere verbiage of talk. He has not given me anything whatever to do in the way of reply, and I simply conclude my speech by thanking you for your attention, and by moving a vote of thanks to our chairman for having presided over us so impartially for these two nights.

Mr. ROBERTS having seconded the vote of thanks, the Chairman responded and the meeting closed.

Digitized by Google

Third Night,

THURSDAY, 15th JUNE, 1876,

IN THE TEMPERANCE HALL, BIRMINGHAM.

MR. GEORGE H. ST. CLAIR IN THE CHAIR.

THE CHAIRMAN: Ladies and Gentlemen, we are met together to hear a very important question discussed by two gentlemen very competent to discuss it. The question is, "Are the Scriptures the authentic and reliable records of Divine revelation?" The discussion of this question was commenced two evenings ago at Leicester, but we shall scarcely be at any disadvantage on that account, inasmuch as separate points are to be taken up each evening. In the agreement made between the two gentlemen it is provided that Mr. Roberts shall lead off with a speech of half an hour's length on the affirmative, that Mr. Bradlaugh shall follow with a speech of the same length on the negative side, then that Mr. Roberts shall have the liberty for a quarter of an hour either of making a speech or of questioning Mr. Bradlaugh: Mr. Bradlaugh to give categorical answers, not making a speech himself, and afterwards Mr. Bradlaugh shall have the same privilege of questioning Mr. Roberts for a quarter of an hour. Thus we shall occupy an hour and a half of our time. For the remaining hour it is arranged that the speakers shall speak alternately for a quarter of an hour at a time. That will bring us to ten o'clock, and at ten o'clock the meeting is to close. You will perceive that this arrangement leaves no room for any remarks to be made by the chairman, and it leaves no room for any interruptions on the part of the audience. It is, indeed, very properly provided that should either disputant be interrupted the time thus wasted—and it will be utterly wasted—shall not count against him; the only result therefore would be to keep the entire meeting to an unnecessarily late hour. Those, therefore, who disturb the public peace will be in a sense enemies of us all. However, I anticipate no interruption; I address you as ladies and gentlemen, and I anticipate nothing but polite conduct on the part of all. I now call upon Mr. Roberts to open the discussion on the affirmative side.

MR. ROBERTS: Mr. Chairman, Ladies and Gentlemen, I am sorry that so far as this audience is concerned, we have to begin in the middle of the discussion. That is a form of things that I tried to avoid, but was not successful. By what may for the purpose of to-night be described as an awkward twist in the preliminary negociations, I was compelled to consent to have two nights at Leicester out of six nights which I wanted at Birmingham. I do not now propose to occupy time in paying any further attention to that point, but I thought it necessary to allude to it as a necessary recognition of the awkwardness which I feel to some extent you are placed in and I also. In order, however, that there may be as little disadvantage as possible resulting from that circumstance, I will indicate in a sentence or two, so far as that can be done, what has taken place at Leicester.

On the first night I began the argument, at the date at which we were assembled and contended that the circumstances existing in the world at the present time are such as ought to exist if the Bible be true, and that the evidence that ought to exist of the early existence of the Scriptures if the Bible is true, does exist that there is ample evidence of the authenticity of these books which constitute the New Testament, upon which I contended the Old was also proved

night I argued that that great revolution in the history of mankind which occurred 1,800 years ago, by the general consent of all men, cannot be accounted for upon any rational principle apart from the account given in the New Testament, and that is that Jesus of Nazareth, who was crucified by Pontius Pilate, rose from the dead, and spent a certain length of time with his friends, and then left them with a promise to return, and afterwards endowed them with power to give evidence of the truth of their testimony in the working of miracles.

All that Mr. Bradlaugh has done hitherto has been, first, to neglect my general argument, which perhaps he did not quite comprehend, and secondly, to try to divert me from it by calling my attention to a number of discrepancies in detail, which certainly I admit at the right time ought to be capable of reconciliation with the general argument, but which it is out of my power, in the rehearsal of that general argument, to notice meanwhile. He demanded that I should first prove when and by whom the book of Genesis was written, when and by whom the book of Exodus was written, when and by whom all the other books were written; but I take a more sensible plan. When I wish to cross to the other side of a river, I begin by walking on this end of the bridge; and I began to step towards the other bank by lifting my feet in 1876, and marching downwards to the first century; and we have got there, and we are there to-night, and I have to-night to call your attention to what I shall contend to be the most unanswerable evidence of the resurrection of Christ that can be produced. I refer to the case of the apostle Paul.

The apostle Paul is a man whose individuality stands out more distinctly from the dark background of antiquity than almost any man of similarly remote times, with the single exception, perhaps, of Jesus his master. We not only have his biography written clearly, concisely, and distinctly, by a fellow-voyager of his, but we have a compilation of authentic letters of Paul, written under a variety of circumstances, and dealing with a variety of matters, in which even the minute shades of his character and tendencies are visible. Mr. Bradlaugh chose to deny the authenticity of them, he did no more. I asked Mr. B. to disprove them; he said that was not his business; and as a matter of fact, he has not done it. Therefore I am entitled, in to-night's argument, to assume it as an undisputed thing that these letters of Paul are Paul's letters, being *primâ facie* evidence of themselves, until they are set aside, and I am certain Mr. Bradlaugh cannot set them aside, as will be manifest to you in the course of this evening's discussion.

Upon that basis, then, I introduce to your notice Saul of Tarsus. In what character do we first find him? We find him an enemy of the Christians. In the 7th chapter of the Acts of the Apostles, we read that Stephen was slain for his testimony to the resurrection of Christ—stoned by the Jews and (58th verse), "the witnesses laid down their clothes at a young man's feet whose name was Saul." We next find him not only passively endorsing or sanctioning the destruction of the professed believers in the resurrection of Christ, but we find him taking very active and energetic steps to compass that end. In the 8th chapter and the 3rd verse, "Saul made havoc of the church, entering into every house and hailing men and women, committed them to prison." In Acts ix. 1, "Saul, yet breathing out threatenings and slaughter against the disciples of the Lord, went unto the high priest and desired of him letters to Damascus to the synagogue, that if he found any of this way"—that is, believers in Christ—"whether they were men or women, he might bring them bound to Jerusalem." That is the testimony of one who was afterwards a companion of Paul in his journeys. I will now produce Paul's own confirmation of these statements: I will give you Paul's own declarations as to his previous career. In the first chapter of the Epistle to the Galatians, verse 13, he says: "Ye have heard of my conversation in time past in the Jew's religion, how that beyond measure I persecuted the Church of God, and wasted it, and profited in the Jews' religion above many my equals in mine own nation, being more exceedingly zealous of the traditions of my fathers." Again, in 1st Timothy i. 12: "I thank Christ Jesus our Lord, who hath enabled me, for that he counted me faithful, putting me into the ministry, who was before a blasphemer and a persecutor." In Acts xxii. 3-5, you have this account delivered by Paul in an address to a very large and turbulent, but for the moment quiet, assembly of Jews assembled around the foot of the castle stairs, whom he had permission to address at the moment of his apprehension by the Roman governor of Jerusalem:—"I am verily a man which am a Jew, born in Tarsus, a city in Cilicia, yet brought up in this city at the feet of

Digitized by Google

Gamaliel, and taught according to the perfect manner of the law of the fathers, and was zealous toward God, as ye all are this day; and I persecuted this way unto the death, binding and delivering into prisons both men and women; as also the high priest doth bear me witness, and all the estate of the elders, from whom also I received letters unto the brethren, and went to Damascus, to bring them who were there bound unto Jerusalem, to be punished."

Now, the man of whom these things are authentically declared, afterwards became one of the most energetic, indomitable, enterprising and successful apostles and a preacher and defender of the faith which he formerly destroyed. No sane man will deny that; and here is the question, How came about that great change? If Paul had been convinced by argument, I would not attach any great weight to the change, because the change in that case would merely indicate a change of his conviction, and would not be a guarantee of the correctness of his convictions. But was he changed by argument? Let us see. Surely such a man is able to give us a reasonable account of so great a change; and when he stood a prisoner before that extensive assembly of his fellow-countrymen at Jerusalem, his particular business was to explain to them how it was that he came to be changed; and I will read you his account.

Before I do so, let me remark that when you come to realise Paul's character, you will find that he was not a man that could be changed by anything short of the evidence of his senses in the particular circumstances in which he was a persecutor. He must have been a witness of the miracles of Christ, as an inhabitant of Jerusalem and a disciple of Gamaliel, a leading Pharisee; but in common with the rest of the Jews, he would see, in the crucifixion of Christ, a complete evidence of Christ's imposture, and a reason why he should refer the miracles of Christ to the supposed magical power to which they ignorantly referred them. This man, who resisted all the evidence displayed in the life of Christ while on earth, changed in the manner I have described, and the mere fact of this change is presumptive evidence that some powerful cause must have produced it. Paul himself explains the cause, and this is his account of it, in the 22nd chapter of Acts, verses 6-16: "And it came to pass," says he, "that as I made my journey (on the persecuting errand before referred to), and was come nigh unto Damascus, about noon, suddenly their shone from heaven a great light round about me. And I fell unto the ground, and heard a voice saying unto me, Saul, Saul, why persecutest thou me? And I answered, Who art thou, Lord? And he said unto me, I am Jesus of Nazareth whom thou persecutest. And they that were with me saw indeed the light, and were afraid, but they heard not the voice of him that spake to me. And I said, What shall I do, Lord? and the Lord said unto me, Arise, and go into Damascus, and there it shall be told thee of all things which are appointed for thee to do. And when I could not see for the glory of that light, being led by the hand of them that were with me, I came into Damascus. And one Ananias, a devout man according to the law, having a good report of all the Jews which dwelt there, came unto me, and stood, and said unto me, Brother Saul, receive thy sight. And the same hour I looked up upon him; and he said, the God of our fathers hath chosen thee, that thou shouldest know His will, and SEE THAT JUST ONE, and shouldest *hear the voice of his mouth*, for thou shalt be his witness"—*his witness:* it is not a matter of opinion; it is not a matter of "religion." Mr. Bradlaugh, last night, talked of the number of the Brahmins being an evidence of the truth of their religion. I don't argue that way about this matter. I say this is no matter of religion, so-called; it was not a matter of theory which Paul was called upon to embrace. It was a matter of fact of which he was allowed to be a personal witness: the fact of the existence of Christ who had been crucified. It is, therefore, a question of evidence we have to consider; a matter of fact; a matter of logical induction from very definite premisses: "Thou shalt be his witness unto all men of what thou hast SEEN AND HEARD. And now, why tarriest thou? Arise, and be baptised, and wash away thy sins."

Now, from the record of that transaction, it transpires that Paul saw Christ and not merely something from which he inferred his presence. Ananias expressly speaks of his "seeing that just one." The fact appears more clearly from one or two other points to which I will direct attention in the 26th chapter of Acts, verses 15 and 16.

Digitized by Google

Paul upon this occasion gives another address upon the same subject, and, like all truthful men who are detailing a truthful matter, although he substantially tells the same things, it is not told in the same words; though if this book were a concoction or an imposture, very great care would have been taken to make the story exactly the same whenever told. "I said, Who art thou, Lord? and he said, I am Jesus whom thou persecutest; but rise, and stand upon thy feet, for *I have appeared unto thee* for this purpose, to make thee a minister and a witness to both of THESE THINGS WHICH THOU HAST SEEN, and of those things in the which I will appear unto thee." And afterwards Paul, alluding to it in the 15th chapter of the 1st Corinthians, verses 3-8, in combatting an objection which had arisen in the minds of certain living at Corinth on the subject of the resurrection of the dead, says, I first preached unto you "how that Christ died for our sins according to the Scriptures, and that he was buried, and that he rose again the third day according to the Scriptures; and that he was seen of Cephas, then of the twelve; after that, he was seen of above five hundred brethren at once, of whom the greater part remain unto this present, but some are fallen asleep. After that he was seen of James, then of all the apostles; and last of all *he was seen of me also*, as of one born out of due time," that is to say his apostleship was late in its date, because strictly speaking they only could be apostles who answered to the description which you find in the 1st chapter of Acts, when they came to appoint a successor to Judas, where this is defined as the necessary qualification—(verse 21): "Of these men which have *companied with us all the time that Jesus went in and out among us*, beginning from the baptism of John, unto that same day that he was taken up from us, must one be ordained to be A WITNESS *with us of his resurrection.*" As Paul was appointed after all these things, he declares of himself that he was as one born out of due time. But he had the essential qualification of having seen the Lord and thus enabled to give personal witness to the fact of his having risen. This is the strong point of his testimony: "*he was seen of me also.*" Now, those of Mr. Bradlaugh's way of thinking may be disposed to laugh at this, but, remember, that one man's evidence as to what he has seen and heard is as good as another man's evidence, and better when his evidence is supported in so many collateral and powerful ways, as it is in the case of Paul. Paul's seeing Christ was not a matter of isolated curious experience. It was followed by a career of forty years' length, during which Paul's particular business was to declare these things and to apply them in a definite manner for the eternal benefit of those by whom they were received; for doing which work, recollect, he "suffered the loss of all things." This is a strong confirmation of his testimony of having seen Christ. His declaration in writing to the Philippians, to which I also now call your attention, is this—and judge ye whether this is the language of an impostor or an ignorant enthusiast, or a literary forger, which the author of Phillipians must have been if Paul did not write it. Referring to his previous career, in Philippians iii. 4-8, he says: "Though I might also have confidence in the flesh. If any other man thinketh that he hath whereof he might trust in the flesh, I more; circumcised the eighth day, of the stock of Israel, of the tribe of Benjamin, a Hebrew of the Hebrews; as touching the law, a Pharisee; concerning zeal, persecuting the Church; touching the righteousness which is in the law, blameless. But what things were gain to me, those I counted loss for Christ. Yea, doubtless, and I count all things but loss for the excellency of the knowledge of Christ Jesus my Lord, *for whom I have suffered the loss of all things*, and do count them but dung, THAT I MAY WIN CHRIST."

Let me also read you his description of the general position of the apostles in the world at that time; and judge ye whether it was such a position as men of sinister aims could possibly be brought to take up. In 1 Corinthians iv. 9-13, he says, "I think that God hath set forth us the apostles last, as it were appointed to death; for we are made a spectacle unto the world, and to angels, and to men. We are fools for Christ's sake, but ye (Corinthians) are wise in Christ; we are weak, but ye are strong; ye are honourable, but we are despised. Even unto this present hour, *we both hunger and thirst, and are naked, and are buffeted, and have no certain dwelling-place; and labour, working with our own hands*; being reviled, we bless; being persecuted, we suffer it, being defamed, we entreat; we are made *as the filth of the world and are the offscouring of all things unto this day.*" Now a man who was educated at Jerusalem, of a high parentage, and with splendid opening prospects

Digitized by Google

before him, who should suddenly rush into a career leading to such results, must be held to have had some rational reason for doing it. Paul's reason is rational. There is no other reason admissible in his case. Let me ask Mr. Bradlaugh to tell us what he thinks was Paul's reason, and I will then examine it. Mr. Bradlaugh cannot give a rational account of Paul's case. He can only say he has no evidence there ever was such a man, which is simply shutting the eyes to the clear beams of truth.

But the case for Paul does not rest entirely upon the facts I have rehearsed. There are other strong confirmatory elements when we come to look into it. Paul not only went before Jews and Gentiles and presented his personal testimony to the resurrection of Christ, but certain things transpired in connection with the presentation of that testimony which we shall now have to consider. We are told that "God wrought special miracles by the hands of Paul"—(Acts xix. 11). I submit the evidence of it: 1 Corinthians xiv. 18-19: "I thank my God, *I speak with tongues more than ye all*," says he, in writing to the Corinthians. He says this in the course of an argument tending to depreciate the importance of speaking with tongues. Let me read it to you, as it is an illustration of the great good sense that characterised this man: "I thank my God I speak with tongues more than ye all: yet in the church I had rather speak five words with my understanding, that by my voice I might teach others also, than ten thousand words in an unknown tongue. Brethren, be not children in understanding: howbeit in malice be ye children, but in understanding be men." What does he refer to when he refers to that "speaking with tongues?" You will find an answer in the second chapter of Acts, which I intended to call attention to last night; but which I was prevented from doing for want of time, but which will come in appropriately at this point of the argument. You will see by reference to that chapter that the apostolic "speaking with tongues" was not the sort of gibberish which passes current in certain holes and corners in our day for "tongues." Hear the definition of them (Acts ii. 1): "When the day of Pentecost was fully come, they were all with one accord in one place, and suddenly there came a sound from heaven as of a rushing mighty wind, and it filled all the house where they were sitting. And there appeared unto them cloven tongues like as of fire, and it sat upon each of them. And they were all filled with the Holy Spirit, and began to speak with other tongues, as the Spirit gave them utterance. . . . . Now when this was noised abroad the multitude came together, and were confounded, because that every man,"—every man of the multitude spoken of in the 5th verse: "devout men out of every nation under heaven,"—"every man heard them speak IN HIS OWN LANGUAGE." And they were all amazed, and marvelled, saying one to another, "Behold, are not all these which *speak* Galilæans?" not only Galilæans, but illiterate fishermen, who knew no tongue but their native dialect—"And how hear we every man *in our own tongue, wherein we were born?* Parthians, and Medes and Elamites, and the dwellers in Mesopotamia, and in Judæa, and Cappadocia, in Pontus, and Asia, Phrygia, and Pamphylia, in Egypt, and in parts of Lybia about Cyrene, and strangers of Rome, Jews and proselytes, Cretes and Arabians, WE DO HEAR THEM SPEAK IN OUR TONGUES the wonderful works of God." Therefore this speaking with tongues in the apostolic days was no matter of gibberish; it is no matter of what is understood in our day by "unknown tongues:" the *tongues* spoken in those days were "known;" they were the spoken languages of mankind. And therefore the question to be answered is, how came illiterate men, without previous instruction, to be able in a moment to speak the current languages of mankind?" Paul says, "I thank my God that I speak with tongues more than ye all," yet he counts it as a matter of little importance, which shows how real an experience it was in the apostolic day; for men don't talk this way about a thing that is not happening. If it was real, it was miraculous; and if miraculous, we have another evidence of the truth of Paul's testimony of Christ's resurrection: for these miracles were expressly declared to be God's confirmation of the testimony of the apostles. Then beside the speaking with tongues, we have other miracles. In Acts xix. 11 we read: "And God wrought special miracles by the hands of Paul: so that from his body were brought unto the sick handkerchiefs or aprons, and the diseases departed from them, and the evil spirits went out of them." Again, Acts xvi. 25: "And at midnight Paul and Silas prayed, and sang praises unto God;" this is when they were made prisoners for teaching the word of God, "and the prisoners heard them. And suddenly there

Digitized by Google

was a great earthquake, so that the foundations of the prison were shaken; and immediately all the doors were opened, and every one's bonds were loosed." In Acts xiii. 9-12, you have the account where Paul struck with blindness a man who was opposing him before the Roman deputy. In Acts xiv. 8-10, you have a case where he cured a man who was crippled from his infancy, in consequence of which the people of the city wanted to do him and his companions the honours supposed to be due to the gods, which they declined, saying that the works done were not their works, but done by God through them in attestation of the fact that His Son was risen and was offered to all men for faith, that they might obtain forgiveness of sins and a title to another and a glorious life, which Christ is to develop upon the earth at his second coming.

Mr. BRADLAUGH: Mr. Roberts has been good enough to sketch to you what has happened on the previous two nights of this debate, but his sketch lacks one or two features which I will take the liberty of supplying. The question for discussion and the point that Mr. Roberts ought to try to prove is that the Scriptures are the authentic and reliable records of divine revelation; and in answer to a challenge from myself Mr. Roberts said that by authentic he meant really written by the persons by whom they professed to have been written, and at the times they professed to have been written, and said that there was evidence that the writings were in current circulation at the time they were produced. He has not given a particle of evidence, either on the two previous nights or to-night, in favour of any one person as the writer of any one book. He has asked me to disprove that some epistle was written by some man whom he calls Paul. His business is not to ask me to disprove it, but to prove it to you, and my business is simply to wait for his proof, and then examine it. If I know nothing whatever on the subject, that don't prove that Paul wrote the epistle: his business is either to prove them or to say nothing about them. Then he is good enough to say something about the books not being the works of impostors. He ought to have told you that I had said that I do not maintain, that I never pretended to maintain, that the Bible, as represented in the authorised English version, which Mr. Roberts tells me is what he is content to be bound by in this debate; I have never pretended that that whole book is the work of some men designedly intending an imposture. I have always pretended, and do pretend, that like many other mythic books it is an out-growth of different ages, the work of different men and at different times, full of their blunders when they blundered, full of their crimes when they were criminal, having their poetry if they were poetical, but simply expressing the men and the age out of whom it came. (A voice: ha! ha!) The gentleman who thinks that ridiculous has afforded us the weight of his testimony to the truth of the divine revelation, and I am sure it is the most valuable piece of evidence I have listened to in this debate here. And now you must do me the justice to say that our friends did not begin any of that interruption. I asked Mr. Roberts whether that could be a divine revelation which, professing to state the character of Deity, contradicted every fairly assumable attribute for Deity, and I read a number of attributes which, with one exception, were thoroughly agreed to by Mr. Roberts; viz., omnipotence, omnipresence, omniscience, including foreknowledge, infinity, eternity, personality—I added another—all-goodness; to that Mr. Roberts objected, not to the attribute of all-goodness, but as saying that he did not mean to bind God with the meaning of the word goodness as usually applied to man. I did not gather from him any sufficient meaning in lieu of it; that might have been simply my fault, but with that exception we were agreed. And I drew his attention, not simply to discrepancies of detail, but I drew his attention to Exodus the 32nd chapter, verses 7 to 14, where the Lord says unto Moses, "Now therefore let me alone, that my wrath may wax hot against them, and that I may consume them; and I will make of thee a great nation;" and I asked whether, in that which professed to be a revelation from an all-wise and all-powerful God, we could fairly expect any language of that kind at all. I drew his attention to verse 35, and to chapter 28, verses 1-3, and showed that by those verses God was appointing Aaron a priest at the very time He knew that Aaron was misleading His people, and that God punished the people because they did the sin which Aaron had done, whom God had appointed to be their leader; and I asked him whether this was

Digitized by Google

consistent with any notion of a revelation from God. I took him to a variety of texts: Numbers xxiii. 19; 1 Samuel xv. 29; Malachi iii. 6, which represent that God does not repent and that God does not change. I took him to the case in 2 Kings xx. 1, where He says to Hezekiah, "Thou shalt die," and afterwards, on Hezekiah praying to Him, relents, and doesn't kill Hezekiah at all, but lets him live. I took him to where He repented of having made Saul king, 1 Samuel xv. 11; and to 2 Samuel xxiv. 15-16, where God punished a people for the crime of their king, and then repented Him of the evil He was doing. I took him to Genesis vi. 6, where God repented that He had made man, and it grieved Him at His heart. I took him on the point of omniscience to Genesis xviii. 20-21, and pointed out to him that the story had reached God in Heaven, that He did not know whether it was true or not, that He had come down to find out; and asked him whether that was consistent with omniscience. I took him through the same story, and showed the whole trick of bargaining with Abraham as to the preservation of the people in the doomed cities. I took him to 2 Chronicles xxxii. 38, and Deuteronomy viii. 2. I took him from these to the abhorrent cases of legislation in Exodus xxi. 2-6, where it provides that a slaveowner may give to a Hebrew slave a wife, and that when the seven years of servitude are up, that if the slave have begotten children by that wife he is to leave his children behind him and go away by himself; and if he wants to remain with them, as a penalty for that he is to be made a slave for ever; and I also referred to Leviticus xxv. 44-46; and I pointed out that while these doctrines applied to the Jews, for the pagans there was a never-ending slavery: "Ye shall take them as an inheritance for your children after you, to inherit them for a possession; they shall be your bondmen for ever." I took him to the war commands of Numbers xxxi. 17, and pointed out that while the tendency of all wise men to-day was towards peace, this represented a God full of blood and murder, authorising the killing of every man, of every woman who was a mother and wife, and only sanctioning the saving of women who were not wives for purposes so horrible as to shock all right-minded persons, and which are yet imagined to be legalised by God. (Hisses). If you dare not listen to your own Bible you have the fullest evidence that it is not authentic. I took him to the whole story of the fall, as depicted in Genesis, and asked him how God could be imagined as inventing a damnation-trap in which to catch the whole world. I took him to the story of the deluge, and asked him whether it was consistent with the attributes of God, as we have them, that He should convert the whole world into a slaughter-house, when He was omnipotent enough to have reformed it. I took him to the case of Jacob, the thief, the liar, and the cheat, who was loved by God either because of, or despite his rascality, and to Esau, the one who when strong forgave his mean brother, who nevertheless was hated. I took him to the case of David, in 1st Kings xi. 33, 34, 38; and xiv. 8, where he is spoken of as having kept God's statutes all the days of his life, and as never having done anything wrong; and I pointed out that he was a murderer, a traitor, a liar, a thief, an ungrateful scoundrel, betraying to death the subjects of the king who sheltered him. I asked whether this was a picture of an authentic revelation. Well, those were a few of the little discrepancies. And not one of these having been answered, Mr. Roberts says, if he had time he could, if he had time that he could melt them away one by one, but he has not tried the melting process yet: not one of them has been touched, and nearly the whole of them were put forward in my first speech on the first night. He has quoted Acts, but until he proves when the book was written, where it was written, by whom it was written, that it was current at the time to which the events it refers to relate, according to his own statement he has no right to read the book of Acts to me at all; because to say, I will prove to you that the Bible is an authentic and reliable revelation of God, simply by reading his statements, is the funniest fashion of conducting a debate I ever heard of in my life. Then Mr. Roberts says this evening, Oh! I will refer to Paul and to the resurrection, but he did not tell you that when he had quoted from Acts the night before last, about Jesus having been seen for forty days, and curiously, he did not mention the forty days: he said "for a certain time" to-night, that I quoted from the last chapter of Luke a statement utterly impossible to be reconciled with that forty days. Why didn't he touch that? Then when he deals with the case of Paul, he says Paul, as a truthful man, don't recite it in the same words. But it is not the question, Is Paul a truthful man? but "Are the Scriptures the authentic

Digitized by Google

and reliable records of divine revelation?" that is, did God, who could not make a mistake at all, send this message to humankind, or is it simply the work of men who may have blundered? Then in the discrepancies I gave I gave him the whole history of Jesus himself, born without a father, whose mother's husband had two fathers born in the lifetime of Herod and not born till after Herod's death, who was in Egypt and Judea at one and the same moment, known and not known by John at the same moment, in the grave three days and three nights, between late on Friday evening and before Saturday was over. These are the discrepancies he says he can answer at the proper time and place, but surely the time is now and the place is here. If not, then I don't understand what a debate is. I submit to you that merely to go on reading texts out of this book until the book has been disproved is a most absurd thing. What does Mr. Roberts say to-night? Oh, he says, "I began at 1876 and got back to the first century." He did nothing of the kind: he jumped from 1876 to somebody he called Clement of Rome, and whom, without proving, he quoted as a thorough authority. He lumped with him Clement of Alexandria and another, and spoke of those writings "in those days," and I ask whether that is a fashion in which proof can be conducted. We must take the Old Testament first, and show you at any rate who he pretends was the writer of each book; he must show you at any rate when he pretends each book was written. I am not using the word pretend in any unfair sense; I am only using it in the sense of the contention he has got to make out in this case. He must show you where he thinks the books were in custody; and last night he contended that the five books of Moses were in custody at Shiloh during the time of Joshua, but he gave no evidence, quoted no texts, and would not even promise that he would find them at all for me.

Mr. ROBERTS: I did promise I would.

Mr. BRADLAUGH: I did not interrupt Mr. Roberts at all, and I have a splendid memory.

Mr. ROBERTS: I merely avail myself of the Parliamentary right to speak to a question of fact. I merely say I did promise, and I will fulfil my promise before the discussion is out.

Mr. BRADLAUGH: When? On which night of the debate will he fulfil his promise?

Mr. ROBERTS: Next.

Mr. BRADLAUGH: On the next night of the debate Mr. Roberts is here to show that in Shiloh, in the time of Joshua, he can prove that there were the five books kept that are called the five books of Moses. Now that is a step; the only pity is, that as he made the statement, he was not prepared with the proof of it at the time. I will show that there is not a particle of such proof existing anywhere, and it won't be enough to give loose texts from different books; we must have proof of the books, from which the texts are quoted before they can be used as any evidence against me. It is not enough to bolster up one position of a book with a declaration from another until you have verified the portion of the book from which you use the declaration.

Now, if you please, we will carry this a little further. Mr. Roberts asks, What explanation will I give of Paul's reasons. First, I know nothing about Paul; reading about Paul from the Acts of the Apostles is no evidence to me until the Acts of the Apostles are proved to me. How are they to be proved? The question is, Are they authentic? What does *authentic* mean? Were they written by some people at some time? Were they current literature at the time they profess to have been written? And when Mr. Roberts has given the evidence of that in relation to the Acts of the Apostles—and I deny that he can show the Acts of the Apostles to be in existence within one century after the time of the alleged death of Jesus, and if that be so the whole burden lies, not of disproof upon me, but of proof upon him. And curiously let us see the kind of reading you have had from the texts: you have had reading from the 22nd chapter of Acts, but what Mr. Roberts should have done was this, not simply to tell you that the language did not agree, but that there was positive contradiction of fact. In Acts ix. 7 it is said, "The men which journeyed with him stood speechless, hearing a voice but seeing no man;" and yet when he comes into Acts xxii. he will there find, "They that were with me saw indeed the light, and were afraid, but they heard not the voice." Now which is true? Is it true that they heard it, or that they did not hear it? Don't say that Paul made a mistake; it

Digitized by Google

is God who made a mistake if this is God's revelation to man; this is the point to deal with. If Mr. Roberts will admit that the people who have written in this book have blundered over and over again, if he will admit that there are many matters of detail entirely incorrect, if he will admit that the book is on a level with any ordinary book, I shall know with what I am dealing; but his contention is that "the Bible is the authentic and reliable record of divine revelation." Now, is it true that the people heard the voice or that they did not? is it true that they stood up or fell down? Can it be pretended that these contradictory statements are divine revelation? Then I will ask you just to consider what he says: he says one man's evidence as to what he has seen and heard is as good as another's. But we have got to get the evidence first, and we have not got it, and reading a statement from an unverified book is not evidence; and besides, one man's evidence as to what he has seen and heard is not as good as another's: it depends on the ability of the man to judge of the facts of which he gives evidence. Some men can note more accurately and state more clearly what they note; for example, suppose a man comes to you and says I made a journey across the Atlantic in the *City of Berlin;* when we were half-way across a big fish swallowed the whole ship, and I alone ultimately escaped from the belly of the fish; the man's evidence is not good, because it contradicts all experience and all probabilities, the whole story outrages all experience, and the moment a man makes such a statement you condemn it at once. And yet when Mr. Roberts comes here and says that somebody saw the invisible God, oh! that ought to be believed, and that is to be something you are to accept! The Bible says "no man hath seen God at any time." O yes, Abraham saw Him; Paul saw Jesus, who was either God or was not—I don't know which contention Mr. Roberts will make, and don't much care—what I submit is that the testimony to events which contradict all experience, the testimony to events which are alleged to be outside the range of all experience, is not testimony which you accept in the same fashion as testimony which you are entitled to examine and testimony which you are entitled to weigh. And I will ask Mr. Roberts frankly to take up the points I have dealt with. On the first night of the debate, when I read nearly the whole of those texts, all accept four, he said, Oh! six minutes is not enough to deal with those texts. I said, at any rate you might have done one of them. He told us he had gone through 144 contradictions issued by a society in America, but his business was to go through the contradictions I stated, but this has not been done. Last night not a reference, to-night not a reference; and I ask whether it is not simply a sham of a debate to allow these things to go on, and to make no effort at all to answer them now. I submit that if the book contains statements inconsistent with the character of God as omnipotent, inconsistent with the character of God as all-good, inconsistent with the character of God as omnipresent, inconsistent with the character of God as infinite and eternal, then I say that book cannot be a revelation from a Deity having such attributes; and I say it is not enough for Mr. Roberts to say disprove this or disprove that, because the whole burden of proof lies upon himself. He is the challenger in this debate; he has undertaken to prove it; it is he who should have brought his evidence here. I have not seen one particle—one atom of it yet. I don't know whether I shall during the continuance of this debate, but, at present, the whole case on the other side is utterly unproved. Mr. Roberts tells you I referred to the Buddhists and Mahommedans; but I will tell you why I referred. He talked of the spread of Christianity, and then I had a right to answer him by the spread of other religions. Oh! he says, I don't mean the spread now to-day. But in his very opening, he had referred to Christianity as existing in 1876, and I had the same right to go back through it step by step, and show what it had been, and that is what I did; and I showed that while it pretended to be founded on this book as a divine revelation, that it had been productive of murder, of wickedness, of licentiousness, of ignorance, of poverty, of tyranny, of serfdom, and of keeping down people during the whole time that it had obtained power in the world. When Mr. Roberts talks of his first century proofs, he must remember that, at the present moment, I dispute them all, and that I have not had submitted to me the evidence on which I am bound to receive them. To tell me that I am to account for Paul until Paul is proven is the most absurd nonsense. He says that Paul suffered; where is the evidence of Paul suffering? In the Acts. You are going to prove Paul from the Acts, and the Acts

Digitized by Google

from Paul. Well, if that is not turning all debate topsy-turvy, abandoning all reason, then the English language has no meaning whatever.

Well, is there any other evidence I need trouble you with? Yes; that every man spoke in different languages; and he proves that by referring to the Bible. And then he says they were ignorant men. Where is the proof that they were ignorant? How can you even identify the men at all? You have no right to open the book and quote a line from it to me until you have said that this book was written so and so, was in the custody of such and such people, at such a time. Submit to me that evidence, and let me examine it, and then, perhaps, you will be entitled to read the book. But, then, I am entitled to go through it, and to show you, that instead of being a book full of love and kindness and goodness, like every other book representing the religion of the past, it is full of the barbarities of the past, full of the cruelties of the past, full of the mischiefs of the past, and full of the ignorance of the past. I sit down saying, that up to this, the third night of the debate, there has not been an atom of attempt to prove one of the positions that lay on Mr. Roberts to prove.

THE CHAIRMAN: Allow me to say that I do think that those persons who are not prepared to calmly listen to both sides should not have come. I for my part am very desirous of hearing what each of the disputants has to say, and I am of opinion that if I listen quietly I shall be in a better position to judge at the end of the debate than I shall be if I am continually interrupted and they are interrupted too. Do please let us have quietness: restrain your feelings. I wish that neither gentleman shall have any reason to complain of the way in which he has been treated by the audience. Mr. Roberts will now occupy a quarter of an hour, and will have the option either of making a speech or putting questions to Mr. Bradlaugh, which Mr. Bradlaugh will answer categorically.

MR. ROBERTS QUESTIONS MR. BRADLAUGH.

Mr. BRADLAUGH, do you believe that ever such a man as Saul of Tarsus existed?—I have not evidence sufficient to believe that he did exist.

Are you doubtful?—It is quite possible a man named Saul of Tarsus may have existed.

If I were to prove that the book of Acts and Paul's epistles were in circulation at the close of the first century, would you doubt then that such a man as Paul existed and took a leading part in the establishment of the Christian faith?—I think you had better give me the proof first, and then I will tell you what my opinion is on that proof.

It will make it more worth my while to produce the proof if I have some hope of doing good.—If you produce the proof I must be convinced by it, and it is no use asking me what effect it will have on me till I see it.

I ask you whether you will accept Paul's epistles as proof of Paul's existence?—I accept proof as a fair man, when the proof is produced.

I asked you last night how far back you allowed the New Testament to have existed, and I think you said you could trace it no further back than A.D. 150?—I stated that the four gospels cannot be brought to a date as early as A.D. 150.

Would you object to substitute in your answer the New Testament for "the four gospels?"—Yes, I certainly should.

Why do you fix on the year 150 for any part of the New Testament?—Because I know I can show it later than that, and I always like to be on the safe side.

What is the earliest date you can show it?—That is not my business. It is your business to show it, and I decline to give you proof which it is your business to bring.

Can you trace it before 150?—I have already said that I decline to give you proof which it is your business to bring.

Why do you fix on that year?—Because I know you cannot produce the shadow of a particle of evidence, going earlier.

Digitized by Google

Can I produce any at that time?—I don't know what you can produce, because I don't know how far your researches have extended.

I am speaking to a gentleman on the supposition that he is educated, and I am asking him how far the proof can be carried in his view of the case?—You will find the whole of the proof stated by me in my pamphlet, *When were our Gospels written?* in my discussion with B. Harris Cooper, Esq., in *Horne's Introduction to the Bible*, in *Davidson's Introduction to the New Testament*, in *Norton's Introduction*, and in other works of that class.

Then you cannot tell why you fix on 150?—Yes, I have told you: so that you sha'n't catch me on a wrong date.

You have told me generally; I ask for specific information?—And I decline to give you that which it is your duty to produce.

You can't do it, then?—Yes, I can.

Then you won't?—No; it is your business to prove your case, not mine to make it out for you.

Then I must produce it. I first produce the book itself: every book is *primâ facie* evidence of itself until it is disproved.—That is not true.

It is a canon of universal criticism that a document is evidence of itself until it is disproved?—No, that is not true: the book of Mormon is not evidence until it is disproved; the tale of the sea-serpent is not evidence until it is disproved.

Then you refuse to recognise the universal principle of literary criticism?—It never has been the principle of literary criticism in relation to theological Scriptures.

Well, all I can say, of course, is that you contradict the facts.—I generally do, especially when they are not true.

Can you disprove that Paul wrote the Epistles bearing his name?—It is not my business to try until you have given me the proof.

I give you the proof—I have not heard it.

I will read it.—What are you going to read from?

"Ye see how large a letter I (Paul) have written unto you with mine own hand." (Gal. vi. 11).—What are you reading from?

I am reading from Paul's epistles.—That is the book you have got to prove.

Then I produce the book as *primâ facie* evidence. Can you disprove it?—Really, that is simple nonsense. If I produce a bill signed "Robert Roberts," before I am entitled to make Robert Roberts pay, I must prove his signature.

Then I ask you, why don't you believe the evidence I produce that Paul wrote that statement?—Because I don't: the evidence is not sufficient to induce me to believe it. There have been so many forgeries in connection with apostolic writings that I am inclined to look at all of them as false until I have evidence of their verification.

What are apostolic writings?—Writings pretending to be by apostles.

Do you mean to say that those are apostolic writings that are not apostolic writings? I do not mean to say anything more than my answer conveyed.

Do you mean to say a pretended thing is a thing itself?—Everything is a thing.

"A pretended thing?"—A pretended shilling is a shilling.

Is it a real one?—The difference between a pretence and a reality is that one is sham and the other is real.

I ask you if an apostolic writing is not a real apostolic writing?—A forged apostolic writing is no more a real apostolic writing than a forged bill signed "Robert Roberts" would be a real bill signed "Robert Roberts."

I ask about a real apostolic writing?—I know nothing of any real ones.

Then what do you mean by apostolic writings?—I said "forged."

"Forged!" Then I ask again, Are forged apostolic writings real?—If you don't know the meaning of the words you have used yourself, I cannot supply you with any better.

Are forged apostolic writings real?—Forged apostolic writings are real forgeries, but are not real writings by apostles.

Then do I understand you to mean that there are no such things as real apostolic writings?—That is not my business. Show me something, and ask me whether I consider that to be so, and I will answer.

I ask you whether there are such things as real apostolic writings?—Out of the enormous mass of forgeries, I have not been able to find any.

Digitized by Google

What proof of forgery can you give me in Paul's letters or outside of them?—If you will hand me the volume of Eusebius, I will give you lots of proofs of forgeries.

I ask you about the Epistle to the Corinthians.—I have not said it is a forgery.

Then do you admit it is real?—It is not my business to do so.

Can you prove it is a forgery?—I have not said it is a forgery.

Do you believe it real?—My belief is not an atom's weight in this debate. We are not discussing "Does Mr. Bradlaugh believe the Bible to be an authentic revelation?" We are discussing "Is the Bible an authentic revelation?" and Mr. Roberts undertook to prove it. I don't believe those to be the writings of Paul, but I don't necessarily involve any allegation as to forgery about them, because it is not part of my case.

I must return to my question. I must insist upon an answer whether or no Mr. Bradlaugh believes the 1st epistle to the Corinthians to be forged or real?—I don't believe the 1st Epistle to the Corinthians to be the writing of Paul.

Then if it is not the writing of Paul, is it not a forgery?—I don't know anything about it until you give me the evidence for it, and then I will tell you my opinion on that evidence.

What is your reason for saying it is not the writing of Paul?—Because the evidence that I have examined has not brought the opinion to my mind that it is Paul's.

Have you any evidence that it is not?—That is my business, not yours; your business is to prove that Paul wrote it.

Is it not your business to take away the foundation on which I stand?—Oh! the moment you build a foundation I will knock it away quick enough.

I ask again, are you prepared to prove Paul's Epistle to the Corinthians a forgery?—I have not said it is a forgery. I have said I do not believe that to be the writing of Paul. It is not my business to express anything more than my belief at the moment.

If it be not the writing of Paul, is it not a forgery in pretending to be so?—I can give no other answer than that I don't believe the writing to be the writing of Paul, and that it is your business to make out that it is.

And my question is that if it be not the writing of Paul, is it not a forgery in pretending to be so?—If it does pretend to be the writing of Paul, and is not the writing of Paul, then it is a forgery; but my belief and the fact are two distinct matters.

Will you define the sense in which you used the term "forgery" as applicable to a literary document?—O yes; I say that where I can show that the name of an author has been used for a book that he never wrote, that if that has been used intentionally then that is a forgery; but it may have been used unintentionally: then it is not a forgery but a blunder.

Then do you mean to start the theory that somebody unintentionally wrote these letters as Paul's letters, when they were not the letters of Paul?—That is not my business.

I ask you whether that is the theory you wish to broach to-night.—I will tell you my theory in my speech.

Do you believe that Josephus, the Jewish historian, wrote, in the first century, the works which are attributed to him in our day?—I believe that the works accredited to Josephus in our day, are, with slight alterations, as Josephus left them to us.

Have you any better evidence in the case of Josephus than you have in the case of Paul?—I think yes.

Please produce it.—The business is not for me to prove the writings of Josephus, and, therefore, I decline.

Can you produce contemporary evidence of Josephus having written a work which you believe to be his?—I can produce it, only that it is no part of this debate, and therefore, I utterly decline to do it, because I have not relied on Josephus. I can produce quotations, in every age, coming through from time to time, of the writings of Josephus; but it is not my business to do it; it is no part of this debate, and I decline.

Digitized by Google

The CHAIRMAN: Ladies and gentlemen, I can understand that this process of questioning and answering might be extremely interesting if we were only permitted to listen to it quietly. Mr. Bradlaugh will now have the privilege of either making a speech or questioning Mr. Roberts.

MR. BRADLAUGH QUESTIONS MR. ROBERTS.

By whom do you think the Book of Genesis was written?—By Moses.

When?—Principally while the Israelites were sojourning in the wilderness for forty years.

But about what date is that?—About 1500 years before Christ, more or less.

Can you show me any evidence that the Book of Genesis was in current circulation about 1500 years before Christ?—Yes.

Will you please give it?—I produce the book itself.

Except producing the book itself can you give any evidence that the Book of Genesis was in current circulation 1500 years before Christ?—I can give the consent of subsequent generations in an unbroken line for many centuries.

Then as you can give it in an unbroken line for many centuries, give me one in the year 1400 before Christ?—Joshua.

Give me a writing of Joshua?—I produce it.

Show it to me?—You know it.

Do you mean the Book of Joshua in the authorised version?—Yes.

Give me any evidence that Joshua wrote it?—I produce the evidence (pointing to the book).

Give me any evidence that Joshua wrote it?—Then I will read it.

Please, just give me chapter and verse as you read?—The 8th chapter of Joshua.

Please tell me the verses.—I will read them.

No; if you will tell me them I will read them: I can read them quicker.—You must allow me to read them, Mr. Bradlaugh.

No; I must read them.

The CHAIRMAN: Mr. Bradlaugh asks Mr. Roberts to produce the passage and read it; Mr. Roberts has a right to do so. That is the fair and proper way. If he occupies a long time, then the time is lost to one gentleman as much as another, when it is questioning that is going forward.

Mr. ROBERTS: "And he (Joshua) wrote there upon the stones a copy of the law of Moses, which he wrote in the presence of the children of Israel." "And afterwards," verse 34, "he read all the words of the law, the blessings and cursings, *according to all that is written in the book of the law, there is not a word of all that Moses commanded*, which Joshua read not before all the congregation of Israel."

Is that the whole of your evidence that the Book of Genesis was in existence in the time of somebody who you say wrote this Book of Joshua?—No.

Then give me the evidence, because there is not a word about Genesis here: it refers to a book about law—a copy of the law written upon stones, and it does not refer to a book written by Moses; and I want you to give me the evidence that Moses wrote a book which we now have called Genesis. This evidence is that Joshua wrote a book, and not that Moses did.—Do you deny that the law there spoken of is the law of Moses?

It is your business to prove what you said you would prove.—Then I prove it again. This is a verse I did not read before.

What verse?—The 33rd. "And all Israel, and their elders, and officers, and eir judges, stood on this side the ark and on that side, before the priests the Lev es, which bare the ark of the covenant of the Lord, as well the stranger as he that as born among them; half of them over against mount Gerizim, and half of them er against Mount Ebal; *as Moses, the servant of the Lord, had commanded before*, at they should bless the people of Israel. And afterward he read all the words of the law he blessings and cursings, according to *all that is written in the book of the law.*" ow what is that? I will refer to Deuteronomy to prove that.

But wait a moment. Your statement was—and I recall it to you—that the B of

Digitized by Google

Genesis was written by Moses, and that you could bring evidence of that, and you said that you could bring evidence in the time of Joshua. I asked you for proof that the book was written in the time of Joshua. That you have not given me, but you read me instead a statement in the Book of Joshua—a statement that Joshua wrote a copy on the stones, and that he read it to the people. Now how is that evidence?—It is a recognition of the fact by Joshua that Moses had written a book of the law.

Where does it say so in those verses which you have just read?—It says that Joshua wrote—"According to all that is written in the book of the law," and I was proceeding to prove what that was when you interrupted me.

No, but you must prove it from Joshua. You cannot prove it from any other than Joshua until you abandon Joshua: Can you find me in the Book of Joshua a statement, that Moses wrote the book which we now have as Genesis?—I have produced it, and I have not completed my evidence.

But is there any other portion of the Book of Joshua you want to read?—Not at present.

Then I decline to allow you to read any other than the evidence you offered. Will you now give me the evidence that Joshua wrote the book from which you have just been reading?—I begin at the modern end of the line of the evidence.

No, but you will please begin where I ask you. You said you would trace it from the time, and I want you to begin by showing that Joshua wrote it.—What I said was that I relied on the Books of Moses having been written by Moses by the consent of subsequent generations in an unbroken line.

Then I want you to begin at that time.—I trace the line backwards.

But I decline to allow you. I want you to begin at the beginning, and I ask you to give me the evidence because your statement was in your speech that you would give evidence that the writings were in current circulation at the time they were produced, and I want you to show that the writing you call *Joshua* was in current circulation at the time it was produced.—The book itself is evidence of its production.

Show me the date of it.—What do you mean?

I mean the date on the book. You say there is a date on the book, and I want to see it.—I did not say there was a date on the book: I said the book was evidence of the date of its production.

What was the date of production?—1500 years before Christ.

Where do I get it?—By a calculation of the various dates involved in the narrative.

You spoke of the consent of subsequent generations.—Yes.

Give me the consent of someone at that time.—I produce Josephus, who——

But Josephus was—did not live at that time.—You must allow me to finish my answers.

Josephus is 1300 years at least later than the date I am enquiring about, and it is not fair when I ask for contemporary consent to give me Josephus, 1400 years later, and say that is evidence.—Mr. Bradlaugh you must allow me to answer your question, and you will see whether or not I give you the evidence you want: You break in upon me before I have done.

You said you could prove from Joshua that Moses wrote the book we call Genesis, and I want the evidence, not from Josephus, but from Joshua?—You want evidence from anywhere I can get it surely.——

No, I don't: I want it from the witness you call Joshua.—And I have produced it.

Then show me that the book you call *Joshua* was in existence 1300 years before Jesus.—And I first produce the book itself as evidence.

Then show me that the book was in existence.—I am about to do it, and you will not allow me.

But Josphus was 1400 years later, and I object to that. I want a witness of the date you pretend the book came.—I am going to prove it just as you would prove to me the age of Homer's writings.

But the age of Homer's writings is not the matter in debate. What you have said is that you can show the Book of Genesis in existence in the time of Joshua. You try to do that by quoting a book you call the Book of Joshua, and I want you to show me

Digitized by Google

the Book of Joshua in existence 1400 years before Jesus.—And I am about to do it, and you will not allow me.

Then try; but not from writings 1400 years later.—If I can prove it in any way proof is proof. I produce Christ as a good witness, because——

But Christ was 1400 years later.—Mr. Bradlaugh, you ought not to interrupt my answers. If you interrupt my answers I shall decline to answer any more questions.

I will interrupt the answers if they are not answers to the question.—Then I will not answer any question, because you cannot judge till you hear my answer whether it is an answer or no.

The CHAIRMAN (to Mr. Bradlaugh): You might have avoided this difficulty by making your question a little more definite.

I have made it very definite.

The CHAIRMAN: But there was just the possibility of mistake on Mr. Robert's part. If you say, produce me evidence from a book of that date.

Mr. BRADLAUGH: That is what I have asked for, I say, produce me evidence from the year 1400 before Christ, or about that time, that the book you call the Book of Joshua was in existence?—And I am producing the evidence, and Mr. Bradlaugh will not allow me to elaborate it.

But which is the author you are going to quote?—You won't wait to see.

The chairman has made a very fair suggestion. Can you give your evidence without quoting writers 1400 years after; yes or no?—Yes.

Which is the nearest writer to the 1400th year before Christ that you can quote?—At the very time.

Very well: now we have got it. Then quote me some writer at the very time to show that Joshua wrote the book.—Joshua.

But how can you prove that Joshua wrote it?—By evidence which you have prevented me giving. You know there are no books extant in the world except the Bible that existed at that age.

Oh! then now your answer is, there are no books extant in the world except the Bible which existed at that age?—Yes.

Then were you wrong when you said that you would give evidence that the writings were in current circulation at the time they were produced?—No: I was not wrong.

But how can you give evidence if you have only got the book itself to rely on?—The book itself is *primâ facie* evidence until it is disproved.

Do you mean to say, then, that every book in the world is *primâ facie* evidence for the truth of its contents.—Until it is disproved.

Of course. But I say, do you mean that every book in the world is *primâ facie* evidence of the truth of its contents?—It is *primâ facie* proof of its authenticity, which is another point altogether. I admit the authenticity of the Koran, but I do not believe the contents.

But wait a moment. You have said two things; first, that you would show that the Book of Genesis was written by Moses, and that it was in circulation 1500 B.C.—Yes.

Asked for your proof, you simply quote a certain text from the Book of Joshua.—I do not simply do so; I was about to do that which you will not allow me to do.

Pardon me for a moment. Have you any other evidence outside the Bible of the circulation of the books at all: yes or no?—In a general way, yes.

Give it in a general way, then, outside the Bible.—I will only refer to it in a general way, because I presume you are acquainted with the facts, and that as an honest man you will——

Give it in a general way.—I prove it by the evidence of Ptolemy Philadelphus' library.

But is Ptolemy Philadelphus within a thousand years of Joshua?—No; but the presence of the Septuagint there is evidence that logically goes far back beyond the library itself.

THE CHAIRMAN: Mr. Roberts will now speak for a quarter of an hour.

Mr. ROBERTS: Mr. Chairman, Ladies and Gentlemen, I only wish Mr. Bradlaugh

Digitized by Google

would employ the opportunity he has during his option of questioning me for 15 minutes, to put to me that host of difficulties he says I did not answer, instead of wasting the time with uncertain and impracticable issues which do not really affect the question, though apparently to the point. As he has never yet so used his opportunity of bringing home to me the alleged discrepancies and difficulties in the Scriptures, he has no right to complain of my not noticing them in the time allotted to me to maintain the affirmative; for what is the duty of any speaker who undertakes to prove the affirmative of anything but to rehearse the positive evidences on which his proposition rests? Positive evidences are far more profitable to consider than mere gaps and negations. The positive argument is more powerful to sustain a proposition than an attempt to grapple with multitudinous details of an opposing character, which are capable, with deliberation and coolness, of being harmonised with the affirmative, but which, in the short time allowed to the disputants, and in the heat of discussion, are not capable of being treated in a satisfactory manner, if the main duty of marshalling the positive evidence is to be performed. I prefer to rehearse before you the great positive evidences on which rests the proposition that the Scriptures are the authentic and reliable records of divine revelation; and Mr. Bradlaugh's business is to destroy those positive evidences if he can. He has not yet attempted to touch those evidences, and, to-night, for the second time, he has said that it is not his business to do so. He tries rather to inveigle me into the consideration of details which would conceal the general argument from view. I must simply disregard his tactics, and address myself to the important duty of the moment, and that is to make some attempt, in our day, when scepticism is creeping into every corner like a rising tide, to show reasonable minds that there are evidences that cannot, in true, calm and unbiassed process of logic be got rid of, which go to show that God spoke by Moses and the prophets to Israel, and that Jesus rose from the dead and is now in heaven, and will re-appear among men, to carry out that great programme which God has put in his hands to accomplish for the regeneration of mankind and the blessing of all the families of the earth at the appointed time, when we shall have got through the present wretched but necessary preliminary period, when men like Mr. Bradlaugh can with impunity go about and try to blast the hopes of men by attempting to destroy the only foundation of hope that is extant amongst men; for certainly if the Jewish Scriptures do not contain the elements of that hope, there is no hope, and we must be content to drift down the dreadful stream of time to the region of alluvial deposits, and to be laid among those fossils whose eternal fellowship is all that Mr. Bradlaugh can offer us as the result of a life's exertion and a life's sacrifice on behalf of the highest aims.

Pursuing that policy, then, I recall your attention to the great and unimpeachable facts connected with the apostle Paul. Not only did he personally testify for forty years, in the face of the organised and formidable opposition of Jew and Gentile, that he had seen Christ; not only did he base upon that testimony the most earnest practical and noble objects it is possible to aim at or conceive in connection with men; not only did he write to communities of the people those epistles of unexampled loftiness, density, purity and power; not only did he work miracles in the execution of his work, but there are minor practical elements in his case which, when impartially considered, will do as much as anything else, to convince sober, practical and unbiassed intellects of the truth of Paul's whole testimony for Christ. I may mention, as a singular illustration of the truth of this remark, that the late Lord Lyttelton, in his early days, stood on Mr. Bradlaugh's ground in being a sceptic, and in connection with another gentleman, he undertook to prove the fallacy of the Scriptures by an analysis of the case of Paul. With this view, he sat down to examine that case thoroughly in all its facts, with all the collateral circumstances involved in Paul's epistles, whose authenticity he confessed himself bound to admit, unless he chose to reject all established rules of evidence. In the execution of his task, he came to the very opposite conclusion to that which he intended to establish. He came to the conclusion that Paul's case was a proof of the resurrection of Christ; and he reduced to writing, in a systematic way, the whole of the considerations that had guided him to that conclusion, so that others might have the benefit. That argument is extant now, and accessible to anyone; and if examined by logical minds, open to follow the results of evidence, I am convinced it cannot fail to bring them to the same result.

Digitized by Google

A few, then, of the minor but potent elements in Paul's case are these. First, he was successful in his labours; he carried away whole districts; he turned the minds of vast masses of men, notwithstanding the opposition of the authorities and notwithstanding the fact that imprisonment and ruin stared in the face of every one who should adopt his views. This is a circumstance to which too much weight cannot be attached in the argument. The proof of the circumstance I give by reading an extract from the undisproved Acts of the Apostles, and which indeed are their own proof to any man who will calmly read them. In chapter 19 of the Acts of the Apostles, verse 23, we read: "At the same time there arose no small stir about that way:" that is, in Ephesus, 'for a certain man named Demetrius, which made silver shrines for Diana, brought no small gain unto the craftsmen; whom he called together with the workmen of like occupation, and said, sirs, ye know that by this craft we have our wealth. Moreover ye see and hear, that *not alone at Ephesus, but almost throughout all Asia, this Paul hath persuaded and turned away much people*, saying that they be no gods which are made with hands: so that not only this our craft is in danger to be set at naught, but also that the temple of the great goddess Diana should be despised, and her magnificence should be destroyed, whom all Asia and the world worshippeth. And when they heard these sayings, they were full of wrath, and cried out, saying, Great is Diana of the Ephesians. And the whole city was filled with confusion; and having caught Gaius and Aristarchus, men of Macedonia, Paul's companions in travel, they rushed with one accord into the theatre. And when Paul would have entered in unto the people, the disciples suffered him not," for they were afraid of his personal safety in such a turmoil. That is evidence of the fact that his preaching produced a wide-spread effect in the teeth of persecution; and as reasonable men, you have to explain that circumstance. What is the explanation? If Christ rose from the dead, if Paul worked miracles, then the circumstance is explained; but if Christ did not rise from the dead, then Paul was a madman, and could not work miracles, and how in that case are you to explain the fact that those vast multitudes went in the teeth of their dearest temporal interests for the sake of believing Paul's doctrine? There is no explanation apart from that one explanation which I stand before you to represent. There are only four suppositions possible in the case, and they are all inconsistent with the facts except one. No man will say Paul was an impostor; no man will say he was an ignorant enthusiast; no man will say that he was an earnest man deceived by others, for the incident which Paul alleged as the great turning point of his career was of a character that did not admit of the interposition of others in the way of deception. It was something that happened in the broad day-light: it was not at night; it was at noon-day, and what he saw was a light above the brightness of the sun, which is not a thing that could be done by deception. The company of officials who were with him saw it also, and were felled to the earth by the brightness of the light. Besides the light, Paul heard a voice, and here I am reminded of Mr. Bradlaugh's difficulty about the narrative on this point, to which I will address myself for a moment, as an illustration of the unreal character of the difficulties raised by Mr. Bradlaugh, and which could all of them be dissolved if there were time to address myself to them in detail. In one account it is said that those that were with Paul did not hear the voice; in another, namely, Paul's own account, it is said they did. What is the explanation of that? Is it a contradiction? It appears like it; but what is the fact? There are two senses in which the word *voice* is used: you say you hear voices in the street, though you cannot make out the words; you hear a voice if you hear a person speak to you. In the one case you hear the voice in a sense different from that in which you hear in the other. In one case, you hear without being able to make out what is said: in the other you hear the words. A man who hears the voice and hears the words hears it in both senses; and that was the fact with Paul; but in the case of Paul's attendants they only heard the sound of the voice without making out the words. Probably this was because the voice "spake to him in the Hebrew tongue." The officers that accompanied him would probably be Romans, and they while hearing the voice, would not know what was said, and, therefore they could be said by one narrator to hear and by another not to hear without any contradiction occurring. Paul's attendants afterwards led him by the hand to Damascus, and when they arrived there, a certain man came to him named Ananias with a message from Christ. Mark this circumstance. On any other supposition than

Digitized by Google

the reality of Christ's appearance to Paul, it is inexplicable. How came Ananias to know about Paul at all? The New Testament account is that Christ appeared also to Ananias: if this be true, the explanation is obvious, and Christ's resurrection proved; but if Christ did not appear to Ananias, how came he to know that Paul had been the subject of the incidents that happened on the way? The account is (Acts ix. 10): "And there was a certain disciple at Damascus, named Ananias; and to him said the Lord in a vision, Ananias. And he said, Behold, I am here, Lord. And the Lord said unto him, Arise, and go into the street which is called Straight, and enquire in the house of Judas for one called Saul, of Tarsus; for behold he prayeth, and hath seen in a vision a man named Ananias coming in, and putting his hand on him that he might receive his sight. Then Ananias answered, Lord, I have heard by many of this man, how much evil he hath done to thy saints at Jerusalem; and here he hath authority from the chief priests to bind all that call on Thy name. But the Lord said unto him, Go thy way, for he is a chosen vessel unto me, to bear my name before the Gentiles, and kings, and the children of Israel; for I will show him *how great things he must suffer for my name's sake.*" That is another element in the case. Paul was to suffer by the new course to which he was introduced. If Paul had been to gain any advantage by it, it might have been suggested that he had some sinister object in his testimony; but he gained nothing; he realised the sufferings referred to here. Afterwards, when Paul was brought before King Agrippa, there occurred this remarkable interchange of remarks between the two. Festus, in introducing Paul's case, said (Acts xxv. 24), "King Agrippa, and all men that are present here with us, Ye see this man, about whom all the multitude of the Jews have dealt with me, both at Jerusalem and also here, crying that he ought not to live any longer. But when I found that he had committed nothing worthy of death, and that he himself hath appealed to Augustus, I have determined to send him, of whom I have no certain thing to write, unto my lord. Wherefore, I have brought him forth before you, and specially before thee, O King Agrippa, that after examination had, I might have somewhat to write. For it seemeth to me unreasonable to send a prisoner, and not withal to signify the crimes laid against him. Then Agrippa turns to the prisoner, and says, "Paul, thou art permitted to speak for thyself. Then Paul stretched forth his hand, and answered for himself." And observe his compliance with the decorous customs of society, his courtesies, not at all characteristic of a self-confident and egotistical and visionary enthusiast. "I think myself happy, King Agrippa, because I shall answer for myself this day before thee, touching all the things whereof I am accused of the Jews, especially because I know thee to be expert in all customs and questions which are among the Jews: wherefore, I beseech thee to hear me patiently." It is just as good as having Paul on this platform to rehearse his own case in the presence of Mr. Bradlaugh. "My manner of life from my youth, which was at the first among my own nation at Jerusalem, know all the Jews, which knew me from the beginning if they would testify, that after the most straitest sect of our religion, I lived a Pharisee. Why should it be thought a thing incredible with you that God should raise the dead?"

Mr. BRADLAUGH: There is one thing that I think I ought to do before commencing this speech, and that is personal to myself. A little while ago I disputed the ruling of the chairman. It happened to be exactly the reverse of the ruling of the chairman last night, and I thought I was right in disputing it at the moment. I now think I was wrong. I think that when you accept a chairman you ought not to challenge his decision, and I therefore tender him my apology.

I feel considerably troubled about the course this debate has taken, because, frankly, I would not have entered into it at all if I had not thought that the best that could be said for the authenticity of the Scriptures would be said, and that I could reply to it. And I hold that it is not the proper way to prove that authenticity by simply reading from the Bible and contending that that is evidence, because with reference to the New Testament, I put the challenge in a very narrow shape, because I challenged there the possibility of evidence of the four Gospels until the year A.D. 150. Now on that I am either right or wrong. The burden is on Mr. Roberts, and he ought to have been prepared, before he entered into a debate of this kind at all, to

Digitized by Google

deal with that, and what he ought to have been prepared to do would have been this had he been frank: he would have said, the old Hebrew books, I am not prepared to verify them in the same fashion, because there is in the Hebrew nation only that literature to which I can appeal: there is no literature outside it. But he then would be bound to try the books on their contents. What I complain of is this that he pretends there is evidence, which he ought to know don't exist, and that he don't answer frankly, for the purpose of avoiding the confession of it. And I will give you what seems to me the most startling evidence of that. Challenged to prove that the book of Genesis existed at what he called the era of Joshua, he read these verses—and why I wanted to read them was: I knew that they had nothing whatever to do with it, and I knew that I would read them much quicker than he did, and that it would give me the opportunity of asking further questions. There is not a particle in the 31st, 32nd, 33rd, or 34th verse which he read identified any books as written by Moses then being in existence. On the contrary, the pretence is there that Joshua wrote something upon stones, not that Moses wrote something, and not that they had then got that which Moses wrote.

Well, now we come to the only difficulty which Mr. Roberts chose to deal with. He says he could deal with all of them; why don't he? He wants me to take up the time of my speech in questioning. It is enough for me to state the objections in my speeches. I have plenty of other matters I want to deal with. I want to show that Mr. Roberts has not a ray of evidence in favour of the case he ought to maintain. But he says, Oh! the statements in the 9th of Acts and the 22nd of Acts are reconcileable, for although one says they heard a voice, and the other says they did not hear it, it does not mean that, but it means that they did hear it but did not understand it. Now I ask, If this is a divine revelation, why did not God say what He meant, instead of leaving it for Mr. Roberts 1,800 years afterwards to give the explanation? Well, Mr. Roberts says they all fell down; but Acts says No, they stood speechless. I don't know whether they did or did not; I only know that the story contradicts itself. Mr. Roberts says that Christ rose and was seen for a long period prior to his ascension. I quoted from the 24th of Luke to show you that that was impossible, and he never dared to answer it. Which statement is true? both cannot be. Let us dismiss such things as Lord Lyttelton. The Lord Lyttelton who has just died never said he was an Atheist at any time.

Mr. ROBERTS: His father: they are both "late."

Mr. BRADLAUGH: You should say what you mean. Now I have another allegation, and I am extremely doubtful whether the most straining of opinion can identify the views of Lord Lyttelton, as expressed in his writings—now dealing with Lord Lyttelton the father—at any time of his life, with the opinions put forward by me. But if it were so, the fact that Lord Lyttelton said one thing at one time of his life, and at some other time of his life said something else, makes nothing out whatever for the case Mr. Roberts has to prove. I will tell you what would be important: if he would put forward the evidence on which Lord Lyttelton was convinced; then that evidence might have some effect. But I have never yet found Mr. Roberts quote accurately from any things he has been dealing with, and I want precise evidence, not general statements, because the general statements, when examined, simply come into nothing at all. What is the case? O! Paul spoke. But suppose Paul did speak, how does this get rid of the objection I took to the 21st of Exodus, which gave a man the right to have a slave, to keep that slave, if he were a Jew, for seven years; if he at the end of that time had been married before he went into slavery, he was to take his wife and children with him; but if his master had given him a wife, and she had borne him sons or daughters, the wife and her children were to be the master's. How can any statement about Paul make that a revelation from a good God? How can anything make the text in Deuteronomy, which says you are to kill a man who tries to entice you away from your religion—how can any statement about Paul make that a revelation from a good God? How can any statement about Paul make that a revelation from a good God which says both thy bondmen and bondmaids shall be of the heathen round about you, and they shall be your bondmen and bondmaids for ever? Nothing about Paul will make that into a good declaration. The civilisation of the world condemns it, the humanity and civilisation of to-day

Digitized by Google

reject it; and then, Mr. Roberts ventures to tell me about my scepticism, which is ruining the world—yes, my scepticism has had to fight against the slavery which this book taught—against the corruption which this religion fostered. But Mr. Roberts's business in this debate is not to attack my scepticism, but to prove that these Scriptures are an authentic Divine revelation. I am quite willing to come at another time and defend my scepticism against any representative Christian. Here I bind myself to the Bible, and when he talks about my wanting to put you amongst fossils, at any rate the fossils are better than the hell and damnation which this book teaches. But these kind of things are no arguments either on one side or another: they are simply so much talk thrown in to utterly avoid the subject. The subject we ought to deal with is this: Is there evidence of the authenticity—that is of the authorship—of these books? What is the evidence? It is not for Mr. Roberts to say to me, Can you disprove it. Because, supposing I am the most ignorant man in the world, that don't make out a case for him. My business is not to disprove. In the opening of a case on the part of the plaintiff in a court of law—because Mr. Roberts has talked about what ought to be done in a court of law—the plaintiff has to prove his case; the only duty of the defendant is to cross-examine the witnesses, and unless a *prima facie* case be made out, he is not obliged to do anything more, and that is what I say here: there is no case to go to a common sense jury. Mr. Roberts has read, in a tone of voice which may be effective from the pulpit, texts from the Bible, but he has not given a particle of evidence outside. Friends, I cannot understand that Mr. Roberts could allow one of these points, which he says he can explain, to pass unexplained for three nights, when he knows the effect they must have. I show God cruel, I show God repenting, I show God vascillating, I show God unjust to peoples and favouring kings against peoples, I show God, by the texts I have quoted, giving pardon to kings, no pardon to people, and punishing a people for the offence of their king; and if you tell me that is a revelation from an all-wise God, and a just and merciful God, then language has a different meaning in your mouth than what it has when spoken by most English people. And I object that no man, when pleading here, has any right to cast my scepticism against me; his business is to make out *his book*. Without scepticism we should still have been in the dark ages of the world, when your Bible-Church was triumphant. If it had not been for the scepticism of the Arabian and the Moor, who lit up philosophy again when your Christianity had crushed out its flame, there would have been no possibility for the reform of to-day. When your Church was in the plenitude of its might, you had a divinely-ordained tyranny, a proud and licentious clergy, and not a shadow of aspiration amongst the people. You twit me with my scepticism: what have your Churches done? Look where huge cathedrals cumbered the ground, while poor men's dwellings were miserable, and the poor had no right. God's revelation! Why didn't it rescue peoples long ago? Why didn't it give freedom to peoples long ago? Why didn't it help the people long ago? Why didn't it relieve the poor and sick long ago? Why is it that infidelity has had to battle against the tyrannies of the world when your Church has taken the side of the strong against the weak. Friends, I have nearly arrived at the exhaustion again of my time, and I have only to regret that this third night, as every other, is utterly fruitless on the question we have to discuss, because, if Mr. Roberts begins at the beginning of one epistle and reads to the end of it, until he has addressed some evidence as to the authenticity of that epistle, it is so much waste of time. We don't seem to apprehend the commonest principles of evidence in a case of this kind; and I ask you, who were against me when I began to speak—I ask you, if you think my opinions so bad, at any rate you ought to give the frankest and the best care to try to change those opinions, so that they may not influence others for wrong. I have been obliged to find throughout the whole history of the world that what you call *the Bible* has been on the side of wrong, on the side of the mighty against the people, on the side of the priest against the poor, on the side of the rich abbot and the richly-endowed cathedral and the rich King. I find the people in misery, and that those who have striven to rescue them have been assailed as sceptics during their lives, and have only been canonised when their bones have mouldered in the grave.

The CHAIRMAN: Ladies and gentlemen, the threat that I addressed to you at the

Digitized by Google

beginning we are about to remit: instead of keeping you later we intend this evening to close at ten o'clock, I shall therefore be obliged to restrict each gentleman to ten minutes in their concluding speeches. Mr. Roberts will now speak.

Mr. ROBERTS: Mr. Chairman, ladies and gentlemen, the apostle Peter speaks of men who speak evil of things which they understand not. I am rather under the impression that we have had an exemplification of that in the speech to which you have just listened. Mr. Bradlaugh has said that fossils are better than hell-fire; so say I. But there is an implication under that remark which is not sustained by the facts. The implication is that the Bible teaches the eternal torment with which the clergy have striven to maintain their ascendancy in all those dark ages which Mr. Bradlaugh denounces, and which I denounce equally with him.

Mr. BRADLAUGH: Hear, hear.

Mr. ROBERTS: The Bible is innocent of any such monstrous doctrine, as I am prepared to prove on the right occasion. He makes the Bible responsible for the cathedrals; I should like him to try to prove that the Bible has ordered cathedrals to be built by Christians. He makes the Bible responsible for the wretched houses of the poor, and a great many other dark features which characterise the present, and more particularly the past, civilization of Europe. For these the Bible is totally irresponsible. The system of the Papacy, it is, which has given the political law to Europe during all the ages which Mr. Bradlaugh has referred to, and which in itself is a great fulfilment of prophecy and a proof of the Bible's truthfulness, as I shall show when we come to that department of the subject—I say that these things which Mr. Bradlaugh denounces, are the doings of a system that has tried to suppress the Bible in the doing of them, in order that its iniquity might not be known.

But Mr. Bradlaugh says that the Bible is responsible for a few things that I am afraid to explain. By no means; I am not afraid to explain any of them. The things done and laws enjoined, through Moses, are legitimate enough in view of the prerogative of the lawgiver. Has God, who created man, no right to say when man shall be destroyed? Has Queen Victoria no right to order a man to be hanged? (No, no). Very well, have you any right as soldiers to shoot Frenchmen if they invade England? (A voice: yes). Then upon what principle will you deny that God has the authority to kill as well as to make alive? I own to and take the full responsibility of those statutes which are contained in the Bible: they are wise in their place and in their time, and God is a better judge of time and place than we.

Then Mr. Bradlaugh has tried to make a great point of slavery. On this I have simply to say the slavery of the Bible is not the slavery against which modern anti-slavery advocates have had to contend: the slavery of the Bible was a mere domestic servitude in which rights were recognised as attaching to those in servitude. American slavery recognised no rights; but whatever the form of servitude might have been, I deny that any argument against the Bible could be extracted from it. Has God no right to dictate the form that domestic institutions may take? Is He not possessed of the highest wisdom to judge in what particular circumstances particular institutions are adapted to work best for objects He may have in view in dealing with men? If it came to detail, I would grapple with all these points: and I wish Mr. Bradlaugh would put them to me at the time he has to put questions to me: I would undertake to shoulder them all and not to stagger in the least degree in carrying the burden. They would not in the least shake faith in the Bible; for that faith is founded on too strong reasons to be touched by the kind of objection Mr Bradlaugh relies on, and as to my treatment of those objections, notwithstanding the tirade of Mr. Bradlaugh against my method of argument, a logical mind is able to perceive that if my argument can be sustained, my proposition is established, that the Bible is the authentic and reliable record of divine revelation. For if Christ rose from the dead, surely it will not be denied that he was the Son of God; if he be the Son of God, surely it will not be denied that his approbation of anything is a proof that it is right, and that therefore his sanction of the writings of Moses and the prophets is a proof that they are authentic and reliable, even if there were a total absence of all other kind of evidence whatever. Is not that so? And I use the case of Paul to show that Christ rose from the dead in the same way that I used the case of the

Digitized by Google

early Christians last night to show that he rose from the dead. And that line of argument Mr. Bradlaugh dares not attempt to meddle with. Instead of dealing with it, he piles upon me a number of little points of alleged inconsistency in the book as a whole, and in a way that I am sure cannot carry conviction to cool and dispassionate and disinterested and logical minds, although it may please and tickle the fancies of a shallow class that do not understand the bearings of evidence. I shall not be diverted from my excellent plan. On the contrary, I rather invite Mr. Bradlaugh to follow me in that plan and pull down, if he can, the house I am building. His course is an oblique one. He did not attempt to allege that the Epistles of Paul are forgeries, and he will not admit them to be true. Why won't he admit what he cannot deny? Because if these epistles were written by Paul in the first century, my argument is substantiated, and the resurrection of Christ proved. He contents himself, therefore, with saying he has no proof that Paul wrote them. Why doesn't he give us the argument that leads him to doubt that Paul wrote these epistles? He talks of the practices of a court of law: who ever heard of a counsel for the defendant who shrank from exposing the forged character of a document produced and relied upon by the other side? Therefore on the very principle of advocacy Mr. Bradlaugh has himself sketched out, he ought to do that which he has refused to do; and he cannot do it: (energetically) I defy him to do it. (Laughter). You may laugh, but it is a very serious matter—so serious that you must excuse me for being in earnest. I am so certain that Paul was a true man, that Christ rose from the dead, that I am prepared to place my neck on the block to-night, if necessary, for my faith. You may make light of it, but Christ will shortly be in the world again, to the utter consternation of those who are so easily carried away by the shallow criticisms to which we have listened to night—I had further arguments on the case of Paul, but as the chairman informs me I have only two more minutes, and as it would be impossible in that short time to develop those further arguments, I will resign my post to Mr. Bradlaugh.

Mr. BRADLAUGH: Mr. Roberts said why don't I touch the question that Christ rose from the dead. I thought I had challenged that what he had said about Christ being seen for forty days according to Acts was contradicted in Luke. I thought I had said, giving texts to him on the previous nights, and reminding him of it to-night, that the statement about Christ being three days and three nights in the grave was not true. I thought I had shown him on each of the two nights that the statements about the women who came to the tomb were self contradictory, one making it one woman, another making it two, and another making it more; and while I have mentioned these contradictions relating to the resurrection, it is simply an impertinence to say that I have not dealt with it.

Now we have a new case made. First, the Bible don't teach hell-fire; and for the purposes of this debate Mr. Roberts is governed by the authorised English version, which he agreed to accept. Mark, 9th chapter, verses 43 to 48: "If thy hand offend thee, cut it off: it is better for thee to enter into life maimed, than having two hands to go into hell, into the fire that never shall be quenched, where their worm dieth not, and the fire is not quenched." And that is repeated over and over again. Matthew xxv. 41: "Depart from me, ye cursed, into everlasting fire, prepared for the devil and his angels." Matthew xviii. 8: "Wherefore if thy hand or thy foot offend thee, cut them off, and cast them from thee: it is better for thee to enter into life halt or maimed, rather than having two hands or two feet to be cast into everlasting fire." Well, if "everlasting fire" don't mean everlasting fire, if fire that can't be quenched don't mean fire that can't be quenched, then we have got to get a new language. It cannot be said that this is wrongly translated from some other tongue, because Mr. Roberts has agreed to accept the authorised English version as authority in this debate. Then he says that the slavery of the Bible was a mere servitude, in which rights were recognised, but that the American slave laws did not recognise rights. I say that is not true. I have read with attention the decisions relating to the slave laws of America, and I say there was no portion of the slave laws of America which said that a man might beat his slave within three days of his life, and that if he lived till the third day he was not to be punished because he was his money; and I say that in Exodus xxi. 20, 21, it is provided that "if a man smite his servant

Digitized by Google

or his maid with a rod, and he die under his hand, he shall be surely punished. Notwithstanding, if he continue a day or two, he shall not be punished, for he is his money." I say that I am not here to defend American slavery. I admitted that American slavery reduced man to the position of a chattel, I admitted that it was damnable and wicked, and I admitted that the clergy defended it on the authority of this very book. I affirm that it was under cover of this book that pious slaveholders upheld their iniquitous system. Our friend says God in His highest wisdom knew what was best. I say that it was never best for any men at any time in the world to have the right to buy people whom they might beat within three days of their lives; I say it was never right for a rich murderer to escape because he paid for the man he had murdered. I say that it never could have been right to steal a woman and then turn her adrift. I say the whole thing is as monstrous as it can be. Then I am told, I am defied to prove the epistles of Paul to be a forgery. That is not the language that a man who is bound to prove them to be true should use to his opponent. Mr. Roberts has told me about the proceedings of law courts. If I don't understand the Bible I understand the proceedings of law courts, and no man who knows me will say I don't—and I say it is a most ridiculous proposition to say that if the plaintiff had not proved any case at all, that the defendant would try to contradict the case he had proved. If a deed is put in as evidence, it is not received as evidence until that deed is verified: it is only a piece of paper to which no attention is paid until it is proved by whom it was written. It is simply a piece of paper that the clerk of the court won't read, because there is nothing in evidence about it.

Then I am told that I have led you off with silly criticisms. The wisdom of the criticisms must be judged by others by and bye. I have only followed Mr. Roberts in the course he has taken. I did not attack the general teachings of Christianity to-night until he had referred to the scepticism of myself to-night, and then it was a fair retort to the speech he had made. If he wants to confine us to a critical examination of the book, I will follow him step by step; but if he fancies that flowers of speech will do, then to the best of my ability I will try flowers of speech too. I don't pretend that we have the deep and profound mind of our friend, who pretends to see evidence where it does not exist; but we have sufficient intelligence for the ordinary affairs of life, and we want that kind of evidence put to us here. Then we are told that there is a comparison between you killing Frenchmen who invade your country, and God telling the Jews to kill Canaanites who were born in the country the Jews invaded under the direction of your merciless Deity. Mr. Roberts says you will be justified in killing Frenchmen who invade your country.

Mr. ROBERTS: No, I did not.

Mr. BRADLAUGH: You did.

Mr. ROBERTS: No; I asked them if they believed they would be.

Mr. BRADLAUGH: But you must have meant something. If it was not intended to explain the one point by an analogy to the other, then it was a mere trick of speech, which might be proper in an infidel not governed by the considerations of the Bible, as Mr. Roberts is, but which ought never to have come from his side at all. Friends, we have nearly finished. I ask, is there one of you who has had the slightest evidence given to you that Christ rose? Has there been an attempt to prove any one of the facts, any kind of evidence given of the authenticity of any one of the books? No; all we have had is a daring "I defy Mr. Bradlaugh to disprove it!" My business is not to advance a line of negative proof: my business is to examine the evidence submitted from the other side; and you have not to do with my mere opinion. My mere opinion may be correct, or it may be incorrect. I pretend to no infallibility. I am ready to examine the evidence if it be submitted to me; but unless, during the three nights of the debate to come, Mr. Roberts is prepared to advance something, he had better make an announcement that he is not prepared to do it now, but will on some other occasion. This is the proper time and place to prove that it is God's Word, and it cannot be God's Word if it be full of cruelty, crime, treachery, deceit, and murder; full of those abominations which a civilised world has set aside. I beg to propose a vote of thanks to the Chairman.

The CHAIRMAN: That had better be reserved till the last meeting.

Digitized by Google

Fourth Night,

TUESDAY, 20th JUNE, 1876,

IN THE TEMPERANCE HALL, BIRMINGHAM.

MR. GEORGE H. ST. CLAIR IN THE CHAIR.

THE CHAIRMAN: Ladies and Gentlemen, The order of the discussion, this evening, will be the same as last Thursday. The order of the meeting will, I trust, be kept at least as well. There was not much to complain of on that occasion; but there was a little. Some few friends found they were not able to control their feelings; and it is reasonable to suppose that having made that discovery, they have staid at home to-night. One or two friends, again, seemed desirous of taking part in the debate, and these, no doubt, have sent a challenge in the meantime, to Mr. Bradlaugh or Mr. Roberts, and they will reserve any further arguments until their own proper debate comes off. It cannot be too well understood that any interruption is a loss of time to the speakers, and a loss of time to the entire meeting, and cannot possibly result in any good. The subject for discussion is the same as before, namely, "Are the Scriptures the Authentic and Reliable Records of Divine Revelation?" Mr. Roberts will affirm that they are, and Mr. Bradlaugh will deny. I ask Mr. Roberts to resume the discussion.

Mr. ROBERTS: Mr. Chairman, Ladies and Gentlemen, Mr. Bradlaugh correctly defined the duties devolving upon the respective parties to this discussion when he said that it belonged to me to affirm that the Bible is true, and that it belonged to him to examine my evidence. Unfortunately, however, so far as the discussion has gone, Mr. Bradlaugh has not acted in accordance with that excellent definition. He has neglected entirely to examine the evidences, such as they are, which I have, so far, rehearsed in your hearing. He has not attempted to controvert the fact that there are Jews, though I should not have been very much surprised had he tried to do so. He has not attempted to controvert the fact that the existence of the Jews is required by the hypothesis of the truthfulness of the Bible. He has not controverted the fact that there is an ecclesiastical tyranny in Europe as the most prominent feature of the European system—a feature which has prevailed for many centuries, as the Bible required. He has not attempted to show that the existence of that ecclesiastical imposture is inconsistent with the position I am taking, or that it fails to sustain the argument I have founded upon it. With regard to the third proposition, he has not attempted to give us a reasonable account of the origin of Christianity, nor has he attempted to deal with the account I gave, which I endeavoured to show was thoroughly reasonable. He has not attempted to deal with the case of Paul; but he has taken the extraordinary course of denying that there ever was such a man, or, at all events, that there is evidence sufficient to justify us in believing in his existence.

When, however, he did attempt to deal with any part of the positive evidence I have rehearsed in your hearing, he has done that which he said he was not called upon to do; he has attempted to disprove my evidence. This he has done by a hurried, rather excited and somewhat disconnected recital of miscellaneous points and passages, which he rather hinted at as inconsistent with my argument, than tried to show that they actually were so.

There was one notable exception to that course of his. I produced the writings of

Digitized by Google

Paul as one of my principal and most valuable evidences. They exist, which is a great fact. I mean the existence of the epistles bearing his name is a great fact, for a reading of them would convince any unbiassed mind that they are no forgery; an unbiassed reader instinctively feels that a forger or literary inventor could not produce such writings. I produced them as a weighty element in the argument. Mr. Bradlaugh did not attempt to disprove them; he said it was not his business. He knows he cannot. When he cannot, he says it is not his business; but when he thinks he can, he tries.

But I am not content to leave the matter in that position. I was a little taken by surprise, I must confess, by Mr. Bradlaugh's tactics on this point, because it is universally conceded now, with the exception of a few of the more unscrupulous and uncritical of the unbelieving class, that Paul lived in the first century, and that Paul wrote these letters. I assumed that Mr. Bradlaugh would admit this also, and argue the case on the basis of that admission. Therefore I had not come prepared with the complete and exhaustive technical evidence which it is possible to produce in support of the fact. I would have prepared myself with the evidence if I had expected Mr. Bradlaugh would have taken the position he has taken. I have come to-night so prepared, and I shall carry the chain of evidence not only back to A.D. 150, but right straight away into the days of Paul himself in an unbroken chain—not a broken one, such as Mr. Bradlaugh says he is contented with in the case of Eusebius. In the case of Homer, Herodotus, Livy, and other ancient writers, he has to be content with a very faint and broken chain of evidence, and the principle which guides him in accepting that evidence would compel him in consistency to accept Paul even if there were only a few scattered links, instead of there being, as there is, a chain without a single link missing.

I asked him last Thursday night how far back he would allow the New Testament to have existed. He said A.D. 150. I asked him his reasons for fixing upon that date, and he declined to give me them upon the somewhat trivial plea of being afraid to furnish me with valuable information. I hope Mr. Bradlaugh will not any longer refuse to answer my question on such a ground, or he will lay himself open to the imputation that he is afraid to submit his case to the test of cross-examination. The object of all my questions is to put the position he takes to a logical test, and if he evades them, it is simply evading legitimate test, which will reflect injuriously on his advocacy. My object in asking for his reasons for admitting the existence of the New Testament as early as A.D. 150, was that I might show to him had he given those reasons, that the evidence which carried the proof back to A.D. 150 would logically carry it back to the days of the apostles. This I hope now to make manifest.

There are five witnesses to the particular date Mr Bradlaugh speaks of, not that they fix on A.D. 150 as a hard and fast line, but their witness establishes that date beyond all question. The five witnesses which I produce are Tatianus, who was born A.D. 130, who wrote an oration to the Greeks and "The Harmony of the Four Gospels." Then there is Theophilus, of Antioch, who died A.D. 181; he wrote three books to Autolycus, in which he mentions John, and makes thirty or forty quotations from the New Testament. We then have Athenagoras, an Athenian philosopher, who became a Christian, and flourished in the second half of the second century. He wrote a treatise on the Resurrection; and also addressed a petition on behalf of the Christians to the Roman Emperor of the day, asking that they might be shielded from the persecution to which they were subjected. In these two publications he quotes the New Testament twenty times. There is, then, Irenæus, who was born A.D. 130, died A.D. 202. He wrote "five books against heresies," and in the course of his arguments, he mentions by name twenty-one books of the New Testament. Earlier still, we have Melito, of Sardis, who wrote a work "Extracts from the Law and the Prophets," and in which he recognises the New Testament by speaking of the Old, a distinction which did not exist until there came to be a new one, of course. Then there is Papias, of Hierapolis, who died A.D. 153, a disciple of Polycarp, who wrote five books of Commentaries, in which he distinctly mentions by name Matthew, Mark, Peter and John. All these men flourished in the middle of the second century, and gave evidence of the existence of the New Testament, certainly in A.D. 150, for they quote from it as a book commonly accepted at that time. They were separate men, living in various parts of the world, all quoting the New Testament in A.D. 150, which excludes the

Digitized by Google

notion that the New Testament only came into existence in A.D. 150; for, mind you, the argument is stronger than it appears. Athenagoras, for instance, tells the emperor, in his petition, that there was, at that time, a community acting upon the precepts of the New Testament, which he quotes. The very fact of his addressing a petition to the emperor is evidence of this; for how came such a petition to be presented, except that there had, for a long time, existed a community of Christians subject to persecution. Athenagoras, to show their inoffensive character, quotes the precepts of Christ from Matt. v., as those by which they were governed. Consider what this proves. It proves that the New Testament must have existed a long time previous to the time of Athenagoras writing; for how, otherwise, could subjection to New Testament precepts (so contrary to the natural impulses of men), have been extensively brought about?

I say, then, that the evidence that carries the New Testament back to A.D. 150, logically carries it much farther back than that. But I am not content to rest my case there, and I march, step by step, back into the very age of the apostles while they were yet alive. I produce Justin Martyr. He was born A.D. 103; he was brought up a Greek philosopher, a man of education and of considerable natural abilities. I emphasise upon this, because this man was converted to Christianity in the year A.D. 130, ten years after which, he wrote an apology to the then reigning Emperor (Antoninus Pius) on behalf of the Christians; and again in A.D. 162, to Marcus Aurelius. In both of these, he quotes extensively from the New Testament. If the New Testament was only in existence in A.D. 150, how came Justin Martyr to quote from it in A.D. 140? and if Justin Martyr quoted from it in A.D. 140, is that not evidence of its existence many years before? for how could you imagine an educated man, as Justin Martyr was, embracing Christianity A.D. 130, and quoting in A.D. 140, from books which were not current in the Christian community, at least at the time he joined them? And if they were current at the time he joined them, they must have been current many years before, for the Christians were scattered in many places, and Justin Martyr travelled among them, and had the opportunity of knowing *the* facts on so simple a point as this, that is, whether they had the New Testament in their possession or not; and whether, being in their possession, it was a genuine book or the production of forgers. A curious kind of forgery certainly, as anyone may see if they will read; it is a forgery impossible on the face of it. And a successful forgery, extraordinary certainly, if it were a forgery, for it is made up of letters purporting to have been addressed to communities in detail, which communities were in existence, and knew whether they had received those letters or not. But Mr. Bradlaugh says "Oh no; I don't say they are forgeries." When I ask him if they are genuine, then he says, "I have no evidence of it." This is incomprehensible. He broaches a new and extraordinary definition of forgery. I always understood that a forgery was an attempt to imitate something real and valuable; but in this case, Mr. Bradlaugh denies the value or the reality of the thing said to be forged. He will not admit the existence of real apostolic writings, though he says there is plenty of forged apostolic writings. This is an extraordinary position for anyone to take, and I must leave you to draw your own conclusions as to its meaning in this case. I have already spoken of Tatianus, who died A.D. 153. He wrote five books of commentaries, in which he distinctly mentions Matthew, Mark, Peter and John. I may say I come prepared with the names of the books and with the quotations from them, if required, wherein all these things appear. Next, I take Polycarp, who was born A.D. 80, when the apostle John was still alive. He died A.D. 167. While he lived, he wrote a letter to the Philippians. I have that letter in my possession, and with me on the platform. In that letter, Polycarp mentions three books of the New Testament expressly by name, and quotes from the New Testament fifty times. Polycarp, in the early part of his life, had the society of the apostle John, and learned from him concerning Jesus. This we learn from Irenæus, the disciple and companion of Polycarp. Earlier than Polycarp, we have Ignatius, who was born A.D. 35, a year after the crucifixion. He wrote seven epistles, in which seven epistles he quotes forty or fifty times from the New Testament, and refers once expressly to the Epistle to the Ephesians. He died A.D. 107. If the New Testament was forged in A.D. 150, how came it that Ignatius, who died A.D. 107, quoted from it at the end of the first century? His epistles were written at the close of the first

Digitized by Google

century, and in them he quotes the New Testament, which constitutes evidence not only that the New Testament existed at the time he quoted it, but that it was then recognised as a book which was a standard authority for reference among Christians. This shows a previous existence of many years. I go a step or two farther, and I take Hermas, who also flourished before A.D. 100, while John the apostle was still alive. In his work, entitled *The Shepherd*, there are at least fifty quotations from the New Testament, and we know that Irenæus, Clement, Tertullian, Origen and others, cite or refer to this work of Hermas as a writing antecedent to their days. Besides Hermas, we may take Clement, who is referred to by Paul. Clement was born A.D. 30, and died A.D. 100. He wrote a letter to the Corinthian Church, as I stated on a former evening, in which letter he expressly refers to Paul's epistle to the same community, and quotes many times from the New Testament. Then there is the testimony of Barnabas, who wrote a letter somewhere about the time of the destruction of Jerusalem, to which he refers as a contemporary event; and in this letter is quoted the New Testament more than thirty times.

With regard to these witnesses, although I do not accept them as competent expositors of true Christian doctrine, yet they are competent witnesses of what existed while they were yet alive. A man may be a trustworthy witness of a fact without being accepted as a judge of the fact. For instance, scientific men may take the statement of an agricultural labourer as to the finding of a particular plant in a field, while we may reject his theory as to the nature and quality of the plant; or a country villager's evidence may be accepted to the existence of a certain custom in the village back to a certain date, without people being bound by his explanation of the meaning of that custom. We may accept the fact while we disregard the theory. So, these "Fathers," as they are called, may be taken as witnesses of what passed in their own day, as the writings of the apostles, though they may not be accepted as good judges with regard to the true nature of the doctrine of the apostles.

The evidence of the authenticity of the New Testament is so complete, that I can only account for Mr. Bradlaugh's objection to Paul's writings on one principle. There would be no difficulty about the authenticity if it were not for the apostolicity. If these writings of Paul merely ranked with those of the scholars of the day, Mr. Bradlaugh would accept the evidence of their authenticity. In fact he is bound to. There is no denial of the fact that these men whom I have quoted lived at that time. There is no denial of the fact that they wrote at that time, and that they quoted the New Testament. It would not alter the argument if it could be shown that these were not their letters, because the writings produced, even if forged, were forged in the age during which Polycarp and the others lived (as shown by the recognition of their existence by Eusebius, Irenæus, and others), and the quotations they contain from the New Testament would have the same force as showing that the New Testament existed, as if they were the production of their professed authors.

The evidence is complete. I have carried the proof right back to the age of the apostles. I have proved the New Testament to have been in existence in the first century. It is a perfect marvel that we have such an unbroken chain of evidence, for we have to remember that the Christians in their beginning were a sect everywhere spoken against, despised and trodden down, and composed principally of the poor. The wonder is that documents should have been produced among them which should be extant to the present day. It was different in the days of Eusebius. Then the protection of the State was thrown over them, and Christian documents became public documents, and Christian writers public writers under imperial patronage, as Eusebius was. Before then Christian documents were private documents, and the wonder is that they are now in existence at all. Having been proved from the beginning of their existence, I ask you to take up and apply the argument concerning Paul which I advanced the last night we were together. That argument properly belongs to to-night, and is in the same line as that previously pursued, though the evidence is stronger. With the proof of the document there is the proof of the facts, and therefore of the conclusion I sought to deduce from them.

I have referred to the internal evidence which Mr. Bradlaugh has refused to look at. Surely internal evidence should go for something. In my judgment it weighs a great deal more than any amount of external evidence that can be produced. I think I shall be able, though necessarily in a brief manner, to indicate some general

Digitized by Google

considerations on this point which will help to carry conviction as to the divinity of this book. This belongs to the second part of my general proposition—that the Scriptures besides being "authentic" are "reliable." Mr. Bradlaugh has not directed his attention to the word "reliable." He has confined himself to the word "authentic." He has limited me in the argument to the idea of authenticity. This is a mistake, for a thing may be utterly worthless and still an authentic record. I believe the Koran to be authenic, but I don't believe it to be reliable. I believe Mahomet wrote it, but I don't believe what he wrote in it. Even on the question of authenticity the Koran cannot be placed in competition with the Bible; but it is necessary, besides saying it is authentic, to show that the Bible is a reliable account of the Divine dealings with mankind; and I proceed by a few hasty thoughts to make that apparent.

I call attention to this fact that the Bible, as a whole, is in harmony with what is now found scientifically to be true, though written at a time when the whole world outside of it was wrapped in speculative fog. I refer now to two items in particular —God and man. With regard to God, the nations of the world said there must be a variety of gods, because there was a variety of power-mainfestations. They saw fire and heat, and sunshine and darkness, and water and love and thunder, &c., and they argued these must be manifestations of separate deities. They, therefore, invented Jove and Venus, and Mars and Neptune, &c. A plurality of deities was believed in by almost every nation. But science has shown that all manifestations of power are referable to one common source, origin or principle, though that common origin is itself admitted to be inscrutable. The doctrine is defined as "the co-relation of forces:" that is, that all forces have their root or origin in one principle. Now, that fact the Bible taught ages before it occurred to natural thinkers. It taught that there is but one God and one universal Spirit, out of which all things have come. Did time allow, I would show this by a number of citations; but my time is drawing to a close. But there is a difference between the Bible form and the scientific form of this doctrine. Science, at least in the hands of some scientists, makes a curious application of its "co-relation" discovery, which I venture to say does not bear a favourable comparison with the Bible use of that truth. I now refer to the doctrine of the origin of the universe, as expounded by men who wish to get rid of a God, upholder of all, proprietor of all, to whom we are all responsible. They say the primal force is an unintelligent impersonal force. They won't accept a personal God. They say they cannot comprehend such an explanation. They cannot comprehend how universal power should have a personal nucleus at one central point in the heavens, as taught by the Scriptures. They cannot grasp the idea of universal power being, in its totality, One Mighty Being. They reject it because they cannot understand it. But do they give us something they do understand? Let us see. They are obliged to admit that things have had a beginning, at least upon earth. They tell us of a time when the earth was in an incandescent state, and when there was no life on it. They tell us of a time before that, when there wasn't even an incandescent world, but when its substance existed in a nebulous ethereal form, diffused throughout the universe. We follow them, and ask them what preceded the nebulous condition of substance? and whatever it was, how came it to advance to a more concrete state? If the impelling motion was due to blind, unreasoning, unsentient generation in the inert universe of vapour or gas, or whatever it was, why didn't the generation take place countless ages before, when the same force being there, the same power of development existed? Why the blind force did not develop itself millions of years before it did is not explained. It ought to have brought itself out from eternity if there was no intelligence to plan, control, check, restrain, or stimulate. What a strange account of creation we have at the hands of such a theory. Here is the 1st chapter of Genesis, written by an American, according to the philosophy which Mr. Bradlaugh represents:—

CREATION ACCORDING TO DARWIN.

1.—Primarily the Unknowable moved upon cosmos and evolved protoplasm.

2.—And protoplasm was inorganic and undifferentiated, containing all things in potential energy; and a spirit of evolution moved upon the fluid mass.

3.—And the Unknowable said Let atoms attract, and their contact begat light, heat and electricity.

Digitized by Google

4.—And the unconditioned differentiated atoms, each after its kind, and their combinations begat rock, air and water.

5.—And there went out a Spirit of evolution from the unconditioned, and working in protoplasm, by accretion and absorption, produced the organic cell.

6.—And cell, by nutrition, evolved primordial germ, and germ developed protogene, and protogene begat eozoon, and eozoon begat monad, and monad begat animalculæ.

7.—And animalculæ begat ephemera: then began creeping things to multiply on the face of the earth.

And so on, and so on. Is that a bit more intelligible than this?—

THE BIBLE ACCOUNT.

"In the beginning God created the heaven and the earth. And the earth was without form, and void; and darkness was upon the face of the deep. And the Spirit of God moved upon the face of the waters. And God said, Let there be light: and there was light."

If that is mysterious, I can only say it is at least not more mysterious than the Darwin mystery, and if I must choose between mysteries, I would rather have mystery with intelligence in it than mystery without intelligence. I can understand how things made a start, if there was a designing initiative to start them. I cannot understand how things could start if there was nothing to give them an organic propulsion.

Mr. BRADLAUGH: On this, the fourth night of the debate, the names of the witnesses are mentioned, and Mr. Roberts says he can quote from them, but he has carefully refrained from doing it, and I will give you the reasons in my speech why he has not done so. He says I admitted that the New Testament existed A.D. 150. But I am in the recollection of the audience, and still more in the recollection of the short-hand writer, whose notes will speak for themselves, and I am positive my answer was that not the slightest evidence could be shown of the existence of the Four Gospels before A.D. 150. I did not say that at A.D. 150 you could show the existence of the book, and if Mr. Roberts thinks I said so he has greatly misapprehended what I said. On the contrary, I took that date to be on the safe side, because I knew it was a long way on the safe side, and I cannot make out a man who has listened with reasonable attention having so entirely misunderstood the statement. Mr. Roberts has referred to Tatian, but not a word has he quoted from Tatian, because there is not a word in existence, and that is a good reason for not quoting him. And here I must ask Mr. Roberts not to use people's names as witnesses, but to quote, with chapter and verse, the phrases on which he relies as evidence. It is simple impertinence to read names to us and tell us he has got the books here when those books do not exist in the world. Mr. Roberts next quotes Theophilus. The reference to Theophilus stands in much the same position as that to Tatian,. with this exception, that there is a commentary of Theophilus which is referred to as spurious. If that is evidence all I can say is that language gets very puzzling. It is alleged by Lardner that the date given to Theophilus is A.D. 181, and how that can come before A.D. 150 my arithmetic don't tell me. Next we come to Athenagorus. With reference to this writer he never mentions either Matthew, Mark, Luke, or John, by name, and when any texts are quoted from him, I will undertake to quote from him that which is not in the Four Gospels at all, and which he must have derived from some other gospels, which it will be my duty to mention to you before this evening is over. We now come to Ignatius—I beg pardon, Irenæus; and the very funny way in which Mr. Roberts manages his dates is remarkable. He says "Irenæus, born A.D. 130, died A.D. 202," and therefore he brings him before A.D. 150.

Mr. ROBERTS: No.

Mr. BRADLAUGH: I say yes, or I don't understand the meaning of the language Mr. Roberts uses. The books against heresies attributed to Irenæus came between A.D. 180 and A.D. 190, and cannot possibly affect the question of what took place before A.D. 150. Next we are told there is Mileto. Would Mr. Roberts name the particular works he relies upon. I don't mean the works of Christian evidence mongers 300
